W. S. Gottsberger announces directly 'Richard Lepsius; a Biography,' from the German of Georg Ebers by Zoe Dana Underhill.

Prof. Max Müller's new volume, a collection of his articles from *Good Words*, and to be called 'Biographies of Words,' will be published here by Chas. Scribner's Sons. As new matter, it will contain a discussion of the original home of the Aryan race. The same firm announces 'Down the Islands,' a richly illustrated holiday book narrating a cruise among the Caribbee Islands, by Wm. Agnew Paton; 'The English in the West Indies; or, The Bow of Ulysses,' by J. A. Froude; 'Free Joe, and Other Georgian Sketches,' by Joel Chandler Harris; and Robert Louis Stevenson's 'Memoir of Fleeming Jenkin.'

Harper & Bros. publish directly the first volume (of three) of 'A History of the Inquisition of the Middle Ages,' by Henry C. Lea; 'Big Wages and How to Earn Them'; and 'Old Homestead Poems,' by Wallace Bruce, illustrated for the holidays.

Houghton, Mifflin & Co. promise 'Lyrics and Sonnets,' new poems by Miss Edith M. Thomas; 'Winter,' edited from the Thoreau journals by H. G. O. Blake; 'The Story of Keedon Bluffs,' by Charles Egbert Craddock; 'The Man Who Was Guilty,' by Mrs. Flora Haines Loughead; 'Bird Talk,' poems, with decorative illustrations, by Mrs. A. D. T. Whitney; and a new edition of Mr. Howells's 'Wedding Journey,' with an additional chapter.

Ticknor & Co. have now ready 'The Story of an Enthusiast Told by Himself,' a novel, by Mrs. C. V. Jamison; and 'Sobriquets and Nicknames,' by Albert R. Frey.

'A Descriptive Geometry,' by Prof. C. A. Waldo, is in the press of D. C. Heath & Co., Boston.

Worthington Co. publish immediately a 'Life of Washington,' by Miss Virginia F. Townsend, written principally for the young; and 'Twelve Times One,' an illustrated juvenile, by Miss M. A. Lathbury.

The next volume in the Eminent Women Series will be a sketch of Hannah More by Miss Charlotte M. Yonge.

Mr. Andrew Lang, having received all of the papers and letters of the late Lord Iddesleigh (better remembered in the United States as Sir Stafford Northcote), has undertaken to prepare a biography of the deceased statesman—a novel task even for this versatile man of letters.

M. Ernest Legouvé, the veteran French dramatist, is preparing for the press a complete edition of his plays, with a new preface prefixed to each. The first volume to appear will be 'Comédies en un acte.' The best and the best-known of M. Legouvé's plays is "Adrienne Lecouvreur," written in collaboration with Scribe.

The information is given by the *Journal des Débats* that the French Ministry of the Marine has authorized the *lieutenant de vaisseau*, Julian Viaud (Pierre Loti), to publish a book entitled 'Madame Chrysanthème.'

The first volume of M. Renan's 'Histoire du Peuple d'Israël' was announced to appear October 25 (Paris: Calman Lévy). The work will form, when complete, three large octavo volumes, and it is said to be already finished. The *Revue des Deux Mondes* for October 15 gives a long passage, "Saül et David," the history of the foundation of the royalty of Israel. This is written in M. Renan's most sober and most rapid style, with all the graces of which he can never divest his writings, but almost without adornment. It is a narrative of which the interest and novelty carry the reader along with the swiftness of a romance, but which will bring down upon itself the condemnation to which the author of the 'Vie de Jésus' is accustomed.

James Darmesteter, the successor of Silvestre de Sacy and of Mohl in the chair of Persian at the Collège de France, has recently returned from a visit to the Orient. Among the fruits of his studies is a paper in the *Contemporary* on "Afghan Life in Afghan Songs"—the earnest of a scholarly edition of the songs themselves, which are to follow in the original Pushtu, with translation, etc. The new number of the *Journal Asiatique* (viii. 10. 38–75) brings us to-day a most interesting article by the same savant, entitled "Points of Contact between the Mahābhārata and the Shāh-nāmah," in which he compares the beautiful story of King Yudhishthira in the seventeenth book of the Indian epos with the tale of the Renunciation of Kai Khosru in the Persian Book of the Kings. Darmesteter is convinced that the old view of the isolation of India is false; and he seeks to show that it received, even in ancient

times, very much from foreign sources, especially from the Greeks, and perhaps also from the Persians.

Profs. Pischel and Geldner of Halle, as we are informed, intend soon to publish a serial of *Vedische Studien*. They hold that the value of the classical Sanskrit for the interpretation of the Veda has been underrated by Roth and his school, and that this error has retarded the progress of Vedic exegesis. A tendency like that of the Halle professors is seen in the recent studies of Abel Bergaigne in the *Journal Asiatique* (1883–84).

The first number of the *Archiv für Geschichte der Philosophie* has just come to hand. It is published by the great Berlin house of Georg Reimer, more for the sake of honor than pecuniary gain. Articles are paid for, and the services of many of the most eminent philosophical writers of all countries have been secured. Being an international periodical, articles are published in Latin, French, Italian, and English, though naturally most are in German. The *Archiv* is made up of two distinct halves. The first contains short articles intended to add to our historical knowledge of philosophy, and is under the editorship of Diels, Dilthey, Erdmann, Stein, and Zeller. The second contains a critical survey of all new works on the history of philosophy, and is under the editorship of the foregoing, along with Tocco (of Florence), Tannery (of Tonneins), Bywater (of Oxford), and Schurman (of Cornell). The present number opens with an article by Zeller on the aims and methods of the history of philosophy. This is followed by half-a-dozen critical investigations, and a very interesting batch of the Leibnitz letters lately discovered at Halle. The book-notices are, in this number, confined to German and English books. In the review of recent books in English on mediæval and modern philosophy, by Prof. Schurman, we notice the names of several American writers. French and Italian books will be reviewed in the next number, which is also to contain more of the Leibnitz letters.

Two years ago, at much length, we reviewed, in the English edition, Ormsby's translation of 'Don Quixote,' ranking it above all its predecessors, and predicting that its excellence would discourage any fresh attempt for a long time to come. We need only say of the American edition of Dodd, Mead & Co., compressed into four volumes, that it has been beautifully manufactured for the low price at which it sells; the thinness of the paper alone making such a qualification necessary, though the legibility of the very clear and open type is not at all interfered with. Gilt tops and a geometrically patterned cover make these volumes fit for any library or table.

Lee & Shepard send us 'The Song of Roland,' a translation into English verse by John O'Hagan, one of the Justices of the Supreme Court of Ireland. This is the first American from the second London edition of a book that deserves the praise it has received from the best English reviews. It is an heroic poem, worth reading in its English form for the mere pleasure of reading it, apart from its value as a translation of the earliest remaining specimen of the old French *chansons de geste*. The translator has not attempted to render the measure and form of the original, but has been satisfied with a spirited version in an irregular measure similar to some of those Scott used so effectively in his long romances in verse. As a translation it is as faithful as could be expected where the exigencies of rhyme and measure require so much expansion that the antique simplicity and directness of the original are too often lost; but as a story in English verse, the book is unexceptionable; it has novelty and vivacity, and a captivating interest.

Ebers's 'Egyptian Princess' has been added to Bohn's Novelists' Library (Scribner & Welford). The translation is by Emma S. Buchheim. The print is large, and the form what every one knows when Bohn is mentioned.

The *Christian Register* published in April last a "symposium" consisting of brief expressions of opinion by eminent men of science, in this country and in England, on the question of the effect produced on the belief in immortality by the discoveries of modern science. The replies sent by the scientists to the editor of the paper in question, together with some additional responses since obtained, are now collected and published by George H. Ellis, Boston, in a little book having the title 'Science and Immortality.'

The latest issue in the line of books of which the Baker & Taylor Co. make a specialty is 'Evangelistic Work,' by Arthur T. Pierson, D.D. It consists of discussions of the question how to make the church attractive to the non-church-going population, and embodies short sketches of famous revivalists from Whitefield to Moody.

As we mentioned last week an English 'Handbook of Home Rule,' we must, in fair play, speak of Prof. A. V. Dicey's little volume on 'Unionist Delusions.' The title has a Home-Rule flavor, but involves exactly the reverse. Prof. Dicey addresses Unionists alone, and his object is to arouse them to a proper sense of the "import and character" of the struggle with the Gladstonians and Parnellites. He wants to remove any hesitation that may exist in supporting the present Tory method of enforcing the supremacy of the laws in Ireland, and maintaining the dignity and efficiency of Parliament. The audience thus chosen would seem to be very un-American, but students on this side of the water should be interested to see how a Liberal like Prof. Dicey seeks to bring others into line like himself with Balfour and Salisbury, and in what his "cause of justice and of sound national morality" consists. Readers of the London *Spectator* have already had the benefit of this exposition in the eight letters now reprinted by Macmillan.

The catalogue of the exhibition of the work of the women etchers of America, now open at the Museum of Fine Arts in Boston, contains twenty-two names. Half of these belong to Pennsylvania.

An American artist universally beloved and esteemed, the late Asher B. Durand, was commemorated in an address before the Century Club by his brother artist, Mr. Daniel Huntington, on April 9, 1887. The Club has now printed this address; the interval, we presume, having been employed in preparing the plate which serves as a frontispiece to the pamphlet. It is Huntington's portrait of Durand, etched by J. D. Smillie. The address has a permanent interest as material for a history of American steel engraving, and it is a pity that one or more specimens of Durand's admirable art with the graver could not have accompanied it.

Mr. F. Gutekunst, Philadelphia, whose art it is to make the transient permanent, sends us a very interesting phototype portrait of the late Jenny Lind, from a daguerreotype loaned by Mr. F. De B. Richards, and presumably dating back to the Swedish singer's appearance in this country. It is a charming souvenir of a charming woman.

We have before us the second volume of Transactions and Proceedings of the Modern Language Association of America for 1886 (Baltimore). The papers published in full are nine in number. Six of them were composed south of Mason and Dixon's line. Three of them relate to the French, and two among these are perhaps the most permanently valuable matter in the series—Prof. Fortier's bibliographical "French Literature in Louisiana," and Prof. A. Marshall Elliott's "Speech Mixture in French Canada," a very curious inquiry into the reciprocal linguistic indebtedness of the Indians (Algonkin and Iroquois) and the French. A revised index gives a list of 354 colleges in the United States, with the names of their professors and instructors in the modern languages.

Miss Anna Brackett has some piquant and sensible remarks on teaching French in the (Syracuse) *Academy* for November. Cæsar is again deprecated, by another writer, as a first classic. Prof. Hart of Harvard furnishes a list of general readings in United States history that will be found helpful, especially as the references for the various epochs and topics are to volume and page of the histories cited. There is a brief symposium of presidents and principals on secret societies, a great divergence of opinion being manifested, and even such a contradiction in fact as that President McCosh says these societies have been put down at Princeton, while President Adams of Cornell (no friend to them) says: "I am told that even with all the ironclad rules they have adopted at Princeton, secret societies have existed there almost without interruption for a good many years past."

In the authorized edition of 1814 of Lewis & Clarke's narrative, the map compiled by Capt. Clarke differs materially from one prepared as a preliminary chart by Capt. Lewis at the Mandan village where the expedition wintered, and thence forwarded to Washington in the spring of 1805. Lewis's map was never ordered published by Congress, but a copy has been preserved in the Archives of the War Department, and Mr. Arnold Hague of the United States Geological Survey has reproduced it in facsimile, as a great curiosity, in *Science* for November 4. It is made up of information, received long in advance of the explorers' verification, from Indian guides and others. The interior drainage of the Columbia was wholly misconceived. An amusing instance of difference in point of view between savage and civilized man is shown in the aboriginal name "River which scolds at all other rivers," and the present designation of "Milk River." Mr. Hague, in his interesting communication, recalls the fact that "Yellowstone" was Lewis & Clarke's translation of the French appellation of the river—*Roche jaune*.

The *Art Age* furnishes an extremely faithful chromolithographic rendering of a water-color drawing by that facile draughtsman Mr. Percy Moran, "The Village Belle." The goodness of the print almost redeems the superficiality and *pose plastique* of the drawing. Mr. Moran has long ceased to make any substantial progress except in greater facility, and his work, while possessed of a certain charm of manner which almost rises to style, does not reach or seem to care to reach any depth of artistic sentiment, contenting itself with costume and scenic effect. But if he is superficial, he is not supercilious, and his sincere and well-sustained general treatment has no leaning to the waste of manual dexterity in making brushmarks which so nullifies a great deal of our art to-day.

The *English Illustrated Magazine* (Macmillan) for October contains F. Marion Crawford's "National Hymn for the United States of America," written for the recent Philadelphia celebration. It is in many places marked by vigor and feeling, and the imagery is often noble. The same number has a sea-piece, by Swinburne, characteristic in style, full of motion and rhythm and the feeling for the free-

dom of wild things, but of a higher poetic rank than much of his later work.

The Manchester *Quarterly*, published by the literary club there, devotes several articles to Wordsworth. They are such as would naturally appear in the proceedings of a Wordsworth society. At the end of the number is a narrative of a voyage to the eastern Mediterranean, and a sort of *catalogue raisonné* of the literary celebrities who have resided near Lake Leman, a map of which is given.

In *Macmillan's* the young reviewer will find the conclusion of the "old literary hand's" advice to his nephew, as truthful a sketch of the minor writer's lot as the neophyte ought to be allowed to have. In the same number is a pleasant criticism on a pleasant writer, M. Anatole France, by W. L. Courtney.

—The November *Atlantic* opens with one of those sketches of real life in the New England of the last age which are almost exclusively in the province of this magazine. It is from the practised pen of Miss Preston, and describes the life and character of Mrs. Judge Lyman of Northampton, Mass., whose memoir, by her daughter, was originally printed for private circulation. There is no better reading in the number, especially for the *laudator temporis acti*. Mr. Hamerton's paper, in the series which has been so welcome the past year, deals with the drinking habits of the French and English, and pleads mainly for discrimination between individuals, on the old ground that indictments are not to be drawn against a whole nation; and he takes occasion, touching lightly on a kindred subject, to traverse Mr. Arnold's charge of lubricity, and to remind him that the batch of contemporary novels is not the whole of French moral life. He himself declares the accusation, so far as his observation and knowledge go, to be false; and he ascribes the French novel of the day, not to a world-reforming school of "Realism," but to the fact that it is made to sell, and that vice has greater capacity to afford sensations to the reader than virtue possesses. Mr. Percival Lowell's third article on the characteristics of the Oriental, and more narrowly the Japanese, concerns itself with the attractive topic of their art, and, like its predecessors, illustrates the impersonality of their civilization. Like all we have seen from his pen, this essay is strongly intellectual in its substance, and, though mannered, is brilliantly handled. The historical chapter by John Fiske, on the "Adoption of the Constitution," is a ranking article on the topic which has lately engaged many writers.

—*Scribner's* misses the best part of its welcome in having no more of Thackeray's letters; and literature itself seems to have dropped out of the issue. The first place is held by music. Mr. W. F. Apthorp's article on "Wagner and Scenic Art" is as entertaining as it is timely, in view of the German opera season at the Metropolitan, which promises to be more Wagnerian than ever. It is accompanied by ten illustrations of scenes from Wagner's later operas, partly based on the original sketches for the scenery at Bayreuth, and partly on photographs from life. The poetic character of these illustrations will explain to many who have never seen these dramas, why Wagner was able occasionally to indulge in peculiar effects of stage lighting which, for the moment, made the facial expression of the actor of secondary importance—relying on the situation, the scenery, and the illustrative music for some of his grandest effects. Mr. Apthorp points out very lucidly the methods by means of which Wagner made such great advances over his dramatic predecessors in gaining a complete and uninterrupted stage illusion. The illustrations to Dr. Sargent's article upon athletics carry with them a pleasing suggestion of the ancient gymnasium and of the more physical examples of Greek art. The text shows what types are developed by the different sports—how the wrestler differs from the runner, and in what directions the gymnast must work to secure the much-desired "all-round" development. It is an interesting exhibition, clear to the most sceptical, although nowhere especially insisted on by the writer, of the serious physiological side of misunderstood "college sports." Miss Seward tells at some length the history of the negotiations with Denmark for the acquisition of its West Indies possessions, and makes a sorry showing for the Senate Committee on Foreign Affairs, who shelved the treaty and put the friendly and liberal Danish Government in so discredited a position that it fell. The failure to obtain the islands was a secondary matter in comparison with the manner of our behavior in an international affair of such a nature. Mr. Francis A. Walker treats of the proper attitude of those advisers of the workingmen who are not of them, but speak from the platform or the press; his words are plain and practical, whether they contain the whole truth or not. He believes in competition so completely that he hails the organization and increased powers of the laborers as another potent factor in the struggle; and the keener the struggle is, the better, he thinks, the results will be. He pleads only for the fair play, and moderation, and law-abiding habit of the native American in the conduct of the economic battle; and in view of the fact that in the confusions of the last two years native Americans have been noticeably absent, he adds his weight and influence seemingly in favor of the protection of the American spirit and way of doing things against the inroads of foreign violence, ignorance, and insolence. The article itself is an excellent example of the attitude of mind the author argues for.

—*Harper's* is largely devoted to the inexhaustible subject of travel. One article, of direct interest to those invalids who have weak lungs, covers in a paragraphic way the leading health resorts of the Mediterranean and this country; another has the color and warmth of Santa Barbara to enliven it; a third, in the disguise of a novel, deals with the South. The two principal contributions are an account of Chantilly, abundantly illustrated, and a view of the Argentine Republic, which deserves to be read by all who are interested in our material prosperity. The text is more statistical and commercial than descriptive of the people and their cities. It reads like the glowing prospectus of some great enterprise; but, in view of what the last decade has accomplished for that vast and prosperous region, in so many ways paralleling the movement of our own population and capital in the new States of the West, and in view also of the great plans already in execution for the opening up of the country to the north, and for the providing of transcontinental paths of commerce between the two oceans by which the long détour about Cape Horn will be made unnecessary, it is hardly possible to exaggerate the meaning and reach of the immediate future of the temperate zone of the Southern Hemisphere. The natural friendliness of the rising Powers, the prospect of their rivalry with ourselves in the export of the necessaries of life, and the insignificant portion of international commerce with them which falls to our share, are strongly brought out; the bribes which capital has received to apply itself to bring out their resources, and the generosity of the Government in providing inducements to settlers, make our own vast grants and liberal policy in peopling and railroading the West seem economical and restrained. It necessarily raises the question how far our reluctance to allow large fortunes to spring up out of schemes which result in widely distributed general good, is justified by facts in a time of enormous expansion; and when a country so very like our new West, with its grain and cattle, is evidently growing up in the Southern Hemisphere, the question of what our trade relations with it are to be both in the way of competition and of supply is one of very deep concern. The difference between English and American enterprise is that the West absorbs us, but it is the world that absorbs London. Differences of national policy, and possibly of national destiny, lie in the distinction.

—In the *Century* Mr. George Kennan begins his series of articles upon Russia and the Nihilists, which promises to be a very notable feature of the magazine. He says, to start with, that there are no Nihilists, as the name is commonly understood—no party, that is, which aims at pure destruction; it would be as sensible to think of the "Know-Nothings" as persons who really are ignoramuses as it is to think of the Nihilists as mere levellers of all institutions indiscriminately. The appellation is a nickname, taken from one of Turgeneff's novels, and applied by the Government to its opponents. This preliminary word of warning opens the way for a truer view of the very heterogeneous party of reform which constitutes the liberalism of Russia. The method of terror is the policy of only one group, and came to be adopted in their case only when the peaceful and legal protests of the other sections had failed. Now Mr. Kennan enables the public to discriminate easily between the dynamite extremists and those who, in any other country, would be known as the constitutionalists. What the grievances of the Russian people are, and what the remedies proposed by the educated class, are questions which could not be answered more authoritatively and clearly than by the letter of the Moscow Liberals laid before the late Czar by Melikoff, which Mr. Kennan is fortunately able to give us. It was on the ground of this petition that the Czar acted in signing the proclamation to give a constitutional government to Russia, as is well known, the day before his assassination. It is a very instructive document—much the most important contribution to the current knowledge of Russian disorders. So far from being a proclamation of anarchy, it shows only too plainly that the Russian Liberals, dynamiters and all, are demanding only the most undisputed rights of men, and institutions embodying the simplest principles of liberty. Mr. Kennan, in his own text, writes in the most matter-of-fact way, and gives names and instances in support of what others have told us in vague declarations. His words must make a deep impression. Other noticeable papers are a pleasant familiar sketch of the Washingtons at Mount Vernon, fresh in style and beautifully illustrated, and a critical eulogy of St. Gaudens, by Kenyon Cox, with a reproduction of the Lincoln statue at Chicago, and of other notable, if minor, productions.

—It was not without some misgivings, in view of a certain eminent example now monthly vouchsafed us, that we noticed in the last *English Illustrated Magazine* a new department of literary and social chat. The writer is Mr. H. D. Traill, whose work we have had occasion to mention from time to time, and often with pleasure. His opening batch of paragraphs was without distinction, but in the

November issue he comes to the front with a series of alert, bright, and thoroughly entertaining little essays, quite up to the level of this sort of literary amusement among ourselves. He has the good luck to get a stroke at the French naturalists, apropos of M. Paul Bonnetain's disapproval of Zola—an ostracism which makes Mr. Traill wittily recall Hogg's news of an acquaintance whom he disliked—that "he had been put ashore by the crew of a whaling vessel for ungentlemanly conduct." Zola is put down by Mr. Traill as an idealist, after all, an idealist of ugliness. "Precisely as the Greek sculptor seized upon the isolated perfections distributed over a group of real or imaginary models—here the noble poise of a head, there the exquisite moulding of a bust—and combined them into the majestic presentment of the goddess; so the French writer has borrowed features of depravity from a variety of members of these classes from which his hideous heroes and heroines are drawn—here a base instinct, there a foul habit—and then amalgamated them into an ignoble, but not the less ideal, whole." The essay is, entire, a bright little "arrow of the chase." In another paragraph he discovers the startling union of Walt Whitman and Tupper in an imperial poet, Prince Chun, father of the Emperor of China, etc. Certainly this ode sounds like Whitman:

> "Oh, this China of four thousand years and more,
> Whose civilization and excellence extend to the utmost parts";

but we protest against the ascription of Whitman's poetical fame to "many of his countrymen." It is Englishmen who have made him the "transatlantic laureate of democracy"; and the "fad," after all, has not extended very widely on this side. A beautifully illustrated meandering article on the Bath Road, and some statuesque Capri figure-pieces by MacLaren—supplemented by a romantic sketch of the inexhaustible island by Linda Villari—make the body of this excellent number.

—*Annals of Botany*, vol. i, No. 1, August, 1887 (Oxford: Clarendon Press; New York: Macmillan), is the first part of a new journal—if that may be so called which is to issue "from time to time"—edited by Profs. Balfour of Oxford University and Vines of Cambridge University, with whom is associated Prof. Farlow of our own Cambridge. Now that these three universities have set up botanical laboratories, under men who are actively engaged in research as well as instruction—especially in physiological and histological research—it is natural that they wish to have an English-speaking periodical, and that they should look for adequate support, "not only in Great Britain, but also in India and the colonies and in America." The excellent appearance of the initial number, not only scientifically in the subject matter, but typographically and iconographically (for the plates are numerous and wonderfully good), should justify the hope. As might be expected, the articles deal chiefly with microscopical subjects, and these are likely to be prominent. But systematic botany and morphology are to have their turn; also reviews and criticisms. In this number the Record of Current Literature is formidably extensive, and is separately paged. Only bare titles are given; but these extend even to short notes in the obscurer or local periodicals as well as in the proceedings of scientific societies, and those of every country. The only objection to this minuteness is, that it gives unimportant notes an undue prominence. Evidently the conductors of these annals do not expect to be idle, nor to be surpassed by the Germans in painstaking.

THE ETHICAL IMPORT OF DARWINISM.

The Ethical Import of Darwinism. By Jacob Gould Schurman, Professor of Philosophy in Cornell University. Charles Scribner's Sons. 1887. Pp. xv., 264.

Prof. Schurman's little work is another evidence of the lively philosophic fermentation which is going on in our midst. "It is the mixing up of things which is the great Bad," is a quotation from George Eliot with which the author begins his preface; and he goes on to say that the work is primarily the outcome of his own intellectual needs, and "has cleared up in [his] own mind the confusion between guesses and facts which is 'the great Bad' in evolutionary ethics." He is "not without hope that it may also prove clarifying to other minds," and publishes it for intelligent laymen rather than for philosophic experts.

Dr. Schurman's style is so clear and rich and easy that it is a pleasure to follow him. Sometimes, indeed, he is too copious; and one feels that the argument would stand out more plainly if the author had been shorter in setting it forth. The conclusion, moreover, will, to many, seem discontinuous with the beginning, as if lectures composed for different occasions and afterwards run together might be to thank for the production of the book. The extrication of the reader from his native "mixing up of things" is, in short, not effected with a quite ringing enough note; and one longs occasionally for something a little more in the style of those few memorable pages of Mr. Arthur Balfour (Chief Secretary for Ireland) at the end of his 'Defence of Philosophic Doubt.'

In the first chapter, Dr. Schurman seeks to separate what is speculative from what can be strictly called "scientific" in ethics, and comes to the conclusion that since *sciences* deal only with *facts* and not with *ideals* as such, the history of men's actual opinions about moral acts is the only *science* pertaining to the subject. At the end of the book (p. 255) he admits that no science of such opinions can determine what *are* moral acts; and that no speculations as to what they are have authority beyond the speculator himself, who knows what ought to be only by "feeling it in his bones." This, to many readers, will seem a "sceptical" conclusion. It may be said, however, it puts moral beliefs deeper than any science could put them, for it seems to make of them nothing less than moral *acts*, and leaves us as liable to lose our souls morally by not believing in a duty as by not doing it after the belief is there. Different persons will take this distinction in different ways; and, considering its importance, the author might have thrown it into higher relief.

The next four chapters popularly analyze the essentials of the Darwinian theory of natural selection. They are charmingly written, but make one wonder whether readers who are supposed to need such a lengthy account are worth writing for at all. Persons as densely ignorant at this late day as Dr. Schurman assumes us to be, of the fact that Darwin never professed to explain the original variations, but only to account for their accumulation and survival, can hardly be saved under any circumstances from that "mixing up of things which is the great Bad," and might perhaps be left alone. The reflections which Dr. Schurman proceeds to make on these variations, however, are both clear and interesting, and we have not met them elsewhere. Even were it true, he says, that consciousness were an accident in an automaton, and conscience an accident of that accident—the utilities of the two accidents enabling them to survive—it would not follow (as the materialistic evolutionists keep saying or hinting) that survival is the whole *meaning* of morality, or that speculative utilitarianism is true. Honesty could still be the best policy, even though goodness were an absolute end.

"All that natural selection requires is that something shall be useful; *what else it may be*, what other predicates it may have, wherein its essence consists, natural selection knows not and recks not. Be virtue a proximate end or an ultimate end, natural selection tells us it will be preserved and perpetuated if it is useful; and it tells us no more. It is, accordingly, a gratuitous assumption which evolutionary moralists make, when they decline to allow more than a merely relative value to morality" (p. 134).

"There are other things besides morality which favor survival. . . . The eye, for example, has no existence among the lowest animals; yet, when it does appear, its own new story is accepted as a fresh revelation of fact. Instead of describing it as an advantage in the struggle for life, the evolutionist sees in the new organ the possibility of a deeper communion with reality; and the more developed the organ, the more valuable its evidence. The earliest eye was probably nothing more than a tingling sensitiveness to light and darkness. The most developed eye discerns a spectrum of seven colors; and along with this advance it has also acquired the capacity of measuring distances, magnitudes, and situations. Both these functions of the eye were eminently useful in the struggle for life. . . . Yet the evolutionist does not hold the eye is merely a utility. Bringing the surprise of something new and unexpected, the eye, he will recognize, is useful only because it makes us aware of fact. But if you accept the evidence of the eye when it testifies to the colors or sizes of objects, you cannot reject the depositions of conscience to the moral character of conduct and motives. This is a new mental function, and has the same claim upon you as the other. The validity of the intuition, 'Injustice is wrong,' is neither greater nor less than the validity of the perception, 'Snow is white'" (p. 158).

The whole question, as far as ethics is concerned, turns on the nature of those primitive variations of impulse and feeling of whose existence natural selection took advantage.

In chapter v. Dr. Schurman, with much ability and success, takes Darwin to task for having abandoned the notion of primitive variations in his explanation of the moral sense, and tried to exhibit the latter as a necessary resultant of such preëxistent mental traits as memory, reflection, and sociability. His speculative ethics is thus drawn on quite other lines from his observational biology. Sudden variations in the way of intuitive perceptions of the superior excellence of social over selfish instincts would (if we understand Dr. Schurman rightly) be the only origin of conscience which he would himself allow to be plausible. But in his last chapter, in which he makes a very telling criticism of Morgan's and McLennan's speculations about the primitive family, he knocks out one such supposed intuitive perception, by admitting that history gives no ground for supposing that chastity and fidelity between the sexes have been universally recognized as virtues by men. But though these virtues are not intuitive, *some* virtues, we may hold, are so. Which they are, further historical study must decide. The author makes some tentative suggestions to this effect as he ends. One misses in his book the clearness and trenchancy which come of a radical temperament. One finds instead the excellences of a scholarly and candid and genuinely inquiring mind. The work deserves to be widely read.

ILLUSTRATED HOLIDAY BOOKS.

King Henry IV. Parts I. and II. Illustrated by Edward Grützner. With an Introduction by Edward Dowden, LL.D. Édition de Luxe. Cassell & Co.

The Modern School of Art. Edited by Wilfred Meynell. Illustrated. Cassell & Co.

The Vision of Sir Launfal. By James Russell Lowell. Illustrated. Boston: Houghton, Mifflin & Co.

Pictures from Holland. Drawn with Pen and Pencil by Richard Lovett, M. A. T. Nelson & Sons.

It is a curious fact that the keenest general appreciation of Shakspere is given by the Germans, and that, whether on the stage or in the field of design, they hold a distinct preëminence among interpreters of the spirit of the poet. The best performance of a play by Shakspere we have ever seen was in a German theatre, and the best general illustration of the plays has been German. C. R. Leslie painted many pictures from Shakspere, and his humor was most certainly of a subtle quality, excelling always in the gayer and more frolicsome passages; but he seems never to have conceived the character so clearly as the *mise-en-scène*, so that his Shakspere people were anybody's people playing in Shakspere's comedies. Smirke had, with certain theatrical qualities added to the dramatic, noteworthy sympathy with the Shakspere spirit; Maclise was a ranter; and, of all the minor painters of our day, not one has risen to the dignity of a pictorial re-creation or noteworthy impersonation of the ideals of the great dramatist. The English artist apparently takes his model—the most convenient—studies the costume and the action; but when all is done, it is the model, however dressed and posed. The German studies out the character and makes a serious preparation for his task, realizing how far from any chance-come model is the personage of the play. It is not a case of distinctly creative imagination—the poet has struck out the individual; but, while the English painter tries only to conceive how he would act and pose, and the Frenchman does not conceive him at all as a Shaksperian type, the German, by a sentimental sympathy, has found out all about him, and gives him to us, not, indeed, without a German accent in his speech, but more nearly the real man of Shakspere than any other art has ever produced.

It is safe to say that no living English painter could have done so well the illustration of the superb volume at the head of our list, which is as worthy of the great dramatist as printer, paper-maker, and commentator could make it. Printed in typographical luxury on heavy Whatman hand-made paper, with red-letter act and scene headings, and head and tail-pieces, it is illustrated by twelve excellent photogravures, of which four are full-page, from black and white drawings by Grützner (photogravure of Goupil & Co.). Two of the latter—the crown scene, act iv., scene 4 of Part II., "O pardon me, my liege," and that from act i., scene 2 of the same part, "What money have I in my purse?" and especially the latter—are admirable pictorial conceptions, the first pathetic and the second humorous. It seems a matter of course that when *Falstaff* comes in it is easier to laugh than to be sentimental, and in his presence motley is the only wear.

The question of photogravure versus engraving is much discussed nowadays, and, on the part of the conservatives in art, with great lamentation that the latter is losing ground; but, with all due respect to art, it seems to us that the substitution of any process of reproduction which, being mechanical, insures absolute fidelity to the original, is a boon to lovers of art. It puts, too, within the reach of everybody, reproductions of the subtler and more inaccessible works of art, such as were unattainable in the days of engraving. Engraving can only be considered superior to photogravure when, as in the case of Turner, the artist himself makes changes which compensate for qualities sacrificed in reducing to white and black, or which improve by changing the originals. Absolute fidelity to the original, such as photogravure insures, is worth all the qualities peculiar to any form of engraving when this fidelity is not attained. We have long since given up the reproduction of old masters in white and black made by an artist, in favor of the photograph; there is no reason why we should not equally accept the photogravure instead of line engraving, much more, then, of mezzotint and other inferior kinds. In fact, the photogravure does not exclude, in case of need, the compensation of the burin; and the illustrations of this volume show, in excellent discretion, the aid so given by a competent engraver. It is always possible to enforce, emphasize, and render more brilliant the photogravure, without in the least sacrificing the fidelity to the most subtle qualities of the original; and while it seems to us to be utterly illegitimate and tricky to affect, as is too often the case, to reproduce those brush marks and excrescences of pigment in pictures which are only visible in a certain light, as qualities of art, it is desirable that, where the original is fitted for absolute reproduction, as in the case of these designs of Herr Grützner in charcoal, the minutest qualities of the original should be preserved. The reproduction by photography of oil paintings has had the disadvantages, in the French school especially, of leading artists to modify the color of the picture to meet the limitations of the photograph—the commercial value of the copyright often exceeding that of the original—so that color development is checked, and the artist self-limited to colors which are favorable to a well-balanced reproduction in the camera. But this has no relation to photogravure, and obtained before the success of that method of translating color into white and black. If the artists could only be induced to make that translation into monochrome for the use of the photographer, there is no good reason why photogravure should not supersede mezzotint and stipple and mixed engraving in all cases, and line in most. The illustrations of Herr Grützner, though not the highest branch of German art, are, we believe, good arguments in favor of this position. The camera can never supersede the brain and hand of the designer; and for the repetition of his ideals what we want is fidelity, not the dexterity or ability of the copyist. Mediums of translation should be as transparent and non-individual as possible.

When a writer uses so broad a term as '*The* Modern School of Art,' we naturally expect something in the way of a broad distinction between the ancient schools and that of to-day. But the title of this book is a misnomer, for it only refers to a very limited phase of the development of art in modern times, and that in a manner which suggests rather a trade circular than a work on art. The artists included are English, with the exception of Meissonier, Legros, Bonnat, and Eastman Johnson, who are thrown in to give some coloring of generality. Eastman Johnson has (illustrations included) six pages devoted to him, of which the following is a specimen:

"He paints with *a full brush and great solidity, but at the same time with none of the coarseness that suggests rather paint than texture.* His eye for color is correct, and he is especially happy in brilliant effects, *which he mellows by an agreeable modulation of gray tints.* Light and shade, if not distinguishing characteristics of his work, are satisfactorily rendered. His shadows are sometimes conventional and not strictly true to nature, and *his drawing is liable to the imputation of uncertainty and fluffiness*, due in part to his working so long without a master, but more to the fact that his talent is one for color and the study of character."

Yet half a page before this we read of him that "his work is remarkable alike *for firmness of handling and refinement of color and texture.*" The value of such criticism is not apparent. It is a fair example of the rubbish written by those employed to do the work for periodicals of the character of the *Magazine of Art*, in which these essays have appeared, but it does neither credit to the editors nor good to the public. The writer, having no competence for judgment on artistic grounds, resorts, like others of his class, to the slang of the studio to hide his ignorance of principles—"fluffiness," "full brush," etc.

The choice of subjects in this book was probably determined by considerations not perceptible to the public, for though we have Leighton, whose position as President of the Royal Academy rather than his excellence as an artist gives him a right to special notice, Millais, Poynter, and Herkomer as representatives of the English school, which is assumed to possess the leading position in modern art, we have in the same breath Louise Jopling(!), Yeames, Fildes, Nicol, Boughton, Halswelle, Orchardson, and Holman Hunt as among the chiefs—not Watts, Rossetti, Burne Jones, or one of the great water-colorists who are really the true masters in English art. The subjects are those which the uneducated opinion of the general public has adopted, and the treatment is not calculated even to better that. The adulatory nonsense—one cannot call it criticism—in the leading essay on Leighton, is sufficient to fix the place of the book among the fashion-plate series, which find their principal use in the decoration of centre-tables by their brilliant binding.

Perhaps there is not, in the whole range of American poetry, so puzzling a subject for illustration as Lowell's 'Sir Launfal.' For an artist to read it is to have called up an infinite gallery of pictures already painted, so far as may be, in words, and with a felicity which the pencil cannot emulate. Take, for instance, this:

"Every clod feels a stir of might,
An instinct within it that reaches and towers,
And, groping blindly above it for light,
Climbs to a soul in grass and flowers;
The flush of life may well be seen
Thrilling back over hills and valleys;
The cowslip startles in meadows green,
The buttercup catches the sun in its chalice,
And there's never a leaf nor a blade too mean
To be some happy creature's palace;
The little bird sits at his door in the sun,
Atilt like a blossom among the leaves,
And lets his illumined being o'errun
With the deluge of summer it receives."

What better image of summer and sunshine can we have, and what can art do to suggest it? Again, the well-known frost picture:

"The little brook heard it and built a roof
'Neath which he could house him, winter-proof.
All night, by the white stars' frosty gleams,
He groined his arches and matched his beams.

No mortal builder's most rare device
Could match this winter-palace of ice"

—what painter can give it visible existence? Imagination and fancy are so mixed through the whole poem that there is hardly a passage where the verifiable creations of the one can be isolated from the complicating embellishments of the other.

There are, however, besides these untranslatable pictures so many that will well endure line and tint, and gain by them, that the selection of the poem for illustration on the scale proposed by the publishers of this unexampled edition should have insured a more serious and artistic effort to fill the order than the designers for it have seen fit to give. The style in which the book is published is worthy of high praise, even among éditions de luxe. Each page is printed on a heavy board (only one side being occupied by the text or illustration), and this hinged to open flat. The binding is in the ex-

treme of elegance and good taste and the cutting of the illustrations is both subtle and faithful to the drawings; but the designs, with some exceptions, are a discredit to their designers, indicating neither an intelligent reading of the poem, nor a decent care for the congruities of so noble an undertaking. The processed headpieces by Bridwell are charming designs, and that of the prelude to the second part is quite in the spirit of the poem. The tail-piece by Alfred Kappes, on p. 85 (in index 87, Shirlaw's Wanderer, indexed 85, being really on 83), is picturesque and not incongruous. But the frontispiece portrait of Lowell is a disgrace to the talented portrait-painter who drew it, though the reproduction of the drawing by Juengling is a surprising *tour de force*. The two winter landscapes are, if not particularly illustrative of the poem, still good winter landscapes, although they share too much in the affectation of flimsiness which is getting to be characteristic with American designers for book illustration. The summer landscape of F. Hopkinson Smith to "And what is so rare as a day in June?" and the interior, with figures by Shirlaw, to "And the wanderer is welcome to the hall," are effective and acceptable as designs, though hardly in the spirit of 'Sir Launfal' more than of any other poem or story, the landscape having absolutely no conceivable relation to it. But the two designs of Christ by Mowbray are simply caricatures of religious art, and,even rendered as they are with the curious fidelity of Juengling's graver, quite unworthy the book, redeemed in fact from utter vulgarity only by being in the translation of an engraver who cannot be vulgar. Mr. Swain Gifford's "He sees the snake-like caravan crawl" is a good desert scene, but suggests nothing "snake-like"; three camels, of which one is hidden by another, and the third is in the distance, not filling the demand of the poem any better than does the poor and irrelevant design to "Better the blessing of the poor" of Mr. Freer. These, and Shirlaw's "And through the dark arch a charger sprang," and "My golden spurs now bring to me," can only be classed as incompetences of the first order, and, like the two Christs, are only saved from dishonoring the book by the singular excellence of the engraving and printing. They are poor, trivial work, of which their respective artists should be ashamed when they see the company to which they have presented them.

And in the poem there are offered such passages for illustration as

> "The crows flapped over by twos and threes,
> In the pool drowsed the cattle up to their knees";

and

> "The castle alone in the landscape lay,
> Like an outpost of winter, dull and gray";

or

> "Around it for leagues her pavilions tall
> Stretched left and right,
> Over the hills and out of sight."

While the picture of the whole poem—

> "As Sir Launfal made morn through the darksome gate,
> He was 'ware of a leper, crouched by the same"

—is not even suggested by Mr. Shirlaw's

> "And through the dark arch a charger sprang."

In the winter part the passage,

> "Down swept the chill wind from the mountain peak,
> From the snow five thousand summers old,"

so full of possible and imaginative suggestion, is not hinted at by Mr. Smith's winter landscape; and the magnificent picture—

> "And he sat in the gateway and saw all night
> The great hall-fire, so cheery and bold,
> Through the window-slits of the castle old,
> Build out its piers of ruddy light
> Against the drift of the cold"

—has not tempted a trial of its capacities for night effect; nor has the finest distinctly figure subject of the whole poem—

> "As Sir Launfal mused with a downcast face,
> A light shone round about the place;
> The leper no longer crouched at his side,
> But stood before him glorified";

or the almost equally fine one—

> "He parted in twain his single crust,
> He broke the ice on the streamlet's brink,
> And gave the leper to eat and drink."

The sumptuous books on Holland published in the few years past are evidence of an awakening interest in that delightful country in the minds of habitual travellers. Mr. Lovett's volume is an humbler tribute; and though, as art, the illustrations are, where not taken from pictures by the Dutch masters, indifferent or worse, and as engraving, whether from great pictures or poor photographs, quite below the best standard of wood-engraving, the book will find its field, and enable many fireside travellers to gather a fair idea of one of the most interesting countries on the face of the globe. As the usual, logical, and by far the most convenient gate to Holland is by Rotterdam, it is difficult to understand why the itinerary of Mr. Lovett begins at Zaandam. Of course, in a book of this character, much must be omitted. Moreover, the peculiar object of it—legitimate enough, for the rest—is to exalt the constancy of the Protestantism of Holland, which is done without attacking Catholicism. The chapter most open to objection is that which deals with Dutch art, which, absurdly enough, begins with Rembrandt, as if he had sprung ready armed from the blood of the old Spanish war, with neither predecessor nor master, a single mention of Pieter Lastman, in whose studio he was "for a few months," being all the information we get of the antecedents of his celebrity. Of what is original in this so incomplete summary one can only say that it shows the hardihood, and we may add originality, of opinion usual in people who have never qualified themselves to pass an opinion, while, in what is quoted, the selection is naturally no more intelligent. Take, for instance, a notice of Ruysdael, where we read "that he was the greatest landscape painter that modern art has ever produced; . . . a draughtsman of the first order, he was also a finished *colorist*. His color, *warm and soft*, exhibits in the half tints of light and shade variations of *exquisite sweetness*." To quote such rubbish as authoritative criticism is far worse than to write original nonsense, and a writer capable of it is out of the category of those who have even the elementary knowledge of art or the ordinary capacity to study nature. The quotation goes on to say: "Never did artist succeed as Ruysdael in concentrating in his skies, filled with sombre and threatening clouds, *so melancholy and tender a poetical feeling*." We are very far from denying to Ruysdael a high order of technical ability, but he had no sentiment, and his skies are more innocent of any melancholy than a sea of Vandevelde's, for one may say that a muddy sea *is* melancholy. That Ruysdael never *painted* from nature is evident to any man who has done so. He drew much and carefully, but his work never forsakes the conventional treatment of his school, and to stamp him as the greatest landscape painter of modern times is only to proclaim one's utter ignorance of art.

The poetic justice which is meted out to us for our part in the history of slavery is the appropriation of the only national field of art or song by the negro—the only picturesque or spontaneously musical element in our population. Negro melodies are the limit of popular enjoyment of music, and constitute the only form of it which thus far America has brought into existence, and on the real plantation song some of our best song music has been constructed. Stephen C. Foster was the author of the most popular of the second-hand negro melodies, words and music, and Ticknor & Co. have brought out as Christmas books very fully and prettily illustrated editions of two of them, the "Swanee Ribber," with portrait of Christine Nilsson, and the "Old Kentucky Home," which recalls one of the most justly popular figure pictures yet painted in this country, Eastman Johnson's "Kentucky Home." The illustrations are by Chas. Copeland for the former, and for the latter by Mary Hallock Foote. They are exhaustive of the capabilities of the subject. Though unequal as designs, the best are in the best vein of our book illustration, and as *ensemble* they distinctly deserve a place on this winter's tables and in next year's book-cases.

An Introduction to the Study of Provençal. By Darcy Butterworth Kitchin, B.A. 12mo, pp. viii., 143. London and Edinburgh: Williams & Norgate. 1887.

THIS neat little volume, which enjoys the honorable distinction of being the first English book for the study of Provençal, is compiled "for the use of students of Romance Philology and candidates for the Mediæval and Modern Languages Tripos at Cambridge, and similar examinations at other universities." But in the present condition of Romance study in England and in this country, the scope of its use may well be broadened to include all our beginners in Provençal. Private students, in particular, may welcome it heartily, for it is a book which they can master readily; it will give them a fair idea of the nature of this literature, and doubtless make them eager to gain fuller knowledge of a body of verse which in form, at least, is matchless. It is, however, chiefly on the ground that it is needful and will be serviceable that this work can be recommended. That in execution it is up to the present high standard cannot be said. Mr. Kitchin divides his work into three books. In the first he gives a sketch of the literature. This division of his work is for the most part a translation and condensation of Bartsch's 'Grundriss zur Geschichte der provenzalischen Literatur,' which is, in general, a thoroughly reliable book. But, in attempting to condense Bartsch, Mr. Kitchin occasionally misrepresents him; while in the few cases where he abandons Bartsch's guidance, he goes astray almost without fail. Thus, he thinks, p. 5, that the Moors were a "serious factor in the style and feeling" of Provençal literature. This ghost has been laid time and again. In raising it anew, does Mr. Kitchin forget that exuberant sensuous imagery, that "serious factor in the style and feeling" of Oriental verse, is unknown in Provençal? On p. 6 he says that *oïl* is derived from *hoc illud;* p. 8, that the fragment of Boëthius "consists of 258 ten-syllable verses accented on the fourth syllable" (not on the tenth as well?); that in the tenth and eleventh centuries "the *langue d'oc* and the *langue d'oïl* were as yet unseparated," and that "assonance was *often* found in place of rhyme"; p. 11, that the troubadour biographies are "in the main of great value" (and at all trustworthy?); p. 12, that in epic poetry the cæsura may fall after the fifth syllable if the verse be feminine (and not so if it be masculine? In fact, the *feminine cæsura* occurs both in verse with masculine rhyme and in that with feminine); and that the poets of Provence "delighted in piling rhyme upon rhyme, regardless of meaning." On p. 22 he asserts that the poetical Academy of Toulouse was once in danger of disruption, through the establishment of the *jeux floraux* (by, alas! Clémence Isaure).

The second book treats of the language. Excepting the first chapter and scattered remarks in the others, this follows Bartsch's 'Chrestomathie' closely. The first chapter deals with

letter change (making, however, no attempt at scientific exposition of phonetics) and pronunciation. For the latter a considerable number of rules is given, so that he who uses this book no longer need say, "Il n'y a pas de prononciation provençale." The treatment of pronouns and of verbs is noticeable for simplicity and method. There are a few slips in this part. Such are the statement, on p. 25, that the double sound of *e* and *o* was not precisely observed; the implied derivation on p. 29 of *luxe* from *lux* (doubly impossible, by meaning and by phonetics); the unqualified assertion on p. 32 that nominative *s* in Provençal nouns comes directly from the Latin (cf. pp. 30, 31). Further, it is puzzling to read (p. 53) that strong verbs are those "which throw the accent in the 1st and 3d sing. of the perf. indic. on the stem, and not on the ending"—inasmuch as strong verbs in these forms have no ending—and distressing to see Latin etymons given (*passim*) in the nominative case.

The third book consists of selections from the literature—two in prose and ten in verse. Here the biography of Guillem de Cabestaing makes an easy introduction into an admittedly difficult language. The other prose piece is from the grammar of Uc Faidit. Then follow a *ballade*, a hymn, an *alba*, three *canzos*, a *domnejaire*, and a *sirventes*, besides extracts from Peire de Corbiac's 'Tezaurs' and from 'Flamenca.' Apropos of 'Flamenca,' we are told (p. 98) that it is "the best surviving example of the epic poems of Southern France." 'Girart de Rossilho,' the only real epic in the language, is nowhere mentioned (though Mignard's edition of the *old French* poem of the same name is noticed in the bibliography), and the 'Chanson de la croisade albigeoise' is referred to only indirectly (p. 11).

On the whole, the verse selections are good, and may fairly be considered representative, though one would expect to see some of the work of Bernart de Ventadorn, the simplest as well as the sweetest singer of them all, and of Peire Cardenal, the great master of the *sirventes*, in a book that finds place for the lady of Vilanova and Alphonso II. of Aragon. Full notes accompany the text, and there is a glossary. A select bibliography and an index close the volume. For a book so small there are two many typographical errors. A few may be noted: p. 8, l. 2, Rhodes for Rodez (same error in index); p. 29, l. 2, nijo for hijo; 34, 13, Dranges, Drango for Drauges, Draugo; 76, 41, es for en; 89, 79, fo rei for bo rei.

Martin Luther: His Life and Work. By Peter Bayne, LL.D. 2 vols. Cassell & Co. 1887.

Dr. Peter Bayne belongs to a class of men with whom one finds it difficult to maintain the degree of patience necessary for any critical judgment of their work. These are the Carlyle imitators. Their mistake is in supposing that what made Carlyle great was the oddity of his expression, whereas in fact he was great in spite of that, and would have been great no matter how he had chosen to express himself. The imitator who begins with the oddity is pretty likely to end there, and to reveal the essential littleness of his own talent by challenging comparison with the master. This is precisely what Dr. Bayne has done to the extent of two stout octavo volumes.

His method has been to take two or three of the best modern works on Luther, together with the reformer's own writings, then to select the most striking incidents of his career, and make each of these the subject of a chapter with some more or less fantastic heading, then to weave about these incidents a narrative of which one part is the accepted tradition of the day, and three parts are speculation as to what the persons concerned must have thought and felt, and what would have happened if things had been different from what they were. The result is, that on the whole the facts narrated are pretty well founded in the researches of trustworthy scholars, that the narrative is in many places picturesque and vivid, but that the general effect is fantastic and cloudy to a degree.

Never, perhaps, was there a man whose life lent itself to partisan treatment more easily than that of Luther. His nature was full of contradictions; the multitudinous problems of his life made it impossible for him to live up to any strictly consistent principles either of judgment or of conduct. Thus, friend or enemy seeking for proofs of his goodness or of his badness can find them in abundance. Dr. Bayne is one of the friends from whom any man looking forward in anxiety as to his reputation might pray to be delivered. He is rather an advocate than an historian. He admits seeming weaknesses and shortcomings in his hero, but does this only to excuse them and explain them away. He is an avowed hero-worshipper, refreshingly frank in his worship, but causing the reader to fear that things may have been concealed or slighted which must be known if the whole figure of a man is to be brought before us. This method of treatment is a deplorable one. It was employed with great force by the most powerful antagonists of the Reformation in recent times, the Catholic Janssen, but that fact has made it all the more incumbent upon the historian of Protestant effort to take an entirely new line of defence. Not by gathering another list of facts on the other side, but by showing that those brought forward by Janssen are in themselves false or misleading, can the defender of the new faith make a powerful impression upon the thinking world.

The style of the book may be best illustrated by the first chapter of the second book. Beginning after the manner of certain novelists, "The early shadows of a November night had fallen upon Eisleben, the trim little county town of the district, or, as we should say, the shire, of Mansfeld to the north of Thuringia," it goes on to inform us that "Die Sonne tönt nach alter Weise—the sun shines much as usual, making his tuneful way through the heavens without perceptible variation in the melody. In the humble room, however, in which lies Margaret, the young wife of John Luder, Ludher, Leuder, Lothar, Lotter, Lutter, Luther—no one had ever cared to ask how the poor miner spelt his name—an event was expected which, from prince to peasant, is of interest to young couples." After referring then to certain legends regarding the supernatural incidents connected with the birth of the reformer, the author continues:

"Returning then to the room—probably a temporary lodging—in which, with or without stellar participation, the boy was born, we can discern, or plausibly infer from subsequent knowledge, that his eyes have a notable sparkle. Not improbably also the cry of surprise, alarm, and distress in which, in the manner of human kind, the infant intimates its sense of the liberty taken with it in ushering it into this world, might have hinted to ears medically expert that, though blessed with excellent lungs, it had something eccentric in the intestinal region. But we cannot be certain that Luther's dyspepsia, as well authenticated as Carlyle's, was congenital. The incidents of the birth were, in short, those usual in such cases."

Three authors appear to have been constantly in the mind of Dr. Bayne while making this book, Shakspere, Carlyle, and George Eliot. If we are to believe him, Shakspere was profoundly influenced by Lutheran ideas. How valuable his opinion is may be inferred from the following argument: Cardinal Cajetan, papal legate to Augsburg in the year 1518, after one interview with Luther declined another, saying, "I will have no more disputation with this beast of a creature. Habet enim profundos *oculos* et mirabiles *speculationes* in capite suo." "Turn now," says Dr. Bayne, "to 'Macbeth':

> 'Thou hast no *speculation* in those *eyes*
> That thou dost stare with.'

It may be a mere coincidence that the words in italics occur in close juxtaposition in Cajetan's Latin and in Shakspere's English, but to many it will seem more probable that Shakespere had read some account of the Augsburg interview, and had noted the graphic words." Who the "many" may be who fancy that the greatest of poets worked up his vocabulary from a commonplace book, it is hard to tell.

It ought to be added in common fairness that this sort of stuff decreases notably in quantity as the book goes on. The second volume is comparatively free from it, and one can hardly repress the conviction that the author was in some way led to see that he was working on a false system. It is only to be regretted that his good genius did not persuade him to subject his first volume to a thorough pruning, the only process by which it can be made tolerable to any reader of taste.

Bornholms Oltidsmindes og Oldsager, af Amtmand E. Vedel, Vice-President of the Royal Society of Northern Antiquaries in Copenhagen. 4to, 424 pp. Copenhagen.

We have here a masterpiece in archæological research, and in regard to the island of Bornholm in the Baltic it is well-nigh exhaustive. Denmark's great archæologists are Thomsen and Worsaae, both deceased, and now Vedel, who well maintains the prestige of his predecessors. Mr. Vedel was a magistrate (*Amtmand*) on Bornholm from 1866 to 1871, when he was transferred to Sorö, near Copenhagen. His time in Bornholm was largely devoted to the examination of the antiquities of the island, and after his removal to Sorö he regularly visited Bornholm and continued his researches. The results of his eighteen years' study are given to the public in the magnificent volume before us. It contains several hundred excellent illustrations and a very good map of Bornholm. For the benefit of foreigners, it is furnished with a résumé in French extending over thirty-three pages.

Bornholm is literally covered with graves, mounds, and burial-places from the past. Their number exceeds 10,000. Of these Mr. Vedel has opened 3,600, and has been rewarded with an abundance of finds, which he has presented to the Royal Museum of Northern Antiquities in Copenhagen. The author points out as a remarkable feature of the stone age that the graves have thresholds and door-posts, and from this he draws the conclusion that the people of the stone age understood the art of building houses and practised it. The interior part of the island was not inhabited in the stone age. The volume abounds in illustrations of the various finds from the Bornholm graves, and these indicate that the ancient inhabitants were highly civilized and developed a fine industry. In the unburnt graves the finds were not destroyed or broken, but, as soon as cremation began, swords and other treasures placed in the graves were mutilated. A century ago Bornholm had more than 1,000 stone monuments, but of these only about 200 now remain. Two groups of monuments are enclosed and protected, one at the instance of King Frederick VII., and the other by the munificence of Mr. Vedel.

Mr. Vedel refers the so-called bauta-stones to the bronze age and the oldest iron age. The rock-tracings (*Helleristninger*), of which there

are ninety in Bornholm, do not commemorate a solitary event, but were produced from time to time in connection with offerings of the gods, so that the same rock contains the history of a whole generation. Much attention is paid by Mr. Vedel to "Brandpletter," that is to say, deposits of charcoal and ashes (*dépôts cinéraires*). Of such spots or deposits he has examined 2,500, but their number is much greater, showing that the population of Bornholm was very large in the olden times. In the first period of these *dépôts cinéraires* weapons were never found, but on the other hand belt-hooks and a few fibulæ, evidence of a pre-Roman iron-culture. In the second period he found fibulæ, swords, gold ornaments, and beautiful earthern vases, and in the third period, fibulæ of a new pattern, and four different styles of vases. The new forms and styles point to revolutions on the island, and the wealthy families seem to have diminished in numbers and influence. The skeleton-graves were rich in ornaments. In the middle stone age each grave held a two-edged sword, but in the younger stone age the swords had but one edge. The large number of ornaments for women described in the work are very interesting, and illustrate the power of fashion in remote antiquity. The mosaic beads are beautiful and excellently preserved. They might be worn by any woman of our day.

Bog-finds have also occurred on Bornholm like those of Schleswig, and then there were large collections of coins and gold, buried in the earth in time of war to protect them from the greed of the enemy, and afterwards forgotten. They prove the presence of great wealth on the island, and the source of this must have been trade and commerce with other peoples. The author asserts that there was a commercial route by way of Bornholm from south to north, and another from west to east. The former he establishes by comparing Bornholm finds with relics from Gulland, Oland, and other places up the coast of Sweden; the other, by the presence of British coins, which indicate a trade between England and Bornholm by way of Schleswig. Mr. Vedel says there is nothing to show what sort of houses the people of the stone age inhabited; little to show how the men were dressed. Men are, indeed, engraved on many of the ornaments, but there is no certainty in regard to the origin of these ornaments. More light is thrown on woman's dress, since the fibulæ, buckles, beads, etc., offer suggestions in this respect. It would appear that the buckle, which became so common in the north, originated on Bornholm.

The island has several excellent specimens of runic inscriptions, which are reproduced and interpreted by Mr. Vedel, and he believes that the population in the bronze age must have been about as large as it is at the present time. There were times of prosperity and periods of depression. Wealth and poverty had their seasons. The weapons found prove that the people had no other arms than shields and swords. They were not afraid to close in with the enemy in combat, and both the men and the women had strong faith in immortality.

Archæologists the world over will heartily welcome Mr. Vedel's monumental work.

A Popular History of the Mexican People. By Hubert Howe Bancroft. San Francisco: The History Company. 1887. Pp. 632.

THE great value of Mr. Bancroft's larger history of Mexico—five volumes of which have appeared—has been suitably noticed by us, and the only question that needs to be asked in regard to this abridgment is as to how it is done. We regret to find it, on the whole, an unsatisfactory performance. It is not perhaps a fair charge against it that it retains the worst faults of Mr. Bancroft's style; for, though one might instinctively hope that pruning would improve his rhetoric, it was only to be expected that the taste which could allow some of the offending passages to stand in the greater work, would be sure to single them out for reproduction in the smaller. It was also inevitable that the too little critical handling of the mythological period of Mexican history, and of the era of the conquest, which marks the extended history, should reappear here. We are told, as before, "All that was written of the Mexicans by their Spanish conquerors cannot be believed"; but we are given no sifting of the evidence, are not informed why one writer is to be credited rather than another, are not enlightened as to the reason why one chronicler should have lied in one way and another in another. Indeed, we do not know that the work of cross-examining the Spanish historians, so as to show the motive and nature of their picturesque falsehoods, has been thoroughly done by any one, though it will have to be by some one before early Mexican history can be more than guess-work.

These faults might have been overlooked or submitted to, if the work of condensation had not been done in such a careless, hop-skip-and-jump, labor-saving fashion. We shall not take up space with specifications, but will simply leave it to the reader to verify what we say by putting the elaborated narrative alongside this volume. If he does not find abundant evidence of job work done by some clerk, his eyes are different from ours. One instance of the way this book is "abstracted" (the term of the preface) from the larger work, we will give. On page 535, and again on page 545, is printed an elaborate plan, lettered and numbered, of some fortification or other, to which there is absolutely no reference; it has no name beneath it, is not alluded to in the text, is not referred to in the index. In the sixth volume of the complete history (if that volume has appeared, we have seen no notice of it), the mystery will doubtless be cleared up; at present, it remains for us an indication of the way this book is made up, in so large a degree, of random selections.

We would not judge with undue severity. Even in 'prentice hands such material as that of Mr. Bancroft could not be utterly spoiled. Unsatisfactory as we must deem it, the book is not without interest and value—in fact, if it might not so easily have been far better, we should be disposed to call it very good. The chaotic periods of Mexican history naturally suffer in the telling in so condensed a story, yet the outline is always clear, if the details are often confused. The weakest part of the whole is the section dealing with the events of the past twenty-six years. The Intervention is inadequately sketched. The estimate of Maximilian is too high, even apart from the recent revelations in respect to him. The paragraphs relating to Gen. Diaz read as if they were extracts from a campaign biography. The whole account of modern Mexico is poor—very fragmentary, evidently made up from books, not from personal observation. The statistics given are, for the most part, belated, being for the year 1879–80. Use might have been made of an authority at least as late as Garcia Cubas's 'Cuadro Estadístico' of 1884. It is fortunate for Mr. Bancroft that his reputation does not rest upon such a piece of bookmaking as the present.

A Short History of Architecture. By Arthur Lyman Tuckerman. With illustrations by the Author. Charles Scribner's Sons. 1887.

THIS little book is a rather hasty compilation of architectural criticism taken from several sources, generally good ones, and is so far trustworthy; but it is marred by the indifference to accurate use of language which characterizes almost every page, and still more by a neglect of the results of late discoveries and late researches and conclusions. The best part of it is the account of Romanesque Architecture, pp. 115-131, with the introductory remarks on Gothic Architecture, p. 133. This seems to have been thought out—at least as far as the eleventh and twelfth century buildings go—and is very satisfactory. And the Gothic chapter which follows is also full of good matter; but here there is much more room for difference of opinion, much greater opportunity for misconception and error, and the book is too hastily put together to allow of avoidance of these pitfalls. In fact, all the discussion of mediæval architecture is too good not to be better.

It is to be wished that the author would read his own work over carefully, like a hostile-minded critic, if that be possible, and consider whether he is really prepared to stand by all his dicta. To take an instance: the differences between French and English pointed architecture are explained in a way brief and incomplete, indeed, but intelligent; what, then, is the shock of disappointment when the reader finds "the spires of Chartres and St. Ouen, at Rouen," named together as "the finest in France"—that is, one of the most mechanical and lifeless designs of the Gothic style built in modern times is added to two of the loveliest, to make up a lesson of excellence—and this followed by the statement that French churches had such high naves that they "often prevented the towers from having their due effect." Now, we do not offer these as gross and obvious errors—the whole work belongs to a better class than that to which gross and obvious errors belong, and the writer was thinking of the central lantern when he named St. Ouen; but these are just the mistakes which a writer makes when he writes hastily, except in the rare, and in architectural matters almost unknown, case, that he is really familiar with his subject. The absence from our library shelves of histories and handbooks of architecture which show really profound knowledge and acute perception of the important points in architectural history, is almost total. Knowledge and acuteness are devoted to monographs; but to general treatises, only here one and there one.

Beiträge zur Geschichte Russlands. Nach bisher unbenutzten russischen Original-Quellen. Von A. C. Wiesner. Leipzig. 1887.

PUBLICATIONS on Russia, its past and present, are in our day among the most eagerly sought-after products of the book market. Not a few of them are composed by writers ignorant of the Russian language and literature, and unfamiliar with the character and peculiarities of the Russian nation, and of the Slavic race in general. Against this kind of "historische Buchmacherei" Herr Wiesner inveighs at length in his introduction. For himself he claims the merit of having lived for some time in Russia, and of having added the knowledge of its language to that of other Slavic idioms. Among these is the Polish, which opened to him sources unknown to other writers. Thus supplied with material of the most genuine originality, he lays before the public the results of his studies and investigations in six treatises on Ivan the Terrible, Peter I., early Russian literature, Peter III. and Catharine II., Pugatcheff's insurrection, and the conspiracy against Paul I.—all this in a little book which hardly exceeds the dimensions of a modest pamphlet.

The topics are certainly interesting, and the publication has the merit, nowadays so rare, of great brevity. It has, however, one con-

siderable defect—that of being itself a specimen of the vilest kind of "Buchmacherei." Its vaunted sources, enumerated as the author's "Litteratur," consist of the two oldest comprehensive histories of Russia and Poland—those of Karamzin and Naruszewicz—of a Polish chronicle published in 1611, a Polish anonymous book on Peter and Alexis, four writings on Pugatcheff and the Cossacks, and some articles in Hertzen's *Kolokol*. The spirit of the historical expounder is shown in his first sentence: "Russia is only apparently a Slavic State." The State, he tells us, is thoroughly Mongolian, and the language "a barbarous mixture, which no other Slav understands." The way he selected and used his materials is patent—to take one sample—from the sketch of the assassination of Czar Paul, which gives detailed particulars, improbable in themselves and conflicting with the best recent authorities; forgets the leader in the conspiracy, Panin, while enumerating such insignificant tools as Depradovitch, Gardanoff, Saratinoff, and Seryatin; and renders the Christian name of Zuboff by turns Plato, Platon, and "Platow." The last form is, of course, a misprint. A worse slip is "Elisabeth" for Catharine on page 88, where Catharine's husband, Peter III., appears both as a German and a "Norman," and her lover, Count Poniatowski, before his election to the throne, as "the King of Poland." The style of the author is worthy of his acumen and accuracy as an historian.

The Scottish Pulpit, from the Reformation to the Present Day. By William M. Taylor, D. D., LL. D. New York: Harper & Bros. 1887.

Dr. Taylor's habit of blazing his track with books is now well established, and it was a matter of course that these lectures of his on the Lyman Beecher foundation at Yale should be published. We hasten to add that the intrinsic value of some of the chapters amply warrants preservation in permanent form, and would easily float a greater amount of inferior matter than is actually encountered elsewhere. Particularly good are the first four lectures, in which is given a clear and helpful outline of the history of the Scottish Church—that mass of tangled threads—with a strong and fresh handling of Knox and the ecclesiastical leaders of the sixteenth and seventeenth centuries. The lecturer appears sometimes to be oppressed with the air of antiquarian mustiness which envelops his researches. He is loath to believe that this is a necessary result of entering those chambers of death where the sermons of a hundred years ago are decaying, thinking that the oblivion into which the once famous discourses of Blair have fallen may be explained by "the fact that the distinctive features of the Gospel are absent from them" (p. 155). Yet he is forced to admit even of the sermons of Boston, which he declares to be "full of Christ," that they "will be resorted to only by those who are impelled to study them for some specific historic purpose" (p. 161). The author would not be himself if his pages did not abound in positive judgments and criticisms, wherein his own beliefs are freely revealed. Highly characteristic also are the frequent hortative turns given the narrative. Indeed, many of Dr. Taylor's readers will derive not the least part of their enjoyment of his book from the material given them whereby to trace the hereditary influences and pulpit traditions which are so clearly preserved in the preacher of the Broadway Tabernacle. Emerson's most quoted line is wrongly given on page 114, and "the hackneyed words of Terence," as Dr. Taylor terms them, appear in an incorrect form on page 263.

Living Lights. A Popular Account of Phosphorescent Animals and Vegetables. By C. F. Holder. Scribners. 1887. 8vo, pp. xvi., 187. Illustrated.

The phenomena commonly grouped under the general term of "phosphorescence" are sufficiently remarkable and varied to furnish an admirable subject for a popular work, and excellent opportunities for the art of the draughtsman and engraver. It is to be regretted that the present volume in no respect comes up to the necessities of the occasion. The preface makes no pretence to scientific treatment of the subject, and, in fact, the treatment, in all its particulars, is the reverse of scientific, is nothing less than misleading and sensational throughout. It is true that many facts are cited which, taken by themselves, are not formally inaccurate, and saving clauses are liberally inserted by the way; but the inferences and impressions which the unscientific reader would gather from the work would be as a whole grossly exaggerated and untrue. All sorts of phenomena connected with the production of light are huddled together without discrimination or order. Mythical absurdities of the seventeenth century find a place in the text side by side with the scientific observations of recent expeditions. The amount and extent of the light produced is in a large proportion of cases greatly overestimated; and especially in those illustrations which have been reproduced from a second-rate French publication, the exaggeration is frequently preposterous.

A more extraordinary collection of rubbish than that in the first four paragraphs of the chapter on "Man's Relations to the Phenomenon of Phosphorescence," could hardly be found anywhere outside of the superstitious farrago of some writer of the Middle Ages. An excellent theme has been wretchedly misused, and the book as a whole is a brilliant example of that kind of pseudo-scientific sensationalism which cannot be too heartily condemned.

History of England for Beginners. By Arabella B. Buckley (Mrs. Fisher), author of 'The Fairyland of Science,' etc. With additions by Robert H. Labberton. With colored maps and chronological and genealogical tables. Macmillan & Co. 1887.

One is surprised at first sight to note the appearance in the field of history of so accomplished a writer upon popular science as Miss Buckley. But often it happens that a writer of ability, in a new and unfamiliar field, sees things with fresh eyes, and thus really adds to our appreciation of the subject. We hoped to find in Miss Buckley's 'History of England' a treatment of the subject, perhaps from the point of view of social forces, which would entitle it to a distinct place among books for the young. In this we cannot say that our hopes have been met. It is just a history of England of the ordinary type—on the whole, a very good one, in an interesting style, and less burdened than most with unessential matter; but we cannot see that it distinguishes itself above its fellows in its substance or its point of view. The maps, we will say, are excellent; we will particularly mention that of the Civil War, giving the battle-fields and other places of note. It would be well to have a similar map for the War of the Roses. The tables also are excellent, and the elaborate analytic table of contents will be found very serviceable. What Dr. Labberton's share in the work is, we have not been able to ascertain; perhaps these maps and tables.

An Unknown Country. By the author of 'John Halifax, Gentleman.' Harper & Bros. 1887.

Under the shadow of the news of the author's death, it is impossible to review this attractive-looking volume with complete freedom. It is an account of an autumn tour round the north coast of Ireland in company with "three kind girls"—from Antrim to Cushendall, the Giants' Causeway, Derry, Gweedore, and the grandly desolate region to Carrick. The book is written in a kindly spirit, and means to be sympathetic and fair; but there is exhibited a want of any real knowledge of the history or archæology of the country, or of the reality and gravity of the impediments to her peace and prosperity. "Kiss and be friends" is the author's solution of the Irish problem.

"If the politicians of both countries would cease talking, and act; if the people would give up wrangling, and work; if the upper classes would show an example to the lower, instead of censuring them for not possessing virtues which for centuries their betters have too seldom exemplified—thrift, order, carefulness, reticence of language, uprightness of life, and, above all, Christian charity—then, indeed, there might be some hope for Ireland" (p. 211).

There is bright, pleasant writing, and occasionally a shrewd observation—as regarding conversation between strangers in Ireland, "which . . . is just now like playing a game of whist, in which your one thought is to discover your neighbor's hand and conceal your own." The scenery is somewhat glorified; the poor hotels not unduly criticised; a perusal of the book is likely to encourage a desire for personal acquaintance, *in fine weather*, with the district travelled over. The print is attractive. It is to be regretted that among so much correct and feeling illustration there should have been inserted such gloomy expanses of printing ink as Dunluce Castle (p. 102), and a few others of a like character, or such careless delineation of the peculiar strata of the Causeway as that to be found at page 78.

Horse, Foot, and Dragoons. Sketches of army life at home and abroad. By Rufus Fairchild Zogbaum. With illustrations by the author. Harper & Bros. 1888.

All who appreciate graphic off-hand accounts and excellent pictures of the spirited features of military life, will enjoy this book. Mr. Zogbaum begins by carrying his readers through a season of French army manœuvres, exhibiting the traits and ways of the Frenchman; then he transports them to England, and has them spend a day at Aldershot, showing them the various branches of the British military service, and introducing them to the charms of a British army mess. After explaining how the forces, in all the glory of pipe-clay, drop the "frills," and, upon a sudden call from some remote province of the great Empire, promptly move to distant lands, cheerfully leaving Aldershot and their sweethearts, with bands playing "The girl I left behind me," the author-artist takes us to Germany, to witness the field manœuvres of the Fourth Corps, seeing the nearest approach to active war that any simulated operations can present. The rigid discipline, the strict order, the deep earnestness of the German forces, all appear as distinctly as if these mimic operations were part of an actual campaign; and Mr. Zogbaum, by delicate indirection, expresses the marked differences between the French and Germans. From Germany we are brought home, and taken to the Great Plains, where army life and frontier life are vividly and accurately portrayed by pen and pencil. The United States soldier, the United States savage, and the United States cow-boy—who may be a

sort of cross between the other two—are shown in their true colors by a writer and artist who has seen and studied for himself all that he presents for the information and entertainment of others. The book deserves favor.

The State: The Rudiments of New Zealand Sociology. By James H. Pope. Wellington, N. Z., 1887.

THIS book is noteworthy for the light which it throws on one feature of civilization at the Antipodes rather than for its contents. It is written principally "for the use of young Maoris able to understand easy English." The Maoris are the aboriginal race of New Zealand, and were cannibals at a time still within the memory of the older inhabitants of the colony. The idea of writing a book on the Political Economy and Science of Government for the use of our Indian tribes would certainly seem ludicrous to us; and the fact that it is not ludicrous in New Zealand is suggestive of at least one element of superiority in their civilization. Examining the book to learn what a Maori is supposed capable of understanding, we find that it is mainly an elementary treatise on Political Economy, written in very plain and simple language, and made clear by illustrations drawn from the commercial and every-day life of the colony. About one-third of the work is devoted to an historical description of the English and Colonial Government. On the whole, it is such a book as ought to be introduced into the higher grades of our public schools.

BOOKS OF THE WEEK.

Alliot, Mme. L. Contes et Nouvelles, Suivis de Conversations, etc. Henry Holt & Co.
Austin, A. Prince Lucifer. Macmillan & Co. $2.
Babyland. Edited by the Editors of *Wide Awake*. Boston: D. Lothrop Co.

NEW YORK, THURSDAY, NOVEMBER 17, 1887.

The Week.

It is scarcely remembered that in the year 1874 Secretary Fish negotiated a treaty with Great Britain in behalf of Canada which President Grant approved and sent to the Senate, covering both the fisheries and the trade relations of the two countries. This treaty was not ratified by the Senate. The Treaty of Washington having been concluded, and the fisheries questions having been settled for ten years, the Senate was not disposed to make any change in commercial regulations. The treaty as negotiated provided for reciprocal free trade with Canada in raw products, agricultural implements, and certain classes of manufactures. Included in the latter were cotton goods, boots and shoes, furniture, carriages, iron, manufactures of leather, wood, stone, paper, and India rubber, and certain kinds of woollen goods, together with machines of various descriptions. If this treaty had been ratified, it would have been of great advantage to our manufacturers, and would have settled the fishery dispute for twenty-one years certainly, and probably for all time. It would have prevented Canada from erecting hostile tariffs against our products, and would above all have secured to both countries the happiness of good neighborhood founded upon mutual interests. Looking back at this lost opportunity, the question may properly be asked whether there is, in the conceptions of the Republican party, any inherent vice and ineradicable mischief in a negotiation which received the approval of President Grant thirteen years ago. If Secretary Fish could conduct a negotiation of this sort in 1874 without the previous assent of either branch of Congress, why may not Secretary Bayard do so now, seeing that the need is much more pressing now than it was then?

Lingg's success in blowing his head off after the jailers had been already put on their guard about him by the discovery of bombs in his cell, seems to be the natural result of the extraordinary laxity and disorder which has marked the custody of the prisoners for months past. The jail appears to have been for some time very much like the scene of a fair or a political reception. On some days, in fact, as many friends of the condemned men as could make their way in were admitted and allowed to hold a noisy pow-wow with them, and load them with fruits and flowers and presents of all sorts. At no time have they been kept in any kind of seclusion. The "death watch" which was set up after the decision of the Supreme Court appears to have been a good deal of a farce, as the watch went to bed like everybody else, and when Lingg's cell was searched, it was almost as full as he chose of baggage and rubbish of every description, including a neat set of most destructive bombs. In fact, except for the iron bars and doors, the prisoners might almost as well have been kept in a hotel, and the jailers' ability to produce them for execution must have been due in a considerable degree to their forbearance or hopefulness.

Some of the horror caused by the Anarchist crimes in Chicago is again said to be finding expression in a movement for the restriction of immigration, so "as to make it impossible for the Anarchist leaders to come here to ply their vocation." But what kind of legislation would this be? How are we to know an Anarchist leader when we see him landing at any of our great ports, or coming across the frontier from Canada or Mexico? When Lingg came over, for instance, there was nothing about him to indicate that he was a leader of any sort, or even an Anarchist. He was probably an inoffensive-looking young German. There is, in fact, no way of keeping Anarchists, as such, out of the country. What we have to do is to make it so hot for them after they get here that they will wish they had never come. We must stop toying with them as if they were curious and interesting animals, and stop trying to find out whether we cannot compromise with them, or see what they will take to refrain from killing us and burning our houses. They must be closely watched by the police, and collared when they counsel murder, and remorselessly punished when they commit overt acts. Nothing will assuage their malice or abate their activity but their finding themselves faced by the courts and police with a determination more invincible than their own. But to deal with them in this way, something must be done to hasten our criminal procedure. We shall not be able to make an impression on their imagination if, as in the Chicago case, when they commit foul murders, a year and a half is allowed to intervene between the crime and the punishment. The chances of escape in that interval are very numerous in this country. It is almost a miracle that the extreme penalty should have been inflicted so long after their conviction on the four who suffered on Friday. And we must not be afraid of "making martyrs" of their leading scoundrels by hanging them. Nobody is hurt by somebody else's being considered a "martyr." What we have to prevent is their setting an example likely to be followed, and the way to do this is to make the close of their careers shameful and terrible, and to support our police in hunting them down.

The *Leader*, the daily organ of the Labor party, which was started during Henry George's canvass last year, expired on Friday, immediately after the execution of the Anarchists, over whose fate it uttered a dying groan. The editor stated frankly that the cause of the catastrophe was the indifference of the workingmen. We presume we shall have a similar story to tell before long of Mr. George's weekly organ, the *Standard*. Recent events must have had a depressing effect on this publication also, and Mr. George is much too shrewd a man to let its maintenance trench on his private savings, for this would revive the poverty which he has so laboriously abolished. The "Anti-Poverty Association" will probably go next. In fact, this institution has latterly given signs of great feebleness. It has already bitterly disappointed its members, as it has thus far simply increased their poverty by calling on them for subscriptions. After it goes, it is hard to say what will become of Dr. McGlynn. His experience of human folly and credulity might make him a good lecturer for one winter, but the lyceum in our day is very sensational and eager for novelties, and, as has been shown in a hundred cases, about nobody is the public curiosity sooner satisfied than an unfrocked priest.

Full returns from Ohio show that the first reports of great Republican gains over 1885 were unfounded. A large labor vote in Hamilton County (Cincinnati) demoralized the Democrats there, and enabled the Republicans to secure 6,500 plurality for Foraker where two years ago Hoadly had over 600 plurality. In the whole State Foraker now has about 24,000 plurality, against 17,451 in 1885, but outside of Cincinnati his plurality is actually smaller now than it was two years ago. In other words, there was absolutely no return from the tremendous uproar over the return of the Confederate flags, the noisy howl over the Jeff Davis and Gen. Jackson performances in Georgia, the wild talk about "rebellion rampant," and all the rest of that dreary nonsense. This is the most encouraging intelligence which has come from Ohio for years.

The gratifying news comes from Maryland that, upon an examination of the men elected to the new Legislature, it appears that, although Boss Gorman has saved his State ticket by a desperate effort, he is not sure of controlling the law-makers, and that there is a good chance of securing an election law which will put an end to the frauds by which alone he has retained power. Not only have the Republicans gained more than a dozen members, but among the Democrats are a number of men who are opposed to the ring. The Baltimore *American* says that "many excellent Democrats have been elected to the Legislature who will coöperate heartily in the effort to pass the Reform League Election Law, and release this city from the intolerable bondage of a prostituted ballot-box." Mr. Cowen, the leader of the Independent Democrats, is confident that "there will be a new election law—one that will guard the rights of the voters and give fair elections." In short, it is evident that the

Mugwump contingent is being rapidly recruited from the Democrats as well as the Republicans, and that neither party can longer count with assurance upon thick-and-thin support, even in its old strongholds.

The action of the Union League Club on Thursday in passing unanimously a resolution declaring it desirable that the Legislature should pass a law providing for the printing and distribution of ballots at the public expense, and appointing a committee to draft such a bill to be presented to the next Legislature, is most encouraging. A similar committee has been authorized by the Commonwealth Club, and the two will undoubtedly work in harmony. The great lesson of the last election here was that it is useless to hope for municipal reform of any kind until a law of this kind is passed. At present our ballots are printed and distributed by gangs of political mercenaries, who are selected by no authorized power and are responsible to nobody for the honest and faithful performance of their duties. If they cheat in printing the ballots or in distributing them, there is no way of punishing them, since they are acting under no rule or law. They have the power to cheat any candidate into office, and they have exercised that power over and over again. A law which puts the business of printing and distributing the ballots into the hands of men hired by the State, sworn to faithful performance of duty, and subject to penalties in case of dereliction, will put an end to this disgraceful state of affairs almost instantly.

It appears that Secretary Fairchild has himself devised and introduced in the Treasury Department a comprehensive scheme of examinations for promotion, applicable to all the bureaus and divisions of that great Department, with its many thousands of employees. The system seems to have been carefully constructed to test the real capacity and merit of those who are examined, the largest weight in the scale of marking being given to the work upon which the person has been engaged during the past year, and the next to the duties of the bureau in which he is employed. The system has already gone into operation, and it is safe to say that, except for such slight modifications as experience may show to be wise, it will be always maintained. Every such advance in civil-service reform is not only important in itself, but even more so in the ease with which its assured success enables other steps to be taken.

Mr. W. W. Flannagan, cashier of the Commercial National Bank of this city, offers us some criticisms upon Mr. John Jay Knox's plan for refunding the 4 per cent. bonds. Mr. Flannagan shows that if the money required to pay the premium on the 4s, viz., $167,000,000, were invested in the purchase of those securities at the present market price, the saving to the Government would be $23,000,000 greater than by Mr. Knox's plan. This is true, and it only remains to find the holders of $167,000,000 of these bonds who will sell at the present market price. Mr. Knox's plan goes upon the supposition that the holders of Government bonds having twenty years to run are a greedy lot, that they do not want any change in existing arrangements, but that if there is to be a change, they see the dilemma of the Government perfectly, and intend to make all they can out of it. So far we think that Mr. Knox is right, but we should have no objection whatever to trying Mr. Flannagan's experiment before trying any other. It would be a valuable addition to our knowledge to know just how many bonds could be gathered in at 126. Nobody who has had much experience in Wall Street will imagine that the whole of anything can be bought at the market price of any particular day.

Mr. Flannagan's suggestion that if Congress will authorize the Secretary of the Treasury to lend his surplus on Government bonds at par to anybody who will furnish such security and pay 2½ per cent. interest, all the trouble about the surplus will disappear, presupposes either that the bondholders belong to the borrowing and trading class, or that their bonds held by them can be somehow made available to borrowers. It is quite certain that the bondholders, with very few exceptions, do not belong to the borrowing and trading classes. The national banks have already borrowed from the public 90 per cent. of the face value of their bonds without interest. The savings banks and life-insurance companies are lenders, and not borrowers. Accordingly, their holdings of bonds are not likely to be crowded over the Government counter to get money at 2½ per cent. The private holders are mostly of the retiring, saving, non-venturesome class, who will not let the bonds go out of their strong boxes on any terms. Nevertheless, we can see no objection to the Government's offering its surplus on that kind of security. If the amount taken is small, no harm will be done. If it is large, so much the better.

At the time of the election of Dr. Storrs to the Presidency of the American Board he requested space for deliberation, and intimated that he hoped to be able to devise some plan of uniting the warring factions over which he had been called to preside. In his letter of acceptance, just published, he puts forth his ideas of the policy to be followed. On the point of doctrine and hostility to the scheme of calling councils to examine missionary candidates, he sides squarely with the conservatives, though he makes, at the same time, remarkable concessions to the liberals—so remarkable that the *Christian Union* is quick to affirm that if the Home Secretary had acted for the last three years in the spirit of Dr. Storrs's letter, the whole controversy would have been averted. One concession consists in a willingness to have the affairs of the Prudential Committee investigated, and to have the whole matter of the relation of the Board to its constituent churches looked into by a catholic committee. This is going far towards the liberal position, but Dr. Storrs goes much further in proposing that no hard-and-fast law shall be observed in the examination of missionary candidates, that each case shall be considered by itself, and, finally, that none shall be compelled to pronounce positively against future probation, but shall only be asked to say that they do not know what will take place after death.

The *Sun* published on Sunday a page of interesting reports as to the workings of the co-operative system in sixteen cities in different parts of the Union. It summarized the results as, on the whole, very unsatisfactory, most of the undertakings in production having failed because of lack of business skill and judgment, contentions among managers, and inability to compete with the regular trade. Moreover, where the enterprises succeeded, it was often only because they were substantially changed into private or joint-stock concerns doing business after the ordinary methods, retaining sometimes scarcely a vestige of the coöperative principle on which they were founded. The *Sun* finds that the experiment of the coöperative store for the sale of goods has worked somewhat better, though only in a comparatively few cases, and nowhere with anything approaching what is represented as the English experience. In short, a study of such trial of the coöperative system as has hitherto been made in the United States must convince anybody that "the labor problem" is not to be solved off-hand by any such device.

The report of the German factory inspectors for the year 1886 deals specially with questions arising from the employment of women. It had been charged by the Socialists and others that the proportion of female labor was increasing, and that its prevalence was injurious to health and morals. The inspectors are disposed to deny the truth of both these charges. In the majority of districts the proportion of female labor has remained practically unchanged for a long series of years; in the majority of employments no distinctly injurious effects are reported. In this latter respect the experience of the German inspectors, though not in accord with common belief, is confirmed by Col. Wright's exhaustive investigations a few years ago. Both the German and the Massachusetts reports show that the ranks of crime and prostitution are not recruited from the factory. In spite of the great apparent evils of factory life, the steadying power of honest industry is strong enough to overcome them. The fact that a girl is willing to submit to hard work is also evidence that she values her character above her pleasure. There are, unfortunately, some lines of industry which are exceptions, and these are nearly the same on both sides of the Atlantic. The most demoralizing employments are those in which gangs of men and women are employed in a half-nomadic life. Of the more settled employments, cigar-making is probably the worst. The German inspectors give very unfavorable reports from cotton-spinning in certain districts. Any one familiar with cotton mills of the old style would expect such a state of things; but the actual facts with

regard to American mill towns are not nearly so bad as one would suppose.

The general proportion of female labor in Germany is not far from the same as with us; but there is much reason to believe that differences in the method of enumeration make the result unfair to America. The percentage of female labor in the Potsdam district is 35, in the kingdom of Saxony 33, in upper Swabia 31, and in the Breslau district a little under 30. These are not unlike the American figures of 37 per cent. for New Hampshire, 33 for Rhode Island, 32 for Massachusetts, and 31 for Maryland; except that the States cited include a smaller proportion of our total population, and we have no other State with a percentage of over 27. The agricultural districts of Germany, as might be expected, show a much larger proportion than similar districts in the United States. Individual industries also show a higher percentage of female labor in Germany than with us. Thus the percentage in the textile mills of the Black Forest district is 73, while in Reuss, a small principality south of Leipsic, it actually rises as high as 90. We know of nothing at all approaching this in the United States. On the other hand, the American figures are worse than the German in showing a decided increase in the proportion of female labor in recent years.

The fate of the Suez Canal seems to have been finally settled by a convention between France and England, in which other Powers are to be invited to join. It declares that the canal shall "always remain free and open, both in war and peace, to all vessels, whether of trade or of war, without distinction of flag; and consequently the high contracting parties bind themselves to offer no obstruction to the free use of the canal in time of war any more than in time of peace," and it is never to be blockaded. The other articles of the convention provide in detail for the execution of the agreement. Now, the value to England of this neutralization of the canal is that it relieves her from the necessity of defending both the entrances to the canal, and of seeing that it is kept clear of obstructions throughout its entire length in time of war. For unless she were able to drive all hostile fleets away from the entrances, it would in time of war be of no use to her whatever. We commend the arrangement to the careful consideration of those who think the United States ought to own a canal across the Isthmus of Panama, and that, unless we owned it, such a canal would be of no value to us. The fact is, that a canal of our own across the isthmus would be absolutely useless to us without two fleets, one in the Pacific and one in the Atlantic, each strong enough to prevent any hostile fleet from blockading it, and a land force strong enough to guard it against obstruction in the interior. A more worthless and costly possession, in fact, no nation could have, than a canal which began and ended in foreign seas, and passed wholly through foreign territory. The British see this plainly enough, but some of our statesmen apparently do not.

The more the decoration scandal in Paris is inquired into, the larger it grows. Proofs of corruption on a great scale against Wilson continue to accumulate, and leave is now to be asked, it is said, of the Chambers to prosecute him criminally. He seems to have seen any number of "channels in which he could be useful" to a considerable number of people, and to have exacted very high rates of remuneration. His case is mainly interesting, however, for its probable effect on President Grévy. The reports as to his intentions in case Wilson is prosecuted vary from day to day. His last decision is said to be not to resign, come what will. Both the Radicals and Monarchists are intent on using the Wilson affair to drive him out, each hoping to be able to play its own game in the confusion which would follow. Besides this, however, the effect of the affair on European politics is necessarily considerable. The revelations virtually condemn France to a peaceful policy for a good while to come. No one would venture to go to war without knowing to what extent the corruption at the War Office had permeated the army, or without fearing that the first victory might give France a military master. This situation of course leaves Russia at the mercy of the Triple Alliance, and insures to Bulgaria the liberty of doing as she pleases.

No recent act of Lord Salisbury's has excited so much animadversion in England as the appointment of Lord Lytton, who made such a terrible failure in India under Lord Beaconsfield, to the embassy in Paris, to succeed Lord Lyons. Lord Lytton has no weight either as a diplomat or administrator, and in India gave abundant proof of featherheadedness, so that his succeeding so able a man of affairs as Lord Lyons, at a very critical period in Continental politics, has astonished the British public a good deal. It is generally considered one of the worst blows the Liberal Unionists have yet received, as it is evidently something on which Lord Salisbury would not have ventured if he were not sure that he could count on their support, no matter what he does, in order to keep Gladstone out. It is, in fact, another proof, in addition to the vigorous execution of the Coercion Bill, of the smallness of their control over ministerial policy.

Lord Salisbury's indignant comments at the Lord Mayor's dinner in London on the way in which Mr. Balfour has been attacked by the Liberals for his execution of the law in Ireland, recalls the way in which the Tories attacked Lord Spencer in 1885 for doing exactly the same thing. In that year the Tories were negotiating with the Parnellites for their support at the polls, and denouncing coercion vigorously, and promising to govern Ireland by the "ordinary law"; and Lord Spencer, who had had to enforce the Gladstone Coercion Act, came in for a liberal share of their abuse. It was not until they found that they could get office and keep it without the aid of the Parnellites that they decided to have a coercion policy of their own, and to outdo Mr. Forster by treating their political prisoners as common felons, and putting them in convict's dress, and keeping them at hard labor, under the sentence of magistrates who hold office at the pleasure of the Crown.

Nothing does more to diminish the hold of the Irish cause on the sympathy and even comprehension of foreigners than the ridiculous conduct of some of its champions. Of this O'Brien's fight with his jailer over the "prison garb" is a striking illustration. There is, of course, both meanness and cruelty in treating political prisoners like common criminals. The object of it is to humiliate and irritate—for it cannot disgrace—the victim in the eyes of the world. But if O'Brien had, along with his undoubted sincerity, a very small allowance of greatness of soul—to say nothing of sense of humor—he would scorn to let his enemies see that he could be either humiliated or irritated by the cut or color of his trousers or shirts. What can be more gratifying to the diabolical Balfour than the knowledge that he is compelling one of Britain's chief enemies to lie abed all day like a sulky boy, lest he should be dressed in clothes of the wrong color if he got up? Fancy Hampden or Sydney trying to serve "the good old cause" by passing his days in his night-shirt under a blanket. "T. P. Gill, M.P.," in the *Tribune*, as usual, tries to make the affair as ridiculous as possible by giving "the full story of the nameless deed that was perpetrated on Mr. William O'Brien on Saturday morning." The "nameless deed" was the abstraction of his trousers in the night and the substitution therefor of a blue pair of prison manufacture. According to the *Tribune*, in order to accomplish their hellish purpose "they lulled the prisoner into a feeling of security, and the outrage was committed while he dozed at early dawn." The question now is, would it be right to accept home rule from the British Government, even if it were offered, unless Mr. O'Brien's trousers were previously returned to him? It would seem not.

We think there is no corner of the civilized world in which the news of the serious character of the German Crown Prince's disease will not be received with deep sorrow. His disappearance from the scene at this juncture will be a real calamity for European politics, but, in addition to this, there is probably no man on the stage of events in the Old World more widely esteemed and respected both in his own and other countries. He is a Prussian Prince of the best type, with all the good qualities of his house and none of the bad ones; laborious, conscientious, modest, moderate in his views, a good soldier, and yet a better civilian, with deep respect for Parliamentary institutions and for public opinion, both tender plants in Germany. The general regret, too, will be deepened by the dreadful nature of the disease, and the terrible demands it makes on fortitude.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 9, to TUESDAY, November 15, 1887, inclusive.]

DOMESTIC.

ON November 11 four of the Anarchists who were convicted of participating in the Haymarket riot in Chicago on May 4, 1884, in which seven policemen were killed, were hanged in the jail of that city. These were Parsons, Engel, Fischer, and Spies. The execution was conducted in an orderly manner, and without being interfered with by sympathizers with the condemned men. The culprits maintained a bold attitude to the last, but offered no resistance to the officers who carried out the judgment of the court.

After fully considering the applications made to him for executive clemency, Gov. Oglesby commuted the death sentence of Schwab and Fielden to imprisonment for life, on the ground that these two were less directly concerned in the murders than the other five were.

About nine o'clock on the day before the executions were to take place, Lingg killed himself by means of an explosive placed in his mouth, and which lacerated the lower part of his face so that he died in a few hours. The authorities were unable to discover how he came into possession of it.

On the day Parsons, Spies, Fischer, and Engel were hanged, Schwab and Fielden were immured in the penitentiary.

The night before the executions in Chicago a procession of about 2,000 Anarchist sympathizers passed down Broadway in New York, bearing red flags and black banners inscribed with incendiary sentiments. At the City Hall the procession broke up without any act of violence having been committed.

The bodies of the dead Anarchists were given to their friends, and on Sunday they were buried by them. Mayor Roche permitted a funeral procession to march through the necessary streets to the graves, under restrictions which forbade demonstrations of undue partisanship towards the dead, without other music than dirges, and without the flags and other emblems of Anarchy. The Mayor's restrictions were partly disregarded, red ribbons were worn, and the Marseillaise Hymn was played and sung.

It is said, with the appearance of authority, that the President has offered the Postmaster-Generalship to Don M. Dickinson of Michigan in case of the promotion of Postmaster-General Vilas to the head of the Interior Department.

The friction between Secretary Lamar and Commissioner Sparks of the Land Office has at last reached a head. Mr. Sparks on November 11 wrote a letter to Secretary Lamar criticising some of his land decisions in a way very offensive to the Secretary. The latter at once sent a reply, in which he plainly informed Mr. Sparks that the alternative was now presented to the President of appointing either a new Secretary of the Interior or a new Commissioner of the Land Office. Commissioner Sparks on November 15 placed his resignation in the hands of the President.

Mrs. Cleveland was present at the opening of the Seaside Institute at Bridgeport, Conn., on November 10. The Institute is the gift of the Warner Brothers to their employees. Mrs. Cleveland at the close of the exercises shook hands with about 2,000 working-women.

On November 14, the United States Supreme Court made a decision adverse to the validity of the driven-well patent.

Sitting Bull is reported to have expressed displeasure with the Crow Indians on account of their late hostility to the whites. He advises the young bucks to remain peaceably with the agencies.

In the late elections in this State Miss Ida L. Griffin was elected School Commissioner in one of the Oswego County districts. Running as the Democratic candidate, she received 400 majority, which was 600 ahead of the regular Democratic ticket. In Wayne County Miss Cook, running as a Democrat for a similar office, was defeated.

Elihu Root, Edward Mitchell, Henry E. Howland, Robert Ray Hamilton, Granville P. Hawes, and Cephas Brainerd have been appointed by the Union League Club a committee to prepare a bill, to be presented to the next Legislature of this State, providing for the printing and distribution of election ballots by and under State authority.

On the evening of November 10 a meeting of prominent gentlemen of this city was held at the Fifth Avenue Hotel, to consider the subject of appropriately celebrating in New York the constitutional organization of the United States Government, the date for the celebration being April 30, 1889. The preliminary action has in view an invitation to the States and Territories generally to participate.

The trustees of the Protestant Episcopal Cathedral formally approved the contract for the purchase of the Leake and Watts Asylum property for the site of the cathedral. Bishop Potter and the Rev. Dr. Nevin were authorized to complete the purchase by the payment of $350,000 in cash, the other $500,000 to be paid in two years. The following permanent working committees were elected: On Constitution and Canons—The Rev. Dr. Houghton, the Rev. Dr. Huntington, Hamilton Fish, Stephen P. Nash, and George Macculloch Miller; On Finance—The Rev. Dr. E. Winchester Donald, J. Pierpont Morgan, Cornelius Vanderbilt, S. D. Babcock, and R. T. Auchmuty. On Architecture—The Rev. Dr. Morgan Dix, the Rev. Dr. Cady, W. W. Astor, and J. R. Roosevelt.

President Bayles of the New York Health Department has written Mayor Hewitt a letter with reference to the probability of cholera getting into the city, saying that he does not at present consider danger from this source as imminent. Secretary Bayard has informed Mayor Hewitt that he has addressed a note to the Italian Minister urging him to request his home Government to have a thorough inspection made of vessels leaving Italian ports for this country.

The Electrical Subway Commission of this city began on November 15 to use asphalt in the construction of the wireways.

Coal-dealers in New York asserted last week, in reply to inquiries relative to the then prevailing shortage of fuel, that there would be no scarcity worth speaking of during the winter.

Judge Barrett on November 14 refused to grant the injunction against the New York Club asked for by Edward Gebhard, to restrain the Club from interfering with his rights as a member. The case grew out of a dispute over a bill rendered by Mr. Gebhard for legal services to the Club.

The Columbus, Hocking Valley and Toledo Railroad has brought a suit against Winslow, Lanier & Co. to recover $8,000,000. The suit grows out of the firm's connection with Judge Stevenson Burke.

The banking firm of A. S. Hatch & Co. in this city made an assignment on November 14.

J. Randolph Tucker, John Goode, and Gov. Fitzhugh Lee appear as rivals of John S. Barbour for the Virginia Senatorship as Riddleberger's successor.

Mayor Latrobe of Baltimore, offended by criticisms made of him in the late elections, refused to appear on the platform with S. T. Wallis on the occasion of unveiling the statue of Chief-Justice Taney.

In the annual meeting of the General Conference of the Congregational Churches in Middletown, beginning on November 9, a hot discussion on future probation was avoided by referring the whole matter to a committee which will report next year.

The Rev. Dr. Leonard Woolsey Bacon was dismissed from his pastorate in Savannah, Ga., on Sunday by a vote of 185 to 119 of the members of the Independent Presbyterian Church. The dissatisfaction with him arose from utterances he was alleged to have made relative to the social position of the negroes.

The balance of the building construction account of the Young Men's Christian Association in Philadelphia, amounting to $200,000, which has been carried by a mortgage, has been cancelled through liberal subscriptions from over 389 persons.

At a meeting of the Board of Trustees of Princeton College on November 10, President McCosh formally presented his resignation, to take effect at the beginning of the third term of the current year.

Mr. Joseph H. Choate of New York has given the Faculty of Williams College its choice of three courses for a settlement of the hazing case in which his son was a victim: To suspend the Committee who signed the newspaper article purporting to explain the case, to suspend the class, or to allow him to take one of the Committee to court and make a test case. The Faculty called a meeting of the Sophomore Class to discuss the subject. On November 15 twenty-one members of the Sophomore Class made a confession to the faculty of having taken part in the hazing, and sentence of suspension was passed upon at least nine of them.

F. H. Ringe of California has offered to erect a new City Hall, an industrial school, and a high-school for boys in Cambridge, Mass., where he formerly lived. The offer has been accepted. He had already bestowed a public-library building.

On account of the delay of the local government of Manitoba in proceeding with the building of the Red River Valley Railroad, to connect with the United States roads, it is suspected that "boodlers" are at work undermining the enterprise so far as public officials control it.

Settlement of the affairs of the Northwestern Manufacturing and Car Company was concluded on November 11 in a way entirely satisfactory to Senator Sabin and his friends.

On November 9 Miss Clara Louise Kellogg, the singer, was married to Carl Strakosch, in Elkhart, Indiana.

Senator Joseph R. Hawley of Connecticut was married to Miss Edith Horner in Philadelphia on November 15. Miss Horner is an English lady who has been employed as a nurse in the Blockley Hospital in Philadelphia.

Dr. Noah Porter personally denies the report that he was engaged upon a new revision of Webster's Dictionary. The publishers say also that there will be no revision of the work for several years.

The trial of E. S. Wheeler of New Haven, charged with obtaining money on worthless notes after his bankruptcy, began in that city on November 15.

Jesse Pomeroy, the well-known "boy murderer," who is now a full-grown man, made another attempt to escape from Massachusetts State Prison by sawing through bars of his cell with a piece of steel.

Young Robert McCreary, son of ex-Gov. McCreary of Kentucky, shot William Schilling on the street on November 12. Schilling died the next day.

Sydney F. Shelbourne, a member of the Board of Council of Electrical Engineers, was killed at the American Institute Fair on November 9, by being caught in a powerful and rapidly revolving fly-wheel.

FOREIGN.

Three courses of treatment for the throat disease from which the German Crown Prince is suffering are considered practicable: Laryngotomy, or the total excision of the larynx; a partial excision, with tracheotomy; or another of Mackenzie's internal operations. The Crown Prince has definitively declined the first, which is dangerous.

After an examination of his throat on Friday, November 11, the Crown Prince took a walk in his private grounds at San Remo. He appeared to be in excellent health, and his voice was fresh and intelligible at a distance of ten paces. The Crown Prince has received immense numbers of letters and telegrams of sympathy from all the courts and sovereigns of Europe. News from San Remo on November 14 was to the effect that his condition was improved, and that the swelling of the larynx was subsiding.

A rumor was telegraphed from London on November 15 that Emperor William had made up his mind to abdicate in favor of his grandson, Prince William of Prussia.

The Czar is expected to arrive in Berlin on Friday, November 18, and will be received with brilliant manifestations of welcome. Among the festivities in preparation are a grand dinner to be given by the Emperor William, if his health will permit, and a gala season of opera. The Czar has requested Emperor William not to attempt, on account of his great age and infirmities, to meet him at the station on his arrival in Berlin.

In the Caffarel trial in Paris it was proved by the manufacturers that two of M. Wilson's letters, dated May and June, 1884, were written upon paper which was manufactured in October, 1885. This revelation has caused a sensation. The newspapers now declare that it is impossible that M. Wilson should be allowed to escape.

A Paris despatch, November 10, says: "The fraudulent substitution by M. Wilson of harmless for incriminating letters to Mme. Limousin is necessarily prejudicial to him, and a magisterial investigation will now take place. The Chamber will then probably sanction his arrest, and President Grévy's resignation will follow."

On November 10 President Grévy caused an exciting scene in Cabinet Council by declaring emphatically that he would not dismiss M. Wilson.

M. Victor de Lesseps, in a letter published on November 9, states that his father, Count Ferdinand de Lesseps, will soon make another trip to Panama, and repeats the promise that the canal will be opened in February, 1890, and that no further loan for the canal will be required.

Señor Tanco Armero, the agent of the Colombian Government, has made public the results of his latest inspection of the work on the Panama Canal. He says he travelled over the entire route and studiously observed the condition of affairs. He avers that while the annual reports that have been made by Count de Lesseps are partial and unsatisfactory, and inadequate as a presentation of the true situation, the writings of the detractors of the enterprise are exaggerated, on the other hand, and not worthy of credit. The Colombian agent makes the following statement with reference to the work: "According to the plans, the number of cubic metres to be excavated in order to open the canal was 143,000,000, and to these figures must be added the quantity of earth to be moved in order to lead off the waters of the Chagres, Obispo, and Rio Grande Rivers, which amounts to 18,000,000 cubic metres, making the total excavation amount to 161,000,000 cubic metres; and as the amount taken out up to the end of August of the present year was 33,925,230 cubic metres, according to the figures of the company, there yet remains 127,074,770 cubic metres to be removed. It is estimated that the cost of controlling the water of the Chagres River will be $94,340,000. The cost of completing the canal is estimated to be 3,012,495,400 francs, or $600,000,000." To the claim of the company that 15,000 men are employed on the work, and that the effective force of the men and machinery is equivalent to 615,000 men, the agent says: "I firmly believe, and without risk of erring, there have never been more than 5,000 men employed, and the work effected confirms this belief. If work were executed equal to that which 615,000 men could do, then by working only three hours per month they would move 1,000,000 cubic metres. Then 3,075,000 cubic metres would be removed daily, or 92,000,000 in thirty days, and the canal would be finished in one month and a half. This is flattering, but it is purely illusory. The truth is, that the greater number of the working sections are almost deserted, and the laborers seen on the works are very few to the number which should be employed. In an undertaking of this magnitude, in which time is the most important factor, laborers should have been obtained in abundance from the first, and from 30,000 to 40,000 workmen should have been put to work. The funds were sufficient, and should have been devoted to that purpose."

It is now settled practically that two of the best known Parisian clubs are to be amalgamated. These are the "Cercle des Champs Elysées"—better known by its old name of "Cercle Impérial"—and the "Cercle de l'Union Artistique"—vulgarly known as "Les Mirlitons."

On Sunday, November 13, an almost unprecedented riot occurred in London, growing out of an attempt by agitators to hold a public meeting in Trafalgar Square. Four thousand policemen took possession of the approaches to the square at an early hour. The paraders were headed by bands of music and they carried banners and mottoes. The police attacked and dispersed each group as it arrived near the square. Fierce fights took place on the Strand, Northumberland Avenue, Whitehall, Pall Mall, and other adjacent streets. One of the societies succeeded in entering the square, but was repulsed after a bloody fight, in which Commoner Graham was seriously injured. Mr. Graham was subsequently arrested for attacking the police. At 4:30 P. M. the crowd in the vicinity of the square numbered 100,000, and the police were powerless to disperse them thoroughly. Cavalry and infantry were summoned to the assistance of the police, but no charge was made, as the people of their own accord began to disperse at dusk. A large number of people and policemen were wounded in the contest.

Mr. Gladstone, in a letter to the Provost of Dalkeith, says: "The excesses of the Government are beyond all expectation. Events like those at Mitchelstown, however, plainly represent the true questions before the nation, proving that the spirit of tyranny of Cromwell and Strafford still exists, though, happily, without power."

Lord Salisbury's Guildhall speech on November 9 confirmed the theory of his adhesion to the triple alliance with modifications. Beyond this the speech contained nothing new, except a hint that the power of appeal under the Crimes Act will be lessened, if not destroyed entirely, as well as an indication that the Irish tactics in the next session will be severely repressed.

A late London political rumor is to the effect that William Henry Smith will soon resign the leadership of the House of Commons to Mr. Balfour, which will necessitate the latter's resignation of the Irish Secretaryship.

The London papers of November 12 generally expressed approval of the result of the Anarchist trials. One or two spoke of the sternness of the Americans in dealing with the present offences against law and order as a lesson for Ireland and Gladstone.

A London *News* correspondent in Ireland, writing on November 10, says that the peasantry have plenty of potatoes to live on, but no money. Taken as a whole, the country never was more impoverished.

Most Rev. Bernard Finigan, D.D., Roman Catholic Bishop of the Diocese of Kilmore, died on November 10.

The Corporation of the city of London are about to issue their bronze medal to celebrate the founding of the Imperial and Colonial Institute. It is three and one-half inches in diameter, and has on one side an historic design of the interior of the Guildhall, and on the obverse, in relief, the royal arms, the city arms, and those of India and the chief colonies. The number to be issued is, it is stated, limited to four hundred and fifty, and the die is to be surrendered to the Corporation, so that no more medals can be struck.

A number of Baptist churches and clergymen in London will follow Mr. Spurgeon's example by withdrawing from the Baptist Union. Among them are the Rev. Mr. Brown of the East London Tabernacle, the Rev. Mr. Davies of a Brighton church, the Rev. Mr. Burton of Dalston, and the Rev. Mr. Spurgeon of Croydon. The directors of the Pastors' College will convoke a conference to consider joint action on the secessions. The Nottingham Tabernacle has passed a resolution of sympathy with Mr. Spurgeon.

A burlesque drama by Dickens, three or four years before the 'Pickwick Papers' were written, is to be included in Kitton's forthcoming collection of portraits of the novelist.

It is said that Sir Charles Dilke is urged by his friends to return to political life, and that he maintains a stubborn attitude in opposition to their wishes. It is given out that a collection of letters has come into his hands which those who have inspected them declare furnish absolute disproval of Mrs. Crawford's story in the scandal which caused the withdrawal of Dilke from public life.

Sir George Stephen, President of the Canadian Pacific Railroad, left for England on November 11 for the purpose of completing arrangements with the Imperial Government for the construction of three steamships for the Pacific Mail service. They will be built on the Clyde, and are to be delivered by January, 1889.

A conference of leading men from five of the important provinces of Canada, held recently in Quebec, unanimously adopted a resolution favoring unrestricted reciprocity of trade between the United States and Canada. The Toronto *Globe* says: "The action of the Quebec Conference should have a large influence upon the Commissioners about to meet in Washington. They cannot now doubt what Canada wants. The British representatives cannot but perceive that the Ottawa Government, if it pretends that Canadians in general do not wish for commercial union, does not represent the Dominion truly."

A correspondent of the London *Times* at Calcutta writes that the jubilee subscriptions to Lady Dufferin's fund have grown favorably, but that they need to be enormously increased before the amount available can be used to perceptible advantage in alleviating the condition of women in India, of whom there are, according to the latest census, 124,000,000.

The Agriculture Building of the Belgian Government was destroyed by fire on November 14.

A WORD TO SOCIAL PHILOSOPHERS.

Gov. Oglesby's decision about the Anarchists gave, we think, general satisfaction, particularly as the distinction he made only saved two of the criminals from the gallows. Although there was no legal difference, nevertheless, there was, it was generally admitted, some slight moral difference between the cases of Fielden and Schwab and those of their confederates. The Governor's recognition of this difference undoubtedly heightened the moral effect of the penalty inflicted on the others, and will rob Anarchist orators hereafter of some of their inflammatory material. The commutation of the sentence of the two who are to remain in prison will doubtless soon furnish an issue to the State politicians, but it will be a much less formidable one than a similar indulgence to six or seven would have been.

The execution of the four wretches who suffered on Friday is, however, whatever we may say of its justice or necessity, a very solemn event in American history. It would fifty, or even thirty, years ago have been considered wildly improbable that, within this century, at least five men would have to be hanged in the most prosperous city in the American Union for running amuck against the whole community with bombs and pistols, and that they would have tens of thousands of sympathizers in various parts of the country. A man who predicted this in the streets of Chicago any year before the war would undoubtedly have been considered insane. Nevertheless, it has come to pass, and we must, dreadful as it is, try to get some profit or warning out of it, individual as well as national. The lesson it conveys is, in our belief, one which it behooves our social philosophers, including under that term philanthropic clergymen, and college professors, and labor speculators, no less than the poor Anarchists, to ponder diligently. Some of them—we say it advisedly—have gone and are going far to share in the blood-guiltiness of this diabolical Anarchist agitation by the encouragement they give in their lectures and essays and "conferences" to the notion that every man who saves or acquires in any way more money than his neighbor does wrong to that neighbor, and that in short the owners of accumulated property are a band of robbers. What professor, or preacher, or philanthropist, except McGlynn, we shall be asked, has preached any such atrocious doctrine? Every professor, and preacher, and philanthropist, we answer, who tells crowds of ignorant and poor men that there is something wrong in the present constitution of society without showing what the wrong is and how it is to be remedied; and every professor and preacher who gives poor and ignorant men to understand that in his opinion the earth supplies the means of "abolishing poverty" if its products were only fairly distributed.

Every ignorant and poor man who hears this vague talk from this source, treats it as a confession of guilt on the part of the people who own anything or are not dependent on daily wages. It keeps him in a constant state of bitterness and unrest. It makes honest labor hateful, and the very sight of people richer than himself a cause of irritation to him. It makes listening to the blatherskite of socialist agitators the great distraction and solace of his life. It fills him with suspicion of or hostility to everything which good men and good women try to do, either in legislation, or administration, or in charity, to cultivate his ambition and self-dependence and to increase his chances of rising in the world by his own exertions. And, finally, it prepares him for the arrival of the bold and desperate fanatic like Lingg, who tells him that he has talked enough, that the time has come for action, and that he will show him how to get his due from the "capitalists."

Nothing can well be more instructive than the history of this ruffian's connection with the Chicago crime. Anarchism in one form or another had been simmering and stewing in that city for ten years, and was every year reënforced partly under the influence of the indifference or contempt of the local authorities, and partly under the influence of the encouragement given it by social speculators and labor reformers in other parts of the country. The Anarchists met and paraded and harangued a good deal year by year, but nobody took them seriously, though the duty of murder and arson was one of the favorite themes at their meetings and in their periodicals. Finally, Lingg, the man of action, arrived from Europe with the art of making bombs, and acted as the spark which was to produce the explosion. He found the materials all ready for him—that is, a horde of excited men, who had worked themselves into the belief that they were the victims of intolerable wrong for which there was no legal remedy. In nine months after his arrival he had them ready to use his bombs; we know with what result.

Now, there is not a city in the country in which a little circle of malcontents of this description may not be found—that is, of men who think there is a fund belonging to the public in general which the owners of property have got hold of, and refuse to divide with the poor, and who are gradually learning to hate every man who saves, and wears good clothes. Moreover, there are demagogues, both native and foreign, springing up in every direction, some sincere and some knavish, ready to make a living out of their delusions, or to express them in some sort of crime. Into the hands of these social pests, clergymen among us in their pulpits, and professors in their lecture-rooms, are every day playing, either by vague intimations that there is shortly going to be a great "social revolution," in which we shall all lie on our backs and make machinery do our work for us, or that the present distribution of property is in the main the result of cheating, and that there must be something rotten in a state of society in which a few men can accumulate large fortunes. What the remedy is, how human society is ever to be at any time anything but the product of human character and culture, they never tell us; but they intimate that if the industrious do not promptly divide more freely with the idle, the frugal with the improvident, the workers with the blatherskites, there will be trouble, mysterious in its nature and unknown in amount. If the Chicago tragedy teaches anything, it teaches most impressively that this fooling should cease.

THE RIGHT OF PROCESSION.

The dispersion of a quasi-political procession in London on Sunday, and the permission granted in New York on Thursday last to an Anarchist procession to parade in the public streets, suggest the inquiry whether there is any natural and indefeasible right on the part of particular societies and crowds of people to occupy public streets and places for the purposes of demonstration and in order to show their strength. We are so accustomed to a free-and-easy use of the words free speech, right of petition, right of assemblage, etc., that we are apt to confound these things with quite different matters. The right of free speech does not carry with it the right to speak on another man's premises without his permission, or in a public hall without paying for the use of it. It does not convey the right to burn gunpowder, or to beat drums, or to make noises disagreeable to one's neighbors. The right of petition manifestly does not require that a petition be conveyed by all the signers to the officers of the Government or the Legislature to whom it is addressed. The right of assemblage does not imply the right to interrupt street traffic or to exclude from public places the ordinary movement of people therein. Speech, petition, and assemblage are therefore in principle separate and distinct from street gatherings and public gorges of every kind. Human liberty is no more assaulted or endangered by forbidding such assemblages than by a policeman telling an ordinary foot passenger to "move on."

If the streets and squares of a city are simply public easements to enable people to move to and fro, the use of them for parades, processions, and meetings is a privilege to be sought, not a right to be demanded. It is a proper subject for regulation by statute. If the use of streets for such purposes is not a natural right, like those of life, liberty, and the pursuit of happiness, or a constitutional right, like those of petition and habeas corpus, it ought to be lodged in the discretion of the authorities controlling the streets, to be granted or withheld upon their general responsibility. In this respect the law of New York is defective. It presumes that parades, processions, and public meetings held in the open air will always be orderly and proper, and that the chief officer of such gatherings will see to it that the orders of the police are obeyed. It accordingly puts no restraint on processions except that it prohibits them from marching on railway tracks or across such tracks in a manner to interfere with the movement of cars, or from marching on Sunday (except funeral processions). It requires the chief officer of the procession to give six hours' notice of the intention to parade to the police authorities, who may then designate how much space in width the procession may occupy. In fact, the law of New York recognizes the

right of procession, and virtually hands over the streets to every sort of parade, even of those who carry black flags, red flags, or foreign flags, and who avow the intention to subvert the Government. The law of Illinois, as quoted by the Mayor of Chicago the other day, is much more rational. No procession can use the streets without the permission of the chief officer of the city, who may prescribe such conditions and regulations in each particular case as he chooses.

The brief letter of Mr. Gladstone shows that the London procession, although avowedly political in its character, was a dangerous collection. There was mixed up with it a large element of "the unemployed." The unemployed paraded last year in the shop windows along Piccadilly and Oxford Street, and helped themselves to a large amount of portable property. When a procession of this sort gets under way, it is joined by all the tramps, roughs, pickpockets, and ticket-of-leave men, all who have committed crime, and all who are on the lookout for a chance to commit crime. A great hurly-burly where the police cannot act freely, and where nobody can be identified, is what they are always on the lookout for. The employment they are in want of is robbery shorn of unpleasant consequences. Evidently the usual amount of this material had been sopped up along the road to Trafalgar Square. The Government was bound to anticipate these accessions to the crowd, because it had had sufficient warning of their character last year. It was bound accordingly to prevent the meeting in Trafalgar Square upon the same principles that it would prevent a bonfire from being started in close proximity to a lot of combustible material. That the Government had the legal right to prevent the meeting in Trafalgar Square is undoubted.

The recent Anarchist parade in New York was both a disgrace and a danger. It was a disgrace to permit a polyglot foreign rabble to march through the streets with black flags and red flags, or any flag except that of the American republic. It was a danger to permit such a rabble to collect together at all, considering that their fundamental creed is that violent death should be visited upon all who have property and refuse to hand it over to the first comer. Since the laws do not vest the police or the Mayor with authority to prevent such assemblages, the Legislature should lose no time in conferring such authority upon them.

A NARROW MARGIN.

SINCE the result of last week's election in New York State was known, it has been universally accepted by both parties throughout the country as settled that President Cleveland will be renominated by the Democrats without any opposition. In view of the result in Virginia, it is also generally admitted by Republicans, and is certainly not doubted by any unprejudiced observer, that the Democratic candidate in 1888 will again receive the support of the entire South.

Many Democrats take it for granted that Mr. Cleveland's reëlection is also assured. In one contingency there is no doubt that they are right. If the Republicans should renominate Mr. Blaine, Mr. Cleveland would unquestionably beat him far worse than before. Mr. Blaine could not again conduct a successful intrigue for "the Irish vote," and, on the other hand, he could not again hold to his support the tens of thousands of Republicans who only supported him under protest before, because they believed that Mr. Cleveland's election would "ruin the country." If the Republicans are to be guilty of such stupendous folly as presenting again the tainted and dangerous candidate whose nomination defeated them in 1884, then indeed is the election of 1888 already decided in Mr. Cleveland's favor.

But it is safe to take it for granted that the Republicans will not be so crazy as to renominate Mr. Blaine. Suppose that they offer the country neither Mr. Blaine nor a Blaine dummy (who would be scarcely less weak than Mr. Blaine himself), but a first-class candidate upon a first-class platform. What then will be the situation? Mr. Cleveland will have 153 electoral votes from the "Solid South," and must have 201 to win. In 1884 he secured 219, carrying New York (36), Indiana (15), New Jersey (9), and Connecticut (6). He could have spared from the list either Indiana alone, or New Jersey and Connecticut together; but New York was essential in any case, and with it either the large Western State or both of the small Eastern States.

It is possible that Mr. Cleveland may carry some Northern State in 1888 which he did not in 1884. New Hampshire gave only 961 Republican plurality on the vote for Congressmen last year, and only 461 for Governor, and although the poll was not a full one, it is evident that the Republicans will have enough to keep them busy in holding the State next year. There are one or two other Northern States that voted against Mr. Cleveland before, which it is within the range of possibility for him to carry next time. But the Democrats will place no dependence upon what would be at best but happy accidents. They will rest their hopes upon carrying New York, and with it the other three Northern States which they had in 1884.

It is worth while for all concerned to keep in mind that in every one of these four States the margin is very narrow. Indiana gave Mr. Cleveland only 6,427 plurality over Mr. Blaine in 1884, and in 1886 it elected a Republican Lieutenant-Governor by 3,324 plurality, and seven Republican Congressmen out of thirteen. New Jersey gave Mr. Cleveland only 4,412 plurality over Mr. Blaine in 1884, and in 1886 gave the Republican candidates for Congress 6,906 more votes than the Democratic. Connecticut gave Mr. Cleveland only 1,276 plurality over Mr. Blaine in 1884, and in 1886 elected a Republican Governor by 1,898 plurality. New York gave Mr. Cleveland but 1,047 plurality over Mr. Blaine in 1884, and in 1887 has given the Democratic candidate for Secretary of State only about 18,000 plurality.

Each one of these four States is so close that the scales are turned by the independent vote. New York would have gone Republican this year if the Republican ticket, platform, and party management had not caused the independent voters to give the preference to the Democrats. Connecticut rejected a bad Democratic candidate for Governor by independent votes in 1886, as she had, by the same votes, rejected a bad Republican candidate for President in 1884. Indiana elected a Republican Lieutenant-Governor in 1886 because her independent voters were displeased with the record of Democratic administration and legislation in the State during the previous two years. New Jersey has just elected a Republican Legislature because her independent voters were disgusted with the last Democratic Legislature.

It is thus plain that the margin in each of these States is a very narrow one. How any one of them will go next year depends absolutely upon the independent vote. The Republican managers can so affront that vote as to insure a Democratic plurality in each by offering it only the old alternative of 1884. The Democratic Administration can disaffect it by yielding to the spoilsmen, and incline it to support a good Republican candidate. Mr. Cleveland was persuaded by the Democratic managers to express the opinion that "every man in Massachusetts who is in sympathy with the Administration and wishes to secure victory next year, should heartily support Lovering in Massachusetts in this campaign." The Massachusetts Mugwumps replied by voting against Lovering, whom they considered a bad candidate, and thus nearly doubling last year's plurality for Ames. The moral is plain: the independent vote can only be secured by deserving it.

THE SILVER QUESTION.

THE silver question has not been a topic of public discussion for the better part of a year. International bimetallism has been on the anvil very much as usual, but this is not what is meant by the silver question in the United States. The silver party in this country never cared a fig what other nations were willing to do. Their ideas were aptly phrased in the query, "What have we to do with abroad?" And in all this they were quite right. What they wanted was a cheap dollar. They believed they should get it by coining silver dollars at a certain monthly rate, regardless of the public demand for them. As their opponents believed this also, they became more set than ever in their determination to multiply silver dollars, and less inclined to give heed to M. Cernuschi, Mr. Dana Horton, and the other academic bimetallists, whose warnings that silver coinage in the United States was hurting the good cause in Europe have always fallen upon deaf ears in Congress.

The silence that has fallen upon this vexed theme is due to a doubt that has been rising, among both silver and anti-silver men, whether the continued coinage of that metal under existing law will ever bring a cheaper dollar into the channels of business, or enable anybody to pay his debts at less than one hundred cents gold value. In other words, the question engaging the thoughts of those who really think on the subject at all is, whether any conceivable addition to the Government's

stock of silver dollars will, of its own force and without further legislation, upset the gold standard and substitute that of silver in its place. If this question be answered in the negative, the silver men will have no motive to keep the mint going after the currency demand of the country is fully satisfied. On the other hand, their opponents will cease to borrow trouble about silver, will look upon the accumulation of that class of dollars in the Treasury as they look upon other unnecessary taxes, of which we have an over-plentiful supply. When both parties shall have reached this state of mind, the law will be changed and silver coinage will be limited to the wants of the community, just as the subsidiary coinage is; for unless the silver men are strong enough to pass a free-coinage act, their game will have been lost, and they can have no more reason than others have to maintain an unnecessary tax.

We ventured some time since to express the belief that the manufacture of silver dollars on Government account would not of itself change the standard of value from gold to silver. We have not seen any argument controverting that position. It was manifestly impossible, at the time when the Silver Act was passed, to foresee its ultimate effects, because it was a complete anomaly in the world of finance. Nothing like it had ever been seen or imagined. No Government had ever before bought bullion and made money of full legal tender out of it, for sale to its own people at a profit. There was a whole chapter of paradoxes in the law as it was finally passed. No analogy could be drawn from the experience of any other country, because none had had such an experience. There had been single-standard countries and double-standard countries and "limping standard" countries —the last being the condition of France and the nations of the Latin Union that have ceased coining silver, but still retain a great quantity of it in circulation as full legal tender. There had never been an experiment made like ours. Therefore nobody could tell how it would turn out.

There were also unknowable elements in the problem. Nobody could then foresee the decay of the national-bank circulation. Still less could anybody predict what would be the demand for paper currency arising from the growth of the country, the settlement of the far West and Southwest, the development of industry, and the influx of immigration. What we see now is, that all these things have conspired to give room for more than $200,000,000 of silver certificates, and that the demand for them has not ceased. While we consider this kind of circulating medium costly and unscientific, and a bad speculation in metal, it is nevertheless true that there has been an efficient demand for more currency than could be legally supplied in any other way, either by the banks or by the Government, and that this demand has reimbursed to the Government about all that it has thus far expended for silver bullion.

The demand for silver certificates is simply a demand for something that will serve the purpose of domestic exchanges. Greenbacks or bank notes would be taken with equal readiness if they were to be had. As they are not to be had, the next best thing is taken, and this happens to be silver certificates, since gold certificates are not issued of a less denomination than $20. What the future demand for them may be, it would be idle to speculate. Of course a time will come when the country will be saturated with them and can absorb no more. When the public cease to buy them, the excess of silver dollars will lie where they are made. They will become an idle and inert hoard, but they will not, without further legislation of a radical kind, change the monetary standard of the country from gold to silver.

ITALY AND THE VATICAN.

ITALY, October 25, 1887.

THE Papal jubilee and the presence of jubilee pilgrims in Rome, so far from reopening the question of reconciliation between Italy and the Vatican, are but fresh proofs that there is no special question to be settled, or at all events the present Italian Ministry are bent on ignoring it. Despite the declarations to this effect made by Crispi and Zanardelli on entering the Cabinet, nothing could persuade the extreme parties, namely, the ultra-clericals and the ultra-radicals, that Crispi's journey to Friedrichsruhe had not for its chief, or sole, object to consult with Bismarck as to the best means of finding a *modus vivendi*. Simple Conservatives and old-school Liberals did not fall into this error. For one of the chief leaders of the party of action outside and of the Left in Parliament to have opened his lips to a foreign statesman on the question would have implied the renunciation of the very corner-stone of the Liberal creed. When Rome was first proclaimed capital of Italy, the Liberals opposed the law on Papal guarantees, but were outvoted on the main question, and the law proclaiming the person of the Pope sacred and inviolable, to whom, as to the King, royal honors were to be paid, and providing an income of 3,325,000 francs, exempt from all taxes, the free possession of the Vatican, of Sa. Maria Maggiore, of the villa of Castel-Gandolfo, with all the edifices, gardens, and lands appertaining, is still the law of the land. But when it was proposed that the Papal guarantees should be made a subject of international discussion and law, the Liberals, by their vigorous and unanimous protest, won the day. We are but just freed from the material oppression of foreign armies, and you would place Italy under the moral tutorship of the Catholic Powers? they asked; and, the republic being just then proclaimed in France, and monarchy not yet firmly established in Rome, the point was yielded with regret.

That same law, however, rendered it binding on the Italian Government to defend, even by force, all future councils and conclaves, and it so happened that at the death of Pio Nono, which occurred on the 7th of February, 1878, just one month after that of Victor Emanuel, Crispi was Home Minister, with Depretis President of the Cabinet; and the House, prorogued after the new King had taken the oath, had been reconvoked for the 20th of February. In the young King's first speech there was not a single allusion to the Vatican, to the Pope, or even to religion, save where he promised "religious observance of free institutions as the one safeguard against all perils." Crispi, on whom devolved the "defence of the conclave," learning that the cardinals trusted so little to the Government that they had actually decided on holding the conclave elsewhere than in Rome, took his precautions to exclude the shadow of pretence for foreign intervention, and, instead of convoking Parliament at once, delayed doing so until the 7th of March—this, of course, with the full concurrence of the young King. "Never," says a Catholic writer, "did the *fathers*," as he classically calls the cardinals, "enjoy such unlimited liberty as during the conclave of 1878, to the infinite surprise of the oldest among them, who had a vivid remembrance of the foreign and Roman pressure brought to bear during the conclaves of Leo XII., Pius VIII., Gregory XVI., and Pius IX." In two days the conclave commenced and ended with the proclamation of Leo XIII., who, if he had had his own way, would have blessed the populace from the *outer* balcony of St. Peter's, thus initiating a reconciliation with the Italian Government—all gain to the Vatican, all loss to the Quirinal. This postponement of Parliament gave umbrage to a large section of the Liberal party, who styled it "a truckling to the Papacy, an offence to the King and the representatives of the nation." The protests, coupled with animadversions on an act of an entirely private character, induced Crispi to resign on the 3d of March, before Parliament met, but he had had time to define his Vatican policy. It was not a caving in, but simply the avoidance of the appearance of pressure.

As with the conclave, so with the jubilee and jubilee pilgrims: common law and common courtesy are duly enforced, there has been no need for the display of military or police. A few good-humored articles in the officious newspapers, reminding the Romans that *noblesse oblige*, that pilgrims to the Vatican are as much their guests as pilgrims to the Pantheon; some significant warnings to the pilgrims to put on their best manners with their best clothes, that offences against the law or insults to the Government or people will no more be permitted in guests than in citizens, have sufficed. The pilgrimage causes no disorder, and no other sensation in Rome save content to the shopkeepers, omnibus and cab drivers—if we except a strike on the part of the latter because the former were supposed to have received an undue share from the purses of the pious pilgrims.

These being the facts, it is scarcely needful to repeat that, so far from Crispi and Bismarck having met to discuss the Vatican, it was a subject not alluded to between them, unless with a smile. Even that meeting occasioned no surprise among the members or friends of the old historical Left. A Prussian alliance was their ideal long before it took place; Bismarck versus Napoleon, a to-be-united Germany against imperial France, was the dream dreamt out by those who desired moral as well as material unity, who dreaded Napoleonic influence far more than imperial soldiers. I remember that Francesco Cucchi, who paid us a visit at Garibaldi's headquarters in France, to inform the survivors of the Mille that they had forfeited their pension by taking arms under the French Republic, was even then on a return visit from Berlin. But the general public were only made aware of the fact when Bismarck asked Crispi after "his old friend Cucchi." Quite other subjects than Vatican policy or any other internal question led to the very natural meeting between the two statesmen. There is no country in Europe by which peace is so desired, or to which it is so absolutely necessary, as Italy; and whereas the alliance between Italy, Germany, and Austria is an accomplished fact, nothing would be now more distasteful to the party in power and their partisans than a war between Germany and France. Despite the constant provocations of the French press

there would be a terribly divided feeling among the Italians if ever it were necessary to enter into an offensive alliance against France, which, as a republic, still possesses invincible attractions for the radicals—to call socialists and republicans, internationalists, and the few communists, by one common name. Then, again, Italy has a very special interest in the settlement of the Eastern question. The autonomy of the nations in the Balkan Peninsula is another article of their creed. This question and that other of the Mediterranean, Italy being resolved that this sea of theirs shall never become a French or Russian lake, were themes sufficiently interesting to occupy the forty-eight hours of the interview at Friedrichsruhe.

That the Pope himself and all Catholics are mortified and aggrieved at this indifference shown to themselves and their claims is manifest in every sentence of the Catholic press, but there is no help for it. It takes two to make a quarrel, and "Massa Crispi says: Won't." Yet if anything were wanting to show that the present Government is far from yielding an iota to the Vatican or from desiring reconciliation, the question of the monument to Giordano Bruno supplies the hiatus. In a sort of diary entitled 'Avvisi di Roma' one reads: "On Thursday morning, 15th of February, 1600, in the Field of Flowers (Campo de' Fiori) was burned alive the infamous Dominican friar of Nola [Giordano Bruno], on whom the sentence was passed of *heretico obstinatissimo*. He said that he died as a martyr and willingly, and that his soul would ascend to Paradise purified by those flames. By this time he will have found out how much truth there is in his vaunt." In the same diary on the 17th of February is added: "To the judges who read his sentence, Bruno, who really was a beautiful youth, in the act of ascending the funeral pyre, said: 'You are filled with far greater fear in reading the sentence than I am in listening to it.'" Last year, in homage to the prevailing monument epidemic, a committee of the University of Rome presented a petition to the Municipal Council of the capital of Italy to permit "the erection of a monument to the pantheistic philosopher in the centre of the Field of Flowers, on the spot where his lofty and audacious idea was sealed with heroic death. This spot historical justice has chosen to erect a monument to the philosopher and martyr." Ettore Ferrari, the great Italian sculptor whose monuments of Garibaldi arise month by month, in every town and village of Italy, proffered his services, and the petition to the Roman municipality irrespective of party was signed by Crispi, Zanardelli, Nicotera, Cairoli, Baccarini, Parliamentary Liberals; Bovio, Radical; Saffi, Mazzinian; Cavallotti, Radical poet: Cadorna, Silvio Spaventa, Ruggero Bonghi, pillars of the moderate church.

A year passed, and meanwhile the new municipal elections of Rome multiplied the Clerical members. When Crispi entered the Ministry, delegates from the Giordano Bruno Committee waited upon him to know what would be the action of the Government with regard to the monument. His reply was straightforward: "The Government would see with pleasure the erection of the monument to Giordano Bruno, not doubting for a moment that the municipality of Rome would concede the requisite space for its erection in Campo de' Fiori." *Tutt'altro*, the Clerical members of the Roman municipality, being in the majority, protest against space being granted on the said Field of Flowers for the glorification of the heretic philosopher burnt by the order and for the honor and glory of the Church. Significantly enough, Ruggero Bonghi secedes from his colleagues, on the ground that the monument to Giordano Bruno ought not to be used as an incentive to party passion or to political rivalry, and now, so late in the day, objects to its being erected in the Field of Flowers, devoted to the sale of cabbages and turnips. His letter finishes with very touching reflections on the head of the Church and most cordial sympathy with Duke Torlonia, Syndic of Rome. The wish to avoid offering an affront to Leo XIII. is the chief reason alleged for his advice that the question of the monument be dropped. This is impossible: the Syndic of Rome must propose the cession of the site to the giunta or members of the executive, and the greater the opposition offered the more numerous will be the subscriptions poured in. But certain it is, if the Clericals really outnumber the Liberals, the site for the monument of Giordano Bruno will not be granted in the Field of Flowers.

This otherwise insignificant incident proves that Catholics in Italy, by the simple exercise of their rights as citizens, *i. e.*, by presenting themselves as electors and candidates at the municipal elections, may carry a point in favor of the Vatican against the very strong Liberal party in Rome itself. Hence it is clear that whatever laws they may wish enacted or revoked, they have but to enter the lists as electors and candidates at political elections, and their success will be in proportion to their numbers. Of course the question of the temporal power can never again be discussed, but on most other questions the Clericals would find on entering Parliament that they and the Moderates are very much of the same opinion. The Conservatives, for instance, were strongly opposed to compulsory conscription for seminarists; many of them would gladly see religious education substituted for the "rights and duties of citizens" now taught in the schools, and are opposed to the law on divorce, to the abolition of capital punishment. Hence it is clear what an immense gain it would be to the Vatican should Catholics present themselves as candidates at the next general political elections.

What prevents them from so doing? What hinders them from entering the lists openly as candidates? We say *openly* because most of them vote as electors under the rose. Simply this, in 1874, just three years after the Italian Government had taken possession of Rome, reasonable Catholics—foreseeing that the programme, "Neither electors nor deputies," meant for them practical abdication, realizing that the Chamber of Deputies and even the Senate, composed exclusively of members opposed to the restoration of the temporal power, would bring forward bills and enact laws more and more hostile to the Church—tried to obtain from Pio Nono if not a permission a sort of truce, and received in exchange a sort of anathema, followed by severer denunciations and an explicit veto; and now, until Leo XIII. revokes Pio Nono's prohibition, no Italian who cares to retain his position as one of the faithful can proffer himself as a candidate for a seat in the Italian Parliament. Clearly it is in the interest of the Italian Government that the repeal of this prohibition be retarded as long as possible. None better than Crispi know that he is only tolerated by the old Conservative party—that if only the Catholics be allowed to take the oath to the inseparable welfare of King and country, an offensive and defensive alliance will be at once concluded. Give Crispi time to rally and organize the Liberal ranks now scattered, undisciplined, and, worse than all, indifferent, and Liberal Italy may hold her own; but the success of the Clericals as municipal administrators in Rome, in Naples, in Venice, in larger and smaller cities, is but a foretoken of what will come to pass should they, allied with the Conservatives, present themselves at the political urns.

Their desire to do so will not be diminished by Crispi's speech yesterday, in which he made it very clear that no concessions will be made beyond such as the law consecrates, and also that his Ministry is not to be a hodge-podge of Moderates and Liberals, of men of progress with Conservatives and reactionaries.

"You know what my past has been," he said. "I have nothing to forget, nothing to change; nay, I cherish the sweet illusion that it was in virtue of my past that our loyal King accorded me his confidence. Assuredly, none of you will expect to see me fail in the duty of consistency. Liberty means for us the respect of individual rights harmonized with national right, devotion to the law which, in its turn, is devoted to reason. This guides our conduct towards the people, nor could we adopt another system towards the Church, whose liberty is larger and more secure in Italy than in any other country. This liberty we do not mean to limit; but in respecting it we intend to be respected. This is well known. No one has ever thought of urging such a line of conduct upon us by violence, or even by moral pressure. We have been called *authoritarians*, and we don't deny the charge, if it is meant to indicate our firm persuasion that some sort of authority ought to preside over the fundamental essence and the daily development of the State; but that authority must be legal in all its aspects, founded on the sincere suffrage of the majority, supported by a frank explanation of their desires, by the partition among all of the utmost possible good. Duty, authority, and knowledge must be combined in a government; all else is mere arbitrary rule."

Without entering into the laws that will be proposed to the new Parliament, he let it be understood that reforms will be gradually introduced. A rapid glance at the morning papers shows that the speech on the whole has produced general satisfaction save among the ultra-Radicals, whose representatives formally abstained from the banquet, chiefly on account of the despatch of fresh troops to Africa. The heartiest applause was bestowed on the praises dealt out to the populations of southern Italy during the cholera, and for "the proper and dignified conduct of the entire Italian people, despite the terms not always measured, the acts not always Christian, of the Vatican and the Vaticanists."

J. W. M.

A SÉANCE OF INOCULATION.

PARIS, October 29, 1887.

BEHIND the Latin Quarter, after passing through faded streets, at No. 14 rue Vauquelin, one reads over a modest entrance, not unlike the door of a deserted convent in the provinces, "Institut Pasteur." Within is the same melancholy atmosphere of the convent yard before you enter a vast hall in which are gathered the children of various nations, reminding one of the variegated crowd to be seen at Castle Garden after the arrival of an emigrant ship. The group is impatient, moving restlessly to and fro, and changing expressions like a phantasmagoria. Smoking is prohibited in four languages, and a notice warns the patients that the Institute authorizes no hotel-keeper to assume any responsibility during their treatment. In that solemn enclosure a material link with the outside world is a glass case in which letters bearing foreign postmarks await their destination. I noticed some American stamps among them.

A little recess at the end of the hall is occupied by two men guarding a register. When I mentioned an invitation from M. Pasteur, one of them silently opened the wooden gate for me to pass, then ushered me into another hall where things wore a still more solemn aspect. There I was left in company with the preparations for the séance. These were simple enough. On a

table a small spirit lamp burned fiercely over eleven little glasses duly labelled and covered with paper. These eleven glasses contained the eleven series of virus, graded according to the cases, and ready for the silver needles of the operator. On a second table two small china vessels were filled with a solution of phenic acid; silver pincers were at hand to apply the thoroughly saturated cotton wad.

It was eleven o'clock in the morning, and we were waiting for some one. I could see M. Pasteur coming from time to time to glance at the clock. His thoughtful, almost somnambulic expression, which doubtless comes from his long tête-à-tête with one of nature's secrets, seemed lighted with impatient expectancy. He looks well, however. Evidently his long summer rest has done him good, and, at the risk of appearing flippant, I should say that he looks quite the modern savant, with his coiffure of gray cloth trimmed with black braid instead of the black velvet cap dear to investigators. But, to illustrate the proverb that punctuality is the politeness of kings, many minutes had not elapsed after eleven o'clock struck when the expected guest, Dom Pedro d'Alcantara, Emperor of Brazil, was announced. The old gentleman entered, followed by two *confidents*, as his companions would have been styled in the old time. I thought as he lifted his tall hat, if the silken fillet of the *pater conscriptus* of ancient Rome encircled his patriarchal brow, how thoroughly he would represent the beau ideal of kind majesty and manly dignity.

The signal was given. Like a bishop emerging from the vestry, surrounded by his clergy, the great savant reappeared, followed by two doctors and two assistants. The first name was called: a swarthy navvy responded; one of the assistants pushed the needle of the syringe through the paper cover on the first glass and filled it, while one of the doctors took a pair of the silver pincers holding a wad of cotton steeped in phenic acid, and gently rubbed the side of the patient before the needle was applied. The face of the man contracted, his dark, burning eyes glowed, and his hot blood, stirred with emotion, gave to his skin the fantastic hues of some rare copper cauldron. A visitor who should have entered at this moment could easily have evoked a vision of the rabies without too heavily taxing his imagination. Not so with the next patient, a buxom, blushing girl from the country, who, without coyness and with admirable tact, slightly opened her simple sacque, and exposed a cut through all her garments prepared for the operation. As her face could not blush a tint deeper, no apprehension was indicated, and with a polite "Thank you" after the inoculation she moved away.

The patients passed in turn—some cold and stoical, some flustered, some attitudinizing—among them a soldier in uniform, who, no doubt, animated by the souvenir of the French warrior who smoked his pipe while his leg was amputated, smiled blandly. The distinguished visitor looked on with great interest. What shrieks, what contortions, as a child was brought. The fatherly old sovereign softened his accents and offered a few consoling words to quiet it, while his grave eye, that had witnessed the making of a whole country, grew tender at the sight of childish fear. Next a youth came forward who kept his gaze fixed steadily on Dom Pedro. Instead of retiring like the rest after the inoculation, he remained standing, when M. Pasteur presented him to the Emperor, saying that he had arrived from Brazil the day before to be treated. "What is your name?" asked the fatherly voice. The boy repeated his name twice, still looking in the face of his sovereign with the expression peculiar to one who meets a countryman in a foreign land. "Tell me," resumed the Emperor, still softening his tone, "thou dost not feel at all queer?" The youth shook his head (apparently he had not been trained to any court ceremonial). "Good! Was it a small dog or a big one that bit thee?" "A Newfoundland." "Ah, nothing to fear!" said the Emperor. "I was knocked over by a Newfoundland once, from whom I had taken his soup. He did not bite me, however, but I bear the scar of his scratch on my finger. Look!" And Dom Pedro ungloved his right hand, and held the finger for the boy to see.

During this exchange of experiences between liege and subject, the séance progressed, and Dom Pedro's attention was next arrested by the entrance of a palish young woman with a plaster on her cheek. "Ah!" he remarked, "bitten on the face; that is graver." A young man standing near me, overhearing this remark, said confidentially that he had been bitten on the leg, and that the cloth of his pantaloons had no doubt absorbed the greater part of the venom. "I don't believe mine is a serious case; however, I left Brussels at once to come here," he added. This remark reveals the benefit of inoculation to mankind, even admitting hydrophobia to be merely an imaginary disease pushed to fatality by nervous excitement, as the regular practitioners contend. If this simple operation has the power to calm fears in the face of which the bravest are cowards and the stanchest hearts fail, has not M. Pasteur done more than offered a cup of cold water to a thirsty traveller? The last of the forty patients to be treated was a small boy bearing the *berret* of the Pyrenees. He had come alone from his serene mountains in search of that panacea without which his native skies would never seem cloudless again.

M. Pasteur next introduced his illustrious colleague of the Académie des Sciences to that ghastly factory of virus—that conservatory of microbes—if I may call it by that name. *Multum in parvo* might be the motto of that darkened room, where millions and millions of microbes, enclosed in their glass prisons, thrive and multiply. On a long table are rows of air-tight flasks, each containing a small piece of the pulp or spinal or cerebral marrow of a rabbit dead of hydrophobia. These flasks have been previously heated to the requisite temperature to render them inaccessible to foreign deposits, the necessity of which M. Pasteur emphasized by reminding Dom Pedro that even cutaneous injections of morphine cause slight irritations of the skin—in other words, local poisoning—brought on by the introduction of foreign matter infected with the morphine. When these pulps infected with virus are thoroughly dried, they are pulverized and classed according to the degree of their intensity. It is well known that one of M. Pasteur's most precious discoveries is that the oxygen of the air is an agent for attenuating the strength of the virus. Thus the vaccine can be modified and its virulence graded by greater or less contact with oxygen. The vaccine is applied to the patient according to the gravity of the case and the progress of the treatment. It is in *bouillons*—the essence of purified chicken soup—that the powder of microbes is cultivated; they form the stock of vaccine matter.

From the time M. Pasteur thought of communicating hydrophobia by a direct application of rabid matter placed on the surface of the brain, a great step was made towards a practical method of cultivating the germ. Before that the method of inoculation was very slow; months often elapsed before the experimenter could see the result of an experiment. When M. Pasteur, instead of deriving the rabid virus from the saliva of mad dogs, took it from the cerebral substance of a mad animal, he obtained a pure virus, which developed madness in exactly the same length of time that follows a bite. And when the virus was placed under the cerebral cap on the surface of the brain, results proved that hydrophobia is essentially an illness of the encephalon: not only the brain, but the spine and the whole set of nerves, even the marrow of the animal, are infected.

The theory of hydrophobia transmitted through the bite of a mad dog and by trepanning is very clear. The bite of the dog inoculates the virus through the blood, which puts it in communication with the surface of the brain and the marrow, and penetrates the nervous mass. By trepanning, the marrow is first attacked, and death results from paralysis. The contortions and spasms present when the nervous system is a prey to rabid poison are absent; the animal is neither furious nor excited, but calm to the end. Paralysis wraps his senses in its lethean embrace.

The next thing was to visit the rabbits. These are kept in a thoroughly ventilated rotunda, where each little animal occupies a separate cage and nibbles the fragrant herbs scattered round him until paralysis ends its existence. The effect of the poison is at once discernible in their actions. Those recently inoculated—those bearing a fresh wound on the head—are the most lively, while those with the wound almost healed are nearing the end. "This one will be dead to-morrow," said M. Pasteur, glancing at the label on the cage, "and is, besides, the sixty-fourth subject of a line of mad rabbits, having received on his brain the virus that had been transmitted through sixty-three before him."

It cannot be denied that these rabbits are more convenient to handle than mad dogs. They must be agreeable substitutes for the weird pack that howled in the basement laboratory of the Rue d'Ulm. I recall an episode in the life of the great savant during that period of unceasing experiments. A veterinary surgeon despatched a message saying he had a bulldog furiously mad that he would place at M. Pasteur's disposal. M. Pasteur started with a basketful of rabbits, expecting to have them bitten by the dog, but it was in vain that the long ears of the rabbit were pushed through the bars of the cage where the dog was confined; he shrunk back to the furthest corner and refused to hurt them. Not discouraged, M. Pasteur ordered the surgeon's aids to hold the dog on a table while he applied a glass tube to the foaming mouth, and with his own lips drew a few drops of the fatal saliva with which he inoculated the rabbits. An eye witness of this perilous deed told me that M. Pasteur never seemed so great as at that moment.

The sight of the rabbits naturally suggested the subject of trepanning. M. Pasteur proposed to illustrate its simplicity, much to the gratification of Dom Pedro, whose interest in all matters pertaining to science knows no weariness. We followed the savant to one of the rooms in the Institute, where a frisky rabbit was brought and laid on a table, and a tiny paper funnel placed over his nose. Very soon the chloroform had converted his sprightliness into the limpest drowsiness. It was a moment of great interest. The Emperor drew nearer as one of the assistants, with a sleight of hand as clever as magic, cut the skin over the cranium, and, with the trepan, took out a piece of the skull as large as the eye of a shoe button, deposited on the surface of the untouched brain an atom of the virus, replaced the skin, and sewed up the wound. Pretty soon the rabbit was as sprightly as before, and was

taken to a cage in the rotunda, with his days numbered. This was the beginning of the end; in twenty days he would be dead.

As we passed out through the dreary courtyard where the autumn wind scattered the rain and dead leaves, we met a curious-looking old couple under the guidance of a pilot in search of M. Pasteur's remedy. The short, full skirt and the gaudy fichu of the old woman, the fustian jacket and broad-brimmed hat of her companion, told of a distant province; but neither of the faces told which was the unfortunate one. A look of equal anxiety met the questioner's gaze. They needed help—that help which the strongest believers in destiny do not hesitate to ask of science to rescue them from the penalty of sin.

LE COCQ DE LAUTREPPE.

FURTHER PETRARCH DISCOVERIES.

FLORENCE, October 18, 1887.

SEVERAL months back (No. 1103) the *Nation* gave an account of the rediscovery, in the library of the Vatican, of autographic codices of three of Petrarch's works—the fact of their existence having passed out of the knowledge both of the custodians of the library and of the general world of letters. The hope was then expressed that the identification of such a body of Petrarch's handwriting would soon lead to the recovery of other documents throwing light upon the literary productions, or the life, of the great poet and humanist. This hope has since been amply gratified. M. Pierre de Nolhac, the able French palæographer to whom scholars are so greatly indebted for the discoveries previously made in the Vatican, delayed his projected work on the library of the sixteenth century book-collector, Fulvio Orsini, in order to hunt through the manuscripts of the Paris National Library for volumes either transcribed by Petrarch or, at least, once in his possession. Of these latter some seventeen had already been pointed out by Joseph Van Praët (1813), in a virtually inedited list of the vellum codices of Paris, and by M. Léopold Delisle in his interesting 'Cabinet des Manuscrits' (1868); but neither had subjected to the rigid examination they deserved these relics of Petrarch's library—which had originally come to France, on the capture of Pavia by Louis XII. in 1499, as a portion of the splendid collection founded by the ducal family of the Visconti in that city, and deposited in the very palace in which Petrarch once resided as the guest of Galeazzo Visconti.

Four of these remarkable vellum manuscripts have been selected by M. de Nolhac for description in an article entitled "Facsimilés de l'écriture de Pétrarque et appendices au 'Canzoniere autographe,'" published in the *Mélanges d'Archéologie et d'Histoire* (tome vii) of the French School at Rome. Besides many marginal notes of interest in the handwriting of Petrarch, all the four have, in accordance with his custom, a sort of *ex-libris*, in which he gives the dates of their acquisition. The first (Par. lat. 1994) is a commentary on Psalms ci–cl by St. Augustine (who, of all the Fathers of the Church, was the object of Petrarch's special veneration), on the final leaf of which the owner has written: *Emptus Rome 1337, 16 martij;* while on the recto of the first folio is a long note in his hand, dated five days later. The second (7595) includes the works of that encyclopædic compiler, Isidore of Seville, in which the Petrarchan *ex-libris* records its purchase for him at Paris by his father, its loss by theft, and its subsequent recovery: *Emptus mihi a patre Parisiis* [=*Parisiis*], *tempore pueritie me*[*e*], *post furto perditus et recuperatus. 1347°*. The third codex, in two enormous tomes of the thirteenth century, is a complete copy of St. Augustine's commentary on the Psalter, and was presented to Petrarch by Boccaccio, whom he thanks for the acceptable gift in a letter still extant ('Fam.,' xviii, 3), the hitherto unknown date of which is now fixed by this autographic inscription: *Hoc immensum opus donauit mihi uir egregius dominus Iohannes Boccacii de Certaldo poeta nostri temporis, quod de Florentia Mediolanum ad me peruenit. 1355, aprilis 10.* At the end of this manuscript M. de Nolhac found the *ex-libris* of Boccaccio, which he had evidently erased before sending the book to his friend at Milan. The action of chemical reagents brought out some fragmentary portions of this autograph of the author of the Decameron: *Iste liber est mey Giouanni* [*B*]*ocha*[*c*]*he . . .* [*ten*]*ebat a fratre Iacopo de cha . . . e sene . . . pro eo.*

The fourth described codex is a Latin version of Homer, made, through the efforts of Petrarch and Boccaccio, by the Calabrian teacher of Greek, Leo (or Leontius) Pilatus—a copy executed under Petrarch's supervision from Leo's original. The *ex-libris* thus tells its story: *Domi scriptus, Pataui ceptus, Ticini perfectus, Mediolani illuminatus et ligatus anno 1369°*. This record presents a fair instance, not only of the continuity and steadiness with which Petrarch carried on his bookish labors, but of his methodical ways in general—one of the multitudinous phases of his character which, combined, make him what Ludwig Geiger calls him, the first modern man. He received Leo's translation in 1364 or 1365, and had the copy made in his own house, beginning it at Padua, completing it at Pavia (Ticinum), and having it illuminated and bound at Milan in 1369—successive changes of residence confirmed by consulting Fracassetti's chronology of the poet's movements for the years 1365–69. This was the first complete version of the Homeric epics ever made.

Of the remaining volumes in the French National Library, once on Petrarch's shelves, M. de Nolhac will give full details in his forthcoming work, 'La Bibliothèque de Fulvio Orsini'; indeed, he half leads us to hope that he will devote himself later to the task of reconstructing the catalogue of the poet's library, which was pretty certainly without a rival in its day, for he was the earliest book-collector of the Renaissance, preceding by several decades Nicholas V., Cardinal Bessarion, and Cosmo the Great. Meanwhile the indefatigable palæographer will publish, immediately after his 'Fulvio Orsini,' another work, already in the press, 'Les Scholies inédites de Pétrarque sur Homère'—these scholia probably drawn, in large part, from Petrarch's own copy of the version of Leo Pilatus.

But the inestimable feature of M. de Nolhac's essay—of which some copies have been separately issued—is the heliotype facsimiles of Petrarch autographs which accompany it. The first is a page from Petrarch's finally revised copy of the 'Canzoniere' (Vat. 3195); this is in the hand of the author, but is followed by a page in the handwriting of the scribe who executed a comparatively small portion of the codex under the poet's eye; then succeed two pages from the autographic manuscript of Petrarch's 'Bucolicum Carmen' (Vat. 3358); and a final sheet giving the long annotation on the opening folio of the first of the four described Paris codices, and the *ex-libris* from the other three—each one written, it will be remembered, at a different period of Petrarch's life, namely, in 1337, 1347, 1355, and 1369—the whole thus forming an invaluable aid to the discovery of the still unrecognized literary treasures of Petrarch likely to exist in the European libraries.

M. de Nolhac, resuming subsequently his labors on Fulvio Orsini, encountered a tradition—or, rather, a positive statement, repeated successively by Baldelli, Fracassetti, Dell' Acqua, and others—that the superb Virgil codex in the Ambrosian Library at Milan, formerly belonging to Petrarch, and containing the famous note on Laura, had once formed a part of the Orsini collection. In his endeavor to set this question at rest he ran across some letters of the seventeenth century, written not long after the acquisition of the precious relic by Cardinal Borromeo, the founder of the Ambrosian collection. These conclusively proved that the Virgil was bought before April 15, 1600 (a few weeks previous to Orsini's death), at the sale of the library of the Abate Maffa, and also added the assertion that it had once been in the possession of Cardinal Cusanus. But one of the private letters examined (written by G. M. Grazi to the noted Padovan bibliophile, G. V. Pinelli) stated that the notes in the Virgil were certainly by Petrarch, since the handwriting was of precisely the same character as that in an Apuleius in the Vatican. This was too significant a hint to be neglected by so acute an investigator as M. de Nolhac. Being in Paris, he called to his aid a brother palæographer attached to the École Française at Rome, who, with M. de Nolhac's facsimiles in his hand, carefully scrutinized all the manuscripts of Apuleius in the vast Vatican treasure-house. He was fortunate enough to find the object of his search in the vellum codex No. 2193, comprising various treatises by Apuleius (at the beginning of the volume), Cicero, Frontinus, and especially the work 'De re rustica' by the Roman agronome, Palladius. There were a few marginal notes in the poet's hand, but, what was of vastly more importance, the final folio was filled with a great mass of observations drawn from his experiences in gardening, set down between the years 1348 and 1369, all of them hitherto unknown. These M. de Nolhac now edits in an article, "Pétrarque et son Jardin, d'après ses notes inédites," in the last issue (fasc. 27) of the Turin *Giornale storico della letteratura italiana*.

They are written, of course, in Latin, and not only prove over again Petrarch's ardent love of nature, but exhibit the many-sided man in the new phase of a scientific investigator. We see him first as a viticulturist at Parma, where he has divided his garden into two parts, one for plants requiring more careful tillage. Here on November 26, 1348, he takes some cuttings from his vines, sets out part of them in the usual way, but plants the remainder very deep in the soil, burying them, as he says, so that only a "modicum" of each is left above ground. This, he states, is totally contrary to the custom of the country, but in accordance with the advice given him by a Cremonese horticulturist. In his experiments he notes the day and hour, the state of the wind and the atmosphere, the phase of the moon, the character of the season, with all the exactness of a modern investigator, and in a subsequent paragraph the ultimate result, which, in the case of the deeply planted vines, he sets down as better than he expected (*melius quam putaram*). It gives one a novel idea of the fourteenth century to mark how like the observations of an experimental gardener of to-day are these terse records of the final results: "Succeeded admirably," "not the least effect," "still living and flourishing finely" (*Viuit et uiret optime*), "good, especially in the case of the willows," etc. He goes on, trying various soils for his apple trees and peaches and plums,

testing culture in the open and against walls, devoting thought to his trenches, substituting lawns in certain spots for plantations of trees, grafting his vines with scions of rare sorts from beyond the sea (*uites transmarinas*), possibly from Greece or Sicily, and procuring seeds and plants from various friends in other regions. He displays a familiar knowledge of many herbs and vegetables—rosemary, hyssop, beets, parsley, spinach, fennel—and studies the varieties of the olive (of which he gets a better sort from Bergamo), the willow, and the laurel—to which last, as the tree sacred to poets, he devotes much time and care. At Milan, with no garden of his own, he labors in those of various convents—St. Valeria at one time, and then St. Ambrose, which latter lay close to his house.

It was in the garden of St. Valeria that an incident occurred, here carefully narrated, which determines the date of one of Boccaccio's visits to him, and shows us two of the great figures of the Renaissance side by side. Petrarch had received, he tells us, five specimens of laurel, two of a delicate character and three of a hardier variety (*due tenere, tres duriores*) from his friend Thaddeus (*lauros Cumo*—which M. de Nolhac takes to be Como—*transmissas per Tadeum nostrum*), and on Saturday, March 16, 1359, he proceeds to plant them. After a preliminary note about the weather and condition of the soil, he says: *Inter cetera multum prodesse deberet ad profectum sacrarum arbusculorum, quod insignis vir d.*[=*dominus*] *Io. Boccaccii de Certaldo, ipsis amicissimus et mihi, casu in has horas tunc aduectus, sationi interfuit.* Perhaps no prettier compliment was ever paid by one famous poet to another; certainly no happier conceit was ever recorded in the note-book of a gardener. But Petrarch, even in the memorable presence of such a friend, doesn't lose his horticultural interest, and immediately sets down his comments on the state of the roots of the laurels and the lingering coldness of the season. A month later he notes the condition of the shrubs: *Iam nunc circa medium aprilem due maiores crescunt; alie uero non letos successus spondent. Credo firmiter terram hanc huic arbori inimicam.*

In 1369 Petrarch maintained gardens both in Padua and Arquà, and records some experiences connected with both. One spring day in that year Lombardo da Serico, the companion of his old age, the executor named in his will, and the continuator of his unfinished 'Epitome vitarum virorum illustrium,' brings him "two huge laurels with immense roots;" and out of respect, doubtless, to their extraordinary size, the two friends plant the sacred shrubs with much ceremony (*solemnissime*). The concluding note refers to some fruit trees and a solitary laurel, sent as a gift to Petrarch. Receiving them in Padua, Lombardo hastens to gratify his distinguished friend by conveying them to him at Arquà, but in going by water across the plain to the base of the Euganean Hills, he is detained by contrary winds, and the plants doubtless suffer in the December cold. (Petrarch does not say, as M. de Nolhac incautiously quotes in his French summary, that "Lombardo va da Padoue à Arquà en bateau," since that feat would have been as difficult of performance in the fourteenth century as now, considering that Arquà, though so near to Padua, lies not much less than a thousand feet above it.) No proper precaution is neglected in the planting of the fruit trees, and the final note closes, appositely enough: *Ego nescio quid sperem; operiemus finem.*

M. de Nolhac, by these "finds," both those of Paris and those of Rome, establishes, as has already been hinted, many new and important dates for the benefit of Petrarch's future biographers; but his services in exhuming the pleasant records of Petrarch's constant devotion to his garden, and of his eager desire to test the varying influences of nature, are of even a higher value.

Now that the autographic codex (Vat. 3195), containing Petrarch's final copy of his Italian lyrics, has been reidentified, new data in regard to the past history of this remarkable literary monument are rapidly accumulating. An unnoticed passage in Vellutello's preface to his long commentary on the 'Rime' makes it more than probable that the Padovan owner from whom Cardinal Bembo borrowed the codex in 1501, in order to use it as the text of the first Aldine edition, was one Messer Daniello di Santa Sofia, who was still living in 1525, but of whom nothing further is yet known. If there were any doubt about the subsequent ownership of the manuscript by Bembo himself, it would be dissipated by a statement of G. V. Pinelli, unearthed by Professor Pio Rajna—author of that sterling work, 'Le Origini dell' Epopea francese'—among the manuscript collections of the Ambrosian library. Pinelli, in one of his bibliographical note-books, puts down a list of various interesting objects which he saw during a visit to the Cardinal's library (*studio*) at Padova, made some time before 1581. Among these he cites: "Versi volgari del Petrarca di mano dell'autore in bella lettera in perg."—which can be none other than the autograph codex. In the same place Pinelli also finds the detached paper folios containing the rough drafts, with corrections, of several of the lyrics (Vat. 3196), which, as will be remembered, likewise passed from Bembo's collection into that of Fulvio Orsini. He thus describes them: "Alcuni fogli di rime del Petrarca corrette e mutate da lui med°. le quali cita il bembo nelle sue prose," to which he adds in parenthesis: "furono ritrovate in mano d'un pizzicarolo"—but whether it was Bembo himself or some one else who rescued them from the hands of the groceryman (*pizzicarolo*), Pinelli does not say.

Another Petrarchan discovery, of quite a different character, has been lately communicated to the public by Dr. Johannes Uebinger of Münster, a scholar long engaged on a new edition of the works of Cusanus (Nicholas of Cusa)—that prelate who, long before the days of Luther, believed in the necessity of a Reformation, and, long before the days of Copernicus and Galileo, believed in the theory of the earth's motion, and the very cardinal who, as has been seen, is supposed to have been, at an early period, the possessor of Petrarch's Virgil. Dr. Uebinger's essay, "Die angeblichen Dialoge Petrarcas über die wahre Weisheit," is printed in Geiger's *Vierteljahrsschrift für die Kultur und Litteratur der Renaissance* (vol. ii., No. 1), and relates to the dialogues 'De vera sapientia,' so long ascribed to Petrarch. This tractate has always occupied an anomalous position; it is nowhere alluded to in Petrarch's letters, as are all his other works, and is mentioned by none of his contemporaries; nor is there any manuscript of it in existence as old even as the earlier part of the fifteenth century; yet it has been included in all the five editions of the collected writings from 1496 to 1581. Buhle, the historian of modern philosophy, was the earliest to notice its resemblance to some dialogues by Cusanus bearing nearly the same title; but he took it for granted that Cusanus had copied from Petrarch. Körting, Petrarch's ablest biographer, indicated clearly (1878) that a portion of the work was identical with certain passages in Petrarch's 'De remediis utriusque fortunæ'—and Petrarch was hardly the man to repeat himself. Dr. Uebinger now demonstrates that the bulk of the book (nearly one-half of the first dialogue and all of the second) is, with various alterations and corruptions, from the treatise 'De sapientia' of Cusanus, in which has been interpolated (in the middle of dialogue i.) excerpts from Petrarch's 'De remediis,' followed by an extract from some still unrecognized author; and infers that the work, in its existing state, is a compilation by some scribe of the fifteenth century. But, strangely enough, the treatise of Cusanus (written in 1450) was not published until 1478, while the earliest edition of the 'De vera sapientia,' under Petrarch's name, was printed at Utrecht some five years before, or less than a decade after the death of Cusanus (1464). There are thus some doubtful points still to be cleared up, but it seems fair to conclude, with Dr. Uebinger, that the 'De vera sapientia' must be erased from the list of Petrarch's productions.

Correspondence.

AMERICAN ECONOMIC ASSOCIATION.

To the Editor of The Nation:

Sir: My attention has been called to your recent article on "State Interference with Railways," in which you take the opportunity to criticise the American Economic Association, and to place its members in a false position. As Secretary of the Association it seems proper for me to tell your readers that this society embraces men of the most diverse opinions, some of whom go as far as you in the direction of *laissez-faire*. When you comment upon the American Economic Association, you are simply speaking of the economists of the country, for I know of no economic tendency which is not represented in its membership. In fact, it includes at the present time the majority of economists of prominence in this country, and a considerable proportion of the better-known economists of England. Our last monograph is by a lecturer in Lincoln and Corpus Christi Colleges, Oxford. The governing body of the Association is the Council, and if you will look in our annual report when it appears, you will find in it more than one name of those whom you delight to honor in your editorial columns; no one of them has, however, so far as I know, observed this "serious danger" to which we seem exposed.

While there is a wide difference of opinion among us, and while I have no authority to speak for others, to prevent misunderstanding I think I ought to say that I know of no one who interprets the declaration in regard to the State as an agency of progress to mean that "in doubtful cases the presumption is in favor of State action." One of our monographs, indeed, takes strong ground against any such doctrine.

In conclusion, allow me to call your attention to another declaration in our constitution. The object of the Association is "the encouragement of perfect freedom in all economic discussion."

As much as we differ in other points, I think we all agree in this.

WATERWAYS VS. RAILWAYS.

To the Editor of The Nation:

Sir: In your editorial, "State Interference with Railways," of November 3 (No. 1166), speaking of water-routes competing with railways, you take a position which will be disputed by no one who is familiar with the subject. The advocates of projected canals admit, without evasion, that canals in most cases do

not, or would not, if constructed, yield interest on the investment. They claim that water-routes serve in bringing down freight charges over a wide territory, and save the shipper as well as the consumer vast sums of money through competition. This view is advocated largely in Western newspapers, and its most conspicuous exponent was the late Gov. Horatio Seymour. In numerous papers and addresses he endeavored to prove that the visible effects of artificial waterways, *i. e.*, freight actually moved and the financial statements of its operations, are insignificant compared with the pressure it exerts on competing railways. If this view is correct, your argument is incomplete unless it disposes of this phase of the question. GUSTAV WIEMER.

CARROLLTON, ILL., November 7, 1887.

[If the United States Government should choose to build a railroad from Chicago to New York, and habitually run it at a heavy loss, it might thereby reduce charges much below their present figure. But a permanently bankrupt road of this kind would not be a useful thing for the country. It would give an artificial stimulus to trade at some points, and check the natural growth of railroad enterprise at others. If a community, however large, asked the Government to build such a railroad, not because they could pay for it, but because it was going to reduce the profits of somebody else whom they did not like, it would be class legislation of the worst sort. And when the Government is asked to spend money for unprofitable waterways because railroad profits will thereby be reduced, it is a case of the same kind.

If the community can make a canal pay, it is evidence that they need it. If they cannot make it pay, it is at least strong *prima facie* evidence that they do not need it. If they claim that it will pay indirectly, by reducing railroad profits, they overlook the fact that such reduction will prevent railroad facilities from being extended as fast as they otherwise would be. If the Government gives A a canal which he cannot pay for, it deprives B of railroad facilities for which he could pay his share. If it were a case of subsidizing one railroad route against another, people would see the fallacy. There is a glamour of apparent free competition about a waterway which blinds them to the facts in the case. But the number of people who can make direct use of an internal waterway is not large; and the history of certain rings at Buffalo and Cincinnati shows how water traffic may be practically monopolized in a few hands.—ED. NATION.]

THE RAINFALL AT LOS ANGELES.

TO THE EDITOR OF THE NATION:

SIR: In a very interesting letter to the *Nation*, from Henry T. Finck, which shows him to be a very accurate observer, and which, as a whole, gives a very true picture of us as we appear when seen with loving eyes, the following statement is made:

"The general irrigation now resorted to, and the numerous green oases which have in consequence sprung up amid the deserts of prickly cactus, have already exerted some influence on the climate, and there is reason to believe that rain will be more abundant in the future than in the past."

One frequently hears this opinion expressed, not only by the oldest native, but also by the latest "tenderfoot." As accurately observed facts do not seem to justify the theory, I trust you will print the enclosed table, which is taken from the "Annual Meteorological Review" collected and compiled by Sergeant James A. Barwick of the Signal Corps, United States Army, in Sacramento, Cal. Since our rain comes at any time from the first of November to April inclusive, and not during the summer months, the best way is to judge by the rainfall during the "rainy" season, and not by the year. Both are given, however, as they show some interesting variations when taken together in the time of the rainfall. Thus, in 1884, there was 40.39 inches of rainfall, but in the season of 1884 and 1885 only 9.29 inches.

LOS ANGELES, L. A. CO., CAL.

Year.	Rainfall in inches.	Season of	Rainfall in inches.
1873.....	16.86	1873-4	24.78

Very truly yours, H. B. WING.

LOS ANGELES, November 4, 1887.

THE PRIVATE BOMB-MAKER.

TO THE EDITOR OF THE NATION:

SIR: Cannot some public attention be called to the extreme necessity for making the private manufacture of bombs criminal to such an extent as to merit very severe punishment? Hitherto we have not seen or heard that their possession by any one was treated as a crime. The ease with which they can be manufactured, the secrecy with which they can be successfully carried about and used, and the fact that nobody needs them except for criminal purposes, ought to make their private manufacture and possession at least as criminal as carrying concealed weapons. We think they should be more severely treated. The events which have occurred so recently in connection with the Chicago Anarchists ought to emphasize this. Let the penalty be a severe penitentiary punishment for the manufacture, use, or possession of them in any way not carefully prescribed by law. We see very little legitimate use for dynamite in the private purposes of life, and no reason for tolerating such an abuse of power as it puts into men like the Anarchists. It is too late to wait until they have done something destructive to punish them. As for ourselves, we know of no case in which the mere possession of it is not surrounded with something like criminal intentions. Cannot the public be awakened to some action in this matter?

JOHNS HOPKINS UNIVERSITY,
BALTIMORE, MD., November 11, 1887.

THE LEIF ERIKSON MONUMENT.

TO THE EDITOR OF THE NATION:

SIR: In reading the Boston *Transcript's* long account of the exercises attending the unveiling of the Leif Erikson monument in Boston on October 29, I was somewhat surprised to find that no mention was made of the origin of the agitation which has just culminated in the completion of the monument. The orator of the occasion, Professor E. N. Horsford, entered into the discussion of details in almost every other branch of his subject, but, strange to say, had only one single sentence that has any reference to the origin of this movement. That sentence is: "This is the statue Ole Bull, earliest of all, conceived and dreamed of, worked and sang for." It seems to me, Mr. Editor, that something more than this barren sentence might very appropriately have been said in this direction.

The idea of erecting a monument in honor of the Norse discoverer was conceived in the State of Wisconsin among a few patriotic Norsemen, with Ole Bull as the central figure. Ole Bull and Professor Rasmus B. Anderson, now United States Minister to Denmark, were very intimate friends. They first met in January, 1868. Professor Anderson was at this time much interested in the study of the Norse discoveries, and had lectured on the subject. Ole Bull was also an enthusiastic vindicator of the claims of the Norsemen, and the first time they were together the subject was discussed by them. In Ole Bull's response to an address of welcome on the occasion of his first visit to this city, January 19, 1868, he spoke of the discovery of America by the Northmen. On May 17, 1872, he gave a concert in this city for the purpose of raising funds for purchasing Scandinavian books for the library of the University of Wisconsin, and after the concert was over a State reception was given in honor of Mr. Bull, presided over by Gov. C. C. Washburn. Various speeches were made on this occasion, and I find in the report of the speech made by Professor Anderson these words: "And right here allow me to say that when you have assisted Norway in erecting a monument on the grave of Harald Haarfager, we earnestly hope that you will return hither and assist us in erecting a monument in honor of Leif Erikson." In his response Ole Bull dwelt on the same theme.

This, so far as I can ascertain, is the first public mention of a monument for Leif Erikson. It had, however, often been talked of before by Ole Bull and Professor Anderson among their friends.

Ole Bull returned to this city in the fall of 1872; and on May 27 succeeding, at a meeting of the Scandinavians of this city, at which he was present, the plans for the erection of a monument were discussed. Ole Bull was soon to depart for Norway, but offered his services in giving, before his departure, a few concerts, for the purpose of starting a fund. The first one was given at Cambridge, Wis., on the evening of May 31, 1873. At this and the other concerts held for the same purpose, Professor Anderson was with Mr. Bull, and spoke in the intervals on the Norse discoveries and of the plans for a Leif Erikson monument. Ole Bull, too, often became so enthusiastic in the cause that he was not content to act as a virtuoso merely, but assumed the rôle of an orator as well. I was present at the first of this series of concerts, and distinctly remember the interest he succeeded in arousing among his countrymen.

Ole Bull was, indeed, full of enthusiasm on this subject. His original plans for the unveiling of the monument were, too, somewhat different from those which have recently been carried out. His were to have been on a much grander scale, and it is interesting to recall them at this time. The following is from Madison daily of May, 1873:

"Ole Bull, Professor R. B. Anderson, Senator J. A. Johnson, and other prominent Norwegians are raising money to build a monument to Leif Erikson. The first-named gentleman has already given some concerts, and will give some more before leaving for Nor-

* Up to May 1, 1887.

way, the entire proceeds to be devoted to the monument fund. Professor Anderson, a linguist thoroughly versed in Scandinavian literature, is to lecture for the benefit of the fund. The total amount to be raised is $10,000. The monument is to be erected in Madison, and dedicated with great ceremony on the hundredth anniversary of American independence. Ole Bull, Björnson, the famous Norwegian author and poet, and other celebrities will be present on the occasion, together with such a host of enthusiastic Norwegians from this and adjoining States as were never before seen together outside of the borders of Norway."

In June, 1873, Professor Anderson accompanied Ole Bull to Norway, where they agitated the same question. Björnson was summoned from Christiana to Ole Bull's villa near Bergen, where a conference was held to discuss the subject. After his return, Professor Anderson published a small work entitled: 'America Not Discovered by Columbus.' From a note in this work concerning the monument scheme I find the following:

"For the realization of this object Ole Bull has contributed his eminent services. He has already given several concerts, both in this country and in Norway, the proceeds of which go to the monument fund. . . . Norway's famous poet and orator, Björnstjerne Björnson, has promised to write, for the dedication of the monument, a cantata, to which the eminent Norse composer, Edward Grieg, will write the music. Björnson has also promised to come to America in person and deliver the dedication oration."

These were Ole Bull's original plans.

As a result of this initiatory work, about $2,000 were raised, but for various reasons, into the details of which I cannot here enter, the work of raising money progressed very slowly in the West, and hence, in order to gain the coöperation of men of means, a committee, consisting of over fifty prominent Eastern men, was appointed December 8, 1876, on the occasion of a concert given by Ole Bull in Boston, and to this committee the funds raised in the West were ultimately transferred.

Hoping that I have contributed a few facts that may be of interest in the history of this monument, I am,

Yours respectfully, JULIUS E. OLSON.

UNIVERSITY OF WISCONSIN, MADISON, October 7, 1887.

SOME THINGS ABOUT THE UNITED STATES SUPREME COURT.

TO THE EDITOR OF THE NATION:

SIR: At the recent meeting of the bar commemorative of the late Justice Woods of that court, one of the senior lawyers made some statements, concerning the bench itself, which have been brought to mind by your paragraph referring to the vacancy caused by Judge Woods's demise. They may be of some interest:

"Its centennial was near, and it was a curious thing in its history that no associate justice of the court had ever fully become its head. One (John Rutledge) had been nominated for Chief Justice, but failed to pass the Senate. One Chief Justice (R. B. Taney) had been nominated for an associate justice, and also failed in the Senate."

A still more curious thing was the fact that no full Chief Justice had, before his elevation, filled any judicial position whatever.

"It was perhaps a law of the court that no associate should be promoted, and the Chief Justice should never serve any judicial apprenticeship—a thing to be remembered when estimating their success as the head of this court. It was also true, as a rule, that the associate justices were taken untried from the ranks of the bar. And what a comment, that for near a hundred years there had not been a poor lawyer, a weak or a bad man on that bench—never had been! The personnel of the court had always been so high, the court had so well performed its functions, so well borne its dignity and sustained itself, that conscious weakness, infirmity of character, deficiency of learning had never reached the bench—dared not seek it."

This last was eulogium. Taking the matter up at the point that usually all the members of the court have come fresh from the bar, something may be added. Justice Woods himself was taken from the Circuit Court, and he left upon the bench Blatchford from the Federal Court of New York, and Gray from the Supreme Court of Massachusetts.

The whole number of associates, from its first session ninety-seven years ago, is forty-three. Of these but fourteen or fifteen had previously filled judicial positions, and the most of these were in the earlier years of the court. Obviously, whatever may be the fitness of men already invested with judicial functions, that condition renders them inconspicuous—more so than a high position at the bar; while he to whom it falls to place a new incumbent upon the national bench knows many at the bar fit for the place. Possibly the consideration that men in judicial places are provided for, has a small percentage of influence, as has the wish to provide for a deserving Cabinet officer.

It is curious to observe how the high honors of the Supreme Court have been distributed among the States. Six have fallen to New York—a chief and five associates—Jay, Livingston, Thompson, Nelson, Hunt, and Blatchford. Of these the second, third and fourth had served on her bench. The last was taken from the Federal bench.

Massachusetts contributed four — Cushing, Story, Curtis, and Gray. The first and last were her Chief Justices when taken. Was it stepping down or up for these? Story and Curtis were from the bar direct.

Virginia has furnished five—John Marshall and Bushrod Washington from her bar, John Blair, P. P. Barbour, and Peter V. Daniel from her bench.

Pennsylvania has been honored with four places—James Wilson, Henry Baldwin, R. C. Grier, and William Strong. Grier was a State judge; Baldwin, Strong, and Wilson were not.

From Maryland came Taney, R. H. Harrison, Thomas Johnson, Samuel Chase, and Gabriel Duval. Chase, when transferred to the Federal Court, was Chief Justice, and Duval went from the Marylaud bench.

North Carolina furnished Iredell from her bench and Alfred Moore from her bar.

John Rutledge, as everybody knows, was a South Carolinian, first appointed an associate justice, nominated Chief Justice, presided in a single short term as Chief Justice, was rejected by the Senate, and retired. This in 1795. He was born in 1739, and died in 1800. William Johnson was also from South Carolina. Neither Rutledge nor Johnson had previously been a judge.

New Jersey contributed William Paterson and the present Justice Bradley, both from the bar direct.

Connecticut has had the single honor of furnishing the third Chief Justice, Ellsworth.

Kentucky has received three of the high places—Thomas Todd, Robert Trimble, and our present Justice Harlan. They were all Kentucky lawyers.

Ohio has been conspicuously remembered. President Jackson took John McLean from her Supreme Court. Chief-Justices Chase and Waite, Justices Swayne and Matthews, came from her bar direct.

Georgia has had two seats—one for her Wayne; and Woods was from Georgia.

Tennessee relinquished her Judge Catron to the national tribunal.

From Alabama came John McKinley; and John A. Campbell, who went out with the South. Born in 1811, by many years the senior of most of the justices, two years older than Judge Bradley, he is often before the court, in seeming undiminished vigor.

Maine has the single honor of her Clifford. Iowa has her Miller; Illinois, her Davis; California, her Field, all of whom came fresh from their several bars; while New Hampshire rejoices in the memory of her Woodbury.

One-half in number of the present States have thus furnished the forty-nine judges (reckoning together chief justices and associates), twelve States have been honored with forty-two, while the court has in fact been the product of eight—New York, Massachusetts, Virginia, Maryland, Ohio, South Carolina, Pennsylvania, and Kentucky. New York has had six, while, of the old States, Vermont, Rhode Island, and Delaware have been neglected. Ohio has had two of her sons at the same time on this bench for the past twenty-five years, and twice crowned with the Chief Justiceship, while Indiana, Michigan, Wisconsin, and several of her other young sisters have had no citizen called to this high position.

These are at the least curious facts in our history, and might warrant a study. Should President Cleveland transfer the Secretary of the Interior to the Supreme Court, Mississippi would be added to the favored States; the bench, so far from losing, would preserve its full measure of strength. It may be doubted whether in brilliancy of intellect it has ever had his equal, nor in any, except Story, perhaps, his peer in culture. R.

WASHINGTON, D. C., November 13, 1887.

Notes.

THOSE who have followed Dr. Holmes with pleasure in his recollections of his trip to Europe in the *Atlantic* can now possess themselves of the whole story in book form, as it has been very handsomely published by Houghton, Mifflin & Co., Boston. 'Our Hundred Days in Europe' will be a lasting, and perhaps an historical, illustration of the sort of relation which has grown up between the kin on both sides the sea in our times, largely through Boston, and very largely through literature.

A few months ago we noticed the first volume of Mr. Gomme's 'Romano-British Remains,' in the "Gentleman's Magazine Library." The second part, just published (with continuous paging) by Houghton, Mifflin & Co., contains the rest of the counties (from Staffordshire to Yorkshire), as well as Wales and Scotland, and supplementary notices to the whole. It contains also a series of short papers, occupying nearly one hundred pages, upon the Roman roads in Britain, and some valuable "Historical Notes" upon Cæsar's campaigns in Britain. These are: "A Visit to the Portus Itius," "The Time of Cæsar's Invasion," "Cæsar's Cantian Campaigns," "Samian Ware," and "On Helmets Worn by the Romans." There are two indices—one general; the other, "a place-name index of Roman remains."

A volume of selections from the *Spectator*, edited by Alex. Charles Ewald, F. S. A. (Frederick Warne & Co.), has been added to the "Chandos Classics." Upwards of one hundred of the essays have been included. The character sketches are grouped at the beginning, and the papers on general topics, exclusive of the critical and religious disquisitions, which are altogether discarded, fill up the remaining and larger portion of the volume. A good biographical introduction concerning Steele and

Addison, with a word for the minor contributors, is furnished.

T. Nelson & Sons send us the ruby 16mo edition of the Bible, printed at the University Press, Oxford, in the revised versions, with the respective prefaces of the revisers, and the supplementary preferred readings of the American Committee. All this occupies about 1,000 pages in the small type already designated, so that the volume is rather for reference than for reading.

In part 13 of the Supplement to 'Brockhaus's Conversations-Lexikon,' the articles are completed, the last page of the *Nachtrag* containing a notice of New York and the projected tunnel under the North River. This is followed by an index of subjects which is very full and valuable, the references probably numbering more than 50,000. There will also be a second index of maps and illustrations, and both will add greatly to the ease of consulting the work. In this part and in No. 14 are given some excellent maps of the German Colonies in New Guinea and the neighboring islands; a railroad map of Germany, distinguishing the State roads from private roads, and marking the places where the principal offices and works of the various companies are situated; a chart showing the distribution of vertebrates throughout the world; and a large general map of Africa. This, for its size, is the fullest which we have yet seen, and, when compared with those accompanying the article Africa in vol. i, will show at a glance what an immense progress in a very few years has been made in our knowledge of the dark continent. We may return to this Supplement hereafter.

The fifth biennial report of the Directors of the Kansas Historical Society is chiefly noteworthy for its showing of local newspaper files, of which there are 4,292 bound volumes. Besides these, there are 1,694 volumes of newspapers published in other States and countries.

Of the leaves of last year's calendar, torn off day by day, we have heretofore had to inquire —"Mais où sont les neiges d'antan?" Now Messrs. Houghton, Mifflin & Co. have bethought them to insert between brass clasps a removable book of selections, which lies open from week to week, and remains intact at the end of the year. This may be observed in their Holmes Calendar and Whitney Calendar for 1888, the former having a portrait of Dr. Holmes, and both showing a decorative colored background, to which pad and book are attached.

Little & Brown, Boston, send us a translation of 'Les Misérables' in five volumes, which is at once an extremely pretty book to look at, and as easy and pleasant English to read as any reasonably good translation of Victor Hugo's French can be. If something of literal exactness is sacrificed at times, the style and language are made more possible to English ears and tastes, and the impression of the author which is given is upon the whole quite as truthful as would be conveyed by a more strictly literal rendering. The translation used is the English one by Sir Lascelles Wraxall, made in 1862, when 'Les Misérables' first appeared; but passages and chapters omitted in that have been specially translated for this issue, and the text has been restored to its original French form wherever the old translation departed from it by omission or alteration of any kind. The books are beautifully printed at the University Press by John Wilson & Son.

The fourth and fifth volumes of 'Les Misérables' have been issued in the handsome edition published in French by Wm. R. Jenkins, thus completing the work. We have before now spoken in praise of the general excellence and attractiveness of this edition of the most widely known of Victor Hugo's stories. Mr. Jenkins has presented it to the American reader of French in all the luxury of thick paper and large, clear type, and at a price which is much below that of the French editions.

Among the latest books issued in Paris by the house of Hachette is 'Ramona; la Conquête Américaine au Méxique,' *roman anglais* (*sic*), translated, with the authorization of the author, by Mme. de Witt, *née* Guizot.

The second volume of the 'Journal des Goncourt,' covering the period from 1862 to 1865, has just been published by Charpentier.

The Temple newspaper and review known as *Pump Court* has lately been changed to a weekly journal. In its issue for October 27 it gave a facsimile of the anonymous letter to Lord Monteagle which led to the frustration of the Gunpowder Plot. Other facsimiles of interesting historical documents will follow, besides views and descriptions of historic houses. As heretofore, the substance of *Pump Court* will be legal news and discussion.

Harper's Young People for 1887 makes the customary plump volume, in which the old lines have been closely adhered to. Mr. French's infant heads connect it pictorially with its predecessor, and Mr. Howard Pyle continues to stamp his pleasant fancies on the pages of the magazine. "Process" cuts have been perhaps less employed than usual.

Babyhood completes, with its current issue, its third year and volume. The merits of this serious and well-conducted magazine more and more make it worthy to be classed among indispensable household articles. It is published at No. 5 Beekman Street, N. Y.

We learn from the *Gazette Anecdotique* (New York: Duprat) that the Librairie des Bibliophiles has recently begun the publication of a new periodical, the *Carillon Théâtral*. Each number will be devoted to a single new play, giving a complete account of it, together with the various and often opposing opinions of the principal theatrical critics. During the active season of the Paris theatres, from October to June, it will appear three times a month; during the rest of the year, only once a month. The first number was issued October 10, and was devoted to 'Dégommé,' the latest comedy of M. Gondinet.

When M. Caro died last summer, he had just finished the little volume on George Sand he was to contribute to Hachette's collection of the "Grands Écrivains français." Although the publication was already announced at that time, the book did not appear until October 26, but a long extract was given in the *Revue des Deux Mondes* of October 1. This is an account of George Sand's works according to periods, and of the various influences under which they were written. The moralist and philosopher here judges the artist and the woman with great kindliness and admiration, but not always with full sympathy. It is amusing to see the active antipathy of M. Caro for some of the friends and inspirers of George Sand, especially during the period between 1840 and 1848, through all the works of which time the influence of Pierre Leroux and of Lamennais upon his author seems to rouse in M. Caro's criticism an eager asperity quite unlike the moderation of his usual manner. One is tempted to believe that if the writer had lived to publish his work himself, this asperity of tone would have been softened, leaving the literary judgments, which are excellent, unchanged.

M. Albert Delpit, author of 'Mademoiselle de Bressier,' begins a story called 'Thérésine' in the *Revue des Deux Mondes* for October 15. The scene is in Louisiana; the time, within the last ten years; the actors, French or Creoles. M. Delpit should make a success of his new novel, for he is himself a native of Louisiana, the son of a wealthy planter ruined by the war. It is said that, after being educated in France, he spent some years in New Orleans, even engaging in journalism there for a short time, but as he returned to France definitively in 1868, before he was twenty, this does not seem probable. He was naturalized in France in 1870, when he was twenty-one, and fought with distinction in the Franco-Prussian war. He has been since then a very prolific and successful writer of novels and plays. 'Mademoiselle de Bressier,' which is by no means one of his best works, appeared first in the form of a novel, and later was turned into a drama—a frequent transformation with M. Delpit, all of whose works, in their original form, suggest an ultimate theatrical destination.

M. Léo Quesnel contributes to the *Revue Bleue* for October 29 an interesting sketch of the present condition of Marocco, derived from the accounts of the most recent travellers in that country. He holds that the interests of France will be best served by the maintenance of its independence under the sovereignty of Muley-Hassan, or, in the event of his death, one of his house, following in this the view of the late M. Gabriel Charmes. This is based chiefly on the fact that the Emperor of Marocco, being a descendant of the Prophet, is regarded as the religious head of the Mohammedan Church throughout Africa, and in case he was dethroned there would be no one sufficiently powerful to resist and possibly prevent another Mahdi rebellion, nor to hold in check the turbulent Mohammedan confraternities. These are eighteen in number, their influence extending from British India to the banks of the Congo, and their principal object in Africa is to obstruct the progress of Christians. He believes, apparently, with M. Le Chatelier, who has recently published a book on 'Les Confréries Musulmanes du Hedjaz,' that only the strong pressure brought to bear upon these zealous propagandists, both at Mecca and by the Emperor of Marocco, prevents them from proclaiming a "Holy War" against all who are not Arab or Berber. In such an event, Algeria and Tunis would be the first to suffer.

Students of Omar Khayyám will find some interesting examples of his quatrains in the November *Macmillan's*, in which the writer tries to illustrate, as well as to specify, in what ways Mr. Fitzgerald's translation is so greatly transformed from the original as almost to be remade. The stanzas are generally not those chosen by the latter; they lack, too, just that touch of genius which made his "large infidel" so near in feeling to the modern spirit.

In the *Academy* for October 29 Mr. W. W. Skeat comes to the rescue of the Shaksperian word *mort* in its obvious signification in the phrase "mort o' the deer" ("Winter's Tale," 1, 2, 118). The commentators' supposition that it meant not 'death,' but 'a flourish blown at the death of the deer,' he traces to a corruption, in other early English passages, of the word *mot*, which means 'a note winded by a huntsman upon his horne,' into *mort*.

Mr. J. E. Keeler, astronomer of the Lick Observatory, California, now more than a year resident on Mount Hamilton, contributes to the *Sidereal Messenger* a few notes on the atmospheric conditions prevailing at the Observatory at different seasons. Appointed to the charge of the extensive time-service of the Observatory, which reaches eastward as far as Ogden by the Central Pacific, and El Paso by the Southern Pacific Railway, Mr. Keeler has for a con-

tinuous period of some fourteen months made the necessary time determinations, as well as other observations, which afford the means for making a fairly accurate estimate of the chances for good observing at all seasons; and it is a matter for regret that his experience is not fully confirmatory of that of all astronomers who have previously been there, and found the mountain a paradise for the telescopist. Their observations were mainly conducted through the summer and autumn, and tended to show that bad nights were exceptional; while Mr. Keeler is compelled to record a difference against the winter season so enormous that for two months it is doubtful whether astronomical work could be pursued to advantage. If we may judge from the character of the appointments already made to this institution—Mr. J. M. Schaeberle of Ann Arbor and Mr. E. E. Barnard of Nashville having recently accepted the positions offered them—the Lick Observatory will soon drop into line among the foremost astronomical establishments in the world.

The October number of *Petermann's Mitteilungen* contains the first part of a report by Dr. H. V. Jhering of an expedition sent out by "Herman," the German Colonization Society for South America, to examine certain lands in the Brazilian Province of Rio Grande do Sul. A very clear and minute account is given of the delta of the Camacuam, and of this river as far as S. José. It is accompanied by two unusually fine maps. This is followed by an interesting account of some of the "Religious Conceptions and Customs of the Central Esquimaux," by Dr. F. Boas. He dwells particularly on the cult of the goddess Sedna and certain spirits. A peculiar legend is that of a "Flight to the Moon," where the test of endurance is in the not laughing at a comical dance of the Moon-man and his wife.

It is gratifying to be reminded now and then that the German Muse can live and thrive in our cis-Atlantic atmosphere. We have lately received from C. N. Caspar of Milwaukee two small volumes of American-German poetry, of which it may at any rate be said that if the verse in them is not of superlative merit, yet much that is less good is constantly appearing in the fatherland. One is an allegorical narrative poem entitled "Aglaia," the chief fault of which is the monotony of its hundred or more eight-lined stanzas. 'Aglaia' is printed at Milwaukee. The other volume referred to, however, bears the imprint of a Munich house, and is entitled 'Lieder und Sprüche aus dem Volke für das Volk gedichtet, von Frank Siller. Here we find a most cosmopolitan range of subjects and a few really good lyrics. We can, however, bestow no very warm praise upon the Funeral Ode to Garfield, in which very commonplace thought and feeling are wedded to an unpleasing rhythm. Not a little of this volume is taken up with miscellaneous translations of English lyrics. Among these we notice an excellent version of Longfellow's "Excelsior."

We lately mentioned the forthcoming new edition of the 'Dizionario biografico degli scrittori contemporanei' of Professor Angelo De Gubernatis, first published in Florence in 1879, and, despite some errors, the most useful lexicon of living authors in any language. It was particularly serviceable for its sketches of the writers of eastern and southern Europe, concerning whom information is otherwise often inaccessible. The first edition has long been exhausted, and copies have recently sold in Italy for more than double the publication price. Professor De Gubernatis desires that his second corrected and enlarged edition shall be fairly complete in regard to the contemporary literature of America. To this end he has addressed a card to the principal American authors not represented in the former edition, and expresses the hope that, in the absence of American works of reference in the Italian libraries, they will kindly communicate to him some needed biographical and bibliographical details. The printing of the new edition will begin before the close of the year.

The Boston Museum of Fine Arts has recently received a collection of twenty-nine beautiful Greek terracotta figurines found at Myrina, a small town on the western coast of Asia Minor, north of Smyrna. The site was excavated by the French School at Athens a few years ago with extraordinary success as regards the number and beauty of the objects discovered, many of which are now in the Louvre. The Boston collection, although comparatively small, is admirably representative of the variety of types discovered, and of their artistic merit. A few of the figures have the severity of the Tanagra style, but most of them are conceived with much more life and movement, and reflect the spirit of the larger sculptures of the Hellenistic age, to which they belong.

—Mr. Charles Dudley Warner's paper on "Shelley" in the November *Princeton Review* is a warning to facile writers. The mass of material in Shelley's case is so voluminous and complicated, and so little of it is superfluous, that the subject is likely to prove a trap for any one who ventures upon it without proper preparation. This has happened with Mr. Warner, who comes out of the labyrinth, as was to be expected, with an impossible Shelley, so full of incompatible qualities that the critic himself is completely puzzled and confused. The estimate is worthless, on both the poetic and personal sides; and there are not a few statements of fact that are misleading. What reader of Trelawny but would protest against the conversion of one of his most naïvely humorous anecdotes of the poet into this: "His appearance, nude, after a sea-bath, before a dinner party at the Villa Magni, the summer of his death, was the freak of an impish child rather than a man devoid of decency"? It was nothing of the kind, but a mere accident; his clothes had been washed away, and the fun was in the poor bather's stopping a moment to explain his predicament when he found himself unexpectedly in the presence of "company," and remonstrating with them for being there at an unusual time. The statement that "it is amazing that he should not have had a glimpse, in the principle of universal love he sought, of the true character of the historical Jesus as an influence in human affairs," shows superficial acquaintance with his works and thought; the exclamation, in connection with the ideals of 'Prometheus Unbound,' that "that way lies anarchy!" is a piece of astonishing misconception; while the contemporary critics whose remarks Mr. Warner marshals in their black array, said nothing worse than Mr. Warner's "we should expect such poetry from the sickly imagination of a eunuch." A critic who indulges himself in such phrases comes nearer to passing the bounds of decorum than Shelley ever did; but, after all, the article is not meant to be wanton—it is merely incompetent.

—The frontispiece to the October number of *Les Lettres et les Arts* (Charles Scribner's Sons) is a delicately colored portrait of Guy Chabot, Baron of Jarnac, whose famous duel opens with such picturesqueness the reign of Henri Deux. The portrait of Jarnac's adversary, La Chastaigneraye, is also given, bearing, like the other, the little stamp of the Bibliothèque Nationale, and it is probably this one which is the "facsimilé d'un dessin de François Clouet," mentioned in the list of artists on the cover of the number. Both portraits are extremely interesting, but would be still more so if we knew with certainty which of them was the work of the famous artist of the French Renaissance, and to whom the other is due. It is a serious omission for the *revue* not to give with each number the very satisfactory descriptive list of illustrations which appears only at the end of the volume. It would be pleasant to know something more than what mere surmise and intuition tell us, without having to wait three months for the information. The accompanying article, by M. Henri Bouchot, is entitled: "Choses de Duel: le Coup de Jarnac," and is a brilliant and vivid description of what was in reality the last of the solemn trials by combat of the Middle Ages. Michelet has told the same story, in the volume of his History of France, called 'Guerres de Religion,' after contemporary documents—the official account of the heralds of the day, the relations of Vieilleville, and of Brantôme, the last of whom was the nephew of La Chastaigneraye—and with illustrations and additions drawn from the inexhaustible historical treasures of his own imagination. M. Bouchot's paper reflects something of the passionate glow of Michelet's narrative, and of the ardor of his partisanship; and if not a wholly original restatement of the story, it is certainly a very pleasant one. M. Ludovic Halévy, in his "Notes et Souvenirs," gives a striking picture of the moment of the defeat of the Commune and the entrance of the Army of Versailles into Paris, from his own observations and his notes taken at the time. This very dramatic relation extends from May 22 to May 26, including the narrative of the Commandant Trève, the Captain of the French frigate who on May 21 had the honor, as M. Halévy says, of entering Paris before the army, and planting the national colors on the ramparts. The second part of M. Charles d'Héricault's "Idylle de Prairial" fulfils the promise of the beginning, and the completed story is an excellent specimen of one of the new methods of writing historical fiction. Whether M. Albert Vandal's "Roman d'un ambassadeur" represents another of these fashions in fiction it would not be easy to decide without special knowledge; but, whether it is romance or reality, it is well done, and worthy of the historian who wrote 'Une Ambassade française en Orient sous Louis XV.' The large and well-filled pictures of Venetian life in the last century which illustrate this paper are very peculiar, but they are well worth careful examination.

—The École Libre des Sciences Politiques opens this year, according to the *Journal des Débats* of Oct. 24, with five hundred pupils; a new wing and additional work-rooms having been built to accommodate the increasing numbers in the various classes. It now consists of five departments, the administrative, financial, diplomatic, general, and colonial, the last having been organized last year to meet the new requirements occasioned by the French colonial policy. In it are taught the language, history, and customs of the inhabitants of the French colonies and countries protected by France. It is hoped that, by this means, competent colonial administrators will eventually be supplied—a much-felt want in the French service. The *Débats* says that very few now present themselves for examination for Government clerkships who are not graduates of this school. The last number of its *Annales*, the review published by the professors and pupils, contains an article by M. Huot on the "Canadian French and the Development of Parliamentary Liberties in Canada."

—The formal opening of the Oriental Seminary in connection with the University of Berlin was brilliantly celebrated on October 27 in the presence of the Cultusminister von Gossler, Count von Bismarck, members of the Bundesrath, heads of bureaus, and the Rector and professors of the University. Great interest has been manifested in the foundation of this Seminary not only by scholars, but by the German public, for several reasons. Among these is the success of German travellers in explorations during the last two decades, but, above all, the present colonial policy of the German Empire, which seeks the acquisition of territory and the extension of trade, in order that its foreign influence may equal its present commanding position in European affairs, and at the same time that it may anticipate certain social dangers which are among the questions of the future. The Imperial Diet and the Prussian Parliament have united in the establishment of this Seminary, and it is expected that it will form a centre for scholars whose studies in the Oriental languages have been begun in other universities. The prospectus of the Seminary, issued by the Cultusminister in connection with the Foreign Office, provides that at first instruction shall be given in Chinese, Japanese, Hindustani, Arabic, Persian, Turkish, and Suaheli; that in addition to the study of the language of any country, its religion, laws, customs, geography, statistics, and recent history shall be studied. The aim of the instruction shall be: (1) To impart a knowledge of the grammar and of the vocabulary, such as is in daily oral and written use; (2) practice in speaking and writing the language; (3) an acquaintance with the most popular writings of a public and private character; and (4) a knowledge of the land and people. For every language to be taught a special course of instruction is provided, consisting of a theoretical and a practical part. The theoretical instruction will be given by German teachers, the practical exercises will be given by native teachers. The length of the courses in the different languages is fixed as follows: In Chinese, from six to eight semesters; Japanese, six semesters; Hindustani, Arabic, Persian, and Turkish, four semesters each; Suaheli, two semesters. Additional courses will be organized at the beginning of each academic year, as may be found necessary. In order to secure the best results, the number of students in any course is not, as a rule, to exceed twelve. Students without means will be taught gratuitously, and stipends of 300 marks a semester are provided for students of special excellence, which will be determined by the results of the studies of the first semester; other students pay a small lecture-room fee (*Auditoriengeld*), and 20 marks a semester, which will be used for a library fund. Examinations occur at the end of a course in any language.

—For admission to the Seminary, students must be regularly admitted to the University or receive the Rector's permission to study as guests (*Hospitanten*). It is further provided that candidates for the position of translator in the foreign service who have passed these examinations satisfactorily, and have the other requisite qualifications, shall receive the preference in appointments. Dr. Karl Eduard Sachau, Professor of Arabic in the University, has been appointed Director of the Seminary. In the first semester two courses of practical exercises in Chinese will be given by native Chinamen; one will have special reference to North Chinese, the second to South Chinese. The two courses in Arabic will include the dialect of Syria and of Egypt. In addition to the assigned courses, public lectures of general interest will be given on Saturday evenings. The old Bourse has been fitted up for the reception of the Seminary. It is in the immediate vicinity of the museums, and but a few minutes' walk from the University. The Cultusminister, in formally conveying the Seminary to the University, emphasized the fact that it was not designed to supersede or limit the present work in the Oriental languages in the University. Its aim is practical, not scientific, and lies outside the study of philology—namely, to equip the student for intercourse with foreign nations, to be of service to the dragoman, the missionary, the officers of museums, the traveller, the merchant, the technical student. He regarded the Seminary, as at present constituted, as but a germ of what it will become.

—Harvard College Observatory, having come into the possession of the Boyden Fund for the purpose of obtaining astronomical observations at elevated stations, Professor Pickering is prosecuting experimental researches as to the best method of obtaining photographs of celestial objects. Years ago Mr. Rutherfurd demonstrated the practicability of converting any refracting telescope into an equivalent photographic instrument, by mounting in front of the visual object-glass a convex lens of long focus. Such lenses have been adapted to a number of telescopes, and used in celestial photography, with entire success; but the cost of the additional lens and the introduction of two more surfaces constitute sufficient objection to the method to lead to inquiry after other methods of accomplishing the same result. Professor Pickering finds that, if the surfaces of the crown glass are given different curvatures, the desired result may be obtained by a slight modification of the construction of the cell, whereby the flint lens may be moved towards the focal plane. When an object-glass of this construction is used for direct or optical observation, the two lenses, flint and crown, are in contact, the more convex surface of the crown coming next to the concave surface of the flint. When it is desired to use the telescope for photographic work, the lenses are separated by a suitable interval in the cell, and the outer or crown lens is reversed, so that the rays strike the more convex surface first. In order to determine whether this principle of construction might be available for a large objective to be made for experimental work undertaken with the aid of the Boyden Fund, Professor Pickering directed Messrs. Alvan Clark & Sons to construct a small object-glass on the new plan. This proving to be well adapted to its purposes, the larger one, of 13 inches aperture and 180 inches focal length, has been recently completed by the same makers; and it is found upon trial that the images are excellent for direct observation, while the photographic images prove to be equally good when the lenses are separated three inches and the crown glass reversed. This important discovery makes it possible for every observatory purchasing a visual telescope to own also a photographic outfit of equal power at trifling additional expense.

DARWIN'S LIFE AND LETTERS—I.

Life and Letters of Charles Darwin. With an autobiographic chapter by Francis Darwin. London: John Murray. 3 vols. (To be published next week in New York by D. Appleton & Co. in 2 vols.)

HERE we have, at length, the natural complement of that full line of duodecimos which stand on so many shelves, which have interested so many readers, and so much influenced scientific and philosophic thought. A perhaps unusual amount of this interest has been personal; for, although many were repelled by Darwin's doctrine, all were attracted by the man, as he quite unconsciously revealed himself in his writings. As his letters show, Darwin thought he was addressing only the limited circle of naturalists, and he expected rather to diminish their objections to his theory of evolution than to win their assent. We see that the wide popularity of 'The Origin of Species' was a genuine surprise, as also was the personal admiration and good feeling which his unaffected modesty and candor, and his disposition to maximize rather than to minimize all objections to his theory, very naturally elicited. Thus prepossessed, and desirous to know more of the man himself, and of his ways and doings from youth to age, we take up with eagerness the three volumes of 'Life and Letters,' which the son who most shared the father's pursuits has edited and published.

The first volume opens with a brief account of the Darwin family, contains the "Autobiography" in eighty pages, a chapter of "Reminiscences" by the editor, and selections of letters down to the beginning of the year 1854. The second volume covers the period of the growth and development of "The Origin of Species." The third brings the correspondence down to the close. The Autobiography and the Reminiscences offer us more matter than we can use in the present article. From these we will cull as we read.

The Autobiography somehow reminds us of that of Franklin, which we have not read since boyhood. Indeed, more than one point of likeness might be traced between the two men. The editor tells us that his father's autobiographical recollections were written for his children without any thought that they would ever be published. "To many this may seem an impossibility, but those who know my father will understand how it was not only possible, but natural." It was mainly written in June and July, 1876, and the manuscript is headed, "Recollections of the Development of My Mind and Character." About the time Darwin's mother died, when he was a little over eight years old, he was sent to a day school at Shrewsbury. Already, he says, "my taste for natural history, and more especially for collecting, was well developed. I tried to make out the names of plants, and collected all sorts of things—shells, seals, franks, coins, and minerals." In one little particular the boy was not the father of the man; he says he was then addicted to fibbing:

"One little event during this year has fixed itself very firmly in my mind, and I hope that it has done so from my conscience having been afterwards sorely troubled by it; it is curious as showing that apparently I was interested at this early age in the variability of plants! I told another little boy (I believe it was Leighton, who afterwards became a well-known lichenologist and botanist) that I could produce variously colored polyanthuses and primroses by watering them with certain colored fluids, which was of course a monstrous fable, and had never been tried by me. I may here also confess that as a little boy I was much given to inventing deliberate falsehoods, and this was always done for the sake of causing excitement. For instance, I once gathered much valuable fruit from my father's trees and hid it in the shrubbery, and then ran in breathless haste to spread the news that I had discovered a hoard of stolen fruit."

His detestation of cruelty, which comes out in various ways, it seems, was earlier developed than his entire veracity. In this early boyhood, he had

"a strong taste for angling, and would sit for any number of hours on the bank of a river or pond watching the float; when at M—— I was told that I could kill the worms with salt and water, and from that day I never spitted a

living worm, though at the expense probably of some loss of success. Once as a very little boy while at the day school, or before that time, I acted cruelly, for I beat a puppy, I believe, simply from enjoying the sense of power; but the beating could not have been severe, for the puppy did not howl, of which I feel sure, as the spot was near the house. This act lay heavily on my conscience, as is shown by my remembering the exact spot where the crime was committed."

In another connection he remarks that "I can say in my own favor that I was as a boy humane, but I owed this entirely to the instruction and example of my sisters. I doubt, indeed, whether humanity is a natural or innate quality." Another trait of his boyhood is worth noting. From his eleventh to his sixteenth year he was at a boarding-school in Shrewsbury, where he had the advantage of living the life of a true schoolboy:

"But as the distance was hardly more than a mile to my home, I very often ran there in the longer intervals between the callings over and before locking up at night. This, I think, was in many ways advantageous to me by keeping up home affections and interests. I remember in the early part of my school life that I often had to run very quickly to be in time, and from being a fleet runner was generally successful; but when in doubt I prayed earnestly to God to help me, and I well remember that I attributed my success to the prayers and not to my quick running, and marvelled how generally I was aided."

The school was strictly classical, and, "as a means of education to me, was simply a blank.' His father and his masters took him for a very ordinary boy, rather below the common standard of intellect. Yet he remembers that he had "a keen pleasure in understanding any complex subject or thing," and that when he was taught Euclid by a private tutor, the clear geometrical proofs gave him intense satisfaction. He remembered also his delight when the principle of the vernier of a barometer was explained to him by his uncle. He was fond of reading the historical plays of Shakspere and the recently published poems of Byron and Scott, but, as we shall see, this disposition did not last. On the other hand,

"early in my school days a boy had a copy of 'The Wonders of the World,' which I often read, and disputed with other boys about the veracity of some of the statements, and I believe that this book first gave me a wish to travel in remote countries, which was ultimately fulfilled by the voyage of the *Beagle*. In the latter part of my school life I became passionately fond of shooting; I do not believe that any one could have shown more zeal for the holy cause than I did for shooting birds."

This passion lasted for a good while. After he had taken up geology in his last years at Cambridge, at the close of a tour in Wales which he made with Sedgwick, he hurried down to his uncle's country-place for shooting; "for at that time I should have thought myself mad to give up the first days of partridge-shooting for geology or any other science." And it is in one of his letters about this time that this sentence occurs: "Upon my soul, it is only about a fortnight to the First; then, if there is a bliss on earth that is it." But not long after this his quick feeling for suffering, whether of man or beast, overcame this passionate love of sport. Entries in the Autobiography substantially confirm the following reminiscence which was supplied to the editor by an old college friend:

"Before he left Cambridge he told me that he had made up his mind not to shoot any more; that he had had two days' shooting at his friend's, Mr. Owen of Woodhouse; and that on the second day, when going over some of the ground they had beaten on the day before, he picked up a bird not quite dead, but lingering from a shot it had received on the previous day; and that it had made and left such a painful impression on his mind, that he could not reconcile it to his conscience to continue to derive pleasure from a sport which inflicted such cruel suffering."

At the boys' school at Shrewsbury he read White's 'Selborne,' and fell to observing the habits of birds, and to "wondering why every gentleman did not become an ornithologist." He thinks, from certain memories, that he must have observed insects with some care even at the age of ten, and that he thought of collecting all the insects he could find dead, "for, on consulting my sister, I concluded that it was not right to kill insects for the sake of making a collection." Towards the close of his school life his brother was working hard at chemistry—of course out of and quite away from school—and in assisting him he got interested in the subject. This, he says,

"was the best part of my education at school, for it showed me practically the meaning of experimental science. The fact that we worked at chemistry somehow got known at school, and, as it was an unprecedented fact, I was nicknamed *Gas*. I was also publicly rebuked by the head-master, Dr. Butler, for thus wasting my time on such useless subjects; and he called me, very unjustly, a '*poco curante*'; and, as I did not understand what he meant, it seemed to me a fearful reproach."

In October, 1825, as he "was doing no good at school," his father took him away at a rather earlier age than usual, and he joined his brother at Edinburgh University. The latter was completing his medical studies, and the younger Darwin was to begin them. "But soon after this period I became convinced, from various small circumstances, that my father would leave me property enough to subsist on with some comfort, though I never imagined that I should be so rich a man as I am; but my belief was sufficient to check any strenuous effort to learn medicine." Indeed, from his account of it, the study was not made inviting.

"The instruction at Edinburgh was altogether by lectures, and these were intolerably dull, with the exception of those on chemistry by Hope; but to my mind there are no advantages and many disadvantages in lectures compared with reading. Dr. Duncan's lectures on Materia Medica at eight o'clock on a winter's morning are something fearful to remember. Dr. —— made his lectures on human anatomy as dull as he was himself, and the subject disgusted me. [There are survivors who can fill the blank and recall the memory.] It has proved one of the greatest evils of my life that I was not urged to practise dissection, for I should soon have got over my disgust; and the practice would have been invaluable for all my future work. This has been an irremediable evil, as well as my incapacity to draw. I also attended regularly the clinical wards in the hospital. Some of the cases distressed me a good deal, and I still have vivid pictures before me of some of them; but I was not so foolish as to allow this to lessen my attendance. . . . I also attended on two occasions the operating theatre in the hospital, and saw two very bad operations, one on a child; but I rushed away before they were completed. Nor did I ever attend again, for hardly any inducement would have been strong enough to make me do so; this being long before the blessed days of chloroform."

Among his first-year acquaintances at Edinburgh, although much his senior, was Dr. Grant the zoölogist:

"He one day, when we were walking together, burst forth in high admiration of Lamarck and his views on evolution. I listened in silent astonishment, and, as far as I can judge, without any effect on my mind. I had previously read the 'Zoonomia' of my grandfather, in which similar views are maintained, but without producing any effect on me. Nevertheless, it is probable that the hearing, rather early in life, such views maintained and praised may have favored my upholding them under a different form in my 'Origin of Species.' At this time I admired greatly the 'Zoonomia;' but on reading it a second time, after an interval of ten or fifteen years, I was much disappointed; the proportion of speculation being so large to the facts given."

Grant introduced him to the Plinian Society, where, in 1826, he read the account of his "one interesting little discovery. This was, that the so-called ova of Flustra had the power of independent movement by means of cilia, and were, in fact, larvæ."

We cannot omit the following. To the older naturalists the name of the Neptunian professor is not veiled. But how it carries one back!

"During my second year at Edinburgh I attended X.'s lectures on geology and zoölogy, but they were incredibly dull. The sole effect they produced on me was the determination never as long as I lived to read a book on geology or in any way to study the science. Yet I feel sure that I was prepared for a philosophical treatment of the subject; for an old Mr. Cotton in Shropshire, who knew a good deal about rocks, had pointed out to me two or three years previously a well-known large erratic boulder in the town of Shrewsbury called the 'bell-stone'; he told me that there was no rock of the same kind nearer than Cumberland or Scotland, and he solemnly assured me that the world would come to an end before any one would be able to explain how this stone came where it now lay. This produced a deep impression on me, and I meditated over this wonderful stone. So that I felt the keenest delight when I first read of the action of icebergs in transporting boulders, and I gloried in the progress of geology. Equally striking is the fact that I, though now only sixty-seven years old, heard the professor, in a field lecture at Salisbury Craigs, discoursing on a trap-dyke, with amygdaloidal margins and the strata indurated on each side, with volcanic rocks all around us, say that it was a fissure filled with sediment from above; adding with a sneer that there were men who maintained that it had been injected from beneath in a molten condition. When I think of this lecture, I do not wonder that I determined never to attend to geology."

Notwithstanding, he did take to geology in his last year at Cambridge, although he "did not even attend Sedgwick's eloquent and interesting lectures," but, through his friend Henslow's instigation, made a trip into North Wales with the former, apropos to which we have the subjoined extract from the autobiography, a fit pendant to the preceding:

"This tour was of decided use in teaching me a little how to make out the geology of a country. Sedgwick often sent me on a line parallel to his, telling me to bring back specimens of the rocks and to mark the stratification on a map. I have little doubt that he did this for my good, as I was too ignorant to have aided him. On this tour I had a striking instance how easy it is to overlook phenomena, however conspicuous, before they have been observed by any one. We spent many hours in Cwm Idwal, examining all the rocks with extreme care, as Sedgwick was anxious to find fossils in them; but neither of us saw a trace of the wonderful glacial phenomena all around us; we did not notice the plainly scored rocks, the perched boulders, the lateral and terminal moraines. Yet these phenomena are so conspicuous that, as I declared in a paper published many years afterwards in the *Philosophical Magazine*, a house burnt down by fire did not tell its story more plainly than did this valley. If it had still been filled by a glacier, the phenomena would have been less distinct than they now are."

Why Darwin left Edinburgh and went to Cambridge, from 1829 to 1831, is briefly told as follows:

"After having spent two sessions in Edinburgh, my father perceived, or he heard from my sisters, that I did not like the thought of being a physician, so he proposed that I should become a clergyman. He was very properly vehement against my turning into an idle sporting man, which then seemed my probable destination. I asked for some time to consider, as from what little I had heard or thought on the subject I had scruples about declaring my belief in all the dogmas of the Church of England; though otherwise I liked the thought of being a country clergyman. Accordingly I read with care 'Pearson on the Creeds'—and a few other books on divinity; and as I did not then in the least doubt the strict and literal truth of every word in the Bible, I soon per-

suaded myself that our Creed must be fully accepted. Considering how fiercely I have been attacked by the orthodox, it seems ludicrous that I once intended to be a clergyman. Nor was this intention and my father's wish ever formally given up, but died a natural death when, on leaving Cambridge, I joined the *Beagle* as naturalist. If the phrenologists are to be trusted, I was well fitted in one respect to be a clergyman. A few years ago the secretaries of a German psychological society asked me earnestly by letter for a photograph of myself; and some time afterwards I received the proceedings of one of the meetings, in which it seemed that the shape of my head had been the subject of a public discussion, and one of the speakers declared that I had the bump of reverence developed enough for ten priests."

It was through Baden Powell that Capt. Fitzroy offered to give up a part of his own small cabin to any proper young man who would volunteer to go with him, without pay, as naturalist to the voyage of the *Beagle*. Henslow was consulted, and he recommended Darwin. The latter had got to be known at Cambridge as "the man who walks with Henslow"; his were the only scientific lectures which Darwin attended, though he says that he did not study botany; and there was a rare friendship between the two. Not long before, Darwin had read Humboldt's 'Personal Narrative,' and had been so stirred that he had "copied long passages about Teneriffe and made inquiries about ships by which to go there. He jumped at Fitzroy's offer. But his father objected strongly, yet fortunately adding the words: "If you can find any man of common sense who advises you to go, I will give my consent." When the son, who says he had been rather extravagant at Cambridge, suggested that he should be deuced clever to spend more than his allowance while on board the *Beagle*, the father responded, "But they tell me you are very clever." So the offer was declined; but the uncle, Josiah Wedgwood, heard of it, took a long drive to confer with Dr. Darwin, and convinced him that it would be wise to accept the proposal, and, being eminently a "man of common sense," the father's objections were overcome.

Very few pages of the Autobiography are given to the cruise of the *Beagle*, but there are a good number of letters in the latter part of the volume. Brief, also, is the narrative from the time of Darwin's return, in the autumn of 1836, to his marriage, January 29, 1839, and to the removal to Down in the autumn of 1844. There is one interesting record: "In July 1 [1836] I opened my first note-book for facts in relation to the origin of species, about which I had long reflected, and never ceased working for the next twenty years." He gives sketches of some of the remarkable men whom he had well known, such as Lyell, or occasionally met, such as Robert Brown, Herschel, Humboldt, the old Lord Stanhope (who said—much to the horror of his son the historian—"Why don't you give up your fiddle-faddle of geology and zoölogy and turn to the occult sciences?"), Sydney Smith (of whom he records two new sayings about Lady Cork), and Carlyle, who naturally "thought it a most ridiculous thing that any one should care whether a glacier moved a little quicker or a little slower, or moved at all." He mentions "a funny dinner at my brother's, where, amongst a few others, were Babbage and Lyell, both of whom liked to talk. Carlyle, however, silenced every one by haranguing during the whole dinner on the advantages of silence. After dinner, Babbage, in his grimmest manner, thanked Carlyle for his very interesting lecture on silence." Considering how very good Darwin's brother was to Carlyle and his wife, the Sage of Chelsea might have had better taste than to throw off the ill-natured saying of the Darwins which we remember. Darwin's own estimate of Carlyle is discriminating, but not laudatory. The text of it is Kingsley's astonishing remark that Carlyle was "a man well fitted to advance silence"; which reads like a joke.

Very interesting to read, though we must pass it mainly by, is Mr. Darwin's account of his life during its golden years, from 1842 to 1876, and even to 1881. He briefly refers to his ill-health and suffering, which enjoined a very retired life, says his chief enjoyment and sole employment has been scientific, the excitement of which drives away or drives from memory his daily discomfort; and that he has nothing to record except the publication of his several books. He explains how each arose, and gives his opinion of its character. The narrative should be read in connection with the correspondence, the principal staple of the three volumes. All this we defer; but no one who takes up the Autobiography will be apt to lay it down until he has gone through it.

At its close (written in 1881) the author thinks it may be worth while to try to analyze the mental qualities and the conditions on which his success has depended, though aware that no man can do this correctly; and we are naturally much interested in what Mr. Darwin thought of himself. He says:

"I have no great quickness of apprehension or wit. . . . I am, therefore, a poor critic; a paper or book when first read generally excites my admiration, and it is only after considerable reflection that I perceive the weak points. . . . My memory is extensive, yet hazy; it suffices to make me cautious by vaguely telling me that I have observed or read something opposed to the conclusion which I am drawing, or, on the other hand, in favor of it. . . . So poor in one sense is my memory, that I have never been able to remember for more than a few days a single date or a line of poetry.

"Some of my critics have said, 'Oh, he is a good observer, but he has no power of reasoning.' I do not think that this can be true, for the 'Origin of Species' is one long argument from the beginning to the end, and it has convinced not a few able men. No one could have written it without having some power of reasoning. I have a fair share of invention, and of common sense or judgment, such as every fairly successful lawyer or doctor must have, but not, I believe, in any higher degree.

"On the favorable side of the balance, I think that I am superior to the common run of men in noticing things which easily escape attention and in observing them carefully. My industry has been nearly as great as it could have been in the observation and collection of facts. What is far more important, my love of natural science has been steady and ardent. This pure love has, however, been much aided by the ambition to be esteemed by my fellow-naturalists. From my early youth I have had the strongest desire to understand or explain whatever I observed; that is, to group all facts under some general laws. These causes combined have given me the patience to reflect or ponder for any number of years over any unexplained problem. As far as I can judge, I am not apt to follow blindly the lead of other men. I have steadily endeavored to keep my mind free so as to give up any hypothesis, however much beloved (and I cannot resist forming one on every subject), as soon as facts are shown to be opposed to it. Indeed, I have had no choice but to act in this manner, for, with the exception of the Coral Reefs, I cannot remember a single first-formed hypothesis which had not after a time to be given up or greatly modified. This has naturally led me to distrust greatly deductive reasoning in the mixed sciences. On the other hand, I am not very sceptical, a frame of mind which I believe to be injurious to the progress of science. . . .

"My habits are methodical, and this has been of not a little use for my particular line of work. Lastly, I have had ample leisure from not having to earn my own bread. Even ill-health, though it has annihilated several years of my life, has saved me from the distractions of society and amusement.

"Therefore my success as a man of science, whatever this may have amounted to, has been determined, as far as I can judge, by complex and diversified mental qualities and conditions. Of these, the most important have been—the love of science, unbounded patience in long reflecting over any subject, industry in observing and collecting facts, and a fair share of invention as well as of common sense. With such moderate abilities as I possess, it is truly surprising that I should have influenced to a considerable extent the belief of scientific men on some important points."

These are the closing words of the Autobiography. But we must go back to a few remarks which Darwin makes upon changes between earlier and later years:

"I am not conscious of any change in my mind during the last thirty years, excepting in one point presently to be mentioned, nor, indeed, could any change have been expected, unless one of general deterioration. . . . I think that I have become a little more skilful in guessing right explanations and in devising experimental tests; but this may probably be the result of mere practice, and of a larger store of knowledge. I have as much difficulty as ever in expressing myself clearly and concisely; and this difficulty has caused me a very great loss of time; but it has had the compensating advantage of forcing me to think long and intently about every sentence, and thus I have been led to see errors in reasoning and in my own observations or those of others.

"I have said that in one respect my mind has changed during the last twenty or thirty years. Up to the age of thirty, or beyond it, poetry of many kinds, such as the works of Milton, Gray, Byron, Wordsworth, Coleridge, and Shelley, gave me great pleasure, and even as a schoolboy I took intense delight in Shakespeare, especially in the historical plays. I have also said that formerly pictures gave me considerable, and music very great delight. But now for many years I cannot endure to read a line of poetry: I have tried lately to read Shakespeare, and found it so intolerably dull that it nauseated me. I have also almost lost my taste for pictures or music. . . . My mind seems to have become a kind of machine for grinding general laws out of large collections of facts, but why this should have caused the atrophy of that part of the brain alone on which the higher tastes depend, I cannot conceive."

He deplores this loss, and says that if he had to live his life again, he would make it a rule to read some poetry and listen to some music, at least once a week, since the atrophied faculties might perhaps have been kept sound through use; and that the deprivation, besides a loss of happiness, may possibly be injurious to the intellect, and probably to the moral character. Singularly enough the repugnance did not extend to novels. These, he declares,

"though not of a very high order, have been for years a wonderful relief and pleasure to me, and I often bless all novelists. A surprising number have been read aloud to me, and I like all, if moderately good, and if they do not end unhappily—against which a law ought to be passed. A novel, according to my taste, does not come into the first class unless it contains some person whom one can thoroughly love, and if a pretty woman all the better."

There is a simple explanation of this enjoyment of novel reading, or rather of having novels read to him. From the time of the voyage of the *Beagle* to the end of his most laborious and productive life he was an almost constant, though variable, sufferer from an illness not unlike seasickness, which was always aggravated by mental application, and accompanied by insomnia. As the editor states at the close of that most charming and instructive chapter (pp. 108–160) of "Reminiscences of My Father's Life," which completely brings the man to view in manner as he lived—"for nearly forty years he never knew one day of the health of ordinary men, and thus his life was one long struggle against the weariness and strain of sickness," and all his work was done in snatches and intervals. The discomfort was assuaged by listening to novel-reading. We note the editor's remark that "his expression showed no signs of the continual discomfort he suffered." Indeed, he appeared to his friends to have a particularly joyous life.

Many readers will turn with interest to the intercalated chapter viii., of the first volume, which brings together what is to be said of Darwin's religious views. In 1879 he wrote to a correspondent:

"What my own views may be is a question of no consequence to any one but myself. But, as you ask, I may state that my judgment often fluctuates. . . . In my most extreme fluctuations I have never been an Atheist in the sense of denying the existence of a God. I think that generally (and more and more as I grow older) but not always, an Agnostic would be the more correct description of my state of mind."

One gathers from the correspondence that the qualifying member of the sentence might have been emphasized. Again:

"It is impossible to answer your question briefly; and I am not sure that I could do so, even if I wrote at some length. But I may say that the impossibility of conceiving that this grand and wondrous universe, with our conscious selves, arose through chance, seems to me the chief argument for the existence of God; but whether this is an argument of real value, I have never been able to decide. . . . Nor can I overlook the difficulty from the immense amount of suffering through the world. I am also induced to defer to a certain extent to the judgment of the many able men who have fully believed in God; but here again I see how poor an argument this is. The safest conclusion seems to me that the whole subject is beyond the scope of man's intellect; but man can do his duty. . . . For myself, I do not believe that there ever has been any revelation. As for a future life, every man must judge for himself between conflicting vague probabilities."

In several pages of the chapter, printed in this connection (although they form a part of the Autobiography, written in the year 1876), Mr. Darwin gives a kind of history of the change in his thoughts. It begins: "Whilst on board the *Beagle* I was quite orthodox, and I remember being heartily laughed at by several of the officers (though themselves orthodox) for quoting the Bible as an unanswerable authority on some point of morality. I suppose it was the novelty of the argument that amused them." . . . He "gradually came to disbelieve in Christianity as a divine revelation. . . . Disbelief crept over me at a very slow rate, but was at last complete. The rate was so slow that I felt no distress."

Some pages follow in which the argument from design in nature is concluded to fail, "now that the law of natural selection has been discovered," and in which he touches the question, "Whether the world as a whole is a good or bad one," giving his judgment that "happiness decidedly prevails, though this would be very difficult to prove," and that, "if the truth of this conclusion be granted, it harmonizes well with the effects which we might expect from natural selection."

"That there is much suffering in the world, no one disputes. Some have attempted to explain this with reference to man by imagining that it serves for his moral improvement. But the number of men in the world is as nothing compared with that of all other sentient beings, and they often suffer greatly without any moral improvement. This very old argument from the existence of suffering against the existence of an intelligent First Cause seems to me a strong one; whereas, as just remarked, the presence of much suffering agrees well with the view that all organic beings have been developed through variation and natural selection.

. . .

"At the present day the most usual argument for the existence of an intelligent God is drawn from the deep inward conviction and feelings which are experienced by most persons.

"Formerly I was led by feelings such as those just referred to (although I do not think that the religious sentiment was ever strongly developed in me), to the firm conviction of the existence of God and of the immortality of the soul. . . . I well remember my conviction that there is more in man than the mere breath of his body. But now the grandest scenes would not cause any such convictions and feelings to rise in my mind. It may be truly said that I am like a man who has become color-blind, and the universal belief by men of the existence of redness makes my present loss of perception of not the least value as evidence.

"Another source of conviction in the existence of God, connected with the reason, and not with the feeling, impresses me as having much more weight. This follows from the extreme difficulty, or rather impossibility, of conceiving this immense and wonderful universe, including man with his capacity of looking far backwards and far into futurity, as the result of blind chance or necessity. When thus reflecting I feel compelled to look to a First Cause having an intelligent mind in some degree analogous to that of man; and I deserve to be called a Theist. This conclusion was strong in my mind about the time, as far as I can remember, when I wrote the 'Origin of Species'; and it is since that time that it has very gradually, with many fluctuations, become weaker. But then arises the doubt, Can the mind of mind, which has, as I fully believe, been developed from a mind as low as that possessed by the lowest animals, be trusted when it draws such grand conclusions?"

It is noteworthy that, after stating and truly feeling that there was nothing in the theory of natural selection that need disturb religious convictions, it seems to have had that very effect upon him. It is also notable that his great difficulty was the very old one, of the existence of evil in the world—one which, however insoluble, was not at all raised, but is in some sense mitigated, by the theory of natural selection. Finally, and in respect to the whole aspect of such questions, one may find reason to conclude that the prevalent Latin-Church conception of transcendent Divinity—of a God apart from the world and operating extraneously—may have operated as unhappily in natural as in Christian theology; and that the fuller recognition of Divine immanence, of the Divine presence in nature and in the course of nature, might help to lessen some of these difficulties.

RECENT NOVELS.

The Crusade of the Excelsior. By Bret Harte. Boston: Houghton, Mifflin & Co.

Thirteen Stories of the Far West. By Forbes Heermans. Syracuse, N. Y.: C. W. Bardeen.

Mr. Incoul's Misadventure. By Edgar Saltus. Benjamin & Bell.

Daddy Dave. By Mary Frances. Funk & Wagnalls.

Edith. By Mrs. Ottilie Bertron. Jenkins & McCowan.

Button's Inn. By Albion W. Tourgee. Boston: Roberts Brothers.

The Great Bank Robbery. From the diary of Inspector Byrnes. By Julian Hawthorne. Cassell & Co.

Jill and Jack. By E. A. Dillwyn. Macmillan & Co.

Sea Spray; or, Facts and Fancies of a Yachtsman. By S. G. W. Benjamin. Benjamin & Bell.

A Game of Chance. By Anne Sheldon Coombs. D. Appleton & Co.

MR. BRET HARTE'S stories invariably have the charm which is inseparable from a well-constructed narrative. He has always something interesting happening, generally something amusing to note, and occasionally something so near to nature that it is beyond art. In spite of the unevenness of his work, one never can doubt the authorship of any page of it; and though his may be in some respects a bad style, it is none the less style, and is entitled to the full ratio of influence which is accorded to that illusive and indefinable element in literature. 'The Crusade of the Excelsior' is in every respect characteristic of Mr. Harte's general methods. In construction, aim, and execution it is neither better nor worse than any one of half-a-dozen of his books that might be named. The plot, while not at all impossible or unreal, is still fanciful enough to admit of continual surprises and absorbing complications. Perhaps the conception of the Todos Santos community, cut off from the outside world by the impenetrable fogs and mists of the Pacific, and living with only the knowledge and in the spirit of past centuries, would be too much for a devoted realist to forgive; but to the ordinary novel-reader, who seeks merely to be amused, the ludicrousness of the predicament into which the matter-of-fact passengers of the *Excelsior* are thrown when arrested by the Commandante of the Presidio as revolutionists, is too delightful to admit of cavil. Perhaps, too, an ardent admirer of the commonplace in art might take objection to the figure of Señor Perkins, whose singular ambitions and queer conceits count for so much both in the machinery of the tale and in the amusement which it affords. But a just and deliberate estimate of the story in all its aspects must admit that Señor Perkins could not be spared, and further, that nothing in the book could be materially changed without its being spoiled. It might be, on a general level, closer to life, but it would not be Mr. Harte, nor would it be nearly so good a novel out of which to get amusement and entertainment.

What merit there is in the 'Thirteen Stories of the Far West' told by Mr. Heermans lies in quite other directions; but the fact that they have very little merit of any sort might as well be said first as last. They are written in the rollicking, careless, "reportorial" style which may deceive some readers into the notion that the writer has caught the "true Western flavor." From a literary standpoint they are quite worthless, and it is only the fact that now and then the author gives to his work a touch of truth about the Far West which endows them with any value whatever. But as for any real conception of the aspects of civilization on our great prairies, or anything like a firm grasp and understanding of the manifestations which show the growth of a sectional character, both there and in the mountain towns still further west, Mr. Heermans has not shown that he possesses these qualities.

It is impossible, after reading 'Mr. Incoul's Misadventure,' to lay the book down without a sense of disappointment, a dissatisfied feeling as if one had been cheated out of one's dues as a novel-reader. Just why this should be is hard to say, because the story has all the outward semblance of a novel. There are but few characters, it is true, but they are quite lifelike; there is a sufficient, though simple plot, which is only strained in order to be striking; while the style might be called a hard finish, it is so terse, so straightforward, and so perfectly adapted to conveying the writer's meaning. But, notwithstanding the logical consecutiveness of the incidents, the resulting tragedy does not force upon one, as all genuine tragedies must do, the realization that it was inevitable. Perhaps one feels disappointed with the story because it is developed rather on the lines of what Sidney Lanier calls the novelist's omniscience than on the natural lines of growth and character. The impression that every incident, every sentence, is merely the arbitrary choice of the author, is unavoidable. One sees beyond a doubt that Mr. Saltus had the entire conception quite complete and well defined in his imagination before he began writing; and while this method has been recommended to young writers by more than one successful novelist, we know that Hawthorne and Thackeray wrote differ-

ently, and that 'Uncle Tom's Cabin' "wrote itself." Mr. Saltus's literary training and habits of mind serve to increase this impression of arbitrary choice and cool calculation of effects and artistic values. He is the author of a work on the 'Anatomy of Negation,' and has been called "a scientific pessimist"—until one's mind refuses to be deceived into taking the story for anything more than the ingenious calculation of a trained intellect. Yet it purports to be a study of passion.

The author of 'Daddy Dave' explains in her preface that the main if not the only incentive in preparing the book for the press was to pay a tribute of affection to a faithful and beloved family servant. This may do well enough; but on no other grounds is the existence of the sketch justifiable for a moment. It is fragmentary and unfinished to the last degree, and affords one more example of the truth that realities do not of themselves either create interest or make a narrative seem natural. In view of the broader and all-important questions which were settled by our civil war, too, one cannot avoid a slight feeling of impatience with the sentimental regret in which the author indulges, notwithstanding her reiterated protestations of resignation and acquiescence.

Mrs. Bertron, however, writes her novel for its own sake. It is true that it is not a great novel, or even an unusually good one; but one must admire the evident enthusiasm and earnestness of it. The interest is not concentrated enough to sustain itself evenly or sufficiently throughout, and one believes that if the author had attempted less, she would have accomplished more. Yet she need have no reason to feel discouraged, for there are many points in 'Edith' which indicate the ability as well as determination to do good work.

In order to realize how entirely modern are the forms of literature embraced by the novel, it is only necessary to call to mind the number of stories which take up in one shape or another the study of some phase of religion, and consider it abstractly—merely, that is, as the growth of an institution. Mr. Tourgee, who, it is safe to surmise, will never write a novel without touching on some movement or development of the body politic, has attempted a very mild and inexhaustive study of the origin of Mormonism in his tale of 'Button's Inn.' The few pages of his preface, however, really contain more on this subject than all the rest of the book, and without these perhaps many readers would have failed to see in the Mormon chapters anything more than their bearing on the story. For the story of itself really has a genuine and wholesome interest, and one follows the fortunes of Dotty Button and her two worthy, generous lovers with a feeling which grows to be personal and warm-hearted. The success in life of the hero is not phenomenal nor undeserved, and there is no one who has the true American spirit that will think any the less of him for attempting and achieving it. In fact, the modern spirit all over the world considers a man who does not want money as materially defective, and would vote Plutarch's words in praise of Coriolanus, that "it is the higher accomplishment to use money well than arms; but not to need it is more noble than to use it," entirely obsolete.

What Plutarch would have thought of 'The Great Bank Robbery' is more of a mystery than the robbery itself was to the detectives. Not that the story is particularly remarkable, as detective stories go, but that the whole class of literature to which it belongs is, in its conception of life and the relations of mankind, so entirely modern. Mr. Julian Hawthorne is fitted to make the best out of such material, and it is not often that one will meet with more clever, telling work than his opening chapters here. It is not until he gets in the midst of affairs, when facts and art refuse to go together without straining, that the true aspect of the effort as a concession to popularity becomes apparent. It is not much to say of such a tale that it is absorbingly interesting, for the same may be said of almost every story of a similar nature. Yet when that is said, all is said, and perhaps the continually rushed and overworked Americans should be thankful for anything that can break the tedium of a railway journey.

As one might easily judge from the title, 'Jill and Jack' is a light, superficially written novel. It is hastily constructed, sufficiently amusing inasmuch as it is short, and built on a plot improbable enough to be striking in spite of its triteness. The love-affair of Jill and Jack is quaintly pleasant from the self-deceit which they both practise; but that of Gaston and Miss Morton, which really furnishes the mechanism of the story, is too heavily loaded therewith to be either natural or entertaining.

A more delightful satire than the first paper of Mr. Benjamin's collection of a yachtsman's facts and fancies is, of necessity, rare. The hero of the tale, who is a Scotchman and a member of Parliament, is shipwrecked on a tropical island. After four years of solitude a Boston lady, who had become a citizen of New York, is sent by fate to be his companion. For a long time they live on terms of the merest acquaintanceship, communicating chiefly by means of notes. When they have finally fallen in love in the most approved fashion, they philosophically lay aside their scruples, and, changing from Episcopalians to Presbyterians, they are married according to the laws of their respective States by declaration—notwithstanding the fact that she has turned out to be his deceased wife's sister. In Parliament he had often spoken against the bills to allow such marriages. In order to secure their children from the danger of dying without the rite of baptism, they at last become Baptists, when they feel that they can safely postpone the rite until the children are grown. Nothing else in the book compares with this tale, which, with a single exception, is the only one that has not already been printed in the magazines.

For a thoroughly depressing novel 'A Game of Chance' is to be recommended. A more vivid portrayal of the ugliness of respectable poverty, or a more complete collection of unworthy characters, would be, in every respect, undesirable. While the picture of Charley Melrose and his unlovely family may be a true enough one in its way, it serves no good purpose in being painted. Poverty is not necessarily degrading; nor is it true that every one who is poor, yet who is capable of appreciating the benefits of wealth, is continually longing after the fleshpots, and resisting but faintly the temptation to speculate and rob.

BOOKS OF THE WEEK.

Abbott, W. J. Blue Jackets of 1812: A History of the Naval Battles of the Second War with Great Britain. To which is Prefixed an Account of the French War of 1789. Illustrated. Dodd, Mead & Co. $3.
Baldwin, J. Elementary Psychology and Education: A Text-Book for High Schools. D. Appleton & Co. $1.50.
Ballads of Romance and History. Illustrated. Boston: D. Lothrop Co. $2.50.
Bamford, Mary E. The Look-About Club and the Curious Live Things They Found. Boston: D. Lothrop Co. $1.50.
Bocock, K. Tax the Area: A Solution of the Land Problem. J. W. Lovell Co. 20 cents.
Brooks, E. S. The Story of the American Indian. Boston: D. Lothrop Co. $2.50.
Browning, R. Lyrics, Idyls, and Romances. From his Poetic and Dramatic Works. Boston: Houghton, Mifflin & Co. $1.
Bruce, W. Old Homestead Poems. Illustrated. Harper & Brothers.
Bynner, E. L. Damen's Ghost. Boston: Ticknor & Co. 50 cents.
Campbell, A. Captain Macdonald's Daughter. A Novel: Harper & Brothers.
Crawford, S. W. The Genesis of the Civil War: The Story of Sumter. 1860–1861.
Ebers, G. Richard Lepsius: A Biography. Wm. S. Gottsberger.
Ford, H. The Theory and Practice of Archery. New ed. Revised by W. Butt. Longmans, Green & Co.
Foreman, A. Big Wages and How to Earn Them. Harper & Brothers.
Foster, W. Reports of Decisions Rendered by the Supreme Court of the Hawaiian Islands. Vol. V. Honolulu: Gazette Co.
Fouqué, La Motte. Sintram and his Companions. Aslauga's Knight. Cassell & Co. 10 cents.
Frey, A. R. Sobriquets and Nicknames. Boston: Ticknor & Co. $3.

Hawthorne, J. An American Penman. From the Diary of Inspector Byrnes. Cassell & Co. $1.
Holmes, Margaret. Recitations for Christmas. Indianapolis: Charles A. Bates. 25 cents.
Jamison, Mrs. C. V. The Story of an Enthusiast, told by Himself. Boston: Ticknor & Co. $1.50.
Johonnot, J. Stories of Our Country. D. Appleton & Co.
Keller, O. Thiere des Classischen Alterthums in Culturgeschichtlicher Beziehung. Innsbruck: Wagner'schen Universitäts-Buchhandlung.
Kluge, Prof. F. Etymologisches Wörterbuch der Deutschen Sprache. 4th ed. Strassburg: K. J. Trübner.
Lathbury, Mary A. Twelve Times One. Illustrations of Child Life. Worthington Co. $1.75.
Laughlin, J. L. The Elements of Political Economy. D. Appleton & Co. $1.50.
Laughton, J. K. Studies in Naval History: Biographies. Longmans, Green & Co. $3.50.
Lea, H. C. History of the Inquisition of the Middle Ages. In 3 vols. Vol. I. Harper & Brothers. $3.
Loew, W. N. Magyar Songs; or, Selections from Modern Hungarian Poets. Samisch & Goldmann.

Moncure D. Conway's

Pine and Palm.

16mo, LEISURE HOUR SERIES. $1.

"A novel singularly attractive both in subject matter and in the way of its relation. . . . A series of intensely interesting occurrences. . . . The plot is ingeniously worked out, and from beginning to end there is nothing but interest."—*Boston Post.*

The City of Sarras.

A Romance. By U. Ashworth Taylor. Cloth, $1; paper 30 cents.

Jean Monteith.

By Mr. G. McClelland. LEISURE HOUR SERIES. $1.

"A welcome proof that this new Southern novelist can fulfil the promise of her earlier story, 'Oblivion.' . . . The story is highly romantic with lines of pain and of passionate endeavor deep graven."—*Boston Advertiser.*

Southern Silhouettes.

By Mrs. J. H. Walworth. 16mo, $1.25.

"All lovers of good American literature, and of a whole American people, will be glad to avail themselves of the pleasure and profit afforded by the perusal of this volume."—*Hartford Courant.*

Henry Holt & Co., New York.

RICHARD LEPSIUS.

A BIOGRAPHY.

BY GEORG EBERS.

From the German by ZOE DANA UNDERHILL.

With Frontispiece. One vol., 12mo, cloth, $1.25.

AUTHORIZED EDITION.

WM. S. GOTTSBERGER,

PUBLISHER,

11 MURRAY STREET, NEW YORK.

COMPLETE INDEX TO LITTELL'S Living Age. Number eleven (Vestries-Wortley) now ready, and sent as specimen to any address.

E. ROTH, 1135 Pine Street, Philadelphia.

MACMILLAN & CO.'S

NEW BOOKS.

A NEW STORY BY F. MARION CRAWFORD.

MARZIO'S CRUCIFIX. By F. Marion Crawford, author of 'Mr. Isaacs,' 'Dr. Claudius,' &c., &c. 12mo, $1.50.

"The workmanship of 'Marzio's Crucifix,' whether as a piece of narrative or a study of character, is remarkably strong. It is certainly one of the best of Mr. Crawford's writings."—*Pall Mall Gazette.*

"The story is one of the best this clever author has yet published, and it is one which will add to his already enviable reputation."—*Boston Courier.*

"There is no falling off in his narrative or his portraiture. The tale is one of Italian *bourgeois* life, but it seems to be Mr. Crawford's privilege to be able to invest commonplace surroundings with a halo of romance. The *dramatis personæ* are very few, and the scene contracted, and yet there is plenty of light and shade, sentiment and matter of fact, comedy and pathos in the working out of the plot. Mr. Crawford understands the art of suspense thoroughly, and the interest steadily mounts in intensity till the very close of the story."—*London Athenæum.*

"'Marzio's Crucifix' is one of Mr. Marion Crawford's best pieces of work, being a very careful and subtile study of character."—*London Academy.*

BY THE AUTHOR OF 'HOGAN, M. P.'

ISMAY'S CHILDREN. By the author of 'Flitters, Tatters, and the Counsellor,' 'Hogan, M. P.,' &c. 12mo, paper, 50 cents; cloth, $1.00.

"She has written the best novel that we have had for years—of its kind, we mean—with a truth which rivals that of Miss Edgeworth's Irish stories, as well as those of Carleton and the O'Hara Brothers, and with a literary grace and charm which theirs do not possess."—*Mail and Express.*

"The story is one that appeals at the outset to readers of educated taste, and is one of exceptional strength and brilliancy."—*Boston Saturday Evening Gazette.*

"A novel as delightfully sympathetic and as subtle and graceful as anything which came from the pen of Thackeray."—*Philadelphia Record.*

HITHERSEA MERE. By Lady Agusta Noel, author of 'Owen Gynnes's Great Work,' 'From Generation to Generation,' &c., &c. 12mo, $1.

The *Athenæum* says: "Lady Augusta Noel has the gift of romance, and involves all her characters in an atmosphere of pleasant illusion, which will be welcome to the majority of her readers. There is a quiet humor, too, in 'Hithersea Mere,' which adds to its charm."

A NEW HISTORY OF ENGLISH LITERATURE IN FOUR VOLUMES.

ELIZABETHAN LITERATURE. By George Saintsbury. Being Vol. 2 of 'A History of English Literature' in four volumes. $1.75. *Immediately.* Also a Students' Edition, on thinner paper, price $1.00.

LETTERS ON UNIONIST DELUSIONS. By A. V. Dicey, B. C. L., Barrister-at-Law. 16mo, 60 cents.

THE BROOK. By Alfred, Lord Tennyson, P. L., D. C. L. With Twenty Illustrations in Color. By A. Woodruff. Oblong 16mo, 75 cents.

INDUSTRIAL PEACE: its Advantages, Methods, and Difficulties. A Report of an Inquiry made for the Toynbee Trustees. By L. L. F. R. Price. 8vo, $1.50.

ESSAYS ON SOME OF THE MODERN GUIDES OF ENGLISH THOUGHT in Matters of Faith. By Richard Holt Hutton. Globe 8vo, $1.50.

PRINCE LUCIFER. By Alfred Austin, Author of 'Savonarola: a Tragedy,' 'Soliloquies in Song,' etc. 12mo, $2.00.

"Mr. Alfred Austin's poem will be prized by lovers of the highest form of imaginative literature."—*Scotsman.*

OUTLINES OF PHYSIOGRAPHY—THE MOVEMENTS OF THE EARTH. By J. Norman Lockyer, F. R. S., Professor of Astronomical Physics in the Normal School of Science, etc. 12mo, pp., 60 cents.

GNOSTICISM AND AGNOSTICISM, and Other Sermons. By the Rev. George Salmon, D.D., Regius Professor of Divinity in Trinity College, Dublin. 12mo, $2.

"Apart from the authority which his name commands, the tone of his argument exhibits the best aspects of scientific thought. Two or three volumes of sermons, which we had previously published, were conspicuous examples of the introduction of this scientific tone into theological discussion."—*Quarterly Review.*

NON-MIRACULOUS CHRISTIANITY, and Other Sermons. By the same author. Second edition. 12mo, $1.75.

"Few sermons could be better adapted to confirm the faith of students and cultivated men. They are well considered and well reasoned, and display a thorough acquaintance with the most recent heterodox speculations, and a great facility in the defence of truth."—*London Quarterly Review.*

GREEK TESTAMENT, School Readings in the. Being the Outline of the Life of our Lord as given by St. Mark, with additions from the Text of the other Evangelists. Arranged and edited, with Notes and Vocabulary, by the Rev. A. Calvert, M.A. 16mo, $1.10.

MACMILLAN & CO., 112 Fourth Avenue, New York.

JUST PUBLISHED.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 24, 1887.

The Week.

JOHN SHERMAN has announced the platform on which he would have the Republicans contest the election of 1888 under a candidate whom modesty forbids him to mention. One plank is "A fair count of the vote in the Southern States," by which he explains that he means the assumption by Congress of control over all Federal elections in the South. This would be the revival and extension of a power which a Republican Congress refused to exercise so long ago as when the "Force Bill" was defeated in 1875, and which a Republican President definitively surrendered when Mr. Hayes removed the troops from the South and granted home rule in 1877. That Mr. Sherman should seriously make such a proposition ten years later seems almost incredible. But it is not much more absurd than his other plank, which is the maintenance of the present tariff, except for reduction or abolition of the sugar tax, to be compensated by a bounty; the return to the States of the direct tax; and the revival of that disastrous Distribution Act of 1837 for the purpose of apportioning $20,000,000 of the surplus among the States. Time was when John Sherman was presented as an eminently "safe" and conservative man for the Presidency, but nobody would suspect it to hear him talk in these days.

One of the most important cases that have yet come before the Inter-State Commerce Commission is that in which the Standard Oil Trust appears as the real defendant, although the nominal defendants are certain railroads around which it has thrown its tentacles. It is undoubtedly true that all the railroads, including the nominal defendants in the present hearing, would be happier if the Standard Oil Trust had never existed. Undoubtedly they would all be happier if that concern were removed out of the way by "the comet, the Turk, or the devil." The saying of Commodore Vanderbilt, that there was only one man in the world whom he was afraid of, and that one was the manager of the Standard Oil Company, is well remembered. All the railroad kings are afraid of the thing that the old Commodore was afraid of. They are in terror of the power that controls the distribution of oil in the United States. In the presence of this power they are not free moral agents. It is as useless to chide them for obeying the behests of the Standard Oil Trust as it would be to rail at Jupiter's satellites for revolving around their primary. They are simply obeying the law of gravitation. They will continue to rotate around Standard Oil until a stronger force—for example, the Government of the United States—comes into the field. Probably no case will ever come before the Commission which will excite deeper or more widespread interest. The counsel on both sides embrace the best legal talent, and it is evident that no stone will be left unturned by either side to secure a verdict. Fortunately the tribunal before whom the case is to be heard has acquired universal confidence by the prudent and conservative line of its decisions. While leaning, as it ought, in favor of the idea of non-discrimination, upon which the Commerce Act is founded, it has nevertheless shown the purpose to construe the law with the utmost fairness to vested interests, and to avoid as much as possible the upsetting of established business arrangements. It is safe to assume that the decision or decisions which may be reached will rest upon good legal as well as social and economical grounds.

The Woman's Christian Temperance Union, at its recent Convention in Nashville, Tenn., adopted a resolution declaring that the principle underlying the internal-revenue tax on liquor is wrong, and advocating "the abolition of the internal revenue on alcoholic liquors and tobacco, for the reason that it operates to render more difficult the securing and enforcement of prohibitory laws, and so postpones the day of national deliverance." This is another of those performances by professed reformers which make one wonder that the cause which they advocate can make any progress under such auspices. No fact is more certain or obvious than that the tax upon liquors operates to raise the price and thus to diminish consumption. It is equally certain and obvious that if the Government surrenders the revenue of $90,000,000 a year which it now gets from the tax on liquors, it must keep $90,000,000 a year of unnecessary taxes upon the food and clothing of the people; in other words, that if it abolishes the tax on something which people can dispense with, it must maintain taxes on necessaries. In short, there is not a consideration of sound finance or good morals which is not outraged by the suggestion of repealing the liquor tax; and the spectacle of a convention of people who are devoted to the cause of temperance thus serving the cause of intemperance, is a most melancholy one.

The election on the question of putting prohibition into the Constitution of Oregon proves to have resulted in a majority of about 8,000 against the amendment. Fully two-thirds of this comes from Multnomah County, which includes Portland, where the heaviest vote ever cast stood almost exactly four to one against prohibition; and its friends, with apparent justice, attribute the result to the intelligent, candid, and vigorous opposition of the *Oregonian*, the chief newspaper of the State. The *Oregonian* expresses the belief that fully one-half of the affirmative votes were those of men who had been driven to that stand by the offensive course of the liquor-sellers in interfering in politics, and the question of prohibition was no sooner disposed of than it began an earnest advocacy of high license. The election in Oregon was the fourth State election of the year on the question of prohibition (Michigan, Texas, and Tennessee having preceded it), and there is no doubt that the dogma has lost strength ever since it came so near being incorporated in the Michigan Constitution last spring. The trend of public sentiment throughout the country is now unmistakably towards a combination of local option and high license. Florida is the latest State to try the policy of allowing each county thus to decide for itself whether or not liquor shall be sold, and in this way a large portion of the commonwealth has within a few weeks past established a sort of prohibition which the local sentiment of the communities involved will sustain and enforce. Dakota is also trying this system, and at the recent election more than three-fourths of the counties established prohibition under a local-option law.

The National Civil-Service Commission has adopted a new rule, which requires persons who vouch for a candidate for office to answer affirmatively the question, "Would you, yourself, trust him with employment requiring undoubted honesty, and would you recommend him for such to your personal friends?" This is a terrible blow at the business of signing recommendations. Heretofore they have been largely signed because the signers would not themselves trust the persons whom they recommended, and hoped to get rid of any responsibility for them by saddling them upon the Government.

The protectionists have for some time past been making loud claims that they were gaining tremendously throughout the South, and especially in Georgia. A few weeks ago it was announced, with a flourish of trumpets, that they proposed to "show their power" by defeating for reëlection Senator Colquitt, a pronounced revenue reformer, whose term expires in 1889, and sending in his stead a Sam Randall sort of Democrat. But the scheme was no sooner broached than it became manifest that it would fail. Discussion has shown that the press of the State is well-nigh unanimous for Mr. Colquitt's reëlection, and there is no longer a question that he will be returned. Moreover, public sentiment has been shown to be so strongly against protection that it appears certain that the successor of Senator Brown, whose term expires in 1891, will also be a tariff reformer.

A current discussion in the Alabama press shows at once the growing prosperity of the South and the increasing absurdity of the plea that the South is still so "impoverished by the war" that special appropriations in its behalf must be made from the Federal Treasury. It appears that the taxable property of the State has increased more than 50 per cent. since 1880. The tax-rate was

eight mills a dozen years ago, but now has been reduced to five and a half, while it is to be cut down to five next October; and an agitation has already been started to have the next Legislature lower it to four. Some of the papers, however, point out that the State is abundantly able to stand the present rate, and that instead of cutting it down, it ought to be maintained, and the surplus be devoted to a needed increase of the school fund. It will certainly require a rare degree of assurance for any Alabamian longer to pretend that his State needs any outside aid for education or anything else.

A non-partisan movement is now under way in Iowa to secure the enactment by the next Legislature of a statute authorizing the establishment of what are called "Courts of Conciliation." Denmark has made the longest and most thorough trial of this system, and its success has been remarkable. Each local community is authorized to choose a tribunal called by this name, which consists generally of one judge and two assistants, selected with reference to their high standing in the public confidence and their qualifications for composing disputes. This tribunal has jurisdiction of every complaint upon which a civil action might be based, and no such action can be heard in any regular court until it has been laid before the Court of Conciliation and has resulted in a disagreement, so that every cause out of which an action might arise, except in criminal cases, comes first before this tribunal. The principals appear in person and tell their own stories; witnesses are called in if necessary, but no counsel are allowed; and if the decision is accepted by both parties, the dispute is ended and lawyers' fees are saved, while the judgment has the same force as a judgment of an ordinary court. That the decisions are accepted in the bulk of cases appears from the fact that during the first five years of the system 116,483 cases were brought before the "Courts of Conciliation," of which 74,742 were there settled, and during the next five years 190,836, of which 121,970 were settled, and only half of the remainder were ever carried to actual litigation.

Vermont not long ago appointed a forestry commission, but a paper published at the capital, whose editor has travelled a good deal over the State, says that there is not much for it to do. The Montpelier editor is of opinion that wood is now growing faster in Vermont than it is used, and he speaks of having visited many regions where acres upon acres which were cultivated only a few years ago are now growing up to wood. He thinks that there is no necessity for any special effort to secure the growth of wood, and even goes so far as to say that many farmers might cut more wood on their farms with profit. There is no apparent reason to doubt the soundness of these views so far as they relate to Vermont, but investigation on the other side of the Connecticut River would show the urgent necessity of severe restrictions upon the wholesale operations of the lumberers. In the White Mountain region the primeval forests are steadily and rapidly disappearing under the axe, and already the bad results are visible in the alternate droughts and floods in such beautiful streams as the Pemigewasset, and in a grave diminution of the attractions of the region. The summer-resort industry in New Hampshire, as in Maine, has become one of the greatest sources of revenue to the people, and scarcely any limit can be placed upon its possible development under wise management; but the Yankee will show that he has lost his traditional shrewdness if he does not soon perceive that he is killing the goose that lays the golden eggs when he destroys the forests of the State.

Dakota has at last done what ought to have been done years ago: she has held an election to decide whether her people prefer to come into the Union as one State or two. The politicians who had worked up the scheme for division and apportioned the prospective offices among themselves have always insisted that popular sentiment was overwhelmingly on their side, and the result shows a preponderance of sentiment in favor of division, though the estimated majority of only about 12,000 falls very far short of what the divisionists have claimed. However, it is only fair to treat the verdict as decisive, inasmuch as there are already people enough in the southern half of the Territory to constitute a State. But Congress ought never to admit that region under the name of South Dakota, with the application of North Dakota to the remainder, when so excellent and appropriate a name as Pembina is ready at hand for the northern half, leaving Dakota pure and simple for the southern half.

The Commissioner of the Bureau of Labor Statistics in Maine has been making an inquiry into the cost of living in that State at the present time, as compared with five and ten years ago. Statistics have been collected from a number of families whose conditions are representative not only of the mode of life of the native-born Yankees, but also of the Canadian French, the Germans, and the English. From these statistics the Commissioner deduces the conclusion that the purchasing power of a dollar in Maine has increased appreciably within the last decade, and that as much food can now be bought for one dollar as cost $1.14 in 1882 and $1.17 in 1877. Of course it is absurd to give any partisan bias to such figures; but after the example which the Republicans so long set of attributing the prosperity of the country to the party in power at Washington, it will only be human nature for Democratic organs and stump speakers in Maine during the next Presidential campaign to cite these statistics, and ask workingmen why there should be a change.

The controversy over third-class mail matter which has been in progress for the past month is discreditable to the management of the Post-office Department. The trouble appears to come from the sudden revival and vigorous enforcement of a rule, which had long been a dead letter, forbidding the use on envelopes containing such mail matter of any endorsement as to the sender beyond his name and address, the claim being made that many people have fallen into the habit of printing advertisements of their business upon their envelopes. Very likely there is sufficient foundation for this claim, and it would have been eminently proper for the Department to insist upon a reform. But there is a right way and a wrong way of doing a proper thing. In this case the right way would have been for the Postmaster-General to give the public full notice of the fact that the Department proposed to make a change and rigorously enforce a law which few people knew to exist, and to explain exactly what could and what could not be printed upon envelopes and wrappers in any part of the country. The wrong way would have been to spring the matter suddenly upon the country, to give no general explanation of what the change really involved, and to leave postmasters all over the land to exercise their discretion in enforcing the rule, with the natural result that one allows what another forbids, and that nobody can feel the slightest assurance as to the treatment of any particular case. This latter method is the one which Postmaster-General Vilas chose to pursue.

From the days of Mr. Lincoln, when women were first given employment in the Washington departments, down to the days of Mr. Cleveland, the tenure by which they have held their positions has been, as a lawyer would say, *dum sola*. Until Mr. Vilas recently changed it, the rule that the marriage of a female clerk worked the forfeiture of her place, had been without an exception. This rule was not founded upon the idea that marriage unfitted a woman for clerical work, because it has been usual to give these positions to the wives of men who would not or could not support their families. It cannot be supposed that it was adopted and enforced in deference to what the female clerks themselves owed to morality and propriety, because it soon became an open secret that its natural result was the encouragement of clandestine marriages, and in some cases something worse. The truth is, that a woman was expected to give up her position as soon as she got a husband or some one else to support her, because the place was provided (in the few cases in which it was not considered a reward for partisan service) for those who could not otherwise make a living. The same principle has operated for years as respects the male clerks, also, causing them to refrain from accumulating their incomes, or at any rate from investing their earnings in real estate, or in anything which constitutes visible wealth. At one time it was almost as hazardous for a male clerk to be considered well-to-do as it was for a female clerk to be known as married. The Civil-Service Act having stripped our departments, to some extent at least, of their eleemosynary as well as their partisan features, this rule naturally falls to the ground. Nor

is there any longer a valid reason why a competent clerk should be dismissed the service, or refused entrance to it, because another member of his or her family happens also to be in the employment of the Government—the only limitation which this Administration feels called upon to regard.

The attempt to make a permanent political issue on the public-school question in Massachusetts appears to have failed already. Mr. Hugh O'Brien, present Mayor of Boston, and prospective Democratic candidate for re-election, an Irish-American and a Roman Catholic, came out in his speech at the old school-boys' banquet the other evening, and declared that the public schools must be protected. The Boston *Record*, Republican organ, is sure that Mr. O'Brien would not have taken this stand, just on the eve of an election, unless he knew that Irish-American Catholics generally agreed with him, and it declares its own belief that, if the question were made a direct issue, nine-tenths of them would support the common schools. No good citizen wants to see the public-school system made a political issue, and it is therefore, from every point of view, good news that no such issue can be made in a city where it has been thought possible.

The fact that an advanced copy of Swinburne's poem was in this city, and in the hands of a publisher who was offering it for sale at the newspaper offices, and had been refused one hundred dollars' worth of advertising for it by the *Tribune*, when the *Times* had it cabled over, makes the enterprise of the latter journal more incomprehensible than ever. In fact, it reduces the whole affair to an outlay of two or three thousand dollars for an advertisement. It is a pity that this could not have taken place, however, without committing piracy on poor Swinburne, and helping other pirates to plunder him more successfully hereafter. It would have been easy enough to have 18,000 words cabled without robbing anybody or encouraging robbery.

The Royal Clyde Yacht Club has withdrawn its notice of a challenge for the *America's* cup next year. The change in the deed of gift which deprives the foreign competitor of the benefit of a time allowance in case he sends a smaller yacht than the one which the Americans build to defend the cup, may bear somewhat heavily upon foreign competitors; but there can be no doubt that, in drawing this rule, the New York Yacht Club Committee had no other end in view than to make it certain that future contests should be only between the fastest types of yachts of the two countries. If the British yacht-builders do not wish to take the chance of having a small yacht of theirs met by a larger American one with no time allowance, all they have to do is to build a large one which will come up to the full limit set by the deed. Nobody wishes to see an end put to our international races, but neither does anybody wish to see those races lowered in the slightest degree from their past high standard.

What will come out of the present political muddle in France it is impossible to foresee. The most serious feature in the situation is to be found in the fact that the Rouvier Ministry, which has just been overthrown, was itself the result of a coalition which probably cannot be repeated. That is to say, when M. Rouvier took office, the Republican party apparently did not furnish materials for a Ministry that would command a majority in the Chambers. The votes needed to put and keep M. Rouvier in power were furnished by the Monarchists in a spasm of patriotism. That there is anybody else who would have equally good luck, nobody believes. The Republicans are hopelessly divided by the Boulanger incident first, and now by the Wilson incident. The Boulangerists are wild with delight over the Wilson exposure, and the Monarchists are chuckling over it and all its concomitants as an illustration of what a republican government always is, or must eventually come to. The latter will probably support no other ministry until they see whether the confusion bodes them any good. President Grévy is in the meantime the great centre of interest. He is over eighty years old, and, of course, somewhat shaken in nerves. The scandal in which his son-in-law is involved, while living under his own roof, is being used by nearly all parties to force his resignation. The Radicals want to oust him, partly because he has been too conservative, partly in order to strengthen their attack on Wilson, and partly in order to see what will happen after he is gone. The Conservatives would like him to go for the last reason mainly, but also to furnish a chance, however slight, of putting a royalist, if not a pretender, in the executive chair.

The difficulty with which even the most upright and well-meaning politicians have to contend at this juncture is, that everybody who tries his hand at either building up or pulling down a candidate has an ulterior object in view. Each of the three great parliamentary divisions is, in everything it does, manœuvring for position. Each is more anxious, in other words, to discredit the others than to establish anything permanent of its own. The Radical Republicans wish to discredit a Conservative Republic, the Conservatives to discredit both a Radical Republic and a Monarchy; while the Monarchists are equally anxious to discredit every kind of Republic. This state of things is, of course, inevitable in a country in which the existing form of the Government is not settled in the minds of all the voters as final. Frenchmen have seen so many changes of Government during the past century that they are naturally incredulous about the permanence of any Government. Nothing but the prolonged existence of the Republic will wear this incredulity out, and destroy the class of political speculators who are now constantly waiting for another revolution. No Government France has seen since 1789 has lasted more than twenty years. Until something turns up which lasts at least thirty—that is, lasts so long that the younger generation of voters remembers nothing else and thinks of nothing else as possible—French politics will continue to be the seething cauldron we now see it. The Republic is only in its seventeenth year. The fatal hour in which another experiment may be set on foot is, in the minds of many, near at hand. The spell will not be considered broken until about 1895.

We hope the London *Times* and other supporters of the English Ministry will not attempt to deduce from the friendly reception which Mr. Chamberlain is meeting with in this country any conclusion whatever as to the condition of public sentiment here on the Irish policy of his Government. Any attempt of this kind is sure to be promptly resented in some quarter on this side of the water, and the mere discussion of the subject to discredit Mr. Chamberlain's mission in a greater or less degree. Those in this country who are most anxious for the settlement of the fisheries question have been most careful to ignore Mr. Chamberlain's place in British politics, and to treat him simply as a messenger of peace and good-will, to be heard and treated with solely on his own merits and the merits of the special work intrusted to his hands. So do not let us have any insinuations or intimations that the welcome accorded him indicates what the American people think of the Coercion Bill, or the rent question, or O'Brien's imprisonment, or any other British topic. If anything of this kind comes over the water, there will be a row which will ruin the negotiations.

The reception given Sullivan in England is another illustration of the immense popularity of "sport" of every description in that country, and especially of everything of an amusing or entertaining kind that comes from America. The reception given to "Buffalo Bill" would hardly have been possible anywhere else. Sullivan's will probably not equal it, because he looks rather too much of a brute to be taken up by the ladies; but if he enjoys the hospitality of the Prince of Wales, as he is said to have done, or be about to do, there is no knowing what may happen. Fordham, the jockey, who recently died, had almost as fine a funeral as Fred Archer, the other jockey, who died a year ago, and was in as comfortable circumstances. Both of them had as much space given to their mourning in the newspapers and public gossip as any statesman, except perhaps Gladstone or Bright, would have. This tendency to the worship of the physical, or carnal, if any one likes the term better, is a very curious sign of the times. A recent writer in the *Saturday Review* treated it as a distinct indication of moral decay, and it certainly would be if other tendencies of a very different kind were not also very marked. The foul abuse heaped upon Gladstone by people to whom Buffalo Bill and Sullivan are honored guests is, however, a very curious phenomenon.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 16, to TUESDAY, November 22, 1887, inclusive.]

DOMESTIC.

AT noon on November 19 the members of the British Fisheries Commission were formally presented to the President. Mr. Joseph Chamberlain and Sir Charles Tupper were introduced by Secretary Bayard, and Sir Lionel S. West performed the same duty for the other members of the party. No addresses were made, and the occasion was devoid of all formality.

The Fisheries Commissioners held their first meeting in Washington on November 21.

On November 17 the President gave to the press his letter accepting the resignation of Land-Commissioner Sparks. The Commissioner resigned in consequence of a disagreement between himself and the Secretary of the Interior.

Col. Glover Perin, Assistant Surgeon-General, has been placed upon the retired list.

On November 18 George L. Rives of this city was appointed First Assistant Secretary of State. He was born in New York in 1849, and was graduated at Columbia College and the University of Cambridge, England.

The Treasury Department has again had occasion to decide that a plaster cast intended to be used as a model for the construction of a monument is entitled to free entry.

The Secretary of the Treasury has awarded a gold life-saving medal to Capt. William Babb, and a silver one to each of his crew of six men, of Goderich, Ontario, for services rendered in saving the crew of the American schooner *A. C. Maxwell*, December 9, 1885.

Captain Bunce, of the new United States ship *Atlanta*, made a report to the Navy Department on the 18th in which he condemns the vessel as unseaworthy and worthless in its present condition.

At a special meeting of the Board of Regents of the Smithsonian Institution on November 18, Prof. S. P. Langley was elected Secretary of the Institution to succeed the late Prof. S. F. Baird. Prof. Langley was born in Roxbury, Mass., on August 22, 1834. In 1865 he entered the Harvard College Observatory as assistant, and was subsequently appointed assistant professor of mathematics in the United States Navy. In 1867 he took charge of the Allegheny Observatory near Pittsburgh. The uniform time service in the United States was instituted by him at the Allegheny Observatory in 1869. Prof. Langley has made a series of valuable researches in solar physics, the results of which have been published from time to time. In October, 1878, he announced his discovery of the "great A" group of the solar spectrum. He participated in the expedition sent out by the United States Coast Survey to observe the total eclipse of 1869.

The National Republican Committee will meet in Washington soon after the meeting of Congress to issue a call for the National Convention of that party next year.

Ex-Secretary Boutwell is quoted as saying that if the Republicans of New York would settle their differences and unite upon Mr. Conkling for their candidate for President, no candidate could be named who would be as likely to carry the Empire State as he.

An official list of the members of the next Federal House of Representatives shows that it will consist of 168 Democrats, 153 Republicans, and 4 Independents. The Independents are Anderson of Iowa, Nichols of North Carolina, Hopkins of Virginia, and Smith of Wisconsin.

United States Marshal Dyer, recently appointed receiver of a certain property belonging to the Mormon Church, on November 16 made a demand for the Temple Block in Salt Lake City, on which stand the Mormon Temple, Assembly Hall, and the Tabernacle. He also took possession of the parsonage, known as the Guard House, and the Church Historian's office, leaving men in charge.

Gen. F. M. Armstrong, Indian Inspector, who has been on the Crow Reservation since the trouble began which culminated in the death of Sword-Bearer, says that most of the mischief which led to the outbreak was done last spring, when Sitting Bull, with a party of Sioux warriors numbering about one hundred, went to the Crow Reservation, and, pitching his camp within almost a stone's throw of the Custer monument, began to harangue the Crows. He made a strong impression on the young men of the latter tribe, especially when he began to recount his exploits in his contests with the whites.

A résumé of the fisheries business for the year ending October, 1887, shows that the total number of vessels owned in the Gloucester District is 474, with a tonnage of 30,624, against 487 vessels last year, with a tonnage of 30,583. Seventeen vessels of an aggregate tonnage of 1,137 have been lost, with 127 men, who leave 60 widows and 61 fatherless children.

At the close of the meeting of the National Woman's Christian Temperance Union, in Nashville, this week, banners were presented to State Unions which showed the largest increase of numbers during the year. The States which carried off the prizes are Indiana, Massachusetts, Mississippi, Delaware, Maryland, Tennessee, Minnesota, Michigan, and New Mexico.

On November 18, Gov. Hill appointed two women, Mrs. Charlotte S. Williams of Buffalo and Mrs. Caroline B. Stoddard of Rochester, to the Board of Managers of the State Insane Asylum in Buffalo.

On November 18, Gov. Hill appointed Michael Rickard of Utica Railroad Commissioner in place of John D. Kernan, resigned. Mr. Rickard is and has been for over thirty years in the employ of the New York Central and Hudson River Railroad, in the mechanical department. On the day he was appointed he left his locomotive and went to the Capitol to take the oath of office.

On November 16 Mayor Hewitt appointed the following School Commissioners for the terms of three years, beginning on January 1, 1888: Jacob D. Vermilye, J. Edward Simmons, W. J. Welch, De Witt J. Seligman, Robert M. Gallaway, Charles L. Holt, and Frederick W. Devoe.

On November 19 Mayor Hewitt appointed a committee of citizens to coöperate with the Committee of the Chamber of Commerce and the New York Historical Society in preparing for the celebration of the centennial of the inauguration of George Washington as first President of the United States. The Mayor's committee consists of Daniel F. Tiemann, Smith Ely, jr., Edward Cooper, William H. Wickham, Franklin Edson, William R. Grace, Allan Campbell, Charles P. Daly, Stuyvesant Fish, Elbridge T. Gerry, William G. Hamilton, Gouverneur Morris, and Philip Schuyler.

The New Brunswick Historical Society has decided to celebrate the centenary of the adoption of the Constitution by New Jersey with a public meeting, at which Dr. Austin Scott and Dr. Hammond, President of the State Historical Society, will deliver addresses.

Mayor Cleveland of Jersey City has vetoed a resolution of the Board of Public Works of that city giving the Pennsylvania Railroad Company authority to elevate its tracks within the city limits.

The managers of the Northern Pacific Railroad have refused to recognize the authority of the Railroad Commission of Minnesota, on the ground that, having its charters from Congress, it is not amenable to State control.

The round-house and other buildings of the Cincinnati Southern Railroad at Ludlow, opposite Cincinnati, were destroyed by fire on November 17. Eight locomotives and 150 cars were ruined.

It is authoritatively said that at a recent conference of the Bessemer steel-rail manufacturers it was decided to suspend operations for an indefinite period, the suspension to take place probably about the first of December. The low price for rails is assigned as the cause for the shut-down.

A boycott was instituted on November 18 against the Lehigh Valley Railroad Company by all the local assemblies of the Knights of Labor in the Lehigh and Schuylkill anthracite regions, because of its connection with coal-producing corporations against which a strike is in operation.

At a convention of the Union Labor party of Wisconsin, held in Fond du Lac on November 18, a resolution sympathizing with the late Chicago Anarchists was nearly unanimously rejected.

Herr Most, the leader of the Anarchists in New York, was arrested on November 17 for uttering incendiary language in a speech a day or two before, an indictment having been found against him.

The library of the New York Law Institute in the Post-office building was reopened on November 19, after having been closed since July.

The anonymous offer of $100,000 to go towards enlarging the scope of the New York Historical Society, on condition that a further sum of $300,000 be obtained not later than the close of the current year, has been modified by reducing the sum to be raised to $150,000 and extending the time one year.

Robert Bonner announces in this week's New York *Ledger* that he has retired from the management of that paper. The property and business he turns over absolutely to his three sons.

All the members of the Sophomore Class of Williams College who were engaged in the alleged hazing of George Choate have made a statement that no violence was used upon the young man, and that he was subjected to no treatment that could cause him physical injury. They invite Mr. Joseph H. Choate, the young man's father, to meet them and cross-question them upon their statement of the facts in the case.

The annual exhibition of the National Academy of Design opened on November 21. There are 412 pictures on exhibition this year.

The bronze statue to the memory of John C. Breckinridge was unveiled at Lexington, Ky., on November 16, with elaborate ceremonies.

Mr. Edison says he will have 500 of his perfected phonographs ready for the market by the last of January. Those who have seen the instrument pronounce it practicable for the taking, retaining and reproducing of articulate speech.

The contractor who is building the new State-house in Austin, Texas, has entered a formal protest against going on with the work of erecting the tower, on the ground that the architect's design calls for a superstructure too heavy for the foundation.

The coroner's jury in the case of the falling of the school building in East One Hundred and Fifteenth Street in New York on October 17, whereby seven persons were killed, rendered a verdict on November 19 attributing the disaster to faulty construction of the house. The verdict held Rev. Father Kirner, who was one of the victims, primarily responsible.

On the night of November 16 the Hotel Saratoga, in Chicago, was burned. The guests escaped in their night clothing.

At ten o'clock on Sunday night, November 20, the buildings at Bridgeport, Conn., in which P. T. Barnum had for many years kept his exhibition animals and the other accessories of his show, were totally destroyed by fire. A few of the animals escaped, but those in the central part of the main building all perished. They were zebras, ibexes, tapirs, wolves, hyenas, panthers, great serpents, and the like. Only four of the elephants were lost. One of them was known as the former consort of the famous Jumbo, who was killed in a railroad accident a few years ago. One of the elephants that escaped the fire wandered off into deep water and was drowned. The largest of the lions was rescued from the fire only to be shot and killed. The loss is estimated to be about $150,000.

The passengers of the ship *Alesia*, who had been detained at Quarantine for nearly two months on account of cholera, were landed in New York on November 17.

The shooting of William Shilling by Robert McCreary, son of ex-Gov. McCreary, at Richmond, Ky., last week, has been officially declared to have been done in self-defence.

John Chandler died in Concord, N. H., on November 16, at the age of 103.

Alfred A. Cohen, the attorney for the Central Pacific Railroad Company, died on a Union Pacific train between Sidney and Cheyenne on November 16. He was ill when he left New York.

George M. Gill, aged eighty-five, the oldest and for years one of the most prominent lawyers of Baltimore, died suddenly in his office on November 18.

The Rev. Dr. Lucius H. King, pastor of the Forty-fourth Street Methodist Episcopal Church of this city, died on November 18.

Emma Lazarus, the well-known poetess, translator, and general writer for the magazines, died in this city on November 19, after a long illness.

FOREIGN.

Soon after the French Chamber met on November 19, the Extreme Left moved an interpellation of the Government on the question of its domestic policy. A motion was made by the Ministry to postpone the debate. This motion was rejected by a vote of 328 to 242. Prime Minister Rouvier immediately announced the resignation of the Cabinet.

The Czar and Czarina of Russia arrived in Berlin at 11 o'clock on November 18. The Czar, clad in an elegant Russian uniform, drove with Prince William of Prussia through the streets from the railway station in an open carriage drawn by four horses. The Czarina followed in a closed carriage, accompanied by the Princess Victoria. The popular welcome to the distinguished guests was hearty, but there were no decorations on the buildings along their route through the city. Emperor William received them at the residence of the Russian Ambassador, and at a later hour the Czar returned his visit at the imperial palace. At noon a banquet was given in honor of the Czar. The gala performance, which originally formed a part of the programme of festivities, was dispensed with.

There is no permanent improvement in the health of the Crown Prince of Germany The throat difficulty from which he has for some time suffered does not yield to treatment except to give the patient occasional relief.

A statistical publication issued by the German Government deals with the time of year at which crimes are committed. The year taken is 1883, and of the 390,760 crimes of all kinds committed then, it is possible to fix the month of their occurrence in 317,404 cases. Dividing the year into four seasons—winter comprising December, January, and February; spring comprising March, April, and May; summer, June, July and August; and autumn, September, October, and November — it is found that 80,073 crimes fall to winter, 73,799 to spring, 81,262 to summer, and 82,270 to autumn. Thus spring is the most favorable season for public morality, and autumn the most unfavorable. As to the character of the crimes committed, it is found that in 1883 the offences against State, religion, and public order numbered 98 daily in winter, 93 in spring, 103 in summer, and 106 in autumn. Here summer far exceeded winter, as it did also in crimes with which violence and threats against officials, etc., were connected, the number for winter being 95 daily, and for summer 107. Of crimes against the person 82 fell to winter daily, 90 to spring, 102 to summer, and 108 to autumn; of crimes against morality 60 fell to winter and 146 to summer; of offences taking the character of slander 60 fell to winter and 119 to summer; and of assaults 158 fell to winter and 243 to summer. It would therefore appear that temperature has a great deal to do with inclination to crime. The daily number of petty robberies was 84 in summer and 122 in winter; of serious robberies 92 in summer and 115 in winter; while the cases of receiving stolen goods numbered 77 daily in summer and 132 in winter. The relation borne by offences against property was as follows: Summer 101 daily, autumn 102, winter 96.

Joseph Chamberlain's speech at the Chamber of Commerce dinner in New York was the subject of much favorable comment from the Gladstonian as well as the Unionist press in London.

Mr. Gladstone, in a letter, says that the Mitchelstown shooting and the arrest of Mr. Wilfrid Blunt had no connection with the crimes contemplated under the Coercion Act, and therefore the Government's action was illegal.

Mr. Gladstone is expected to spend the winter in the southern part of France.

Mr. Parnell has written a letter to a news agency stating that his health is slowly but steadily improving.

While the popular vote, so to call it, for the Lord Rectorship of the University of Glasgow stood 867 for Lord Rosebery and 845 for Lord Lytton, there was a tie of the national vote, two to two. The Chancellor of the University, the Earl of Stair, having the casting vote, gave Lord Lytton the preference and elected him.

Sir Henry Drummond Wolff has accepted the Persian Embassy.

Maj.-Gen. Sir Frederick Middleton has retired from the British Army with the rank of Lieutenant-General. He has received a private letter from the Duke of Cambridge, Commander-in-Chief, complimenting him upon his able direction of the Canadian militia.

The Princess of Wales and her children returned to England on November 19, after a long visit to Denmark.

Lord Wolverton died on November 18.

Gen. Valentine Baker, who, in 1875, while holding the appointment of Assistant Quarter master-General at Aldershot, was compelled to leave the service on account of a misdemeanor, is dead. He was fifty-seven years old. His disease was fever, contracted at Port Saïd, while proceeding by steamer to Cairo.

Lord Tennyson has written a letter to Walt Whitman in which he says: "I thank you for your kind thought of me. I value your photograph, and much wish I could see not only the sun picture, but also the living original. May you still live and flourish for many years. The coming year should give new life to every American who has breathed the breath of that soul which inspired the great founders of the American Constitution, whose work you are to celebrate. Truly the mother country, pondering this, may feel that, how much soever the daughter owes her, she, the mother, has nevertheless something to learn from the daughter. Especially I would note the care taken to guard the noble Constitution from rash and unwise innovators."

London *Truth* says: "Mr. Pearsall Smith's suggestion for a copyright treaty with the United States is a most sensible one. Heretofore we have negotiated not so much for our authors as for our publishers. Mr. Smith proposes that we should ask the United States to assent to English authors being allowed a royalty on their works when published in America, with the same reciprocal advantage to American authors here. If agreed to, there would be no monopoly. Fifty American publishers might issue a work, and compete with each other in cheap editions, but the English author would get 10 per cent. upon the retail price of every copy sold. This would be paying by results in its most reasonable form. Mr. Smith's plan for insuring that the author would get his royalty is an exceedingly clever one."

The Royal Clyde Yacht Club has withdrawn its challenge for the *America's* cup, on the ground that the conditions of the new deed of gift are unjust and unsportsmanlike.

The Glasgow yachtsmen have united to give a prize, value £1,000, to be sailed for by yachts of all nations on the Clyde on the occasion of their annual regatta in July.

On November 19 the steamer *W. A. Scholten* left Rotterdam for New York, having on board very few saloon passengers, but about 180 in the steerage, and steamed towards the Straits of Dover in a fog. At ten o'clock that night, a few miles from the Admiralty pier at Dover, the *Rosa Mary*, a small screw steamer of Hartlepool, was at anchor, when the *Scholten*, running at low speed, ran into her, striking her on the port bow. The *Scholten* sank within twenty minutes after the collision, and it is estimated that about 130 lives were lost.

News received in Brussels on November 16 from the Congo was to the effect that Tippu Tib had failed to keep his promise to reinforce Stanley at Yambuya. It was also rumored that there had been fighting between the natives and the explorer, and that the rear guard of the latter had been cut off.

The Royal Labor Commission of Canada has decided to commence taking evidence in Toronto this week. From there the Commission will proceed to Hamilton, St. Catharines, Windsor, London, and Stratford. The following subjects will be inquired into: The effects of organized labor upon the working classes, strikes and their results, industrial schools, tenement-houses and workingmen's dwellings, factory laws, the proportionate profits of capital and labor, the cheapening of production by the use of machinery, Has the use of machinery lowered wages? the apprentice system, profit-sharing, iron-clad contracts, conspiracy laws and black-lists, convict labor, child and female labor, immigration, hours of labor and rates of wages, employers' liability, coöperation in manufacturing and distributing, arbitration, foreign contract labor, land and other rents, wages in Canada compared with those in Great Britain and the United States, and Sunday labor.

The Central Bank of Toronto suspended on November 16.

A division took place in the annual meeting of the International Base-Ball League in Toronto on November 16. The delegates from Toronto, Syracuse, Rochester and Hamilton seceded and organized a new league.

The contract between the Manitoba Government and the contractor for the completion of the Red River Valley Railroad has been ratified. The province is to endorse bonds to the amount of $550,000 for the company until the road is completed and has been in operation for six months.

All export duties imposed by the Argentine Republic will be abolished on January 1, 1888.

THE RIGHT OF MEETING IN PUBLIC SQUARES.

We have received from Mr. L. F. Austin, an English Liberal, a remonstrance against our comments on the suppression of the Trafalgar Square meeting on Sunday week. The general propositions laid down by Mr. Austin are sound, but it is true also that the public authorities must in every case take into consideration the surroundings and accompaniments of a public parade and a public meeting. They must see to it that the public peace is not disturbed. In order to judge whether it is likely to be disturbed, they must give heed to the teachings of recent experience as well as to particular present information. They may make mistakes, but in a free government they do so at the peril of being ousted. In other words, they must have discretion to prevent what appears to them likely to bring on tumult and disorder, using this discretion subject to the corrective power of public opinion. All this is in entire accord with Anglo-Saxon ideas and institutions. Discretion must be lodged somewhere, else there would be no power to stop another Hyndman procession and to prevent a new raid of the shop-windows in Piccadilly. If the London authorities exercised this discretion wrongly, it is for the Radical clubs and party to show this fact in Parliament, in the press, and on the platform, and to enforce their conclusions at the ballot-box. There is not the least danger that the British public will side with functionaries who cannot show good reasons for what they have done. If British public opinion is not to be depended upon, then indeed there is no help for this alleged wrong, or for any other.

Everything depends upon the facts in the case. An Orange procession might march through the streets of an American city without causing any disturbance, but it might also lead to riot, bloodshed, and conflagration. If the public authorities had reason to believe that the latter result would follow, it would be their duty (if they had the legal power) to prevent the procession from marching at all, since public thoroughfares are not maintained to vindicate freedom of opinion, but to promote convenience of movement and traffic. Mr. Gladstone evidently considers that the London police authorities were moved by other than partisan motives when they prevented the assembling in Trafalgar Square. If, as appears, he took into consideration not only the "sinews of Sunday's assemblage," the members of Radical clubs, but also the moppings of the street, the authorities were justified in doing so, and would have been recreant to their trust if they had not. If sincere considerations of the public safety entered into their dispositions, then, although they may have erred in judgment, they cannot be accused of a purpose to infringe the rights of political discussion.

The question whether the Crown can or ought to have any such "property" in a public square as to be able to forbid its use as a public meeting-ground is certainly, it seems to us, one to be settled in Parliament or in the courts. We sympathize thoroughly with those Englishmen who think there ought to be no such "property" either in the Crown or anybody else, that it ought not to be in anybody's power to deny arbitrarily, and out of his own head, on the ground that he may do what he likes with his own, the use of a public square or street in a large city to any body of citizens. But surely no civilized man ought to say that this is a matter to be settled by fighting with sticks and stones. Nothing can be easier than to bring up in the courts the validity of the Crown's title to Trafalgar Square. If the decision is adverse to the Radical claim, certainly the remedy is to be sought by legislation, and not by rioting.

Moreover, during the past few months the square has apparently been given up to frequent meetings and processions, all of them calculated to alarm people living or carrying on business in the immediate neighborhood. Is it fair to allow any square or public place to be used in this way, causing a marked depreciation in the value of surrounding property, without giving the owners compensation? We think not. Everybody who lives around Union Square in this city, for instance, is prepared for occasional orderly meetings in that open space. But suppose there were to be one every week ending in free fights and the issuing forth of marauding parties, and the police were to declare that there was no remedy for this—that it was an inevitable concomitant of free government, should we not be bound to indemnify the unfortunate property-owners who found their business ruined and their lives filled with terror?

Let us add that one has only to glance at the Tory journals in London to see how useful to them all disturbances all over the world are. Every row or riot that occurs, no matter where, is grist to their mill, and is made to bear in some manner or other on the Irish question. They made even the execution of the Anarchists in Chicago the other day a warning to the Gladstonians. Every mob in the London streets they treat as a justification of their Irish policy, as showing that the times call everywhere for the tightening of the bonds of authority and law. They are perfectly enchanted now whenever they hear of any shooting or hanging on a considerable scale. Consequently every Radical, as it seems to us, who fights with the police in the public streets about anything, strengthens their hands.

DECORATIONS.

The Paris scandal will probably do much towards sickening the French public with the "Legion of Honor," as something which, however well adapted to satisfy the cravings of French human nature, cannot be properly managed by a republican government. The "decoration" as a mark of distinction is a monarchical device. What it signified in the beginning, and in monarchical countries signifies to this day, is that the wearer has in some manner merited the special favor of the sovereign. It may mean more than this: it may mean that he has attained marked eminence in some field of human activity; but it means first and foremost, and may mean only, that the King or Emperor likes him, or at some time wished to gratify him. There are only three decorations in the world, we believe, which have to be won by actual achievement in war, the Victoria Cross in England, the Iron Cross in Germany, and the Cross of St. George in Russia. The man who wears one of these is sure to be a man who has performed some feat of skill or valor in the face of the enemy. It may be said of every one of them what *Punch* said of the Victoria Cross when it was first instituted :

"Not in the toys themselves lies their ennobling power,
But in the tales they tell of many a glorious hour,
Of deeds in field or trench, of crumbling fortress held,
When stoutest heart might blench and bravest hope be quell'd."

All other decorations are simply signs of the royal favor. The wearer may be a really illustrious man, but he may be utterly base or commonplace. The Order of the Garter in England has long been little else than a sign of high rank in the peerage, and is given as a compliment to nearly all foreign sovereigns. The Order of the Bath goes to nearly every military man who has seen any service or attained a certain grade, and is distributed more or less freely among civilians who have in some manner won the esteem of the court or distinguished themselves even slightly in connection with some public work or fête. The same thing may be said of the Order of St. Michael and St. George, which is reserved for thriving or useful people from the colonies.

The Legion of Honor was founded by the first Napoleon, and took the place of the old Order of the Holy Ghost, which was the chief reward of military merit under the Bourbon monarchy. The new order, although it was, under the First Empire, mainly a military distinction, was intended to be, and always has been, also a reward of civil merit. During the Napoleonic wars, however, when the whole force of France, both physical and mental, was given to preparation for the battlefield, it rewarded little else than martial prowess. It was the

"—— radiant and adored deceit
Which millions rushed in arms to greet."

Afterwards, as the times grew more peaceful, and French society became more industrial, it was distributed with increasing lavishness among civilians of nearly every calling. Even under the Second Empire it was so widely diffused that it was beginning to be said that in almost any company of Frenchmen it was a distinction not to have it. It was given for all sorts of reasons, and for no reason at all, except that the Emperor chose to honor somebody. It has been increasingly sought after ever since Louis Philippe's day by manufacturers, as an advertisement for their wares, by doctors, dentists, inventors, and, in fact, everybody who had the smallest reason for thinking himself in any way off the common. The red rosette in his button-hole marked him as something in some degree different from his neighbors. Even if he was not known to have earned it by some

achievement, it showed that he had in some manner secured the notice and condescension of the King or Emperor, and this was in itself a distinction. A monarchy is based on social inequality, and part of the monarchical business is the maintenance of inequalities among the people below the throne. This is what Blackstone means when he calls the King "the fountain of honor." As the fountain of honor, the sovereign is charged with the duty of raising some of his subjects above their fellows by outward and visible signs of his esteem; and as the fountain of honor, he is not bound to give reasons for honoring some more than others. His favor is an honor in itself, behind which it is indecent or disrespectful to go in search of reasons.

When the Republic came in, the Legion of Honor remained, but the proper machinery for the distribution of the cross was gone. There was no fountain of honor left—nobody whose mere dictum was accepted as a sufficient warrant for the bestowal of a decoration. Moreover, in a democratic republic all distinctions coming from the Government rapidly become either odious, or so common that they cease to be distinctions. Americans would probably have abolished the Legion of Honor after the Empire was overturned, as a childish device for rewarding merit. The French are not quite as democratic as that, but they have a great passion for equality. They kept the Order, but they think that everybody ought to have it. It is safe to say that one-half the male population of France to-day feel wronged because they are not decorated; not that they think they deserve it, but they think they deserve it as well as other people whom they see wearing it. There is nobody now whose judgment in the bestowal of it is considered final and unimpeachable. It is obtained from the minister of the day by "pressure" or intrigue, like petty places in the public offices. The worst of it is, however, now, that there is "money in it." For a manufacturer, or a shopkeeper with a patent shirt bosom, or the inventor of a new plough or clothes-wringer, it acts as an advertisement the like of which does not exist. It not only raises him above his neighbors and makes their wives feel badly, but it helps him to sell his goods. Consequently, the number of people who desire it has increased enormously, and the number who are ready to pay for it has increased enormously also, and hence "the traffic in decorations" which is to-day convulsing French society, and almost menacing the very existence of the Republic.

How extensive this traffic has been during the last fifteen years of course nobody knows. There is, however, much reason to believe that the recent revelations only touch the very surface of the sore. An abuse like this must have gone far and enjoyed much impunity and been very profitable, when general officers of high rank in a military nation are found engaged in it, and the very palace of the President of the Republic is found to be one of the sources whence the corruption flows. The effect of the scandal in lowering the value of the cross is well illustrated by a police case recently reported in one of the Paris papers. A wealthy manufacturer, who was erecting a house, quarrelled with his architect, and in the altercation which followed warned him that he was not the "premier venu," or an ordinary person; that he was a decorated man and not to be treated lightly. To this the architect sneeringly replied that doubtless he bought his decoration like the rest. The manufacturer thereupon seized him by the throat, and they rolled on the ground in a frantic struggle until the police arrived. Such occurrences will doubtless now be frequent. Every wearer of a rosette who has not performed some great feat will be looked on with suspicion, and will find his distinction do him least good when he most needs it. It will thus be less sought after, and the way prepared for its final abolition as something which democracy has found useless, or impossible to manage.

WORKINGMEN'S INSURANCE IN GERMANY.

THE German legislation for the insurance of workmen against sickness and accident (of which the details are summarized in the current number of the *Quarterly Journal of Economics*) is in full working operation, and materials are accumulating for the judgment of its effects. It will be a long time before final judgment can be pronounced on so vast and complicated a scheme of social reform, beyond doubt the most remarkable experiment of the kind in this century, perhaps in any century. But it is worth while to note from time to time what we can of its operation.

One thing is clear: the administration of the acts is carried on in a spirit friendly to the workingmen; indeed, with a strong bias in their favor. Some such spirit must be shown if the direct practical object of Bismarck—a check to the rising tide of discontent and socialism—is to be attained. Yet there are indications that the mark has been overshot. Curious instances of this appear in the award of the indemnities which the act for insurance against accident secures to the workman. The principles on which these awards are to be made are fixed by the Imperial Insurance Bureau, which is the court of last resort in regard to them. It has been held by the Bureau that indemnities are to be paid not only for accidents occurring from causes connected directly with a business, but for all accidents that happen in it. Thus, when a mason was struck by lightning, his widow was granted an indemnity from the association of master masons, though his work had led in no way to the accident. In another case a factory hand amused himself, in violation of express orders, by gymnastics on a high partition, and had a bad fall and permanent injury. His employers were compelled to pay him a pension because the accident had occurred in the business; and this although the statute expressly refuses indemnity to persons who bring about an injury "intentionally." It must be remembered that the means for paying these indemnities come entirely from employers' contributions, and are supposed to provide against accidents occurring in the course of business. The consequence of this extension of the employers' liability, making them responsible, as it does, for injuries which they cannot possibly prevent, has been that in many factories the practice is adopted of making a medical examination of all applicants for employment, and of rejecting all who are weak and more likely to meet with any sort of accident. Still another curious decision by the Imperial Insurance Bureau is to the effect that it is immaterial, as regards indemnity, whether the particular person injured has lost in fact any of his earning power. A workman is injured, say, loses a finger or an arm, and gets a pension for partial disability from the employers' association. Then he finds employment elsewhere, and, perhaps, earns more than before the accident; yet it is held the pension must always be paid him. In fact, the Bureau, at its first public session, declared expressly that it would administer the act in a "fatherly spirit," since, after all, the legislation was but "the practical application of the golden rule."

In another aspect experience has shown that there are difficulties, not unforeseen, yet grave, in carrying out such paternal legislation. The danger of simulation of illness and injury by workmen who are to be benefited is obvious, and has not failed to show itself, notwithstanding an endeavor to secure strict medical counsel. It was hoped that some check to pretended injury would be found in the representation of workmen in the boards which are courts of appeal on the indemnities in case of accident; but it is not yet clear how far the arrangement has had the desired result. Beyond doubt frauds of this kind are not infrequent, as is shown both by scattered bits of testimony and by the statistics of the Berlin sick associations. Of these associations some have a very large membership and some a comparatively small membership. Obviously the check to fraud can be applied more effectively in the smaller bodies; and to this circumstance must be ascribed the comparatively small percentage of sickness for which their members get aid. The average number of days of sickness was about five per member per year for smaller associations, but was 6.8 days for those having between 5,000 and 16,000 members, and was as high as eight days in the largest body of all, which has 56,000 members.

In the same sense is a striking passage in the annual report of one of the *Berufsgenossenschaften* by which insurance against accident is carried. This body, which insures iron and steel workers in northeastern Germany, says: "We have had to face the regrettable experience that men who have received a pension for partial disability, and who, though unable to pursue their former calling, might do other work, seem to lose the wish and the will to turn to an occupation for which they are still qualified. Sure of a pension, however small, they gradually become unfitted by constant idleness for any work at all, and are entirely demoralized. Then the law leaves no course open to

the *Berufsgenossenschaft* except to consider them totally disabled, and to give them the maximum pension prescribed for total disability."

Facts of this kind point to the fundamental difficulty which must be faced by this scheme, and by all schemes which try to force an improvement in his condition on the average manual laborer. They may demoralize him, and make him in the end materially also worse off than he was before. In the language of the economists, they tend to remove the preventive checks to population and to lower the standard of living. It is by no means certain that the present German experiment will have this melancholy outcome—every one must hope that it may not; but it is here that the scheme has its weakest point. The higher the standard of self-restraint and self-help already is in a people, the more safely may humane aid be extended to them. Here, as so often in social phenomena, cause and effect interact. Those who see in the present high birth-rate and comparatively high death-rate of Germany a sign of a lack of providence in its population, will watch critically the slow development of the ultimate effect of the present insurance legislation.

A writer in the last issue of the *Jahrbuch für Gesetzgebung* has put in the plea that these measures are not really opposed to habits of self-restraint or inconsistent with self-help. They give no guarantee of work, and make no provision for the laborer who is out of work. The unaided struggle for existence remains, and continues to exercise its bracing effect. So much is undoubtedly true; and it is conceivable that insurance against occasional bitter need, even though not provided from the workmen's initiative, may raise rather than demoralize his character. But the facts to which reference was made in the preceding paragraphs show that we cannot be confident of the better effect, and that a long time must pass before the final result becomes clear.

MOMMSEN.

On the thirtieth of this month the historian Mommsen will celebrate a double anniversary—his seventieth birthday, and the completion of the thirtieth year of his professorship at Berlin. His countrymen, always felicitous in celebrations of this sort, will be prepared to render him due honor; among other things, a bust of him by Begas is to be presented to him. Other nations will not be behindhand in congratulations and homage to the man who has done more than any other living person to unlock the treasures of the past and make them the possession of the present generation.

It is hardly too much to say that our knowledge of the history of Rome, in everything but its most superficial facts, we owe to Theodor Mommsen. This we say without disparagement to the great name of Niebuhr, a man of equal genius, of equally profound and extensive scholarship, and who did a work without which that of Mommsen would have been impossible. Niebuhr cleared the ground for the master-builder, by putting an end for ever to the implicit faith which had until then prevailed in the traditionary history of Rome. His work was critical and destructive—he showed clearly what Roman history was not; but when it came to determining what it was, he necessarily failed, partly because the materials were inadequate, partly because it was not yet possible to see them in their true relation to each other. A generation had to pass in further investigation, criticism, and attempts at reconstruction on the basis of Niebuhr's work, before the early history of Rome could be seen in its true light. The scholars who performed this rather thankless task, who filled the gaps between Niebuhr and Mommsen—Göttling, Bekker, Walter, Huschke, Rubino, and others—rendered a great service to historical science, but, for the most part, rather in special points of detail than in fundamental principles. Moreover, all of them were antiquarians rather than historians. Rubino, indeed, one of the most philosophical and logical minds that have ever devoted themselves to historical study, developed a theory of the early Roman State which is essentially that upon which Mommsen has constructed his history; the distinguished historian is never slow to acknowledge his indebtedness to the obscure Marburg professor. But the work which remained to be done could be accomplished only by one who was at once an antiquarian like Bekker, a philosophical thinker like Rubino, and a man of constructive historical imagination.

It is the combination of these three qualities that has made Mommsen the foremost historian of his time, and enabled him to accomplish a work which will never have to be done over again. For we have no hesitation in saying, not that he is right in every particular, but that the conception of the history of Rome which he has made familiar will hold its place as the correct one. What this conception is it would take too long to define in its completeness; but perhaps the best tribute we can render to the great man is to point out its leading features—those in which his genius is most conspicuously seen.

In the busy field of scholarship it is rash to assert for any individual worker absolute originality in any particular part of his work. The merit of each consists largely in the skilful use of the results reached by others. But we think we are not wrong in claiming for Mommsen the credit of having been the first to apply to historical science the comparative method which had just been elaborated in the field of philology. Just here we find an especially interesting point of comparison with Niebuhr, for whom the comparative method was impossible, because, when he wrote, the science of comparative philology did not exist. One of Niebuhr's most plausible attempts at reconstruction—his famous Pelasgian theory—could never have been advanced after the relations of the Indo-European languages to one another had become established. Where Niebuhr begins with this fascinating but unsound theory, Mommsen opens with a discussion of the stages in civilization reached by the Italian nations and their ancestors at successive periods; his theory being based upon a comparison of languages somewhat similar to that upon which Niebuhr founded his hypothesis. These paragraphs may seem trite and inadequate at the present day; but they were the first attempt to arrive at historical truth by this method, and they display a degree of sobriety as well as ingenuity which are unusual in discussions of this kind.

The early institutions of Rome are represented by Mommsen from the point of view of primitive tribal society — a point of view familiar enough now, but then novel and imperfectly developed. If it may be said that it is just in these early institutions that Mommsen's theory has been most modified by later investigations, and just this part of his work that has come nearest to being superseded, it must not be forgotten that he was the pioneer in this field too, and that the subsequent advance has been made upon the lines traced by him. The general outlines of the political system firmly sketched in his first book remain unaltered, and it would be hard to give the substance of this matter more clearly and correctly than it is given there. The most that could be done would be to supplement it in certain respects and modify some details.

One theory of Mommsen's in relation to the foundation of Rome excited great discussion at the time of its appearance, and was very generally rejected, but is now tacitly assumed as a matter of course—the early commercial activity of Rome. It was upon this fact, first brought out by Mommsen, that Mr. Goldwin Smith's admirable article a few years ago in the *Contemporary Review* was based, and it forms the controlling idea in the treatment of the early Republic by Nitzsch, the writer who has, perhaps, more than any other supplemented Mommsen for this period.

The theories which we have spoken of above were presented in his first edition (in 1854) with as much fulness and definiteness as in the enlarged work familiar to the readers of the present day. When it comes to the sketch of the political constitution of the Monarchy and early Republic, on the other hand, we note a marked change. At first Mommsen was—as who at that time could fail to be?—very much under the influence of Niebuhr. But as the subject dwelt in his mind, he came by degrees to depart more and more from Niebuhr's view, and, after some slight modifications in successive editions, the fourth edition (1864) may almost be said to represent a revolution in the theory of Roman history. The publication of the fourth edition was the turning-point in his work as an historian. Since that time his attention has chiefly been given to the period of the Empire, and his labors have been principally in the nature of preparation for the continuation of his history. The successive editions of the published work have shown very little change.

It is, we suppose, generally believed that Mommsen is the most revolutionary and arbitrary of all historians of Rome. But this opinion comes from the fact of his radical departure from Niebuhr's views, which had got possession of the field, especially in England, and might, at the time that Mommsen wrote, be fairly regarded as the accepted views. But, as a matter of fact, Mommsen is conservative in a high degree, and his theories of Roman history, more than those of any of his rivals, rest upon positive statements of the ancients themselves, and not upon pure hypothesis. "If we cannot accept this statement," he says somewhere—we quote from memory—"we may as well give up concerning ourselves with historical inquiry at all." It is generally believed, too, that he presents his novel theories bluntly and arbitrarily, without informing the reader of the authority upon which they rest or the reasons for his changes of opinion. It is true they are so presented in his history; but in his numerous essays and monographs—the most important of which have been collected in a volume, under the title, 'Römische Forschungen'—detailed and substantial arguments can be found by those who choose to study the subject. His readers may at any rate be assured that even his most radical and startling positions rest upon solid foundations. We may not accept them all, but much the largest part of them appear to us established beyond question.

Among the new views advanced in the fourth

edition, along with the increased emphasis placed upon the aristocratic features of the primitive constitution (Mommsen associating in this himself distinctly with the school of Rubino) are the following: The admission of plebeians to the Senate upon the first establishment of the Republic, but with inferior powers, so that from this time the patrician Senators formed, as it were, a distinct body with special powers; the admission of the plebeians at the same date to the *curiæ;* and their tribal organization, on the basis of property in land, by the Publilian Law of 471. This last event he regards as the turning-point in their history; since now, for the first time, they formed a coherent, compact body, in which their natural leaders, the rich rural plebeians, occupied a controlling place. From this time begin their political aspirations and their contest for political equality. All of these views, familiar to students of the completed work, are not found, or are found only in the germ, in the earlier editions.

The most important feature of Mommsen's history of the early Republic is not, it is true, a novelty of the fourth edition, although it is more fully worked out there than elsewhere. It is, however, a stumbling-block to many, even at the present day; and for this reason, believing it, as we do, to rest upon a most profound insight into the character of early society and early institutions, we will draw especial attention to it. The early contests of the Roman Republic were not, he says, political, between patricians and plebeians, but social, between rich and poor. The plebeians had, as we have seen, obtained what, at the time, were considerable political privileges; but they inured to the benefit only of the rich and influential among them. But the poor, who were all plebeians, were exposed to great hardships and abuses, by reason of the severe military requirements and the harsh laws of debt. The tribunate was therefore designed, not to protect plebeians against patricians, but poor citizens against the abuses of magisterial power—for it is well known that patricians who needed it, as well as plebeians, could call upon the tribunes for assistance. It was not until the Publilian Law had reorganized the plebeiate upon a more aristocratic basis that it occurred to the rich plebeians to make of it an agency to obtain complete political equality.

In regard to the later history of the Republic, Mommsen is accused, perhaps rightly, of leaving too much to the side of power—of worshipping success. It is certain that he has a great, perhaps overweening, respect for efficiency; his heartiest contempt and condemnation are given to weak and inefficient governments. But he has a hearty respect, too, for free institutions—so they be genuine and really free. What he shows conclusively, in the last century of the Republic, is that there were no free institutions left—that it was a choice between different forms of despotism. The question of sympathy or approval hardly enters into consideration. It is the delineation of an historical situation, the narrative of an historical event. The Republic fell because it could no longer stand; and the Empire succeeded to it as a natural and necessary outgrowth of the situation.

The original publication, in three volumes, reached the fall of the Roman Republic, by the battle of Thapsus, in B. C. 46. Since that time—a period of thirty-six years—the author has been assiduously gathering materials and making preparations for its continuation, in the history of the Empire. It is true, the first ten years of this period were given in good part to revising the original work and bringing it to perfection; but even in those years in part, and since then chiefly, his work has lain in the field of the Empire—in the collection and editing of inscriptions, in countless special articles and treatises, and in the careful analysis of its fundamental principles of government. For it is plain that even in the most important single publication of these years—the 'Staatsrecht'—his chief interest was in the volume which treated of the Empire. When that was off his hands, he appears to have ceased to give attention to the subject; at least we see no signs of the important volume on the Senate and the assemblies. This long-continued and minute preparation is nothing new to him. His earliest treatise, on the Roman tribes, was a study of the most fundamental administrative institution of the Republic; his work on the South-Italian dialects gave him materials for the ethnology of Italy; his treatise on Roman coins helped elucidate at once the economic history and the municipal system of the Republic.

Mommsen is evidently approaching the term of his labors. The instalment of his history of the Empire published in 1885 as volume v. (known in the translation as 'The Provinces of the Roman Empire') is a sure sign that the history of the Empire itself is soon to follow. And in this work, standing, as it does, nominally as a fragment, but substantially as an independent treatise, the great historian has again done a work which will not need to be done over. His treatment of the Empire is as novel and original as that of the Republic, for he makes plain, what no one saw clearly before him, that the provinces were not a mere appendage of the city, but were the Empire itself. With the organization of the new Government, the history of Rome ends and that of the Empire begins. We call it the Roman Empire, but it was in truth the Empire of the World. Rome, from being a city-republic, sinks by degrees to the rank of a municipality—always supreme in dignity, always the seat of empire, but no longer the Empire itself.

It is not without some impatience and some apprehension that we see the historian reach his three-score years and ten, with his great task still unfinished. But every year that delays the work makes it more perfect. German scholars are a long-lived race, and if Ranke could be taken as a type, Mommsen would have still twenty working years before him. So we will trust and take courage.

THE QUEEN OF WESTPHALIA.—II.

PARIS, October 31.

WE left the Queen of Westphalia in Paris in November, 1809, with her husband, and expecting her father, the King of Würtemberg. Even in Paris she sent little notes to her father after his arrival; they were always written in French. On the point of going to the Trianon to see the Emperor, she writes: "All I know is that the Emperor *est d'une humeur de chien*, and that nobody can conceive why. I suppose you know the news of the day? The Queen of Holland has become the protectress of the houses of education for young girls." This is sarcastical, as Artemus Ward would say; the Queen of Holland was Queen Hortense—not exactly the best patron for young girls.

The King of Würtemberg returned to Stuttgart after a brief visit to Paris, and the Queen of Westphalia was again in Cassel in the beginning of 1810. She was obliged to return to France for the ceremonies of the marriage of Napoleon with Marie Louise. Before the arrival of the Archduchess, she writes:

"You cannot imagine, my dear father, how Napoleon is in love with his future wife; his head is turned to a degree which I could not have imagined and which I can hardly express. Every day he sends one of his chamberlains, charged, like Mercury, with the missives of Jupiter. . . . I will not enumerate to you all the presents which he is preparing; I will only tell you that he said to me that, when he was married, he would give peace to the world, 'and the rest of his time to Zaïre' [a quotation from Voltaire's 'Zaïre']. . . . To prove to you how much the Emperor is occupied with his future wife, I will tell you that he has sent for tailor and shoemaker, so as to be dressed as well as possible, and is learning to waltz. You and I could not have imagined such things."

Napoleon ordered all the pictures which represented his victories over Austria to be removed from the gallery of Diana at Compiègne, where the court waited for the Empress. Queen Catharine and her husband were invited to follow Napoleon and his new wife to Laeken, near Brussels, and to Antwerp. The Emperor inspected this great port and came back to Paris, seeing on his way Dunkirk, Calais, Boulogne. During this journey she became intimate with the Empress, and on her return to Paris was one of the witnesses of the catastrophe which ended a feast given by Schwarzenberg, the Austrian Ambassador. The ball-room was suddenly in flames; Jerome was able to save his wife; the Emperor took care of the Empress and dragged her out of the room.

The brothers whom Napoleon had placed on various thrones were treated by him as mere subjects. The King of Holland resigned. The King of Spain threatened to abdicate if Napoleon did not take his forces out of Catalonia and insisted on holding the left bank of the Ebro against the faith of treaties; to which the Emperor is said to have answered in these words: "If you cross the Pyrenees, I will have you shot." The Queen somewhat innocently adds: "It is to be hoped that such severe answers are exaggerated." The château of Cassel was completely destroyed by a fire in November, 1811, and the Queen could only save her diamonds. The King was nearly stifled by the smoke, and was found half dead. When he came to himself, he thought at first that there had been a conspiracy and an attempt to assassinate him. There was constant uneasiness in his mind. The Queen, speaking of her happiness, said: "Nothing could alter it if we lived in a more quiet time and in a docile country. You, my father, are infinitely more happy than we can be. You rule over the good Swabians attached to our house; our positions cannot be compared." The kingdoms of Napoleon were artificial creations, and Queen Catharine was better able to see this than anybody. The *grand écuyer* of the King was assassinated in December, 1811, by a man of the people. She was often afraid that Jerome himself would fall under the hand of an assassin.

A new war was preparing in 1812. "We are assured that Germany will not be its theatre, and in that case we shall remain quiet at Cassel." Jerome was summoned very unexpectedly on the 9th of March, and left the Queen; she did not even know why he was leaving her. "The most complete obscurity covers the present designs. The greatness of the preparations and the ignorance of the object puzzle the most clever politicians. . . . The soul gets really tired of this continual uncertainty, this impossibility of counting on to-morrow." Jerome made a journey incognito to Paris; Vandamme arrived at Cassel; Napoleon himself came to Dresden, and Queen Catharine had to go to that city. In the night of the 5th of April, Jerome left for Glogau, where he joined the army. During his absence his wife was made Regent of Westphalia. She asked Napoleon at Dresden: "Sire, will you not allow Jerome to come here, so that I can see him once more?" To

which he answered: "Oh, oh, you will see me derange one of my generals for a woman." This contempt for women, whom he considered inferior beings, was one of the characteristics of Napoleon. It was not incompatible with customary politeness, and often with amiability; but, at times and on important occasions, it was always cynically shown.

King Jerome did not take part in the Russian campaign; he only went as far as Poland, and returned. It is curious to see the tone of the letters of the Queen of Westphalia during this terrible campaign. She speaks of the victories of Napoleon as "our victories"; the Westphalians and the Würtembergers being a part of the "grande armée." When the terrible retreat took place, the Emperor Napoleon wrote to his brother Jerome these short lines (December 23, 1812): "There exists nothing more of the Westphalian army in the *grande armée*." The long letter written January 18, 1813, from Paris by Napoleon to King Frederic of Würtemberg is a most extraordinary production. Napoleon maintains that even after the retreat of his army and its almost complete annihilation, he has elements enough to recommence the struggle, but the treason of York and his thirty thousand Prussians has changed the situation. He warns the sovereigns against the spirit of revolution. "It is not only against the foreign enemy that they must guard themselves; there is a more dangerous enemy, the spirit of revolt and of anarchy; the Emperor of Russia has made Stein a minister of State." He warns the King of Würtemberg against the excesses of the press, the preaching of the universities. Speaking of the enemies of his tyranny, he says: "To create what they call a Germany is the object they have in view, and they intend to attain it by anarchy and by revolution." He conjures the King to allow no communication between his subjects and Russia, and to break up all the associations which, under color of patriotism, have only disorder for their object. The reply of the King of Würtemberg is equally characteristic. It is humble and almost servile. He answers for the fidelity of his people, and speaks of his devotion to Napoleon, and of the great sacrifices in men and money he has made for him.

Queen Catharine left Cassel and went to Paris in March, 1813; the Russians were advancing in Germany; they were already in Berlin. Napoleon gave her the château of Meudon to live in, the same in which afterwards the Princess of Savoy, wife of Prince Napoleon, the son of Jerome Bonaparte, took up her residence. The situation was becoming more and more critical, but "the Emperor kept all his presence of mind and the firmness of his great character" (April 14, 1813). During the campaign of 1813, Queen Catharine remained at Meudon, by order of Napoleon, waiting for the issue of events. Her husband was in a very critical position, surrounded by enemies on all sides. Her father wrote to her that his army was nearly annihilated. In October, Jerome was obliged to flee from Cassel, "with the clothes he wore; all he possessed is in the hands of the enemy." "For a long time the King has prophesied to the Emperor just what has happened, and has warned him of the bad spirit of the country, which makes of this war a war of opinion and of fanaticisms, this once happy people being exasperated by the treatment which it has received."

Bavaria allied herself openly with Austria in October, and the King of Würtemberg, the most faithful ally of Napoleon, was obliged to write to him: "In this state of things, all that remains to me, that I may not become guilty towards my subjects, and in hopes of averting from them the horrors of war, is to ask for an armistice and for the neutrality of my States." The correspondence of the father and daughter became tragical. "I have," said she, "the consolation to think that you will remain quietly at home, as quietly as these dreadful circumstances permit, while my husband and I shall be wandering, not knowing what our fate will be. Surely I do not regret greatness; I will bear bravely what is personal to me, but as for the King, I cannot look without fear on the future. I see no ray of hope there." Queen Catharine understood well the situation; she felt that the work of Napoleon had been too artificial to last—the end was coming. There was nothing to expect for the King of Westphalia. Germany was aroused, and Catharine was conscious that the German nation would triumph. The kingdom of Westphalia had been formed with the concurrence of Russia and Prussia, but it had no historical basis. Jerome and Catharine remained some time in the château of Compiègne. The Queen was with child. She found the place too cold, too expensive also, and they retired to Stains, with a very small surrounding. Correspondence with her father had become very difficult, but she took every opportunity to write to him. After the abdication of the Emperor Napoleon at Fontainebleau, she writes from Blois: "We are awaiting here the events which will decide our fate." She says that her husband and herself are "sad victims of an unmeasured ambition, and of a monstrous policy." She hopes for some establishment in Germany. The King of Würtemberg begged her to come back to her own family; if he could not give her a crown, he could give her his affection and rest. He was in hopes to separate her from Jerome. He undertook the care of her daughter, and of the child which she was expecting, and he offered to attempt to obtain from the allies some compensation for King Jerome. "If King Jerome should refuse this proposition, or if my daughter should not accept it, I must declare here, with much regret, that I shall be unable to take in future any interest in their fate. I have charged Count Wintzingerode to bring this declaration to their knowledge" (April 11, 1814).

Queen Catharine refused positively to separate her fate from that of her husband; she understood her duties in a very different manner from Marie Louise. She stood by Jerome Bonaparte, and her resolution was irrevocable. She was of a proud character—she would not hear of any pension, any compensation in money for the kingdom of Westphalia which she had lost; she only wanted some small territory in Germany where she could remain independent. But the allied sovereigns had decided that none of the members of the Bonaparte family should receive any territorial compensations. "United to my husband by ties formed by politics, I will not recall the happiness which I have owed to him during seven years; but had he been the worst of husbands, if you will only consult, my father, what the true principles of honor dictate, you will see yourself that I cannot abandon him when he is unhappy, and especially as he is not the cause of his misfortune" (letter of April 17, 1814, written in Paris). In vain did her father write to her: "King Jerome will never be received by me: a Bonaparte shall never cross my frontiers." In vain did he write to her that Jerome had not been a model husband, that he had even been thinking of repudiating her, and had only been prevented from doing so by Napoleon: "It is to Napoleon alone that you owed, during the summer spent at Dresden, the continuance of your existence as his wife." She remained inflexible, and refused to return alone to her father.

Correspondence.

THE DANGER FROM SILVER.

To the Editor of The Nation:

Sir: In your editorial of the 17th you say; "We ventured some time since to express the belief that the manufacture of silver dollars on Government account would not of itself change the standard of value from gold to silver. We have not seen any argument controverting that position."

As this proposition is put in a somewhat interrogative form, I will endeavor to answer it. The way in which legal-tender paper makes itself inconvertible is by inflating prices. Inflated prices mean increase of imports and decrease of exports, and a balance which must be settled in cash till the drain of specie brings on suspension. This result may be hastened by panic, as at the outbreak of our war, or may be postponed by borrowing abroad. Silver dollars act in precisely the same way—or perhaps it would be more correct to say silver certificates—because, as long as the question was only of coined dollars, the public would not use them, and they were piled up in the Treasury. But silver certificates are just as available as gold certificates, greenbacks, or bank notes. The time will never come "when the country will be saturated with them and can absorb no more," because, being all legal tender, they act indefinitely to raise prices, just as pouring water into a pail half full simply raises the level of the whole. If you will look at the returns of foreign trade at New York for the last three years, you will see that imports have steadily increased, and exports diminished in value, while it is notorious that a flood of our securities has been going abroad so great as to overcome this adverse balance, and even to bring gold this way. When this state of things shall be reversed, especially if the issue of silver certificates continues, is only a question of time. It may be postponed for some years, or it may be precipitated by some event like the collapse of the Panama Canal or the outbreak of war; but when it comes, the only thing which can save us from a change of basis from gold to silver will be a crash which will leave sad wrecks of individual fortunes.

In fact, the inflation which, if we take bank credits into account, has been going on since the war, has been prevented from producing its natural effect by an almost prohibitory tariff, which acts like an artificial dam to keep the lake of our currency at a higher level than could possibly otherwise be maintained; and it is this which makes meddling with the tariff, though a crying necessity, so extremely dangerous.

The session of Congress is at hand, and the country is looking to its result with deep anxiety. What is there to be expected but chaos? No preparation of any kind, no possibility of a policy—wrangling committees, jarring interests, and a rampant lobby. Ah, if the Secretary of the Treasury could only stand up in the House as a centre and rallying-point for the friends of sound finance, and a fulcrum by the aid of which the leaden weight which presses upon the country could be lifted aside! G. B.

Boston, November 19, 1887.

[The difference between legal-tender inflation and what "G. B." calls silver inflation is that the former was an issue of paper put out to meet a Treasury deficit—*i. e.*, forced into circulation. There is no forcing of silver into circulation, nor can there be any

while the public receipts equal the public disbursements.

We do not understand how the present tariff "acts like an artificial dam to keep the lake of our currency at a higher level than could possibly otherwise be maintained." It is a safe rule in economic discussion to doubt everything that cannot be stated with precision and clearness. As a prelude to understanding the operation of the dam and the lake, it would be well to state exactly what we mean by inflation, to tell what it consists of, and how we are to know that it exists.—Ed. Nation.]

TRADUTTORE TRADITORE.

To the Editor of The Nation:

Sir: I feel impelled to take for my text a passage from a recent number of the *Nation*, and to preach a little sermon on a kind of criticism that is as galling to the person criticised as it is, from my point of view, unjust. The text is this: "The two designs of Christ by Mowbray are simply caricatures of religious art, and, *even rendered as they are with the curious fidelity of Juengling's graver*, quite unworthy the book," etc. There is more of it, but this is enough for my purpose.

I make this my text rather than other passages in the same style because it is the nearest to hand. I have seen neither the engravings nor the originals, and can therefore discuss the abstract question of the justice of this kind of criticism on its merits and "entirely unbiassed by facts."

How does your critic know that Juengling's graver has been faithful? I can imagine the artist telling another story. Can you not imagine him saying, "Mr. Juengling's graver is brilliant, facile, vigorous, charming, what you will; but it is *not* faithful"? My own experience is that even our best engravers habitually destroy the most individual qualities of their originals. Most of them are not artists at all; those of them that are, are by that very individuality which makes them artists, prevented from rendering with fidelity the work of an artist of radically different temperament and methods from their own. Mr. Juengling is one of the most original and interesting of our engravers, and *on that account* his rendering of the drawing of another artist is not to be relied on.

The reasoning of the critic who writes in the way quoted (and such criticism is only too common) must be something like this: "The engraving is evidently excellent as engraving, consequently it must be faithful. The drawing is bad and the heads are vulgar; this must be the fault of the artist"; and then he writes a criticism in which the artist comes in for all the blame and the engraver for all the praise.

To see the fallacy of such reasoning one has only to apply it to the old-fashioned steel engravings after the old masters. Imagine a critic deciding on the merits of Raphael or Lionardo from one of Morghen's prints, and saying: "Morghen cuts a line on steel in a masterly manner and shows great knowledge of his profession, but the inane character of the heads and the insipidity of expression in his original are such as nothing less than his nobility of interpretation could save from hopeless vulgarity."

It is time it were said that *no* copyist improves upon his original, and that all interpretations and reproductions are deteriorations. I think most artists who have had the misfortune to work for reproduction long for the day when "process" shall reign supreme, and when the few engravers who are artists shall confine themselves to original work, and the many who are not shall "softly and silently vanish away" and trouble us no more. But as long as we have to endure the injury of having our work "translated" as much beyond recognition as *Bottom* ever was, let us at least be spared the added insult of finding all the merits of it attributed to the translator and only the faults left to our own poor share.

Kenyon Cox.

New York, November 18, 1887.

[Nevertheless, that adequate interpretation is attainable, we fully believe. We could cite a portrait head of Darwin executed on wood for *Harper's Magazine* after a photograph, and on an enlarged scale, which the great naturalist's family decidedly preferred to the sun picture, regarding it as a marvel of insight into the character of the subject. To Mr. Kruell, therefore, they applied for a fresh portrait under similar conditions for the new Life of Darwin. Those who have been privileged to see Mr. Cole's woodcuts after the old masters familiar both from line engravings and from photographs, will confess that they are revelations, and preferable to any reproduction short of color.—Ed. Nation.]

THE SUPREME COURT.

To the Editor of The Nation:

Sir: In the last number of the *Nation*, a Washington correspondent, under the caption of "Some Things about the United States Supreme Court," quotes a speech made at the bar meeting commemorative of the late Mr. Justice Woods, and gives statistics to illustrate two statements made in that speech, viz.: "That no full Chief Justice had, before his elevation, filled any judicial position whatever," and that "it was also true, as a rule, that the associate justices were taken untried from the bar."

Statements so wide of the truth, supported by a series of instances so inaccurate, so different from the facts, may not be allowed to stand unchallenged in the columns of the *Nation*.

It is strange that any lawyer should have made the first statement, and stranger still that any one should have repeated it on paper. Both Jay and Ellsworth had held positions upon the benches of their respective States, as had also Rutledge, whom, however, having failed of confirmation, your correspondent may not consider to have been a "full" Chief Justice. Jay was the first Chief Justice of New York under the Constitution of 1777, and held that office until 1779, when he was appointed to the Spanish Mission. Ellsworth was a Justice of the Superior Court of Connecticut from 1784 to 1789. Rutledge, who, "R." says, had not "previously been a judge," served on the Chancery Bench of South Carolina from 1784 to 1791. (See 'The Lives of the Chief Justices,' by Flanders, or by Van Santvoord.) It thus appears that one-third of the Chief Justices had seen judicial service before their elevation to the Supreme Bench.

As to the associates, of whom "R." says "but fourteen or fifteen had previously filled judicial positions," twenty-five or twenty-six had sat upon State or Federal benches before they donned the silk robe at Washington. Besides Rutledge, the following are among those whom "R." avers to have been "taken untried from the ranks of the bar": Alfred Moore, who was taken directly from the North Carolina bench; Thomas Todd, who, as associate and Chief Justice, had served upon the appellate court of Kentucky from 1801 to 1807, and was thence transferred to Washington by Jefferson; Robert Trimble, who followed in the steps of Todd, and who also, I believe, was a District Judge immediately before his appointment to the Supreme Court of the United States; William Strong, who served with distinction in the Supreme Court of Pennsylvania from 1857 to 1868. Others whom "R." has not credited with previous judicial service are: James M. Wayne, who was a Judge of the Superior Court of Georgia from 1824 to 1829; Levi Woodbury, who served upon the Supreme Court of New Hampshire in the second decade of the century; David Davis, who presided over the Eighth Judicial Circuit of Illinois for fourteen years previous to his appointment to the Supreme Court by Lincoln; Stephen J. Field, who had seen over ten years' judicial service as Alcalde of Marysville and Justice and Chief Justice of California. Ward Hunt was taken from the New York Court of Errors and Appeals, and Stanley Matthews, I have somewhere seen written, was once a Common Pleas Judge in Hamilton County, Ohio. A reference to the State reports and any American biographical dictionary will confirm these statements.

It is thus seen that more than one-half of the men who have worn the ermine of the Capitol have served a judicial apprenticeship; and the rule stated by the "senior lawyer" is no rule.

J. S. A.

Philadelphia, November 21, 1887.

[Another correspondent, after repeating the facts concerning Jay and Ellsworth, continues:]

It might also be added that William Cushing, who was appointed and confirmed as Chief Justice, and received his commission, which he held about a week before resigning, had been previously a County Judge of Probate in Massachusetts, Judge of the Superior Court, Chief Justice of the Supreme Court of the State, and Associate Justice of the Supreme Court of the United States. (Van Santvoord, p. 245, note.)

The case of Chief-Justice Cushing would also seem to form an exception to the statement quoted by your correspondent, that "It was, perhaps, a law of the court that no associate should be promoted" to the Chief Justiceship.

AGE OF THE SEQUOIAS.

To the Editor of The Nation:

Sir: At various times interesting discussions have arisen as to the age of the "Big Trees" in the famous Calaveras Grove. When I was there in the autumn of 1880, I came to the conclusion that it was absurd to suppose that those trees were more than a thousand years old.

From the volume called 'The First Holiday,' published on my return, p. 362, I extract the following from an account of my visit to Berkeley University:

"In talking of the Big Trees and comparing the bark of the sequoia with that of the redwood, I told Prof. Jackson that I felt sure the age of the sequoia had not been properly estimated. In a climate which produces two or three crops a year of most vegetables, there is nothing to prevent the formation of more than one ring in twelve months, and I wished the age of some recently planted sequoias could be tested by cutting down one known to be about twenty years old. Prof. Jackson thought there was a good deal to sustain my view. He said he had found crowded and obscure rings interposed between the well-defined growths."

So far as I know, this was the first time that this theory had been broached. I was led to my conclusion, first, by the existence of the "crowd-

ed rings" alluded to by Prof. Jackson in the fallen trees, and next, by the rapid growth of those lately planted. There is a common opinion that there are no young sequoias; that the tree is perishing off the face of the earth—is, in short, an accidental survival of a prehistoric growth. This is by no means so. The trees have been destroyed by fire; the ground where they grow is covered with fallen timber and choked with other growths; but so many young trees are thriving well that one may be certain that there is nothing to prevent the formation of fresh groves, unless it is the absence of inclination to plant them. A few persons listened, like Prof. Jackson, to my suggestion, but many more were merely amused by it, perhaps because I had said something quite similar in regard to certain (supposed) prehistoric geological deposits which were discovered that same year in the process of manufacture—if one may use such a phrase—in the quicksilver mines of California.

It was therefore with great pleasure that I found the following passage on page 259 of Du Charnay's 'Ruined Cities of Central America.' It records, so far as I know, the first positive test of the theory I proposed exactly seven years ago. Du Charnay has done what I wanted the proprietors of the young sequoias to do, and has, I think, proved my proposition.

"The roofs, the walls, the courts of the palaces are so well hidden, under the thick vegetation which covers them, that a stranger might pass them a few yards away and never suspect their existence. The size of the trees growing over these structures has been adduced as a conclusive proof of the age of these monuments. Waldeck calculated it to be 2,000 years or more. Lorainzar decided that these monuments must be 1,700 years old at least, reckoning by the rings in a single piece of mahogany taken from these ruins. His reasoning was based on the erroneous notion that each of the concentric circles represents a year's growth; whereas, I have ascertained that in a tropical country nature never rests; for, chancing to cut a twig some eighteen months old, I counted no less than eighteen circles. To assure myself that this was not an isolated case, I cut branches and trees of every size and description, and found the phenomena the same.

"In my first expedition to Palenque in 1859, I had the eastern side of the palace cleared of its dense vegetation. The trees now on that spot cannot be more than twenty-two years old. One of the cuttings, measuring some two feet in diameter, was formed of more than two hundred and thirty rings—that is, at the rate of one a month, or even less. It follows that the seventeen centuries of Lorainzar must be reduced to 150 or 200 years.

"Stephens mentions a ceiba twenty-two years old, six feet and ten inches in diameter; and I observed in Mexico some eucalyptus measuring six feet nine inches in diameter, which was only eighteen years old. Could such trunks have only eighteen or twenty rings?"

The paging of the above extract refers to the English translation of the 'Ancient Cities'; but as the rendering is very bad, I have not followed it. CAROLINE H. DALL.

1603 O Street, Washington, D. C., Nov. 14, 1887.

PURITY OF THE BENCH VINDICATED IN PENNSYLVANIA.

To the Editor of The Nation:

Sir: In your issue of August 25 you published a communication giving the details of the shameful deal in offices between the Republican and Greenback parties of Schuylkill County, Pa., whereby the latter organization were allowed to nominate as the fusion candidate for additional Law Judge a person whose intellectual attainments, legal knowledge and experience, and social, religious, and political opinions totally disqualified him for that high office. Since then the election has occurred, and your readers should be informed that while a portion of the fusion ticket was successful, the section most directly involved in the deal—viz., the Judge and Commissioner—was defeated; the latter by some 600, the former by over 2,600. The Republican members of the bar took the initiative in opposing the fusion judicial nominee (seven-eighths of them voting against him), and, in conjunction with all the Democratic and Prohibition members, issued an address to the people in behalf of the reëlection of the Hon. O. P. Bechtel, a Democrat who is just ending a very satisfactory ten-years' term on the bench. The address took the ground that as the doctrine of the non-partisanship of the local judiciary had been successfully asserted in 1881 in the case of Judge D. B. Green, a Republican who owed his reëlection to independent Democratic support, and again in 1882, when President Judge Cyrus L. Pershing, a Democrat, was reëlected by Republican and independent Democratic voters, it must therefore be applied in the present case. A most savage attack was made upon the members of the bar, and especially upon the Republican members, by the fusion organs, and the epithets of "corporation lawyers," "traitors to the party," and "enemies of the workingmen," were freely bestowed, but all without avail, and some 2,000 of the more intelligent of the Republican voters repudiated the fusion judicial nominee at the polls, and thus for the third time in six years in Schuylkill County vindicated the principle that faithful, experienced local judges are entitled to reëlection without regard to their political opinions. REPUBLICAN.

PARTISANSHIP OF WESTERN LAW STUDENTS.

To the Editor of The Nation:

Sir: It is disheartening to an Independent who is in sympathy with the Administration of President Cleveland to be repeatedly told, "He is a Democrat." While the writer does not resent this as a slanderous imputation, nevertheless it is somewhat dampening to the enthusiasm of one who has Republican antecedents, and who does not regard as sustainable the position of the Democratic party on all questions. A marked instance of this occurred lately within the writer's observation.

Resolutions were presented by the undersigned in a club organized among the students of the Cincinnati Law School, endorsing President Cleveland's Administration and demanding his reëlection. These resolutions the writer strenuously advocated, not as a Democrat, but as a believer in the sincerity and thoroughness of President Cleveland's actions. Especially did he dwell upon the fact that President Cleveland was superior to the restraints of party trammels, and carried himself as the President, not of a party, but of the people. His position was immediately assailed by both Democrats and Republicans alike. The first supported the resolutions, indeed, but only because President Cleveland would be the nominee of the Democratic party. The latter opposed them, not because of any sin of omission or commission on the part of the President, but because they endorsed, as was claimed, the Democratic party. My position was entirely ignored. If I was neither fish, flesh, nor fowl, I was nothing and had no right to argue.

The debate degenerated into a heated partisan discussion on the merits of the two parties. Sectional issues were exhumed and "licked into shape" by these embryo statesmen, with as much avidity as ever our esteemed Governor performed the act. The one poor "Mugwump" and his opinions were entirely slighted; and, amid the uproar raised by his resolutions, he must, perforce, be content to be regarded as a Democrat, and see the resolutions voted down as dangerous ebullitions of the old Confederate spirit.

Yours, N. HEINSHEIMER.

Cincinnati, November 16, 1887.

ANARCHISM AND CITIZENSHIP.

To the Editor of The Nation:

Sir: Although in general the expression of opinions, however distasteful to the rest of the community, is not a crime, yet there appears to be no doubt that many of the utterances of the Anarchists inciting to murder and other crimes are within the criminal law. Now, does not this afford us a means of getting rid of a very undesirable element of our population? These Anarchists are almost without exception foreigners. Why not provide by law that any alien who commits this sort of crime shall be sent out of the country and punished if he comes back? We are under no obligation to furnish an asylum to such people.

Also, our law provides that no person who is not well disposed to the principles of our Constitution shall be naturalized. Why not, then, further provide that if a naturalized citizen commits such a crime—his act amounting to an actual crime for which he might now be punished—and the utterance is such as to show that he is not well disposed to those principles, his naturalization shall be cancelled and he be treated as an alien?—Respectfully yours, H. T. T.

New York, November 15, 1887.

CAVENDISH ON WHIST.

To the Editor of The Nation:

Sir: I have just received from a local dealer a copy of Cavendish on Whist, whose title-page tells me that it is a fifth edition, published by D. Appleton & Co., New York, 1887. The book contains ninety-six pages. In what year the original fifth edition appeared in England I do not know, but I feel sure that if a copy of it can be found to-day, its age would admit it to this country free of duty. The preface to the *eighth* edition is dated January, 1868; the *tenth* edition appeared in 1874, and a *twelfth* edition, a plump volume of 279 pages, was issued at least as far back as 1880. Is it possible that the publishers have been imposed on by some joker's palming off on them an antiquated work for reprint? P.

Ann Arbor, Mich., November 12, 1887.

[We are informed that the current English edition of Cavendish is the sixteenth, and that the Messrs. Appleton's edition of 1864 was designated a "fifth edition."—Ed. Nation.]

TEACHERS' AGENCIES.

To the Editor of The Nation:

Sir: If teachers' agencies are what your correspondent of November 10th would imply—mere mediums for furnishing addresses of candidates to the head master of a school, without regard to the fitness of such candidates for the position—then, indeed, the educational world can well do without them. But an agency is supposed to be something more than this. A reliable agency is informed as to the peculiar advantages of candidates, and holds such recommendations and references as a teacher may be able to furnish. One seeking a teacher is, therefore, much more likely to find a suitable candidate through an agency than through individual advertisements, as in the former instance he is at once thrown into correspondence with one who has some claim to fitness, while in the latter case he might answer twenty indi-

vidual advertisements before finding a candidate of promise.

Your correspondent asserts that whether a teacher is employed through an agency or not is a "matter of no consequence to the head of the school, who pays nothing in either case." I am glad to note an exception to the above statement in the case of a certain school board, who, several years since, made an engagement with the writer, through one of the agencies advertised in the *Nation*, and, upon renewing the engagement for a second year, generously handed her the amount of the commission on the first year's salary; and it is altogether probable that the average employer would be willing to pay, if not the whole, at least half of the commission, for the sake of securing a teacher who would not only give satisfaction, but who would promise something of permanency—a quality comparatively rare, especially among the thousands of "sweet girl graduates" who are yearly added to the ranks. C.

November 15, 1887.

ZOLA'S IDEALISM.

To the Editor of The Nation:

Sir: May I suggest, in relation to Mr. H. D. Traill's characterization of É. Zola as an idealist (see the *Nation*, November 10), that M. J. Lemaitre, in his 'Contemporains,' long ago made the same remark? Comparing him with A. Daudet, who *is*, according to him, the genuine "naturalistic" novelist, M. Lemaitre said: "Zola imagines more than he really observes; he is a true poet in the etymological (though somewhat crude) sense of the word, and an idealistic poet, if the customary meaning of this term be reversed." ("M. Zola invente beaucoup plus qu'il n'observe; il est vraiment poète si l'on prend le mot au sens étymologique, qui est un peu grossier, et poète idéaliste, si l'on prend le mot au rebours de son sens habituel.")

I shall take the liberty to add that this conclusion to which M. J. Lemaitre leads his readers with his well-known analytic penetration, does perhaps more real justice to the author of 'Les Rougon-Macquart' than the wholesale slaughter in which M. Brunetière has indulged of late in the *Revue des Deux Mondes*, and in which systematic, or rather idiosyncratic, contempt seems, I am sorry to say, to prevail over equitable criticism.

A. Du Four.

Washington, D. C., November 19, 1887.

THE RAINFALL ON THE PLAINS.

To the Editor of The Nation:

Sir: Recently there have been two contributions to an interesting discussion, that of the increased rainfall which, it is alleged, has taken place of late years in what was formerly called the "Great American Desert," or the region lying west of the Missouri and between the river and the base of the Rocky Mountains. Ex-Senator Dorsey's article in the *North American Review* forms one of these contributions, while the other is the address of Gen. Morrow before the Cheyenne County Fair at Sidney, near the eastern boundary line of Colorado. Gen. Morrow claims that there has been a decided increase in the rainfall; Mr. Dorsey takes the other view of the matter.

As the result of a number of years of continued, though not scientific, observation of the region in question, I am inclined to concur with Gen. Morrow in his conclusions rather than with Mr. Dorsey. But my own explanation of the increased rainfall, and the causes of the increase, is somewhat different from that given by Gen. Morrow. As the subject is one of interest to a large number of people, I venture to present it.

The whole region in question is a gentle slope stretching for about 600 miles east and west, north and south. It is drained by a number of rivers which receive contributions from small streams, in the nature almost of gutters or ditches, most of which, as you go west, are dry for the larger portion of the year. The region is not like any which is found east of the Missouri River, but it rises to a considerable altitude only in its western portion. This vast territory, from a time so far remote as to be almost incalculable, was regularly burned over by fire, and during certain periods of the year was grazed over and trampled by countless herds of buffalo. Never being broken by the plough, its surface gradually assumed a brick-like consistency. It was impervious to water. Upon this brick-like surface there grew a mossy vegetation known as "buffalo grass." Water flowed off from this surface much as it would off from the roof of a house. It passed into the ditches or gutters above referred to, and was slowly carried down into the Missouri. In fact, the whole country was literally one vast tile-roofed water-shed, of which the Rocky Mountains were a species of rude ridge-pole.

It followed, of course, that the rainfall of the country, instead of sinking into the soil and in some form remaining in the country, was carried off to the Gulf of Mexico. As population advanced, all this changed. The brick or tile-like surface was broken, the water percolated into the soil and was held there, the moss-like buffalo grass gave place to growing crops, and consequently all the meteorological conditions were changed. Before this took place there was no more evaporation from that country during the greater portion of the year than there is from the roof of a church. After the soil was broken regular evaporation began. Consequently both soil and atmosphere became impregnated with a moisture unknown before, which lasted all through the year.

This seems a natural explanation of the alleged increase of rainfall, which has unquestionably taken place. Neither is there any safe ground for believing that the climatic changes have yet reached their limit. As the soil is broken further west to the base of the Rocky Mountains, there can hardly be any question that the atmospheric conditions will change correspondingly. Water which formerly poured away will be held, first in the soil, and then in the atmosphere, returning again to the soil in the form of rain. Consequently, there seems no good reason for doubting that the entire area of country west of the Missouri and east of the Rockies will within a few years enjoy a rainfall sufficient to admit of raising crops without any considerable degree of artificial irrigation; the general breaking up of the present tile-like, impervious surface of the soil being the single condition precedent.

The question is not only one of scientific interest, but it is of vital importance to all the companies now building railroads through that region, and any explanation of it derived from observation and experience can hardly be otherwise than of value. I am, etc.,

Charles Francis Adams.

Boston, November 14.

Notes.

A work that will mark an epoch is the volume entitled 'Engravings on Wood by Members of the Society of American Wood-Engravers,' to be published this week by the Messrs. Harper. It will show in a conspicuous way the present attainment of the American school. An introduction treats of the art, and a brief text describes the several illustrations. An *édition de luxe* at $100 each has been already taken up. The popular edition, however, will consist of plate proofs.

A limited large-paper edition of Mr. Stedman's 'Victorian Poets,' with eleven portraits, is announced by Houghton, Mifflin & Co., together with a dollar edition of Bayard Taylor's translation of the First Part of 'Faust,' and a 'Life of Franklin,' by Prof. J. B. McMaster, in the American Men of Letters series.

J. W. Bouton will have ready for delivery in December 'The Salon of Paris, 1887,' illustrated by one hundred photogravures printed in various colors, after the best pictures exhibited, and by a number of etched head and tail-pieces. There will be two editions of this handsome work—a large 8vo—with a slight difference in the cost.

Townsend MacCoun, 150 Nassau Street, will have ready December 1 a plate showing the results of the latest explorations of the Acropolis of Athens. It has been drawn by S. B. P. Trowbridge of the American School, assisted by Dr. Dörpfeld of the German and Dr. Penrose of the English. The size will be 22x15 inches.

'Free Joe, and Other Georgian Sketches,' by Joel Chandler Harris ("Uncle Remus"); and 'A Girl's Life Eighty Years Ago,' being the memorials of Eliza Bowne, of which specimens have already appeared in *Scribner's Magazine*, are about to be brought out by the Messrs. Scribner. They have also in preparation a new and cheaper edition of Mr. R. H. Stoddard's 'Bric-à-Brac Series.'

'Patriotic Addresses [and Articles],' by Henry Ward Beecher, compiled by John R. Howard, is in the press of Fords, Howard & Hulbert.

T. Y. Crowell & Co., still pursuing their Russian "lead," promise translations of 'The Vagrant, and Other Tales,' by Vladimir Korolénko, and 'A Russian Proprietor, and Other Stories,' by Count Leo Tolstoi.

J. B. Lippincott Co. will shortly republish in this country 'Too Curious,' a novel, by E. J. Goodman.

Worthington Co. publish directly 'The Vanderheyde Manor House,' by Miss M. Cruger.

An annotated edition of Wordsworth's 'Prelude,' by Prof. A. J. George of Boston University, will be issued by D. C. Heath & Co.

An edition of Shakspere, cared for by Henry Irving and Frank A. Marshall, is set down for immediate publication in London by Blackie & Son. The "combination" is taking.

We learn that the Danish translation of Prof. R. B. Anderson's 'Norse Mythology' will probably be out by Christmas; an Italian translation, by Tommaso Cannizzaro of Messina, will appear in the spring, and Richter of Hamburg is printing a German version; a French appeared last year, and is about to pass to a second edition. Prof. Anderson's 'America Not Discovered by Columbus' has been brought out in German at Munich. His next undertaking will be a translation of the 'Elder Edda' in two volumes.

A new volume by the poet Jean Richepin is announced by Maurice Dreyfous. It is a continuation of 'Les Blasphèmes,' and will be called 'Le Paradis du Diable.'

The first volume of the 'Mémoires et Correspondance du Comte de Villèle' is announced for immediate publication by Perrin. The work is to consist of four octavo volumes when completed, the remaining three to be issued at short intervals. For any one interested in the political or social history of the first half of the pre-

sent century in France, the correspondence of the famous minister of Louis XVIII. and Charles X. promises much.

A second edition of the first two volumes of M. Paul Thureau-Dangin's 'Histoire de la Monarchie de Juillet' (Plon & Nourrit) has been issued. It is not a mere reprint, the two volumes being enlarged by more than two hundred pages, and portions being entirely rewritten. The present edition has been prepared with the assistance of important unpublished documents which have been communicated to the author since these volumes were first issued in 1884.

The second volume of Rudolph Rényi's 'History of Italian Poetry' ('Itália Költészetének Története') is announced for publication at Budapest. The first volume, issued early in the year, comprises the period ending with the great names of the Trecento. Chapter i. treats of the destructive corruptions of the Latin language in Italy, and of the rise of the new speech; ii.-iii. are devoted to the troubadours, Provençal and Italian; iv.-vi. to the predecessors of Dante, from Folco of Calabria to Guido Cavalcanti; vii.-viii. to Dante; ix.-xii. to Petrarch; xii. to Boccaccio; xiii. to the early drama; and the text closes with an elaborate and instructive essay on the beginnings of humanism, and its rapid and renovating development. The notes fill nearly forty pages, citing all the authorities, and displaying the wide range of the author's researches. The book is worthy of Dr. Rényi's high reputation, and promises, when complete, to be not only an important addition to Magyar literature, but the really best manual of the subject, in a compact form, in any language. It is published under the auspices of the Hungarian Academy.

Engelmann of Leipsic is publishing, in parts, an important botanical work on the natural orders of plants ('Die natürlichen Planzenfamilien'), under the editorship of Profs. Engler and Prantl. Various botanists take separate families—Drude the Palms, which are already finished in 100 pages; Hackel the Grasses, Engler the Liliaceæ, etc., and the lamented Eichler did the Cycadaceæ and Coniferæ, aided at the last by the editors. As the contributors write independently, and publish in separate fascicles, the work gets on rather rapidly. Twelve fascicles, each of 48 pages, imperial octavo, have already been issued. The subscription price is only a mark and a half per fascicle—very cheap, indeed, considering that the treatment extends to the genera and that the letterpress abounds with excellent figures.

The Dunlap Society begins its second year with nearly one hundred and forty members, and recruits continue to come in. It proposes to issue three books this year, as it did last. The first of these is now ready for delivery; it is a reprint of Dunlap's 'André,' with a portrait of André from a drawing by himself, and with an introduction by Mr. Brander Matthews considering chronologically all the Arnold and André plays. The second book will be a biography of Thomas A. Cooper, by Mr. Joseph N. Ireland, author of the 'Records of the New York Stage.'

We have already praised the "Knickerbocker Nuggets" series of classics issued by G. P. Putnam's Sons, and we can now approve the extension of the idea to Irving's belles-lettres works in a portable little library of twelve volumes. This "Tappan-Zee Edition" includes 'Knickerbocker's History of New York,' 'The Sketch-Book,' 'The Alhambra,' 'Tales of a Traveller,' 'Crayon Miscellany,' 'Bracebridge Hall,' and 'Wolfert's Roost.' The seasonableness of its appearance will be appreciated. We may add on the publishers' behalf that their editions of Irving are the only ones based upon the author's latest revisions.

Mr. Lynds E. Jones's 'The Best Reading' (Putnams) covers in its third series the five years ending December 1, 1886. It thus overlaps the last issue of the 'American Catalogue,' and partly bridges the interval before the next issue. It is a "priced and classified bibliography, for easy reference, of the more important English and American publications." Its utility to the student is obvious, and at this season one must think also of the book-giver who will be convenienced by it.

Still another volume of the Pocket Thackeray (Lippincott) contains the 'Roundabout Papers' and many minor sketches.

Burns's "Mountain Daisy," Bryant's "Waterfowl," Longfellow's "Sunrise on the Hills," Hood's "I Remember," and some sea pictures from Tennyson have been made the subject of decorative illustration on a tiny scale by Wm. J. Whittemore (T. Y. Crowell & Co.). The printing is on one side of the cardboard, and the whole is bound together with silken cord. Mr. Whittemore's little dabs of color appear on inspection to be in sympathy with the several poems to which they are attached, and sometimes are fairly to be called felicitous, as in the first Longfellow vignette. They never offend, and that is saying a great deal in the case of holiday souvenirs of this sort.

The biographical section of the Index to the first hundred volumes of *Littell's Living Age* which Mr. Edward Roth publishes slowly at No. 1135 Pine Street, Philadelphia, is near its end. Part 11 extends from Vestris to Wortley.

A list of printed maps of California has been issued in the ninth bulletin of the Library of the University of California. The earliest bears date of 1844, reference for all those which preceded it being made to sundry accessible sources. The second on the list is dated 1846, and then there is a gap till 1860 is reached, so that the twenty-nine pages cover really only the last three decades. The list may be had of the Librarian for the postage — two cents.

The Department of Agriculture pays Prof. A. S. Packard of Brown University the compliment of printing a list of his entomological writings in its Bulletin No. 16. A sketch of Dr. Packard's scientific career is prefixed, and in an appendix is given a systematic list of the new names proposed by him.

The more old-fashioned of us have often had occasion to lament the deterioration apparent in the handwriting of the present generation as compared with that of an earlier date. Whether there is already a true ground for this lament may be questioned, perhaps, but the introduction of type-writers will, if continued at the rate of the last few years, soon leave an influential proportion of the community with nothing but a signature when they "take a pen in hand." Now this chirographic atrophy is descending from the counting-room to the college. The instructions lately issued for the preparation of forensics at Harvard contain the significant paragraph, "Type-writing will be acceptable." The examination system is already responsible for much bad writing, for very few students do more than scramble over their pages when writing hurried answers to hard questions. The formal exercises in written English might, as long as they were handwritten, serve as antidotes to the examinations in this respect, but now this protection is to go. We may freely sympathize with the instructors who have to read over badly written themes and forensics, but we must protest against a movement whose visible end is the supply of type-writer desks to the primary schools.

The *Art Review* of this city comes in a triple number, September–November, and contains ten articles, a large amount of notes and news, and sixteen full-page photogravures. The leading essays are by well-known writers, of whom only one, however, is an artist, and none is an art critic. All have an air of no-time-in-particular or one-time-as-good-as-another, and the *Review* seems devoid of both life and unity. The illustrations—from oils, water color, or plaster—are for the most part rather ordinary in treatment; the best falling short of distinction.

The well-known African traveller, Mr. H. H. Johnston, in the November *Nineteenth Century*, takes up the cudgels in defence of the British missionaries against the recent attacks made upon them, notably by Dr. Oscar Lenz. He pictures, with much force and pathos, the reception of an explorer by the missionary and his wife, and graphically describes his station, home, and occupations. He acknowledges that he is often narrow-minded, and that his converts are few in number and of a low type not merely of Christians, but of men, as compared with many of the heathen negroes. He goes so far as to say of the missions in general, that, "judged from a purely Christian point of view, they have not been successful." He argues, however, that it is not reasonable to judge of what they may accomplish by their present condition. "The arrival of the first missionary with many of these new nations," he justly observes, "may be the first historical event in their annals." There can be no question, he urges, that the missionaries have exerted a great civilizing influence, and have added to the resources of the natives by the introduction of valuable trees and plants. They have also contributed more than any others to our knowledge of the botany, zoölogy, and anthropology of these regions, while by their labors "nearly two hundred African languages and dialects," some of which are now extinct, have been illustrated by grammars, dictionaries, vocabularies, and translations of the Bible and other religious works. There are nine British missionary societies now laboring in Africa, with an aggregate annual expenditure of $1,000,000.

The *Nouvelle Revue* for November contains an account of the city of Marocco during the illness of the Emperor in 1878. The writer, M. Jules Erckmann, was there at the time, on a special mission to the court. At the first report of the Emperor's illness there was an intense excitement, and the "day of Mohammed," Friday, when he was accustomed to go to the mosque, was anxiously awaited. At the appointed time the streets were thronged with an expectant multitude, who, when the Emperor failed to appear, rushed to the shops to buy powder, the price of which doubled in a few hours. The Jews hastened to their homes to hide their valuables, and troops were despatched in various directions to hold in check the neighboring turbulent tribes. For three weeks they lived on the brink of a volcano which might at any instant burst forth. Precisely the same condition of things exists now, he writes, with this difference, that then the sons of the Emperor were too young to succeed him, but he had a grand vizier. Now his sons are old enough, but there is no vizier. Incidentally, M. Erckmann, referring to the fact that there is no feeling of nationality uniting the various tribes, says that there is no reason, if Muley-Hassan has not designated his successor, why the three kingdoms of Fez, Marocco, and Tafilet should not each nominate a monarch. He also tells the story of the present Emperor's accession, as told to him by a renegade Frenchman, Baron Saint-Julien, who had an official position at the court. In this case Sidi-Mohammed's death was con-

cealed for some time in order to permit Muley-Hassan, who was a younger son, to gather force enough to overcome all opposition to his claims.

—Those who are interested in the administration of a scientific bureau of the Government should look over the report on the organization, business methods, and work of the United States Geological Survey, prepared by the Director, Maj. J. W. Powell, in response to a circular from Senator Cockrell, chairman of a select committee of the Senate. The report has lately been published, and presents a most detailed account of the scientific and business organization, including even samples of the vouchers, invoices, receipts, and circular letters by means of which the work of the Survey is transacted, checked, and simplified, as well as outlines of the principles regulating the divisions of geography, topography, paleontology, publication, illustration, and so on. The method of recording the distribution of publications is remarkably specific: every volume sent from the Geological Office can be traced at any time, and the applicant for it, the date of sending, and the receipt are all recorded. Most of the publications are properly technical, but some have a general interest—for example, "Bulletin 13. Boundaries of the United States and of the several States and Territories. 1885. 8vo, 135 pp., price 10 cents." This little monograph, prepared by the Chief Geographer of the Survey, in the course of his work in constructing maps for the Survey's needs, should be within reach of all students of our history. Of more importance than the distribution is the preparation of these documents. This is supervised by an editorial division, to secure uniformity in various desired respects, and by an illustration division, to insure correct and artistic plates and figures. The material to be printed is carefully scrutinized. "The reports prepared by chiefs of divisions are submitted to the Director for approval, and are generally discussed at length by the author and Director, and sometimes by other officers of the Survey, before they are transmitted to the editorial department." This prevents the appearance of crude and immature statements, and is one of the best and most characteristic features of the administration of the Survey.

—We have received from the publishers, Maisonneuve & Lechevalier of Paris, the second number of the *Annuaire de la Société des Traditions populaires* (8vo, pp. xxx, 180). The Society now has an official existence, being recognized by the Government, and having its seat in the Palace of the Trocadéro. The publications of the Society consist of a monthly review and an annual. The number for 1887 contains the statutes of the Society (the subscription to which is fifteen francs a year), list of members, and bibliography for 1886, besides an interesting miscellany. The Secretary, P. Sébillot, contributes minute directions for the collection of folk-lore, and an extensive series of questions covering the physical world, the supernatural world; man and human life; the professions, traditions, and superstitions of a large city; folk-lore law; medicine; legends, beliefs, and superstitions of the sea, and customs and beliefs of fishermen. The other contents consist of folk-songs with the music, and popular tales and customs of various peoples. Among these is a Louisiana variant of one of Uncle Remus's stories ("Mr. Rabbit finds his match at last"), in which a tortoise races with a roebuck. It is interesting to see that the favorite artist Bouguereau has been for twenty years the subject of a somewhat irreverent legend. Intending purchasers of Parisian bonnets will take notice of a custom probably new to them, mentioned on page 80, from which it appears that spitting in the crown of the hat by the maker insures the acceptance of the goods. The *Annuaire* is beautifully printed, with ornamental initials and tail-pieces, and will afford pleasant reading for others than the professional *folk-loristes*.

—The approaching election to fill the vacancy in the French Academy made by the death of M. Caro in July last was already beginning to be talked about, although its date will not be fixed until after the next reception (that of M. Gréard, in December), when two other deaths among the Academicians occurred. The first of these, October 5, was that of Baron Louis de Viel-Castel at the age of eighty-seven. This long life was divided between the duties of a diplomatist and official and the pleasures of an author, the great work of his life being his 'Histoire de la Restauration' in twenty volumes, to which he owed his admission to the Academy in 1873, though at that time only fourteen volumes had been published. M. de Viel-Castel has been reproached for the extreme calmness of the tone in which he has written, which his critics have not hesitated to call coldness, and which even his friends admit to be impartiality carried to an excess that neither truth nor justice absolutely required; but all alike bear witness to his unfailing knowledge of the men and events of the period. The author of the 'Histoire de la Restauration' was singularly well placed for such a work. Entering the diplomatic service in 1818, he was Secretary of the French Embassy at Madrid, and afterwards at Vienna. Returning to Paris in 1829, he became first *sous-directeur* and afterwards *directeur politique* in the Ministry of Foreign Affairs, positions in which all the diplomatic correspondence of the Government passed under his observation, and the most intimate political association connected him with the men of note of the time. It is said that from his entrance into public life he made it his habit to note daily the events which occurred, and the opinions he heard expressed around him, as well as his own impressions of the moment, and that these notes have contributed much towards making his work, if not one of the most interesting narratives, certainly one of the most valuable diplomatic and political histories of the century. After the 2d of December, 1851, M. de Viel-Castel withdrew from public life, and devoted himself to the publication of his history.

—A third vacancy in the French Academy was made by the death, October 18, of M. Cuvillier-Fleury. He was almost eighty-six years old, and he was, like M. de Viel-Castel when he died, the oldest of the Academicians. He was also for more than fifty years one of the most active collaborators of the *Journal des Débats*, in which his first articles appeared in 1834, at the time when that paper had undertaken the advocacy of parliamentary government for France. M. Cuvillier-Fleury always remained faithful to his early political opinions, having been all his life what is called in France a constitutional or parliamentary Liberal. His active but anonymous political collaboration in the *Débats* continued until the Revolution of 1848, and during this time his almost daily articles were attributed in turn to Guizot, De Sacy, and others of the most prominent Liberals of the time. Under the Empire, when direct political writing became impossible, M. Cuvillier-Fleury began a series of literary and critical articles in the *Journal des Débats* which he continued as long as he was able to write at all. These were afterwards collected and published in volumes between 1851 and 1878, and were the ostensible cause of his election to the Academy in 1866. No one who was in the habit of reading the *Débats* twenty-five years ago can recall without delight the charm of these articles, in which, as has been so well said of them, the author seemed to possess the art of letting everything be understood, at a period when it was impossible to say anything. The caprice of events placed M. Cuvillier-Fleury in peculiarly intimate relations with two of the reigning families of France. He began life at eighteen as secretary to the ex-King of Holland, Louis Bonaparte, the father of the Emperor Napoleon III. This was in 1820 and 1821, when the prince was living in exile in Italy. Later, in 1827, Louis Philippe, then only Duke of Orleans, appointed him *précepteur* to his fourth son, the Duc d'Aumale, a position which he retained until 1839, remaining with the young prince as secretary for several years after he was no longer needed as a tutor. The most affectionate attachment always existed between the former master and pupil, the first of whom was happy to consider the other "the best of all his works," while the second was proud to acknowledge his indebtedness to the old friend who directed his youth. It was to M. Cuvillier-Fleury that the French Academy assigned the duty of officially receiving the Duc d'Aumale when he was elected a member of that body in 1871. And later, when the aged Academician became blind, in the last years of his life, it was generally the Duc d'Aumale who guided him to his seat when he came to attend the sessions of the Academy.

—Almost a personal feud has broken out in Copenhagen between two no less well-known writers than Björnstjerne Björnson and the critic and literary historian George Brandes, who once made Berlin his home. The controversy involves not merely literary reputations, but social and moral questions, and it is the more remarkable since it was through Brandes that the fame of the Norwegian novelist was extended to Germany. In Björnson's play "The Glove," he lays a thrilling emphasis upon moral purity in man, which he insists should be as fully demanded of him as of woman. The discussion of social questions is now rife in Copenhagen, and Ibsen's powerful work, 'The Ghosts,' of which an admirable summary was given by a correspondent of the *Nation* on its first production in Germany, has affected every class in questions touching family life and domestic chastity. The subject of Björnson's play was discussed in an address given by a Danish lady in Copenhagen before a woman's association. *Politics*, the organ of the brothers Brandes, in an article headed "Angels," reviewed sarcastically this address and those who hold its views. Björnson thereupon sought to defend himself against innuendoes which he thinks are directed against him and require him to take part in the strife. "As regards Dr. George Brandes, I consider his attacks the more unworthy since he knows by dearly purchased experience how much prejudice and scorn every new undertaking must encounter." Brandes answers this with an abusive attack, which does not touch the merits of the question involved, but is directly personal, upon Björnson, whose rhetoric, he says, has become noticeably feminine; who is half a lay tribune of the people and half a lay preacher; who is the son of a preacher and has a penchant for preaching; whose pathos as well as his anger always wears the white necktie of the preacher. Björnson's views of France at different times are cited to injure him; he writes for the gallery, etc. The views of Brandes, so far as he reveals them, are a violent rupture with accepted traditions and standards. All his former aggressiveness, which has been less mani-

fested of late, appears, in this controversy, unchecked and as tumultuous as in his earlier years.

DARWIN'S LIFE AND LETTERS—II.

Life and Letters of Charles Darwin. With an autobiographic chapter by Francis Darwin. London: John Murray. 3 vols. New York: D. Appleton & Co. 2 vols.

THE American edition of the 'Life and Letters of Charles Darwin' is in two volumes; the English edition, from which we cite, is in three. A French and a German translation appear simultaneously. The editorial labor of love and filial duty is well done. The letters, partly arranged according to topics, so far as regards certain lines of investigation and publication, are left to tell their own story, with some few explanatory paragraphs and terse biographical foot-notes upon persons mentioned or who take part in the correspondence, supplying just the information which general readers would desire and might not otherwise readily obtain. One might say that more letters are printed than is needful for the complete exposition of the writer's work, life, and character; but perhaps none is superfluous, and there is not a tedious one. They were written with absolute *abandon*, without the slightest notion that any one would ever gather and print them, nor even think it worth while to preserve them. They bubble over with *bonhomie*, and have all the life and naturalness of unrestrained conversation. Hence their charm and their value.

The letters in the latter half of the first volume come down to the spring of 1854, to the close of Darwin's work on the Cirripedia. In the autumn of that year he writes that he has "been frittering away the time for several weeks in a wearisome manner, partly idleness and odds and ends, and sending ten thousand barnacles out of the house and all over the world," but that he shall now in a day or two begin to look over his old notes on species. This subject was ever in his mind throughout his prolonged study of Cirripedes, in the midst of which he replied to a near friend, who had asked what "ornamental poultry had to do with barnacles," "Do not flatter yourself that I shall not live to finish the barnacles, and then make a fool of myself on the subject of species, under which head ornamental poultry are very interesting."

The second volume is specially devoted to his work on the 'Origin of Species' and to the correspondence of the period, from 1843 to 1862. It has a preliminary chapter by the editor on the foundations of the theory, with an account of the early sketch written in 1844. There is, moreover, a chapter by Prof. Huxley on the reception of the book—an historical and critical essay, very interesting and very characteristic, very provocative of citation, only one would not know how and when to stop. Excellent and true is his statement of the condition of mind of the leading philosophical naturalists when "the publication of the Darwin and Wallace papers in 1858, and still more of the 'Origin' in 1859, had the effect upon them of the flash of light which, to a man who has lost himself in a dark night, suddenly reveals a road which, whether it takes him straight home or not, certainly goes his way." Again:

"My reflection, when I first made myself master of the central idea of the 'Origin,' was, How very stupid not to have thought of that. With any and every critical doubt which my sceptical ingenuity could suggest, the Darwinian hypothesis remained incomparably more probable than the creation hypothesis. . . . The only rational course for those who had no other object than the attainment of truth was to accept Darwinianism as a working hypothesis, and see what could be made of it. Either it would prove its capacity to elucidate the facts of organic life, or it would break down under the strain. This was surely the dictate of common sense; and, for once, common sense carried the day. The result has been that complete *volte-face* of the whole scientific world which must seem so surprising to the present generation."

Huxley takes the present occasion to reaffirm his early declaration that "perhaps the most remarkable service to the philosophy of Biology rendered by Mr. Darwin is the reconciliation of Teleology and Morphology, and the explanation of the facts of both"; that "the teleological and the mechanical views of nature are not, necessarily, mutually exclusive." He now adds:

"The acute champion of Teleology, Paley, saw no difficulty in admitting that the 'production of things' may be the result of trains of mechanical dispositions fixed beforehand by intelligent appointment, and kept in action by a power at the centre. That is to say, he proleptically accepted the modern doctrine of Evolution; and his successors might do well to follow their leader, or at any rate to attend to his weighty reasonings, before rushing into an antagonism which has no reasonable foundation."

"Not a solitary problem presents itself to the philosophical theist, at the present day, which has not existed from the time that philosophers began to think out the logical grounds and the logical consequences of theism. All the real or imaginary perplexities which flow from the conception of the universe as a determinate mechanism, are equally involved in the assumption of an Eternal, Omnipotent and Omniscient Deity. The theological equivalent of the scientific conception of order is Providence; and the doctrine of determinism follows as surely from the attributes of foreknowledge assumed by the theologian, as from the universality of natural causation assumed by the man of science."

Nevertheless, the "outpouring of angry nonsense" to which Darwin's work gave rise "is sad to think upon," and equally so the cooler misconceptions of many who, with opposing prejudices, either deprecated or welcomed the new views. Darwin's own noble bearing is seen in his letters through this trying period, which give great interest to the second volume. His sensitive nature is seen to respond joyfully to praise, and hardly less so to all just criticism, while unfair or contumelious criticism does not disturb his equanimity or provoke a censorious remark.

The third volume takes up his work in the year 1863, when he was engaged upon the 'Variation of Animals and Plants under Domestication,' to be followed by the 'Descent of Man' and 'Expression of the Emotions,' and by the various biological investigations, chiefly upon plants, which most pleasantly occupied the later years of his life. It was a great satisfaction to his family and friends that his health improved during the last ten years, so that he could work more steadily and, if not enjoyably, yet with less distress and discomfort. Naturally there was a certain loss of physical vigor as the end drew near. His letters to his friends perhaps grow less vivacious, but not less interesting. He writes in the last year: "I have not the heart or strength to begin any investigation lasting years, which is the only thing I enjoy, and I have no little jobs which I can do." The close came on the 19th of April, 1882. The editor concludes the record of his father's life with a note which the latter added to his autobiography two years before:

"As for myself, I believe that I have acted rightly in steadily following and devoting my life to science. I feel no remorse from having committed any great sin, but have often and often regretted that I have not done more direct good to my fellow-creatures."

Darwin's letters, which form the staple of these volumes, are mainly selected from those written to personal friends; perhaps a full half of them are to Sir Joseph Hooker, and an almost equal proportion was to Lyell, while he lived. There are not very many letters from his correspondents; indeed, more of them would have been desirable; but we understand that, except in late years, Darwin from time to time destroyed most old correspondence. It is well that his friends acted differently. Almost all the letters are on scientific subjects or have a scientific substratum, and were written to elicit some information, or to return effusive thanks for the same. But incidentally they reflect the writer's sentiments upon various topics of the day, and are thoroughly illustrative of character. Of family letters there are hardly any. Here is an idyllic bit of one of them, written to Mrs. Darwin when, after working too hard upon the 'Origin of Species' book, he was obliged to go down for a while, in the spring of 1858, to a water-cure:

"The weather is quite delicious. Yesterday, after writing to you, I strolled a little beyond the glade for an hour and a half, and enjoyed myself—the fresh yet dark green of the grand Scotch firs, the brown of the catkins of the old birches, with their white stems, and a fringe of distant green from the larches, made an excessively pretty view. At last I fell fast asleep on the grass, and awoke with a chorus of birds singing around me, and squirrels running up the trees, and some woodpeckers laughing, and it was as pleasant and rural a scene as ever I saw, and I did not care one penny how any of the beasts or birds had been formed" (ii., p. 114).

Readers cannot all be naturalists, nor care very much how the birds and beasts may have been formed; they may care more for Darwin's sentiments regarding human interests. His horror of cruelty to animals, his remonstrance against needless or merely curious vivisection, and his abomination of slavery, even in its least repulsive forms, are well known, and are here and there exemplified in these volumes. Most readers may recall his description of the Fuegians in his 'Journal of Researches,' and his mention of them in the first volume of these letters is equally unhopeful. In 1870, at the close of a friendly letter to his shipmate, Admiral Sulivan, who was a lieutenant on board the *Beagle*, he writes:

"I had never heard a word about the success of the Tierra del Fuego Mission. It is most wonderful, and shames me, as I always prophesied utter failure. It is a grand success. I shall feel proud if your committee think fit to elect me an honorary member of your society."

The following statement by Admiral Sulivan was printed in 1885, namely that—

"Mr. Darwin had often expressed to me his conviction that it was utterly useless to send missionaries to such a set of savages as the Fuegians, probably the very lowest of the human race. I had always replied that I did not believe any human beings existed too low to comprehend the simple message of the Gospel of Christ. After many years, I think about 1867, but I cannot find the letter, he wrote to me that the recent accounts of the mission proved to him that he had been wrong and I right in our estimates of the native character and the possibility of doing them good through missionaries; and he requested me to forward to the Society an enclosed check for five pounds, as a testimony of the interest he took in their good work. On June 6, 1874, he wrote: 'I am very glad to hear so good an account of the Fuegians, and it is wonderful.' On June 10, 1879: 'The progress of the Fuegians is wonderful, and had it not occurred, would have been to me quite incredible.' On January 3, 1880: 'Your extracts [from a journal] about the Fuegians are extremely curious, and have interested me much. I have often said that the progress of Japan was the greatest wonder in the world, but I declare that the progress of Fuegia is almost equally wonderful.' On March 20th, 1881: 'The account of the Fuegians interested not only me, but all my family. It is truly wonderful what you have heard from Mr. Bridges about their honesty and their language. I certainly should have predicted that not all the mission-

aries in the world could have done what has been done.' On December 1st, 1881, sending me his annual subscription to the Orphanage at the Mission Station, he wrote: 'Judging from the *Missionary Journal*, the mission in Tierra del Fuego seems going on quite wonderfully well.'"

In our war for the Union, Darwin was much stirred by conflicting emotions. To an American correspondent he wrote, in June, 1861: "North America does not do England justice. I have not seen or heard of a soul who is not with the North. Some few, and I am one of them, even wish to God, though at the loss of millions of lives, the North would proclaim a crusade against slavery. . . . Massachusetts seems to show noble enthusiasm." A few months after came the Mason-Slidell imbroglio, and he writes:

"What a thing it is that, when you receive this, we may be at war, and we two be bound as good patriots to hate each other, though I shall find this hating you very hard work. How curious it is to see two countries, just like two angry and silly men, taking so opposite a view of the same transaction! I fear there is no shadow of doubt we shall fight if the two Southern rogues are not given up. And what a wretched thing it will be if we fight on the side of slavery. No doubt it will be said that we fight to get cotton; but I fully believe that this has not entered into the motive in the least. Well, thank Heaven, we private individuals have nothing to do with so awful a responsibility. Again, how curious it is that you seem to think that you can conquer the South; and I never meet a soul, even those who would most wish it, who thinks it possible—that is, to conquer and retain it. I do not suppose the mass of people in your country will believe it, but I feel sure if we do go to war it will be with the utmost reluctance by all classes, Ministers of Government and all. Time will show, and it is no use writing or thinking about it.

"With respect to Design, I feel more inclined to show a white flag than to fire my usual long-range shot. I like to try and ask you a puzzling question, but when you return the compliment I have great doubts whether it is a fair way of arguing."

It was in January, 1862, while the trying question (not of the design of Providence, but the less profound design of the United States Government in respect to Wilkes's captives) was still pending, that Darwin wrote to a friend at home:

"I thought it best to make a clean breast to ——, and told him that the Boston dinner, etc., had quite turned my stomach, and that I almost thought it would be good for the peace of the world if the United States were split up. On the other hand, I said that I groaned to think of the slaveholders being triumphant, and that the difficulties of making a line of separation would be fearful. . . . Certainly I agree with you that the present American row has a very Torifying influence on us all."

Two months later, when that crisis had passed, he wrote to his American correspondent:

"Thanks for the newspapers (though they did contain digs at England), and for your note. It is really almost a pleasure to receive stabs from so smooth, polished, and sharp a dagger as your pen. I heartily wish I could sympathize more fully with you, instead of merely hating the South. We canot enter into your feelings; if Scotland were to rebel, I presume we should be very wrath, but I do not think we should care a penny what other nations thought."

Again, in February, 1863:

"I read Cairnes's excellent Lecture, which shows so well how your quarrel arose from slavery. It made me for a time wish honestly for the North; but I could never help, though I tried, all the time thinking how we should be bullied and forced into a war by you, when you were triumphant. But I do most truly think it dreadful that the South, with its accursed slavery, should triumph, and spread the evil. I think if I had power, which, thank God, I have not, I would let you conquer the border States, and all west of the Mississippi, and then force you to acknowledge the cotton States. For do you not now begin to doubt whether you can conquer and hold them? . . .

"The *Times* is getting more detestable (but that is too weak a word) than ever. My good wife wishes to give it up, but I tell her that is a pitch of heroism to which only a woman is equal. To give up the 'Bloody Old *Times*,' as Cobbett used to call it, would be to give up meat, drink, and air."

In another letter some hope dawns: "I hope and think it not unlikely that we English are wrong in concluding that it will take a long time for prosperity to return to you." Happily, he lived to see the returning prosperity and reunion, and to rejoice in them.

If we were to touch upon the scientific topics which in some form or other make up the staple of these volumes, we should have to fill pages. Let such matters be relegated to the scientific journals. Nor may we venture now to cull from the livelier and more personal portions, and the charming exhibitions of good feeling, which light up the pages as with sunshine. Darwin's thanks for every service, and his praise of other people's contributions or elucidations are truly profuse. Disparagement he reserves for himself, and if he criticises, there is never an ill-natured word for the weak points of others. Yet playful hits abound. He was experimenting laboriously as to how long seeds would retain vitality under exposure to ocean water when he wrote: "Have not some men a nice notion of experimenting? I have had a letter telling me that seeds *must* have *great* power of resisting salt water, for, otherwise, how could they get to islands? This is the true way to solve a problem!" Nor will he allow "a good joke" at his own expense to be lost: "H. C. Watson, who I fancy and hope is going to review the new edition of the 'Origin,' says that in the first four paragraphs the words I, me, and my occur forty-three times! I was dimly conscious of the accursed fact. He says it can be explained phrenologically, which, I suppose, civilly means that I am the most egotistically self-sufficient man alive. Perhaps so. I wonder whether he will print this pleasing fact." A postscript adds: "Do not spread this pleasing joke; it is rather too biting." Of his almost single case of "writing in newspapers" he says:

"I have been gnashing my teeth at my own folly; and this not caused by ——'s sneers, which were so good that I almost enjoyed them. I have written once again to own to a certain extent of truth in what he says, and then if I am ever such a fool again, have no mercy on me. I have read the squib in *Public Opinion;* it is capital; if there is more, and you have a copy, do lend it. It shows well that a scientific man had better be trampled in dirt than squabble."

Certainly he was "the quietest of the set"; and as to the squib, our readers may enjoy it as much as Darwin did. It is—

"A lively account of a police case, in which the quarrels of scientific men are satirized. Mr. John Bull gives evidence that—

"'The whole neighborhood was unsettled by their disputes; Huxley quarrelled with Owen, Owen with Darwin, Lyell with Owen, Falconer and Prestwich with Lyell, and Gray, the menagerie man, with everybody. He had pleasure, however, in stating that Darwin was the quietest of the set. They were always picking bones with each other and fighting over their gains. If either of the gravel sifters or stone breakers found anything, he was obliged to conceal it immediately, or one of the old bone collectors would be sure to appropriate it first and deny the theft afterwards, and the consequent wranglings and disputes were as endless as they were wearisome.'

"Lord Mayor—'Probably the clergyman of the parish might exert some influence over them?'

"The gentleman smiled, shook his head, and stated that he regretted to say that no class of men paid so little attention to the opinions of the clergy as that to which these unhappy men belonged."

This little anecdote of Lyell it can do no harm to repeat; it is in a letter of the year 1854:

"Lyell told me that he was so delighted with one of Agassiz's lectures on progressive development, etc., that he went to him afterwards and told him that it was so delightful that he could not all the time help wishing it was true. I seldom see a zoölogical paper from North America without observing the impress of Agassiz's doctrines—another proof, by the way, of how great a man he is."

We have said that these volumes are admirably edited. We have found only one oversight. It is in the sentence on page 258 of the third volume: "Although, according to Dr. Gray, Brown, in common with the rest of the world, looked on Sprengel's ideas as fantastic, yet it was at his recommendation that my father in 1841 read his now celebrated 'Secret of Nature Displayed.'" The article from *Nature* (1874, p. 80) here referred to says, on the contrary, that Brown "looked upon Sprengel's ideas as *far from fantastic.*" The authority for the statement seems to have been Darwin himself, who, in a foot-note on page 271 of the 'Fertilization of Orchids,' says: "Many years ago Robert Brown, to whose judgment all botanists defer, spoke highly of it (Sprengel's book) to me, and remarked that only those who knew little of the subject would laugh at him."

Here we drop these most interesting volumes, of which, after all, we have given only a partial and desultory account.

CHILDREN'S BOOKS.

Mr. John Dimitry's idea of excerpting from Rabelais the simple incidents of the lives of Grandgousier, Gargantua, and Pantagruel, for children, seems to us almost as fantastic as the humor of the original. 'Three Good Giants' is what he calls the handsome little book that results (Boston: Ticknor & Co.), but how this gluttonous and slaughtering trio can attach themselves to any notion of *good* in the infant mind, we cannot guess; much less how their history can inspire goodness. In fact, with all his exclusions, Mr. Dimitry has opened an unredeemed vista of gross animal living and brutal ferocity. We cannot think that it is a gain to the nursery library to put within reach the killing of Loupgarou, or Panurge's trickery, or the most of the moral examples here brought together with more than usual painstaking and literary skill. We suspect that the desire to save for children the grotesque designs of Doré and Robida weighed more with the compiler than he was himself aware in undertaking his task. Exceptions to Mr. Dimitry's punctiliousness are noticeable in his occasional misuse of shall and will, and he has more than once connived at the proof-reader's "Nôtre Dâme" and "Montpelier."

Classic in every sense, Hawthorne's 'Tanglewood Tales' will contribute to the delectation of the young for generations yet to come. The guise in which Houghton, Mifflin & Co. have now put it forth will be grateful to the children who receive it. A better child's book, with its admirable print and paper, it is not easy to name. Mr. Geo. Wharton Edwards's illustrations, if not even as sound, archæologically, as the pictures of Alma Tadema, or in all cases conformed to the text, are, perhaps, as well suited to children's minds as if they were severely correct. The readers for whom the stories were intended are not critical as to classical consistency, and the exaggerated giants and monsters of Mr. Edwards will impress the juvenile imagination more than something less suggestive of Gulliver and Brobdingnag. But why the artist should have

Theseus kill the Minotaur with such an absurd and impossible action it is difficult to see, when the story gives clearly the *modus operandi* thus: "But Theseus by this time had leaped up [having been floored] and caught the monster off his guard. Fetching a sword-stroke at him with all his force, he hit him fair upon the neck, and made his bull-head skip six yards from his human body," etc. The artist makes Theseus lift the Minotaur off the ground, and hold him up with one arm while he stabs him in the throat with an upward thrust which at best could only penetrate to his brain. Then he puts Talus, the bronze giant, standing on the water, for which there is no suggestion in the story; on the contrary, he is represented as in the attitude of the Colossus of Rhodes, "with a foot firmly planted on each headland." These are contradictions of the story which, to children, are serious matters, and which are evidence of reprehensible want of that study of his text which is the first and simplest duty of every illustrator, though Mr. Edwards has in various particulars shown himself indifferent to it. The process reproductions of washed drawings are curiously felicitous, and the printing of them in every respect admirable.

Mr. Howard Pyle's 'Wonder Clock' (Harper & Bros.) is an effective reprint of a series of stories, of the goblin and magical order, from *Harper's Young People*, and one of the best emulations of the German popular fairy story thus far achieved. It is not easy to dig in the furrows of those old workers in fiction—the simplicity and pithiness of the popular creation is hardly attainable by the educated literary mind; but the author of the 'Wonder Clock' has so deeply imbued himself with the character of the literature collected by the Grimms and their successors, that to most children these stories will have as great interest as their prototypes. It is unnecessary to say that it often happens that old material appears *en bloc* in the new structure; but this was inevitable, and occurs equally in the old stories. The illustrations are effective, quite happily wedded to the stories, and thoroughly artistic.

Mr. Horace E. Scudder gives us another grouping of some of the best-known fairy tales, such as "Tom Thumb," "The Three Bears," "The White Cat." He calls it 'The Book of Folk Stories' (Houghton, Mifflin & Co.), and he has rewritten the various stories with very simple words and phrases, in order to suit the capacity of children no older than eight years. He hopes that the book may not only give pleasure, but be useful as a reader for little scholars.

The character of the heroine in 'Esther: a Book for Girls,' by Rosa Nonchette Carey (Lippincott), is meant to be an unusually strong as well as sweet one. But what becomes of the loveliness of a young woman who tells elaborately the story of her own virtues? The third person should have been used. The moral contradiction arising from employment of the first person is insufferable; and religious phraseology does not mend matters.

A still more liberal use of this phraseology is noticeable in the latest of Martha Finley's well-known "Elsie Books," entitled 'Elsie's Friends at Woodburn' (Dodd, Mead & Co.). And still more apparent, also, is the advocacy of highly developed religious self-consciousness. The orthodox formulas in which this is described will naturally recommend the story to persons who cherish those formulas, but not even such persons should forget the dangers which await a mental vision that turns too often inward. Common sense forbids stimulating the youthful mind, either in real life or in fiction, to excited religious introspection. There is a good deal that is pleasant in the affectionate relation of the father to his children in Martha Finley's book, but the sentiment is too effusive for good taste, and much of the talk is stiff, priggish, and overstrained. In a word, the tone of neither of these volumes at all comes up to our ideal of a healthy one in reading for the young.

It would be hard to find a better gift for a young girl fond of using her fingers and of pleasing her friends than 'The American Girls' Handy-Book,' by Lina Beard and Adelia B. Beard (Scribners). It covers some of the ground of 'The American Girls' Home-Book of Work and Play,' published a few years ago, but is superior to that in respect of the novelty and variety of information given as to making fancy and useful articles. The chapters on "Furniture, Old and New," and on "Sea-Side Cottage Decoration," are specially charming. The authors must be among the most ingenious of their sex. Their instructions are clear, and accompanied by a great many excellent wood-cuts, which at once embellish the text and aid much the reader's comprehension. We also find suggestions for pastimes and pleasures for every season of the year, and some of the games described embody unusual novelty. The hints given for Thanksgiving and Christmas merriment are capital. Then, too, the different kinds of topics are nicely intermingled, so that weariness is avoided. Some of the matter contained in this attractive book has appeared previously in different magazines for the young—as is, with too rare candor, stated in the preface; but this will not prevent its being most acceptable to many a bright and diligent maiden.

'Storied Holidays: a Cycle of Red-Letter Days,' is the title of a pleasant book by E. S. Brooks (Boston: D. Lothrop Co.). Among the holidays which are here associated with stories of the olden time are Christmas, New Year's, St. Valentine's Day, and others as familiar, while some, such as Michaelmas and All-Hallowe'en, are more famous on the other than on this side of the water. "The Daughter of Daicles" carries us back to Greek festival days, to the Olympiad of 480 B. C. "When George the Third was King" tells about our first Independence Day, and states some interesting facts regarding it which will be new to most readers, young or old. The general character of the book is sketchy and fragmentary, there being so little material on which to found the stories. But they are interesting for the most part, and will be very useful in helping to fix historical remembrance. They do not all appear for the first time. Each tale has a full-page illustration.

'Jack Hall,' by Robert Grant (Boston: Jordan, Marsh & Co.), is intended to be a reminder of the immortal 'Tom Brown,' through showing both contrast and likeness to an English boy's experience in 'The School Days of an American Boy'; and it is spirited and interesting, though hardly likely to rival its transatlantic predecessor. The accounts of the snow-ball fights in Boston streets, and of the base-ball game and boat-races, are graphic and animated. Surely the author must have been in them all himself. Indeed, one can hardly escape the impression that the book was written chiefly for the pleasure of describing boys' fun and the athletic sports of the day. Much is said about the latter's not being rightly the first object in life, but the *set* of the book is against this sensible idea. Talk about religion, of which there is a good deal in 'Tom Brown,' gives place in 'Jack Hall' to sound moral advice. It is a mistake, however, not to point out clearly the wickedness of attempts to inspire terror in practical joking. The amount and variety of slang introduced into both narrative and conversation, though a serious blemish from more than one point of view, will, of course, make the book only the more attractive to boys. We must concede that it helps to render the story life-like—how without it could base-ball be described? The illustrations, by Attwood, appear to have suffered in the hands of the engraver.

'The Boy Travellers on the Congo' (Harpers), by Thomas W. Knox, is simply an abridgment of Stanley's 'Through the Dark Continent,' and we are unable to see why this fact was not more clearly indicated on the title-page. The 'Boy Travellers,' who must be well on towards manhood by this time, do not go to the Congo, as the reader is naturally led to expect, but read aloud portions of Stanley's work. These are printed verbatim, the editor's part consisting merely of brief introductions and occasional condensations in the various chapters, together with a short account in the closing pages of the Emin Pasha Relief Expedition and of Masai Land. Like the other books of this series, it is profusely illustrated, and has some serviceable maps on the insides of the covers.

The scene of 'Ran Away from the Dutch' (Dodd, Mead & Co.), translated and adapted from the work of M. T. H. Perelaer, is laid in Borneo. Four soldiers desert from a fort in the southern part of the island, and, after numerous adventures and hair-breadth escapes, succeed in reaching Sarawak. Much useful information about the country, the people, their homes, and manner of life is brought into the story, but it is rather clumsily told, and there is an unnecessary and wearisome use of native words to express common things. It was a mistake, also, in a book intended partially for instruction, to assert that "it is really a positive fact, which many savants have accepted," that there are "tailed-people" in Borneo; nor should the travellers have been made to see a glacier-clad mountain. The book is very attractive in its outward appearance.

'On Special Service' (A. C. Armstrong & Son), by Gordon Stables, is a sea-story in which scenes in the life of a midshipman on an English man-of-war are pictured by one who is evidently very familiar with it. Though incidents are not wanting, and some are decidedly sensational, like the capture of the slaver and the negro fort on the Gold Coast and the fight with the pirate in the Indian Ocean, yet the story lacks life and "go." It is entirely unobjectionable, however, and possesses this negative merit in addition, that it will probably never make any boy reader restless and anxious to become a sailor.

In the 'Making of the Great West' (Chas. Scribner's Sons), Mr. S. A. Drake tells in outline the story of the discovery and settlement of that part of our country lying to the west of the Mississippi. He has succeeded in his task—easy so far as relates to the collection of the historical materials, difficult in making them into a connected and lively story—very well, both in his arrangement and manner of narration. Young persons who may find the earlier chapters somewhat dry reading cannot fail to be interested in those describing the events of the past eighty years. Since the author desires to have this and its companion volumes used by school-children, as in our judgment they are very well fitted to be, we will call his attention, for future correction if possible, to a verbal error on page 94, where "from Quebec to the Saint Lawrence" should read "from Quebec to the Mississippi." The quotation from Victor Hugo on page 79 is not only irrelevant, but curiously incorrect. The statement is that Henrietta, widow of Charles I., "died at Cologne, in the house where, sixty-five years before, Ru-

bens, her painter, was born." The facts are, that Rubens was born at Siegen in 1577, and Queen Henrietta died in 1666 at Colombe, near Paris. The book would have been more valuable had there been two general maps of the region treated, the one so shaded as to show the original possessions of the Spaniards, French, and English; the other showing the present political divisions. Some of the numerous illustrations are very good, but others, as that, for instance, on page 309, are simply execrable. There is an excellent index.

Self-reliance and the right use of one's time and opportunities are the lessons which are taught young people in the works of "Jak." The heroes of this author's previous stories have been boys, but in 'Who Saved the Ship?' (T. Y. Crowell & Co.), it is a girl who is the rescuer, a boy who fails and is literally shipwrecked. A second and much longer story in this volume is "The Man of the Family," in which are told the successful efforts of a fatherless lad of sixteen to make a home for his family. The pictures of Western frontier life are well drawn and very interesting. Those which seem to be overdrawn —the charming home which a college professor and his young bride have made in a "dug-out," as well as the incidents of the shipwreck—the author assures us are "truthful narrations." From the same writer and publishers comes 'The Giant Dwarf,' a story of German peasant life. A boy runs away from home in order to escape from its sordid and hopeless surroundings, and finds employment with a cripple, a man of high motives and great intelligence, a maker of toys and clocks. Under his influence the boy develops, and even the stagnant little village itself is gradually transformed. The story, which is suited to both young and old, is told very easily and is full of local color, with incidents sufficient to maintain the reader's interest from the beginning to the end.

'Afloat in a Great City' (Cassell & Co.), by Frank A. Munsey, is a story of the "dime novel" order. The scene is laid partly in New York and partly at sea, the hero being a young ragpicker, who, by some very remarkable coincidences, comes into the possession of a large fortune. There is some picturesqueness in the author's style, but the book is carelessly written, and, though there is nothing really objectionable in it, we cannot recommend it.

'Bonnie Prince Charlie' (Scribner & Welford), by G. A. Henty, is not so much the hero of this story as young Ronald Leslie and his faithful friend and servant, the old soldier, Malcom. They have numerous adventures of an exciting and, we must say, improbable character, which always end happily. The incidents of the battles of Dettingen and Fontenoy, and of the Pretender's romantic march from the Highlands to Derby and the defeat at Culloden, are told with much spirit. The scenes laid in France give a very good idea of the lawlessness prevailing in that country during the middle of the last century. The book is thoroughly interesting, and the historical portions are more skilfully interwoven with the narrative than has been the case in some of this author's previous stories.

ILLUSTRATED HOLIDAY BOOKS.—II.

The Land of Sleepy Hollow and the Home of Washington Irving. A series of photogravure representations, with descriptive letter-press by J. L. Williams, together with Irving's 'Legend of Sleepy Hollow,' etc. G. P. Putnam's Sons.

Enoch Arden. By Alfred Tennyson. Illustrated, engraved, and printed under the supervision of George T. Andrew; drawings by Edmund H. Garrett and Chas. Copeland. E. P. Dutton & Co.

Ballads of Romance and History. By Susan Coolidge, Adeline D. T. Whitney, Sarah O. Jewett, Margaret Sidney, Nora Perry, Celia Thaxter, Harriet Prescott Spofford, Margaret J. Preston, Elizabeth Stuart Phelps, Lucy Larcom, Kate Putnam Osgood, S. M. B. Piatt. Illustrated by Geo. Foster Barnes, Edmund H. Garrett, Harry Sandham, F. Childe Hassam, W. L. Taylor. Boston: D. Lothrop Co.

A Bunch of Violets. Gathered by Irene E. Jerome. Boston: Lee & Shepard.

The Bridal of Triermain. By Sir Walter Scott. With fourteen illustrations by Percy Macquoid, R.I. Boston: Lee & Shepard.

The Count of Monte-Cristo. By Alexander Dumas. With nearly 500 illustrations. In 5 vols. Geo. Routledge & Sons.

THE sound policy of selecting our American classics whose permanent interest is assured, for the lavish illustration and decoration which are becoming the vogue among publishers, is amply justified by the admirable book for which the material is furnished by Irving and Irving's home. As a work of pure illustration it is unique. Besides the reproduction of some of Darley's familiar outlines, the volume is illustrated by about thirty landscapes, mostly double, from the "Land of Sleepy Hollow"—all photographed from nature, and, with few exceptions, so well chosen and treated as to be unequalled by any similar collection produced on this side of the Atlantic. For the photogravures, not even this qualification need be made. There is, in some of the views, the too common fault, in negatives made for process prints, of insufficient exposure. This leaves the shadows in an undistinguishing blackness, which is a defect in any photograph, and which in all forms of process printing is much worse than in silver prints on albumenized paper from the same negative. In the frontispiece, for instance, and the views following pages 35, 50, and 64, and those before pages 57, 59, the landscape suffers by a needless loss of detail and meaning, and by blackness in all the deeper shadows, the photographer not having learned that what makes a good silver print does not always make a good photogravure, and that for the latter the higher limit of exposure should always be given. On the other hand, the views opposite pages 2, 10 (the larger), 26 (both), 48, 52 (especially fine as subject and photograph), 65, and 72, are of the very best class of photographic work. Several of these are gems of their kind, and will surprise even photographers who are not fully conversant with the recent advance in that branch of engraving in which the Photogravure Co. stands unsurpassed now, when it is a question of dealing with negatives from nature. When we add to this that the make-up of the volume is superb as to typography, paper, printing, and binding, and that the edition is limited to 600 copies, we have said all that is needful.

The make-up of Messrs. Dutton & Co.'s 'Enoch Arden' is luxurious. Each page—text on one side of the leaf and illustration on the other—is prepared for the imprint by various watered decorative designs, and the illustrations, thoughtfully if not always equally conceived, are cut with all the care characteristic of our school of wood-engravers. Some of the last designs are rather lackadaisical, but when forty-four designs have to be invented for a poem of the length of 'Enoch Arden,' it is certain that some will be, if only by comparison, weak. Moreover, the poem does not lend itself so well as most of Tennyson's to illustration. The landscapes are particularly good, which is perhaps hardly complimentary to a poem of especial sentimental and human interest, but, judged from any point of view, the book must be admitted to be one of the best illustrated publications of the year. Of course, as a rule, poems by the masters of verse can only be adequately illustrated by a corresponding intellectual power, and in general publishers consider book illustration as a kind of art which may be done by anybody who can draw. To follow out and embody the ideals of a great poet requires in some sort a sympathetic mind, but the illustrator, like the poet, *nascitur non fit*, and all that we can do is to get the best our generation gives us, and, in conscience and devotion, get it to do its best. There is no excuse for careless and frivolous, much less for impertinent designing, and thoughtful illustration is indispensable even if the art be not of the best. When this is not the case, it is generally the fault of the publisher.

The Authors' Club had once the idea to undertake a work similar to the 'Ballads of Romance and History,' but it still remains a project. The present volume, which to a certain extent realizes the dream of the Club, leaves the triumph of successful union of pen and pencil in a harmonious league something still to be accomplished. The verses seem too lame, the designs are too unequal, and the general make-up falls short. One can only say what might have been with more polish in the first, more conscience and study in the second, and more outlay in the third. Of the series of ballads that with the truest ring, "York Garrison," is fortunately wedded to the most appreciative design; the illustrations of Mr. Taylor in this case being admirable and in full sympathy with the text. Of the other illustrations not so much can be said, the most flimsy and irrelevant being those of Mr. Hassam, who evidently does not trouble his brains much with his text, and brings no compensation in the artistic quality of his drawings. The really pathetic ballad, despite some carelessness of form, "The Tenement House Fire," Mr. Hassam professes to have "decorated," but it is doubtful if decorated is any more proper term in this case than "illustrated." Both terms imply an addition of something—decorous in one case and explanatory in the other—and it can hardly be said of his work that it is either.

The collecting of poems and extracts relating to violets might have led, with a little art and enterprise, to the making of an excellent Christmas book, but in the case of 'A Bunch of Violets' it has produced indifferent results. The designs are commonplace, and the wood-engraving far below the American standard. When so much admirable wood-cutting and thoughtful designing is given us by the illustrated monthlies, and even by the weeklies, works like 'A Bunch of Violets' can hardly expect commendation for their art.

An English designer is responsible for the drawings made to accompany the 'Bridal of Triermain,' and reproduced by some form of heliotype. They are mostly figure studies, though one or two landscape views are much the most meritorious of the series. The paucity of imagination and the defects of draughtmanship are little short of amusing, and presumption is the sole word befitting the artist's undertaking. The text is clearly and even handsomely printed on an oblong page; but the binding in its general conception is worthy of the illustrations; and the whole performance must be ranked as fourth or fifth-rate.

The Messrs. Routledge's edition of 'The Count of Monte-Cristo' does not, like the foregoing works, exist for the sake of its pictures, plenti-

ful as these are. It is a library edition for the shelf, not the centre-table—five large and solid octavos, printed (and beautifully printed, by the De Vinne Press) on highly calendered paper, and simply bound in olive-green cloth. It takes its place beside the 'Misérables' issued by the same house. We have need here to speak only of the illustrations, which are of French origin. We cannot vouch for the exact date of their production, but they are as much out of the mode of the present day as the story itself—we were going to say, but Mr. Haggard's 'She' comes to mind. This leaves them, however, in harmony with the text, Romantic both, and both landmarks in the history of popular literature. We can turn readily to better art for household and every-day delight—better design, better wood-engraving. There is a mass of fiction which is more to our taste than Dumas's famous melodrama. All we can say is that they are here well mated, and that those who read English, and not French, have in this edition the comeliest embodiment of them known to us.

The Life and Times of John Jay, Secretary of Foreign Affairs under the Confederation, and First Chief Justice of the United States. By William Whitelock. Dodd, Mead & Co.

The first impression on handling this book is of excessive weight, out of all proportion to its size; and one finds on examination that this is due to very heavy and costly paper—a fair return for the price, doubtless, in the eyes of those persons who cannot conceive that paper can be too heavy, margins too wide, engravings too costly, and the like. In one of the most attractive pages of the 'Autocrat,' Dr. Holmes says: "The teaspoon should be of white silver, solid, but not brutally heavy, as people in the green stage of millionism will have them"—and the rule holds with book paper.

As with the raw material, so with the cookery. This 'Life of Jay' is made big and weighty by the addition of chapters, and parts of chapters, which are good enough as far as the thought and, if we use a little charity, the style goes. But they are pure padding, commonplace and needless. The author says: "It may be thought that the following work is of too historical a nature for a biography; but for a full understanding of the causes which led to the independence of the colonies, and Jay's consequent participation in national affairs, it has proved necessary to go back and trace events prior to the Revolution." And so we proceed to chapter after chapter, one, for instance, on "Taxation," and one on "Tea," which do not add a valuable word to what any school pupil can get in a reasonably good United States history. Really, any person who wishes to read the life of John Jay at all, might be supposed to know something. The author appeals for a precedent to Marshall's 'Washington.' Is he not aware that the later editions of that driest of books discarded two whole volumes of matter on the general subject of colonial history, which had proved effectually the truth of dear old Hesiod's line:

"Fools! who know not how half is more than all"?

There has rarely been a great man that deserved so little to be confounded with "his times" in this manner as John Jay. There was a peculiar personality about him, that deserves to be tracked, if possible, to its most secret springs in private life, as distinct from the sources that were supplying all minds of the day. He had an inborn probity, a genius for virtue, which makes Madison and Adams, much more Franklin and Jefferson, appear defective, and ranks him with Washington, with Greene, with Wilberforce, with Malesherbes—men who could not do wrong if they tried—those good men, for whom, as St. Paul says, "one might even dare to die." It is now considered the duty of a biographer, in writing the lives of such men as Hamilton, or Erskine, or Nelson, to suppress and even laud their vices. Perhaps "men's charitable speeches" demand so much; let Jay's personal virtue, in which he exceeded such men as Epaminondas and Russell, be set out in detail. For, if a foreigner or a child should ask for the saint of our Revolution—not the hero, or the philosopher, or the orator, or the financier, but the best man who gave his services to his country—what name would rise to our lips sooner than John Jay? He was "Chief Justice" by nature as by office.

It will be inferred from what has been said that we do not think Mr. Whitelock's book is worthy of his subject. "'I have no doubt he means well, my dear,' said Mr. Micawber, 'but I have not yet found that he carries out his meaning in any particular direction whatever.'" He has not the penetration or the grasp of mind adequate for entering into Jay's character and setting it in its right position. His own methods desert him at critical points. It is his object, for instance, to vindicate Jay's character as the author of the famous "Treaty." As this document is much more talked about than known, it would have been an excellent thing to print it in full in an appendix. Mr. Whitelock has so inserted two other state papers of Jay's, valuable, but not by any means so identified with Jay's name as is the treaty. But no treaty do we find in the appendix.

There is another obvious flaw in the author's historical method. He appears to have read English history solely as a supplement to American history, and not for its own sake. This is a very common fault with American historians, even such distinguished ones as Dr. Palfrey and Mr. Bancroft. Their elaborate chapters on events in England are, not merely in their pages but in their minds, only episodes in the grand sequence of American events, like the battle of Preston Pans in 'Waverley.' Yet those men at least have been forced, by the amount of European history they have read, to acquire some independent conception of it, however their intense nationality acts to sink it to a place below its intrinsic importance. But what are we to think of a writer who again and again writes "Townsend" and "Lucerne" for "Townshend" and "Luzerne"? We are sure Mr. Whitelock would be disgusted with "Ticonderago" or "Massachussets"—both very common in English historians; yet he rivals such authors.

To close with praise after censure, let us say that we regard the author's defence of the principles and temper of the Federalists against those of their opponents from 1800 till the present time as excellently done—a piece of manly, spirited, truthful writing; much the best thing in the book.

Victorian Poets. By Edmund Clarence Stedman. Revised and extended, by a supplementary chapter, to the fiftieth year of the period under review. Boston: Houghton, Mifflin & Co. 1887.

On the first appearance of Mr. Stedman's 'Victorian Poets' we gladly pointed out its great merit as a hand-book of English poetry during the Victorian period, while we felt called on to demur mildly at its claim as "an essay in philosophical criticism." It now appears in a fourteenth edition, with a supplementary chapter of some seventy pages, extending the range of examination up to the end of the fiftieth year of the Queen's reign. In this Appendix the critical element is necessarily smaller and the hand-book quality more marked than in the main work; indeed, one examines it with almost a sensation of pity for the labor of eyesight required in making such a catalogue of microscopic authors. Some of them are on a scale so small that the recorder has been unable to ascertain their birthdays, so that they appear in the margin, with melancholy vagueness, as having been born in 18—. But it is far better, after all, to be too comprehensive than the reverse; and the humblest of these bards may, at any moment, appear among us in person, ready and anxious to lecture Americans on any conceivable theme, in words of one syllable. Mr. Stedman, in his additional chapter, takes occasion to restate, with some modifications, his earlier judgment on certain leading poets; especially in the case of Browning, whom he now pronounces the "leader-elect" of the immediate future, as was Tennyson of the time just gone by. He is perhaps a little too sarcastic upon the Browning societies, which in this country have passed their period of effervescence and settled down upon simple and creditable work. One of the most valuable portions of Mr. Stedman's volume is the analytic index, which is reconstructed and made to include both parts of the book—a work which is, after all, so carefully and thoroughly done that it will fill in every library a place that must otherwise have remained empty.

BOOKS OF THE WEEK.

Alden, Mrs. G. R. The Pansy: Stories of Child Life, at Home and Abroad, and of Modern and Ancient History. Illustrated. Boston: D. Lothrop Co. $1.25.
Allen, W. B. The Northern Cross; or, Randolph's Last Year at the Boston Latin School. Boston: D. Lothrop Co. $1.
Baker, G. M. The Humorous Speaker. Boston: Lee & Shepard. $1.
Bruce, Prof. A. B. The Humiliation of Christ, in its Physical, Ethical, and Official Aspects. 2d ed. A. C. Armstrong & Co. $2.50.
Bryce, L. S. Paradise: A Novel. Funk & Wagnalls. 25 cents.
Carrington, Dean H. Translations from the Poems of Victor Hugo. Thomas Whittaker.
Coxe, Bishop A. C. Institutes of Christian History. Chicago: A. C. McClurg & Co. $1.50.
De Omnibus Rebus. An Old Man's Discursive Ramblings on the Road of Every-Day Life. By the Author of 'Flemish Interiors.' Illustrated. London: John C. Nimmo.
Dolbear, Prof. A. E. The Art of Projecting: A Manual of Experimentation in Physics, Chemistry, and Natural History with the Porte Lumière and Magic Lantern. Boston: Lee & Shepard. $1.
Doran, Dr. Annals of the English Stage, from Betterton to Edmund Kean. Edited and Revised by R. W. Lowe. Illustrated. In 3 vols. London: John C. Nimmo.
Dumas, A. The Count of Monte-Christo. In 5 vols. Illustrated. George Routledge & Sons. $15.
For Her Daily Bread. With preface by Col. Robert G. Ingersoll. Chicago: Rand, McNally & Co. 25 cents.
Geikie, Rev. C. The Holy Land and the Bible. In 2 vols. James Pott & Co.
Gerry, C. F. Meadow Melodies. Illustrated. Boston: Lee & Shepard. $1.75.
Grier, Sarah A. A Few Hints About Cooking, with Remarks on Many Other Subjects. Boston: Wright & Potter Printing Co.
Irving, W. Belles-Lettres Works. Tappan Zee Edition. 12 vols. G. P. Putnam's Sons. $12.
Jesup, Rev. H. G. Edward Jessup of West Farms, Westchester County, N. Y., and his Descendants. Cambridge: John Wilson & Son.
Jones, L. E. The Best Reading: Bibliography of the More Important English and American Publications for the Five Years ending December 7, 1886. G. P. Putnam's Sons. $1.
Kirby, E. N. Vocal and Action-Language, Culture and Expression. Boston: Lee & Shepard. $1.25.
Lakeman, Mary. Faith's Festivals. Boston: Lee & Shepard. $1.
Leander, R. German Fantasies by French Firesides. G. P. Putnam's Sons. $1.
Mathews, W. Men, Places, and Things. Chicago: S. C. Griggs & Co. $1.50.
Mowry, W. A. Studies in Civil Government. Boston: Silver, Rogers & Co.
Ogden, Ruth. His Little Royal Highness. E. P. Dutton & Co. $2.
O'Meara, Kathleen. Narka, the Nihilist. Harper & Brothers.
O'Rell, M. Friend McDonald and the Land of the Mounseer. Harper & Brothers. 20 cents.
Our Little Men and Women: Illustrated Stories and Poems for Youngest Readers. Boston: D. Lothrop Co. $1.50.
Proctor, R. A. Easy Lessons in the Differential Calculus. Longmans, Green & Co. 90 cents.
Proctor, R. A. First Steps in Geometry. Longmans, Green & Co. $1.25.
Proctor, R. A. Half-Hours with the Stars: A Plain and Easy Guide to the Constellations, specially prepared for American Students. G. P. Putnam's Sons. $3.
Renan, E. Histoire du Peuple d'Israël. Vol. I. Paris: Calmann Lévy; New York: B. Westermann & Co.
Richardson, Dr. B. W. The Health of Nations: A Review of the Works of Edwin Chadwick. In 2 vols. Longmans, Green & Co.
Rowbotham, J. F. The Death of Roland: An Epic Poem. London: Trübner & Co.
Saunders, F. The Story of Some Famous Books. A. C. Armstrong & Co. $1.25.
Scott, Sir W. Rob Roy. Boston: Ginn & Co.

The Nation.

NEW YORK, THURSDAY, DECEMBER 1, 1887.

The Week.

THE *Sun*, in trying to be an organ again, said on Wednesday of last week:

"In writing the famous Fellows letter, declaring himself distinctly in favor of the election of the celebrated Democratic candidate for District Attorney of this city, Mr. Cleveland undoubtedly made a conspicuous concession to the Democratic political Machine on the spoils basis—that is to say, to the United Democracy of New York. This at once excited a remarkable degree of disgust and distrust among the Mugwumps; and they have condemned and criticised and even reviled Brother Cleveland in a loud, active, and bitter fashion."

This is as near the truth as the *Sun* ordinarily comes in discussing such matters. But it is to be observed that, although the Mugwumps still condemn and criticise the President's letter, as a most unfortunate piece of interference in a municipal election on behalf of a bad candidate, they have not condemned or criticised it nearly so severely since they learned that the President recalled the letter on hearing what kind of candidate Fellows was, and that if its publication had been delayed a few hours longer, it would never have seen the light. In other words, he could not and would not have written it about a man who borrowed money from Tweed while that scoundrel was under indictment, and who pleaded public morals in a suit for a gambling debt. He knows very well, of course, that the chances are all against such a man's proving a fit public prosecutor in a large commercial city, and that the very worst service he could render his party would be to help it to elect him.

Mr. F. J. Babson, President of the Fishery Union, employs two columns of the *Tribune* in a learned refutation of Adam Smith and in the defence of duties on fish, showing conclusively that the whole dispute which is now putting in peril the peace of the two English-speaking nations is a matter of about $500,000 a year, which the fishermen want to levy on the consumers of cod and mackerel in the United States. Mr. Babson is very sure that his Association will never consent to reciprocity with Canada, and here he is undoubtedly correct. But there are signs in the political firmament that the fish duties may be abolished along with some other iniquitous and unnecessary taxes without any reciprocity treaty, or any treaty of any kind. When a particular and very small interest happens to bring the country into a foreign complication which everybody else would like to avoid, and when the matter in controversy is an insignificant item in the tariff, common sense would dictate that it be brushed out of the way by a simple and short act of Congress; and this might be done without the least injustice, since the duty on fish is not one of those which a particular interest has been long accustomed to, and may therefore say that it needs, to keep itself alive, but is a novelty and innovation of only two years' standing.

The question what our fishermen want in their quarrel with Canada has received a great many different answers—so many, indeed, that we were thinking that no new one could be thought of. But in this we were clearly mistaken, for Mr. O. B. Whitten, Secretary of the Fish Exchange at Portland, supplies the *Tribune* an entirely new one, and one which, if generally concurred in by the fishing interest, would end all trouble at once and send Mr. Chamberlain and his associates home forthwith, besides relieving Mr. Bayard of a great deal of anxiety. "I do not want it [the Commission] to do anything," says Mr. Whitten. "It is my opinion that the New England fisherman is far better off when he *stays at home*, and prosecutes his work on his own shores, than when he goes within the Canadian shore limits. There is nothing within those limits that is of profit to him, because the water is so shallow that his expensive seines are in danger of great damage. You cannot find one owner between here and Gloucester who would pay a cent for the chance of fishing there." There has been an opinion prevailing in the country generally that what our fishermen want is Canadian shore privileges; that they want to buy bait and supplies, and to ship seamen from Nova Scotia and Newfoundland—in short, to fish from British territory; and that they claim the right to do this under the concurrent legislation and proclamations of 1830. But if Mr. Whitten is right, this is a mistake, or at all events a miscalculation of true American interests. What they want is to "stay at home." Well, nothing can be easier. We hope that Mr. Whitten may persuade the Gloucester men to share his views.

The Postmaster-General's answer to the criticisms on the recent circular touching the printing on the covers of third-class matter is, that when the new edition of the 'Postal Laws and Regulations' was recently prepared, it was discovered that the provisions of the statute of 1879 had been long overlooked, and therefore disregarded; and that he had, therefore, as soon as the violation of the law was discovered, no choice but to enforce it. Our reply to this would be that the Post-office exists as a convenience for the public rather than as an illustration of the power and supremacy of the law; that the unconscious and innocent violation of the law is a very common thing in all civilized countries, and so is the falling of laws into desuetude through oversight on the part of persons charged with their execution; that when the discovery of such oversight is made, it is the duty of administrators to revive the laws with the smallest possible amount of annoyance or detriment to the public, for whose benefit and commodity the law exists; and that the very first duty of the administrator in such case is to give as full notice as possible of the impending change in the practice of his office, so that no ordinarily careful person will suffer in property or convenience therefrom. Mr. Vilas knows very well that under civilized governments no officer is expected to enforce the law under all circumstances and at any cost. He is bound to use judgment about it in all unforeseen emergencies and crises, and trust for indemnity to the Legislature in case he has had to violate or suspend a statute. It is only under Oriental governments that the law is carried out without regard to the lives and property or convenience of the people who live under it. The Post-office, in short, is made for man, not man for the Post-office. If people have been led into mistakes in the conduct of their business by the oversight or neglect of the Post-office officials, they ought undoubtedly to be called on to correct them; but ample time should be given them for this purpose, even if the violation of the statute, after having continued for seven years, should continue for seven weeks longer. What would happen if it did? It would not be the first time that a United States statute has been temporarily disregarded, and neither plague, pestilence, nor famine has followed; and we who say this, yield to nobody in reverence for law.

The situation of the Commissioners of Emigration is an anomaly that falls little short of being disgraceful, not to them, but to the State and the nation. In the first place, they serve without pay or compensation of any kind. In the second place, they are State officers, responsible to the Governor, and the property under their control belongs partly to the State and partly to the city of New York. In the third place, the fund out of which the expenses are paid comes through the Treasury at Washington, being collected as "head-money" from the steamship companies that bring the immigrants. The State has no longer any interest in keeping its buildings in repair or keeping them insured, since they are only nominally the property of the State. They were paid for out of the "head-money" at the time when the State collected that fund—that is, before the courts decided that Congress only could impose a tax on foreign immigration. This was a correct decision, undoubtedly, but it ought to have been followed by a complete transfer of the responsibility of the Bureau of Emigration to the general Government, so that control over the funds and control over the persons disbursing the same should be lodged in the same place.

Much lamentation seems to have been caused by the granting of a subsidy of $80,000 a year by the Argentine Government to an English company for a line of steamers to run between Buenos Ayres and New York. We should suppose that this would be the occasion of great rejoicing among those

who have been worrying all these years about the smallness of our South American trade. Have they not told us all the time that what we needed to put new life into this trade was direct steam communication with South American ports? But now that this boon is supplied without a dollar of expense to us, we hear nothing but dismal forebodings of the result, because, forsooth, the subsidy did not come from our Treasury and go to an American company. Was it the subsidy that they wanted rather than the trade? So it would appear from the tone of the protectionist newspapers.

Protection has found a new peril in a Treasury regulation which permits druggists to import oil of peppermint in sixteen-ounce bottles and reëxport it in twenty-one-ounce bottles without paying the duty of 25 per cent. which our tariff levies on that worthy drug. The farmers of Wayne County, N. Y., are said to be in a high state of excitement over it, since their peppermint has acquired great fame in the world, and it is feared that the repacking of peppermint oil in American ports and in American bottles will take away their foreign markets. A telegram from Lyons, N. Y., says that "the effect is to materially reduce the price to the producers in Wayne County, for it practically annuls the customs duties, and enables the exporters to buy in Japan at low prices instead of looking to American cultivators for their supply. The farmers here, irrespective of party, are indignant at the Administration for thus establishing free trade in a direction coming home to their own interests, and are bringing influences to bear to have the decision reversed." It is not alleged that an ounce of peppermint oil can get into the hands of American consumers without paying the duty, but merely that the oil touches our shores before going to foreign markets. In so far as this amounts to a deception it is a wrong, of course, but it is difficult to see how the Treasury Department is to prescribe the size of bottles that peppermint oil shall be packed in for foreign consumers. It is easy to see, however, that if packing in bond in New York is not permitted, it will only be necessary for the free-traders to send their bottles to Japan instead of bringing their peppermint here. We hope that this crisis may be met somehow before the next election. We do not want a peppermint issue to be added to the Southern question, the fishery dispute, the Anarchist trouble, the surplus, and all the other perplexities of the political situation.

The protection issue is rapidly becoming a hard thing for the Republicans to handle. The trouble is that the farmers of the West are weary of a high tariff, and insist upon a change. Republican newspapers in that part of the country find the sentiment in favor of tariff revision too strong to be withstood. A third of the Republican State Convention in Nebraska a few weeks ago voted for what is generally called a free-trade plank in the platform, and the Omaha *Bee*, a representative party newspaper, keeps publishing such editorial paragraphs as this: "Under the existing tariff system a duty of 92 per cent. is exacted on the cheaper cloths, and 57½ on the more expensive ones. As the poorer classes have to buy the former, and the rich mainly purchase the latter, the injustice of this arrangement is manifest." The Chicago *Tribune* goes a step further, and flatly charges that the Republican defeat in New York was due to the stupid blunder of the managers in pushing forward the high-tariff issue. The only hope which the *Tribune* of Chicago can see for the future of the party is in a change of base on this question and the adoption of the Western view, which the *Tribune* of New York, the *Press* of Philadelphia, and other such Eastern organs are wont to denounce as "the free-trade heresy."

In floundering around after an issue of some sort, Republican organs are trying desperately to make something out of the Dakota question. It is charged that the settlers of Dakota have been robbed of their rights because a Democratic House has hitherto refused to admit the southern half of that Territory as a State, and there is loud talk about "the crime against the people of that Territory" involved in this attitude of Congress. This is all nonsense. Up to the present time the case about Dakota has been simply this: A lot of politicians in the southern part, who had divided among themselves the senatorships and other offices of the prospective State, have vigorously asserted that an overwhelming majority of the people of the whole Territory wanted to have it divided, and the lower half at once admitted as a State. But they would never consent to an election which would decide whether or not their claim was well founded. At last an election has been held, and although the first reports represented that there was a large majority in favor of division, full returns show that all but three counties in the northern half voted against division, that no less than fifteen in the southern half voted the same way, and that the majority for division does not exceed 3,000 in a total vote of about 70,000. This certainly proves that at present there is no unanimity of feeling for division, and that if there ever was a strong sentiment of that sort, the growth of population and the development of common interests have operated to diminish it. The hesitation of Congress is abundantly justified, and it is still a question whether, with the population so evenly divided now, and apparently drifting more and more towards union, it should not exercise its authority to insist upon the Territory coming in as a single State.

It seems rather a melancholy thing that a regular "Professor of Journalism" in one of our universities, such as the Hon. Charles E. Fitch, editor of the Rochester *Democrat*, is, should have to apply for the place of clerk to the State Senate in order to secure "a vacation from the wearing duties of his present [editorial] position." Yet such is the tale told us by his friend the Ogdensburg *Daily Journal*. In the first place, it is rather odd that service in the Senate clerkship should be to all intents and purposes a vacation, for it draws a salary, and professors of journalism ought not to take a salary for taking a vacation. In the next place, we should think Mr. Fitch might secure the needed rest from "the treadmill of editorial work" in his professorial labors at Cornell. These would give him change of occupation, and change of occupation often means rest. In fact, we can imagine nothing more soothing and refreshing to an intellectual man than the delivery of a course of lectures this winter on the journalistic art, illustrated by the writings of those illustrious practitioners, "Judas," "Ananias," and "the Bilk" of this city. To lead the young Cornell mind through the various phases of a controversy carried on by these gentlemen, mingling instruction with criticism on the way, would surely be far more recreative, as well as far more interesting, than doing the mechanical drudgery of the Senate clerkship.

Among the topics which a university lecturer on "Journalism" would, we should think, treat, would be: "The Choice or Invention of Opprobrious Names for a Hostile Contemporary"; "The Proper Treatment of a Mortgage on a Contemporary's Buildings or Plant"; "The Discovery and Discussion of Disagreeable Occurrences in a Contemporary's Past Life"; "Circulation Boasting"; "On Swearing to Circulation"; "On Challenges to Rivals to Come and Examine One's Books under a Penalty"; "On the Proper Mode of Avoiding Retraction or Apology"; "On the Various Modes of Belittling Corrections by a Correspondent"; "On the Making of Fresh Charges Against a Man who Denies One Already Made"; "On the Manufacture of Bogus Despatches"; "On the Collection and Arrangement of Scandal"; "On the Funny Treatment of Executions and Crimes." This would make a nice and improving course of twelve lectures.

Why the *Herald* has raised its price to three cents we do not know, nor does it make much difference what are its motives in making the change. That it is a change in the right direction few intelligent observers will deny, and that all its competitors will speedily follow its example, every one who cares about the moral or intellectual influence of the press must sincerely hope. The lowering of the price of the morning papers to two cents in this city has, in fact, been little short of a public calamity. There was abundant commercial justification for it in the case of one paper, as long as the others maintained their old price. When the *Sun*, for instance, was selling at two cents, and the other morning papers at three or four, it had abundant room to grow in circulation at their expense. Its possible market consisted of all people who were paying three cents for their morning paper, and would be glad to get it for less. But when all the morning papers except the *Tribune* came down, this advantage

was lost. All became competitors in exactly the same field. When it was found, as might have been expected, that the number of newspaper readers could not be increased by any lowering of the price, and that few would buy more newspapers than they were accustomed to buy, because they had become cheap, there was nothing for it but to try to wrest circulation from each other. This meant outdoing each other in provision for what were supposed to be the tastes of the largest reading class in the city, or, in other words, by the daily accumulation of the largest possible amount of scandal, and by the elaboration of crimes, and offences, and vicious adventures, into ornate, diffuse, and highly sensational narratives. Of course, this could not be done successfully without a corresponding sacrifice of the serious and really interesting things of life—the politics, and art, and literature, and economy of the civilized world. We think we can appeal with confidence to all who can remember the New York press since the establishment of the *Tribune* and *Times*, to say whether in that interval there has ever been so little attention to the graver concerns of the community, and so much to its foulnesses, and follies, and sillinesses, as during the two-cent period.

The crisis in French politics has come at a bad time for M. de Lesseps, who had applied to the Rouvier Ministry for an authorization to issue a lottery loan for 565,000,000 francs, and eventually for a further sum to take up old loans. This application, coming simultaneously with the abandonment for the present of the sea-level canal and the substitution of locks at the Culebra section, caused a decline of 70 francs in Panama shares, and a corresponding drop in the bonds of all classes—the 1,000 franc 3 per cents that were issued last year at 450 falling to 360.

The French protectionists have got into a deplorable squabble about the drawback on pig-iron. Under the customs regulations, any manufacturer of iron for exportation can import pig free of duty by giving a bond that it shall be reëxported after conversion into other forms. But it was found inconvenient and wasteful to carry the iron from a seaport to the interior to be worked up and then carry it back to the seaport to be exported. So a practice grew up of importing the pig and selling it at the seaport duty free, using the equivalent amount of French iron in the manufacture, under Government supervision. This has caused an accumulation of pig at and near the seaports, and led to an outcry from the iron producers in the North and Northeast. So they have prevailed upon the Government to rescind the regulations, and require that all pig imported duty free shall be transported under Government escort to the place where it is to be manufactured. This beautiful arrangement, it is said, will throw out of employment 10,000 workmen in the central departments. The danger on that side has become so imminent that at the last moment the Government suspended the new order, and is now trying to reconcile protection to itself.

M. Barodet and sixty other Radicals in the French Chamber have brought in a bill restricting the Legion of Honor hereafter to military and naval men, and forbidding its bestowal on civilians. It appears there are 34,260 persons in France who wear this decoration to-day, of whom only three-fifths are soldiers or sailors. The rest are civilians, of all sorts of occupations, who have got the honors in all sorts of ways, largely, it is said, through electioneering services to the Ministry of the day. But the Barodet bill is for this reason not likely to be passed. The *Journal des Débats* discusses it jeeringly, and asks what would become of the principle of equality, of which Frenchmen are so fond, if nobody could have the decoration but people who had risked their lives in battle? If, for instance, it was refused to a chief clerk in a Government office who opened letters all day, or to a successful grocer, and given to a man who had been under fire in twenty actions, would it not be a gross outrage on the principle?

It would appear as if the destruction of the Salisbury Ministry was after all to come not from the Irish question, dangerous as it is, but from attempts at dealing with English questions, in lieu of or in precedence of the Irish question. When the Conservative Congress, 1,000 strong, met the other day, the "fair trade" fanatics broke loose, and seem to have had the majority with them. They all want to tax something foreign, but cannot agree on what it ought to be. The farmers want to tax foreign grain and beef, but in order to do this there must be something done to compensate the artisans in the manufacturing districts for putting up the price of their food. What this should be, no one is able to tell. Hardly any foreign manufacturers compete with English goods in the English markets. What English trade and industry is suffering from is foreign competition in foreign markets. For this there is no remedy in English legislation which would not resemble the excision of one's nose to spite one's face. So all is confusion, and old John Bright, who is tired of cursing the "Irish rebels," appears on the scene to curse his new allies. He says with his accustomed frankness that they "return like a dog to his vomit," and that "they are all in confusion, and know not what they ask." This is true, but it is true of the Tory mind about other things than free trade.

Canon Taylor's much-talked-of Wolverhampton address on the progress of Mohammedanism and its relation to the civilization of Africa appears, at first sight, to have found an unexpected and most remarkable confirmation in a book just published by Dr. E. W. Blyden of Liberia. The latter is himself a full-blooded negro, and a professor in the negro College of Liberia. His testimony, therefore, to the comparative failure of Christian missions to do anything for the uplifting of his race, and his belief, Christian that he is, that more is to be hoped for from Mohammedanism than Christianity, have naturally been regarded as of the highest significance. But an able reviewer of his book in the London *Church Missionary Intelligencer* for November picks it to pieces in a fashion that robs it of nearly all of its authority—at least on the point of the blessings which, it maintains, have been wrought by Mohammedanism in Africa. He shows, in the first place, that Dr. Blyden confines his attention to but a limited area on the west coast, and that his surprising assertion that the introduction of Islam has "been the most important if not the sole preservative against the desolations of the slave-trade" is made in complete oversight of the mass of testimony proving that, certainly to the east of Lake Chad, Mohammedans are the most energetic of slave-traders, finding their markets in Mohammedan Egypt and Arabia. Similar havoc does the reviewer make of Dr. Blyden's claim of superior sobriety, chastity, and truthfulness for the Mohammedanized negroes. Travellers, early and late, Christian and indifferent, from Landor to Schweinfurth, are summoned as witnesses on the other side, and their rebutting evidence is of the strongest character. In fact, Dr. Blyden, like Canon Taylor, seems to have been treating of an ideal Islam, and to have argued from altogether too narrow premises. That the former is a good deal of a visionary is recognized by Mr. A. H. Sayce in the London *Athenæum*, and is certainly implied by his gravely cherishing the fancy that the negroes of the United States might easily be induced to return to Africa as evangelists and civilizers. We had supposed that such ideas had expired with the Colonization Society.

Thanks to the good offices of the German Minister to Central America, the difficulties between Guatemala and Mexico, which at one time promised a grave issue, are in a fair way to be adjusted. On the 18th of September a convention was signed by the Mexican Minister and the Secretary of State of Guatemala, providing for the negotiation, at the earliest day possible, of a treaty between the two countries, which is to look to the establishment of a mixed commission to try all cases arising out of claims against either Government. The convention also calls for a modification of the tariff laws so that the raw materials of either country may be imported free of duty into the other. This amicable agreement was followed by a formal apology, on the part of Guatemala, for the failure of justice in the case of the assaulted attaché of the Mexican Legation; and thus all causes of ill-feeling would seem to be removed. It is of interest to note, in this connection, that President Barillas, who proclaimed the Dictatorship on the 26th of last June, almost immediately summoned a constituent Assembly to revise the Constitution and consult for the best interests of Guatemala. That body opened its sessions on the first of October, when it listened to a long message from President Barillas, justifying his course and recounting the measures adopted by him during the time of his absolute power.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 23, to TUESDAY, November 29, 1887, inclusive.]

DOMESTIC.

THE Fisheries Commissioners held their second formal meeting in Washington on November 28. Among the publications on the subject of the fisheries that have recently come into the possession of the American negotiators is the Canadian book of despatches containing correspondence between the Canadian and English Governments, which was to a certain extent unknown to the Department of State, and is expected to prove of value in the pending negotiations.

Secretary Bayard entertained a company of gentlemen on Saturday evening, at dinner, to meet Mr. Joseph Chamberlain. The other guests were Senator Ingalls, Secretary Fairchild, Secretary Lamar, Postmaster-General Vilas, Mr. Putnam, Sir Lionel S. West, the British Minister; Sir Charles Tupper, Gen. Cameron, Messrs. Thompson, Bergne, Winter, Moore, Graham, Senators Edmunds and Sherman, and Mr. Angell. Later, Minister West gave a reception to Mr. Chamberlain.

The report of the Third Assistant Postmaster-General for the last fiscal year shows that the total ordinary postal revenue of the year was $48,118,272; revenue from money-order business, $719,836; total, $48,837,609; total expenditures, $53,133,252. The receipts of the year were 11.1 per cent. greater than those of the previous year; the increase of expenditures was at a ratio of but 3.4 per cent.

Secretary Lamar, in his annual report, will recommend that the Inter-State Commerce Commission be made independent of the authority or supervision of the Interior Department, and that it be made directly responsible to Congress or to the President.

The friends of the Naval War College at Newport are greatly disturbed by a project, which is said to be under consideration, for transferring it to Annapolis.

The number of disasters to documented vessels reported within the field of station operations of the Life-Saving Service during the last year was 332. On board these vessels were 6,327 persons, of whom 6,272 were saved and 55 lost. The number of shipwrecked persons who received succor at stations was 737, to whom 1,894 days' relief in the aggregate was afforded.

On Saturday evening a largely attended meeting was held in Chickering Hall, New York, by the friends and advocates of international arbitration. Mayor Hewitt presided, and addresses were made by Sir George Campbell, Mr. Frederic R. Coudert, Halley Stewart, M. P., and W. R. Cremer, M. P. The Chairman was authorized to appoint a committee of five persons to urge upon the United States Government the advisability of effecting a treaty of arbitration with England, and to formally request Congress to call a convention of the nations of North and South America, for the purpose of forming an International Court of Arbitration.

A. G. Menocal, civil engineer in the United States Navy, and Chief Engineer of the Nicaragua Canal Construction Company, says that, of the various plans suggested, the company has decided to reëxamine two, in which the canal from the port of Brito, on the Pacific, to Lake Nicaragua, the navigation across the lake, and slack-water navigation in the River San Juan as far as Ochoa, are common to both, the difference between them being confined to that portion of the routes from the dam across the San Juan River at Ochoa to Greytown. One plan contemplates following the general direction of the River San Juan from the dam to the vicinity of Punta Petaca, just above the outlet of the San Juanillo, and thence by an almost straight line to Greytown. The other involves the same dam at Ochoa, and, by retaining an uninterrupted level through some three miles of the canal and across the basin of the stream San Francisco, which it is proposed to flood and convert into an artificial lake by the construction of an embankment just before it empties into the San Juan, the summit level is extended to the eastern slope of the dividing ridge between the basin of the San Francisco and the valley of the lower San Juan, a distance of 144 miles from the upper lock on the west side of the lake. A lock of 53-feet lift has been proposed at the eastern terminus of the summit level, and thence to Greytown, a distance of 17 miles, the canal follows first the valley of the brook Deseado to Laguna Benard, and then across the flat alluvial plain of the San Juan River to Greytown.

The discouraging outlook for the Northwestern stock business, as it appeared last spring, proves to have been unwarranted. The Northern Pacific has hauled East from Montana and western Dakota this season 72,450 head of beef cattle, against 80,950 in 1886, a decrease of only 7,500 head. Last year 2,280 head of cattle were shipped East from Washington Territory, but on account of the coast demand being greater this year, none were shipped. The shortage from Montana and western Dakota is only 6,220 head. The number of Northern Pacific was 99,648 head, against 110,525 head last year, a decrease of 10,895. These figures show a decrease in the stock movement of only 10 per cent.

Monday, November 28, was extremely cold in the Northwest. In some places the mercury fell lower than it had ever been known to fall so early in the season. In St. Paul it touched 16°, at Fort Buford 28°, at Bismarck 24°, at La Crosse 20°, at Galena 10°, and at Waterloo, Iowa, 38°, all below zero. In Chicago the lowest point touched was 2° above zero.

A welcome rain fell throughout the northern part of Texas on November 24. It was the first of any importance in three months.

Some of the opponents of James G. Blaine are endeavoring to induce the Republican National Committee to select New York city as the place for holding the National Convention.

Senators Cameron and Quay are exerting themselves in Washington to induce the Republican National Committee to call the National Convention of their party in Philadelphia.

Prominent Republicans in Michigan met in Detroit on November 24 to take action with reference to the meeting of Republican clubs in New York on December 15.

Gen. Lew Wallace, author of 'Ben Hur,' was one of the new names mentioned in the papers last week for the second place on the Republican ticket.

Senator Blackburn favors the nomination or Gen. John C. Black for Vice-President on the Democratic ticket.

About 200 people attended the Minnesota State Prohibition Convention held in St. Paul on November 22. Plans for the next campaign, which were adopted, include a thorough organization of the party throughout the State. A State Central Committee of fifteen was elected.

On November 26 an exciting election was held at Atlanta, Ga., to determine whether the sale of liquor should be prohibited in that city. The Prohibitionists were defeated, the majority against them being comparatively small.

The Mayor of Toronto, Mr. William H. Howland, has been invited to deliver an address on the subject of Sunday liquor-selling and temperance at a meeting of citizens in Steinway Hall on the evening of December 13.

Returns from nearly all the counties in Dakota show that the majority for a division of the Territory will not exceed 3,000, the total vote being about 70,000.

The official returns from the election in Virginia show a Democratic majority of 426.

The citizens of New Haven will vote next Tuesday on the question of disposing of the old State-house.

Nathaniel J. Bradlee has been nominated as the Citizens' candidate for Mayor of Boston.

The Jersey City Board of Works on Monday passed, over Mayor Cleveland's veto, the resolution permitting the elevation of the Pennsylvania Railroad tracks.

On November 29 the Court of Appeals at Albany rendered a decision in the case of Jacob Sharp, convicted in the Supreme Court of bribing the New York Aldermen of 1884 to grant the right of way for a horse railroad in Broadway. The question before the highest court was as to the rulings of the lower court. The decision reverses the judgment of conviction, thus opening the way for a new trial. The main point of the elaborate opinion, which was written by Judges Danforth and Peckham, is that error was committed by the trial court in permitting the prisoner's evidence against himself to be received, such evidence having been obtained by the Committee of the State Senate on an investigation of the charges of bribery.

The Reading Railroad property was, by an order of the court, on November 23, taken from the hands of the receiver and turned over to the company, the order to take effect on January 2, 1888.

On November 24 the Lehigh Railroad employees and miners at Pottsville appointed a committee to confer with the employers on the subject of the prevailing strike. The statement is made that the condition of the strikers is such as to compel them to go to work.

An investigation into the management of the Indiana Reformatory for women, by Gov. Grey, shows that shocking cruelty has for a long time been inflicted upon inmates. The management is wholly in the hands of women.

Cardinal Gibbons last week sent to Pope Leo XIII. a letter from the Roman Catholic hierarchy in the United States, congratulating the Holy Father upon the attainment of the fiftieth anniversary of his ordination to the priesthood.

Prof. Langley, the new Secretary of the Smithsonian Institution, says he does not intend to begin his administration with radical changes in methods. If new questions come up, he will act on his judgment; precedent will, however, be generally followed.

Prof. C. H. Hitchcock of Dartmouth College visited the Connecticut River fossil-beds near Northampton last week and obtained some valuable specimen bird-tracks for the museum. Some curious footprints, apparently human, were discovered for the first time.

The Catalogue of the College of New Jersey for 1887-88 was issued last week. It forms a 16mo of 176 pages, and represents the institution in the 141st year of its existence. The Faculty includes 40 professors and tutors. The Academic Department embraces 90 Seniors, 79 Juniors, 116 Sophomores, 113 Freshmen, and 30 specials. The Scientific School contains 95. Besides these there are 10 fellows and 78 graduate students; making a total of 611, or rather 603, 8 names being repeated. This is an increase of 44 over the number of students last year.

The football match between Yale and Harvard, on the Polo Grounds on Thanksgiving Day, resulted in a victory for Yale

by a score of 17 to 8. In the morning on the same grounds, Wesleyan defeated the University of Pennsylvania at football by a score of 10 to 4. Yale thus wins the College championship.

The third annual meeting of the American Association for the Advancement of Physical Education was held on November 25 in the Adelphi Academy, Brooklyn. Officers for the ensuing year were elected as follows: William Blaikie of this city, President; Dr. D. A. Sargent of Harvard University, Prof. E. P. Thwing of Brooklyn, and Prof. H. C. Putnam of Vassar College, Vice-Presidents; Dr. W. G. Anderson, Secretary; Prof. E. M. Hartwell of Johns Hopkins University, Treasurer, and Dr. C. McIntire and Prof. E. Hitchcock, jr., Counsellors.

The thirty-fifth annual report of the Children's Aid Society, which was made at a meeting of the Society on November 22, shows that in the thirty-five years of its existence the Society has saved 83,169 persons from want. Over 100,000 girls and 155,000 boys were taught in its industrial schools. There are now 21 industrial schools, 14 night schools, 6 lodging-houses, 2 seaside houses, and 1 mission for sick children under the care of the Society.

The observance of Evacuation Day, November 25, was less marked than usual. The veterans of 1812, now reduced in numbers to four, paraded in the Bowery and Broome Street, and partook of their annual dinner. They were under command of Gen. Abraham Dally, who is now ninety-one years old. The other three are George Crygier, eighty-eight years old, Henry Morris, eighty, and Elijah P. Jenks, eighty-seven. In the evening fireworks were discharged at Madison Square.

On November 22 the *Thetis* arrived at Port Townsend, Washington Territory, and sailed thence for Alaska.

St. Luke's Protestant Episcopal Church in Brooklyn was damaged by fire on November 27 to the extent of $25,000.

A report from Bridgeport is to the effect that Mr. Barnum will rebuild at that place the winter quarters for his show.

Mme. Etelka Gerster reappeared in concert in New York last week, after an absence of four years. Her voice had so far deteriorated as to render it advisable for her to abstain from further effort for the present.

Dr. Leonard Woolsey Bacon, who was dismissed from his congregation at Savannah, Ga., has been presented by his friends with a costly gold watch and chain. His daughter was presented with a check for a large amount. He preached his farewell sermon to the Independent Presbyterian congregation on November 27. After the morning services five of the seven elders resigned.

A disagreeable sequel attends upon the recent eulogy by Dr. Joseph Parker, the English clergyman who is making a lecturing tour in this country, in Brooklyn upon the late Henry Ward Beecher. The friends of Mr. Beecher claim that they understood that the address was to be given without pecuniary consideration. Maj. Pond, who has Dr. Parker's business affairs in charge, says he had to pay for the eulogy, thereby greatly reducing the amount realized from the admission fees for the monument fund.

The throat difficulty with which Col. Robert G. Ingersoll has been more or less troubled is declared by his physician, Dr. Morgan, not to be a cancer.

A lot containing 3,600 square feet of land was selected in the Waldheim Cemetery, Chicago, on November 24, as the burial place of the executed Anarchists.

Brevet Brig.-Gen. Randolph B. Marcy died at Orange, N. J., on November 22. He was seventy-six years of age. He was brevetted Brigadier-General on March 13, 1865, for gallant and meritorious services in the field during the war of the rebellion, and was retired at his own request on January 2, 1881, after over forty years of service.

A. W. Hendricks, a cousin of the late Vice-President Hendricks, was found dead in his bed in Indianapolis on November 24.

On November 25 Elias Warner Leavenworth died in Syracuse, at the age of eighty-four. He had been a Representative in Congress, Secretary of State of New York, a member of the Legislature, Mayor of Syracuse, and had held various other less important offices. He was born in Columbia County, N. Y., entered Williams College in 1820, and was graduated at Yale in 1824. He was a law student in William Cullen Bryant's office while the latter was in the practice of the profession of law. In 1872 the degree of LL.D. was conferred on him by Hamilton College.

Jacques Wissler, who engraved nearly all the plates from which the money and bonds of the Confederate States of America were printed, died on November 25, at his home in Camden, N. J., aged eighty-four.

Edward M. Davis, formerly a leading silk merchant in Philadelphia, and prominent for the past half-century in philanthropic causes, particularly abolition, died in Boston on November 26, in the 77th year of his age.

On November 28 two nephews of the late C. K. Garrison, named C. B. and C. K. Garrison, were killed in a lead mine in southwestern Missouri, by the falling of the bucket in which they were ascending after an inspection of the mine.

FOREIGN.

A Paris despatch on November 26 says: MM. Lockroy and Granet joined M. Montjou in advising M. Grévy not to resign. They tried to persuade M. Grévy that they were able to form a Cabinet, as there were numerous friends in the Chamber ready to shield him. The Rouvier Cabinet, however, pointed out that MM. Lockroy and Granet only wanted, conjointly, perhaps, with Gen. Boulanger, to form a Cabinet in order to seize the direction of Congress. M. Grévy thereupon abandoned the idea of a combination under M. Lockroy.

At seven o'clock on the evening of November 24 M. Grévy handed his resignation of the Presidency of the French Republic to M. Rouvier. The text of M. Grévy's message is to the effect that he finds it impossible to continue to govern the country.

Thirteen Deputies and Senators assured President Grévy on November 29 that they would unite to form a Cabinet if he would reconsider his purpose to resign the Presidency.

A Paris despatch on November 28 announced the illness of Lord Lyons, paralysis having fallen upon his left side.

Lord and Lady Dalhousie died in Havre, France, on November 26, within a few hours of each other. They were on their way to their home in England from America.

Five years ago the increase of wolves in France had become so serious that the Government found it necessary to raise the awards for killing them. In 1882 423 wolves were killed, in 1883 1,316, in 1884 1,035, in 1885 900, and in 1886 760. The awards are now 200 francs for the killing of a wolf which has attacked human beings, 150 francs for one in young, 100 francs for a male wolf, and 40 francs for a cub.

A Pesth despatch, November 26, says: "The *Pesther Lloyd* says the interview between Prince Bismarck and the Czar was a dramatic one. Prince Bismarck was scarcely able to restrain his passion. The Czar assured the German Chancellor that he desired peace, and did not intend to attack Germany, or to take part in any coalition against her. Prince Bismarck declared that whosoever wished peace must not attack Germany's allies. He presented the *casus fœderis* clearly to the Czar, who admitted that Prince Bismarck's views were not new to him, and added that his declarations regarding Germany applied equally to Austria. The passion shown by Prince Bismarck in his interview with the Czar was on account of his learning of the receipt by the Russian Government of forged letters, purporting to be signed by himself, in regard to the relations between the two Governments."

All the editors of St. Petersburg have been summoned by the press censor and instructed to adopt a moderate tone regarding Germany.

Mr. Pendleton, American Minister to Germany, in a Thanksgiving speech in Berlin, referred in very feeling terms to the Crown Prince. At the instance of Mr. Chapman Coleman, first Secretary of the American Legation, it was unanimously resolved to send the following telegram to the Crown Prince: "The Americans in Berlin offer their most heartfelt sympathy with the Crown Prince in his sufferings, and their best wishes for his early return, restored in health, to his people and their hospitable capital city."

Gilbert and Sullivan's opera "Pinafore" was produced in Berlin on November 27 for the first time.

An attempt made in Limerick on Sunday to hold a demonstration in honor of the Manchester martyrs, Allen, Larkin, and O'Brien, was suppressed by the police. The unveiling of a statue to commemorate the hanging of the men was set down as a portion of the programme. Fearing interference with the statue, a guard surrounded it during the night. Mr. McInerney of New York, who had been chosen to preside at the demonstration, was on the ground and addressed the people. The police then drew their bâtons and made an onslaught upon the crowd. This was answered by stone throwing. The crowd was dispersed. Subsequently, wherever groups were found assembling, the police charged upon them and seized their flags.

The prospectus for the World's Fair at Glasgow in 1888 has been issued. The guarantee fund already amounts to £250,000. The exhibition is opened to the world, and all branches of industry will be represented. The whole arrangements are in charge of the Executive Council, of which the Lord Provost of Glasgow is Chairman.

The search for the British gunboat *Wasp*, which is supposed to have been lost in a cyclone several weeks ago, has been abandoned.

Of the 214 passengers on the wrecked steamer *Scholten*, 102 are known to have been saved.

The Government of Newfoundland are constructing three steamers to be placed on the coast to prevent smuggling on the part of French fishermen.

The Quebec Provincial Board of Health, at Montreal, November 25, adopted a resolution favoring the establishing of uniform quarantine regulations by the United States and Canada.

On November 25 the sculling race at Sydney, New South Wales, for the world's championship, was won by Beach against Hanlan.

It is stated that the Chinese Government has arranged for a loan of 6,000,000 taels at 5½ per cent. for 20 years with the Hong-Kong and Shanghai Bank. It is probable that Nankin will be opened as a treaty port.

The Argentine Republic is about to make a concession to an English company, which is at once to put on a regular semi-monthly line of swift ships between New York and that port.

INDIA AND AMERICA AS WHEAT-GROWERS.

Mr. William E. Bear, an eminent English authority on agriculture, has a controversy with Mr. Edward Atkinson, in *Bradstreet's* columns, on the thesis of the latter that American wheat-growers can realize as good profits, with wheat at 34s. per quarter in Liverpool, as they could at 50s. fifteen or seventeen years ago, by reason of the cheapening of the cost of production and transportation. The question of Indian competition in wheat-growing for European markets naturally falls into this discussion, and here Mr. Bear drops out of agriculture, where he is very much at home, and into political economy, where he is very much at sea. He maintains that since India has a depreciated silver currency, but sells at gold prices, she has an advantage, as an exporter of wheat, of about 25 per cent. over gold-standard countries. He says:

> "As to the advantage which the shipper of Indian wheat obtains through the depreciation in the exchange value of the rupee, that is a topic I have often touched upon in these columns. It is now pretty generally admitted, even by persons who, with extraordinary denseness, disputed it. At the meeting of the Central and Associated Chambers of Agriculture the other day there was a very able discussion of the currency question in relation to agriculture, and yet not a single speaker disputed the fact that what has just been referred to is equivalent to a bounty of about 25 per cent. on the export of wheat from India. Mr. W Fowler, described by one of his opponents as 'the greatest goldbug in London,' distinctly and repeatedly admitted the fact. 'I believe there is a bounty,' he said."

The first thing that strikes us as wonderful after reading this statement is, that the world has been so long unmindful of the advantages that a depreciated currency gives to a country in its export trade. How could Mr. Bear give away such a precious secret? All countries are striving with might and main to increase their exports. Is it not singular that none of them has ever thought of this easy expedient? Surely no instrument is easier to obtain than a depreciated currency; yet, although we have had the example of India before us ever since 1876, when silver was almost as low as it is now, no nation has ever bethought itself of rushing after the silver standard in order to increase its exports.

But depreciation can be produced much more readily by other means than by silver, as, for example, by copper or by paper. The latter method is in extensive use in Austria and Russia at the present time, but without the admirable effect upon exports that Mr. Bear discovers in India. We had our full measure of depreciated currency from 1862 to 1879, but the phenomenon which Mr. Bear discovers in India was never noticed in our export trade, which ought to have been tremendously increased when gold was at a premium of 285. Nor has the advantage which silver depreciation confers been observed in Mexico, where all the conditions which prevail in India, including the maintenance of the local purchasing power of silver, exist in equal force. Mr. David A. Wells, in the current number of the *Popular Science Monthly*, doctors this India-silver-export *malaise* in a way that ought to stiffen the backbone of Mr. W. Fowler, whose fame as "the greatest goldbug in London" has not reached this country except through the medium of Mr. Bear's letters.

Mr. Bear's conception is that Indian wheat-growers obtain an advantage "through the maintenance of the purchasing power of the rupee in their own country concurrently with its great fall in gold value, the only test of its value in England." This is a very cloudy statement—indeed, one which we do not pretend to understand, although we have often tried to do so, long before Mr. Bear became a convert to the theory.

As to the main point in controversy between Mr. Atkinson and Mr. Bear, viz., whether American farmers get as good compensation with wheat at 34s. per quarter as they got at 50s. per quarter fifteen or seventeen years ago, we think that there are not sufficient data to decide it. Nor is it very important that it should be decided, seeing that the price is no longer 34s., but has fallen to 30s. A much more interesting query is that which Mr. J. R. Dodge, the statistician of the Agricultural Department at Washington, seeks to answer in the November report of that Bureau. This is, whether the competition of India in wheat-growing for European markets is becoming more and more severe, and whether that country is gaining on us in the race. Mr. Dodge is convinced that we have little to fear from India. He shows by official statistics that neither the acreage nor the product of Indian wheat has increased during the past ten years, notwithstanding the inducements offered by railway extension. He also quotes Sir James Caird as saying last summer that "there had been no material increase either of acreage or product, but that the surplus that had been pitted and reserved for famine years had been exported, owing to increased facilities for transportation." That the United States is not losing her relative position in British markets is shown by the statistics of imports of wheat into the United Kingdom from 1877 to 1886. Of the total imports, the United States furnished the following percentages:

Year.	Per cent.	Year.	Per cent.
1877	37	1882	55
1878	56	1883	47
1879	61	1884	53
1880	65	1885	47
1881	64	1886	59

After making this flattering exhibit, Mr. Dodge also drops into political economy, and, like Mr. Bear, makes a mess of it. "This increase of exports," he says, "to a nation that is compelled to pay cash instead of goods, in preference to trade with a portion of her own empire, is evidence of a very direct and successful competition of our wheat-growers with those of India or any other nation." We can only wonder what became of the cash that Great Britain paid us in the years 1885 and 1886 for the 76,000,000 bushels of our wheat that she took from us, as it does not appear in our Custom-house returns.

The simple truth is, that when two cargoes of wheat arrive at London, the one from India and the other from America, the buyer pays cash for both. He does not concern himself with the use that the sellers make of the money. The sellers never think of bringing the money home, except in those instances, generally rare, but quite as frequent in Indian as in American trade, when it is more profitable to bring back money than goods. In ninety-nine cases out of a hundred, goods are bought in the London market with the proceeds of the sale of wheat, and there is not an iota of difference between the two, except that if the American buys French, German, or East Indian instead of English goods with the proceeds of his sale, he does so with an English bill of exchange, and thereby gives a profit to an English banker, an English merchant, and probably an English shipowner. This is what is meant by "selling for cash instead of goods." England shows no reluctance to pay cash in this way for wheat or for anything else.

THE RESPONSIBILITY FOR RAILROAD ACCIDENTS.

In a recent number of *Science* Mr. Appleton Morgan has published an article, entitled "The Act of God and the Railway Company," in which he tries to palliate or even to deny the responsibility of the corporations for most of the serious railroad accidents of the past year. We have of late become quite accustomed to such pleas on behalf of the Anarchists, but when the same line of argument is invoked in favor of a railroad company, by a lawyer of Mr. Morgan's standing, it is a surprise, and by no means a welcome one.

To those familiar with the detailed history of railroad operation, the title will seem almost sacrilegious. Railroad accidents to-day are not the "act of God," but most distinctly the act of man, and, in the vast majority of instances, not of one man only, but of a number of men, who have habitually disregarded precautions which would have been sufficient to prevent the result. We do not mean to say that this is true in every case. But it is true in the vast majority of cases; and, what is more to the purpose, it is true in most of the cases cited by Mr. Morgan to prove the contrary. It is most unfortunate that the article should be so inaccurate in its detail. Many readers whose good sense would teach them to shrink from accepting the author's conclusions, will be more or less influenced by some of his statements of fact, simply because they have not the means of testing them.

He devotes special attention to five serious accidents which have occurred during the current year—at Republic, on the Baltimore and Ohio; at White River Bridge, on the Central Vermont; at Forest Hills, on the Boston and Providence; at Chatsworth, on the T. P. & W.; and at Kouts Station, on the Chicago and Atlantic. In all of these cases, he says, the companies "have done, were doing at the time the accident happened, all that experience and science had taught them how to do, or that their professional or expert brethren employed in the same industry could have done under like circumstances," and that "every railway officer knows that the penalty his company suffers for such accidents as the five

above described is exemplary—vindictive only, so far as the companies themselves are concerned."

Among these five accidents we select for detailed examination his account of the Forest Hills disaster. This was investigated promptly and fully by the Massachusetts Commissioners. Every opportunity was given for testimony on behalf of the company. No serious doubt was cast on the fairness of the conclusions. The facts are open for every one to read. What does Mr. Morgan say of this accident? "Somebody had failed to report or to discover a flaw in the ironwork of a bridge at a point called Forest Hills. The locomotive followed the rails. Everything upon the train was in perfect order. No appliance in the company's power to provide was lacking. But the bridge sank."

How do the facts agree with these statements? "No appliance in the company's power to provide was lacking!" The train was not provided with automatic brakes. Seven of the nine cars were; but any man familiar with railroad operation knows that the insertion of two other cars without this appliance rendered the whole useless. There was no evidence offered to show that such disregard of safety appliances was exceptional in the suburban branch train service of the Boston and Providence Road. We repeat it, the train did not have automatic brakes; and this alone is sufficient to overthrow Mr. Morgan's whole reasoning.

"Somebody had failed to report or discover a flaw in the iron work of a bridge." In December, 1881, the Board of Railroad Commissioners had called the attention of the Superintendent of the Boston and Providence Railroad to this particular bridge, which it characterized as "an oddity among bridges," and for which it advised a series of tests. This recommendation was practically not complied with, only one such test being made, and that so careless that no record of its results was preserved.

In the investigation which followed the disaster it was found that the bridge was designed by a man who had no knowledge of skew-bridge construction, was built under contract with a company that had no existence and no responsibility; that the bridge was constructed practically without superintendence on the part of the corporation; that the tests of the bridge were not made in the presence of any one acting for the corporation who was qualified to judge of their value; and that in various details of construction specific warnings of the Board had been disregarded. The Commissioners' report on the disaster contains this passage: "From the time of the construction of the bridge to the day when it fell, the railroad company had caused it to be examined by one man only, who, year after year, passed over vital parts of the bridge without realizing that they were of importance. This man had been in the employment of the corporation for a long series of years, his trade was that of a machinist, he had not been educated as a civil engineer, and the management had abundant reason to know that he was not qualified, and had had no opportunity to qualify himself, to do the work assigned to him with reference to this bridge. . . . In the erection and inspection of bridges the management of a railroad is bound to exercise the utmost care. Had such care been exercised, there is every reason to believe that the disaster would have been prevented. . . . The Board renews the expression of its belief that a preventible accident is a crime."

We have chosen this accident for special examination because the facts were clearer and the results more accessible than in the others. We do not understand how it was possible for a writer of good standing to disregard these facts. Either he must have presumed on the ignorance of his readers, or else he never took the trouble to look into the matter himself. The latter is perhaps the more charitable supposition. But it need hardly be said that for a writer in a scientific periodical either excuse is equally weak.

In one sense there is no very serious danger to be apprehended from the appearance of articles of this kind. The public is not likely to be too lenient in its judgment of railroad corporations. The feeling on the subject of railroad accidents is such that no successful attempt is likely to be made to shift the responsibility. It is by their indirect effects that articles like this do harm. We are living in a time when responsibility, both legal and moral, needs to be strengthened rather than weakened. If a lawyer attempts to enable corporations to disregard it, he gives additional force to every movement by which Anarchists seek to carry the same principle still further.

The justification for the existing industrial system is that it secures more responsible and far-sighted management of capital than could be obtained in any other way. The system of private property and private management of capital is founded on something stronger than the arguments of Bastiat and Henry George about a plane and a plank or a calf and a cow. It is founded on the fact that it secures to the community more efficient, economical, and responsible management of its industry than was possible under the old systems which it has superseded. As long as property-holders and managers are willing to accept their responsibility, they have comparatively little to fear from the attacks of their enemies. It is when they attempt to enjoy the rights of property without corresponding responsibilities that they give their opponents the most dangerous weapon with which to attack them.

A Socialist has described the traditional political theory of English economists as "anarchism tempered by an appreciation of the advantages of having the inside track." There is enough scientific truth in this to give the satire a keen edge. If property-holders or their advocates try to avoid responsibility for what they do, they will give real foundation for the charge. Every such misjudged attempt will make the sarcasm sharper and its practical influence more dangerous. If the railroads and railroad owners are unwilling to face the responsibility for their accidents, the demand for State ownership and management will be all the more forcible. If property-holders as a class are unwilling to face the consequences of what they do, they must be prepared to see the rights of property limited. Whoever fears the growing tendency in the direction of State Socialism must regret the adoption of a line of argument whose ultimate effect will be to strengthen that tendency.

THE AGE OF ENVY.

We do not know the circumstances under which Solomon was led to declare: "Better is a dinner of herbs where love is, than a stalled ox and hatred therewith." They were probably of a domestic nature, but if he were now living, he would find reason for his proverb in the relations of the different members of our body politic to each other. It is beyond question that, so far as provision for their physical and mental wants is concerned, poor people are a great deal better off than they ever were before. No one who has any acquaintance with the details of the life of the inhabitants of this country in the early part of the century, will deny that the hardships of a middle-class family then were greater than those of the family of a sober and well-behaved laborer now, or that the luxuries of the one have become the necessaries of the other. But it is questionable whether our ancestors were not happier over their herbs than we with our stalled oxen. The poor are so much exercised with the fear, or enraged with the conviction, that they are not getting their fair share of the good things of this life, that they cannot enjoy what they do get; while the well-to-do are anxious lest the tide of discontent may rise so high as to sweep away the banquet altogether. Few persons would deny that it would be a pleasanter world to live in if there were less wealth, provided there were also less grumbling, envy, and contention.

It is true that material comfort is a good thing—a truth upon which it is unnecessary to insist to the present generation. But that wealth should be sought and enjoyed in the right spirit is a more important truth, and one that does not at present attract very much attention. What is called the "Labor Question" is discussed in every periodical, and in most of these discussions we find it assumed that the reward of labor is insufficient. The consequence is that every one—for we are all laborers—is prompted to look upon his work in a way that is, to say the least, unfortunate. Every one is pleased if he can lay the blame of his sufferings elsewhere than at his own door, and it seems to be especially satisfactory to complain of the institutions of society. If a man is poor, it is because of the oppression of landlords. If his wages are low, it is because of the rapacity of corporations. So it comes to pass that men go to their tasks with a feeling of unwillingness; they are disposed to "quarrel with their bread and butter," and, of course, the result of it all is bad work. Poverty, it may thus be said, is increased by complaining of it. If men were as much interested in doing good work as in struggling for good wages, they would get better wages without struggling for them.

A general deterioration of character follows

from this yielding to discontent. A man who allows his mind to dwell upon the inequitable return that he receives for his labor, instead of dwelling upon the proper performance of his work, is not likely to be a very desirable member of society. He falls behind his fellows and gives himself up to envy. Instead of reflecting that there must needs be inequalities in this world, he dreams of a state where there shall be no one more prosperous than himself, and comes to hate the present order as unjust. It is obvious that a human being actuated by such sentiments cannot be happy and is likely to be dangerous. If the laws and institutions of society are all wrong, there can be no wrong in disregarding them. If employers have an unjust advantage of position, it is right to cheat them. Thus the moral nature is corrupted and the distinctions of right and wrong become faint and confused. The end is either in open lawlessness or in a sullen despondency, broken by acts of malignant treachery not only to those who are entitled by contract to faithful service, but also to society at large.

The influence of this tendency to yield to what is admitted to be the meanest of passions appears even in our legislatures. It is the nature of envy to pull down, not to raise up, and the measures advocated by those who claim to represent the poor, and who, unfortunately, perhaps do represent them, are often intended really to harass the rich. Nothing was more striking in the agitation of the convict-labor question than the brutal indifference, and even the malicious exultation, with which the warning that if the convicts were to be unemployed, they would have to be supported by the taxpayers of the State, was received by those who spoke for the labor unions. It was evidently felt that if the interests of these unions were advanced, it would not be a matter of regret should the wealthier classes have to pay for it. Minds narrowed by this mean and jealous habit of looking with bitterness upon the prosperity of others are incapable of entertaining any enlightened views of statecraft. Such minds cannot conceive or understand a policy that unifies the interests of all classes, and recognizes the prosperity of the whole as involving that of the parts.

While the poor are from their situation naturally more prone to yield to envy, it would be a mistake to connect this passion with poverty. There have been ages when poverty was not looked upon with contempt, and when it was thought becoming to endure hardships with fortitude; and, as we have said, the poor of the present time are comparatively well off. It is quite possible for wealthy people to envy one another upon many accounts, and much display is really made in the hope of exciting this feeling. The truth is that the prevalence of an envious spirit is a manifestation of the all-pervading materialism of the age. We are so set upon material ends that we exaggerate the importance of attaining them, and come to think little of success that does not "materialize." Now the quantity of material goods is necessarily limited, and it is at the same time impossible that they should be equally distributed. But the immaterial—which are also the real—goods are unlimited in quantity, and can be enjoyed by every one to an extent which is principally dependent upon himself. Men do not envy one another for being honorable and generous and considerate, although they may envy the results of those virtues. And if such goods as these were held up as ideals, mean passions like envy would be expelled. But so long as men are overwhelmingly absorbed in the pursuit of what exists only in a quantity insufficient to satisfy them all, the vast majority of them will infallibly be convinced that they are not getting their fair share, and will hate their successful competitors. It is obvious that no change in human institutions, no interference with freedom of contract, no juggling with property in land, can avail to check a disposition that is necessarily engendered by competition of this kind. There must be a change of ideals before there can be a change of heart.

It is hardly to be expected that teachers of morality should escape the subtle influence of this atmosphere of materialism, but it is surprising that so many of them should fail to see that by stirring up discontent with institutions that can certainly not be overthrown without a revolution, they are destroying the very fountains of kindliness. That mutual trust and regard which is of the essence of civilization, cannot exist if every man feels that his neighbor is looking with envious eyes on his possessions, and calculating how much they ought to be reduced. When such feelings are prevalent, sympathy is discouraged. The most costly benefactions are looked upon as but the giving up of plunder, and in an age distinguished above all others for the magnificence of the donations of private citizens to the public, gratitude is but slightly felt. So long as schemes for the more "equal division of unequal earnings" are held up to mankind as remedies for suffering, so long will mankind forget that most suffering is the result of sin. The human race is still so far from learning this lesson, and this lesson in all its manifold forms is so much more important than any other, that preachers and moralists may wisely postpone schemes for the reformation of society to endeavors for the reformation of individuals.

PRESIDENT GRÉVY'S RESIGNATION.

THE worst blow, probably, that has yet been inflicted on the French Republic by any one, has been inflicted by the action of all the leading Republicans in forcing President Grévy to resign by refusing to hold office under him. He has sent for everybody who was in the smallest degree likely to be able to form a Cabinet, and they have, one and all, told him that they could do nothing as long as he remained in the Presidential chair. He has accordingly been compelled to vacate it in the second year of his term, as effectually as if he had been formally impeached and found guilty of high crimes and misdemeanors. In other words, a precedent has been established which will enable a majority in the Chamber to depose the President whenever they please, by simply refusing to form a Ministry under him. It is to be observed, too, that in the existing condition of French politics, a President who finds himself boycotted in this way has not the resource of appealing to the country by a dissolution, because the Opposition is not, as it is here and in England, loyal to the Government. A Frenchman who condemns the action of the Republicans towards the President, would, if he were called to the polls to-morrow, find that his only way of punishing them was to vote for a Monarchist, or, in other words, to send up a majority in favor of changing the form of the Government and getting rid of the Republic altogether. This, of course, a good Republican cannot do. He has no alternative but to make the best of the Republican politicians now in public life.

It is this absence of constitutional alternatives which is the curse of France to-day. No rational choice is ever offered to the Republican voters. They live between the devil and the deep sea. If they do not like the moderate Republicans, they have either to help the Monarchists to upset the Republic altogether, or put the Radicals in power and prepare for a general upturning, and possibly the return of the Commune. Against the intense personality of French politics the quiet citizen has really no protection. It is, of course, a lamentable thing that anybody as closely connected with the President as Wilson is, should be so strongly suspected of corruption and jobbery. But men who cared more for the Republic than for personalities would have labored might and main to dissociate the President wholly from the scandal, and make Wilson the scapegoat, and would have seen clearly that in insisting that the President must bear part of Wilson's burden they were covering the Republic with disgrace and weakening it both at home and abroad. The mischief is not cured by punishing Grévy for Wilson's sins. The world of course says that a system which puts in the highest place a man responsible for gross corruption in the Executive Palace, ought not to last and cannot last. In fact, the whole movement against Grévy could not serve the purposes of the Monarchists better if they themselves had contrived it, and they are, of course, vigorously supporting it.

When the Convention meets to elect Grévy's successor it will find the Republicans so divided, the future so uncertain, and the popular agitation so deep, that everything will seem possible to the Royalists. There is not now a single Republican statesman who is clearly marked out for the Presidency, as Thiers or Gambetta was, for instance, by past services, or by public confidence. There are a number of men, like Freycinet, and Ferry, and Rouvier, and Clémenceau, each of whom has a small following, but not one of whom has any chance of election, and not one whose election would restore public confidence. Among the military men, to whom France is apt to turn in troublous times, there is not one who, like poor MacMahon, even has a good

record of services in the field. All the few men who distinguished themselves in the Franco-German war are dead. The one prominent military man to-day, Boulanger, is distrusted by fully half the nation as an ambitious charlatan, and yet his chances of the Presidency, if a soldier is to be chosen, are probably as good as anybody's.

Of course the Royalists cannot desire a better state of things for their purposes. When the convention meets, they can either make a vigorous push to secure the election of one of the Orleanist princes, or, failing this, aid in putting into the Presidential chair the worst possible Republican candidate, trusting to his administration to prepare the way more effectually than ever for the restoration of the throne. Boulanger or anybody like him would play their game. What they seek to show, and they do not disguise it, is that a Republic cannot succeed in France; that the very attempt to establish it tarnishes the national fame, and degrades public morals, and makes foreign alliances impossible. Neither Russia nor any other Power will be willing to link its fortunes with a Government which runs the risk of revolution every time a high officer is caught selling contracts and decorations, or the Chambers get out of temper with the President.

SPENCER FULLERTON BAIRD.

THE death of the late Professor Baird occurred at a time when we were prevented from taking proper notice of the event. We owed a double debt to his memory, as a scientist and as a past contributor to the *Nation*. We purpose, in the present article, to repair our neglect.

Professor Baird was of Anglo-Scotch ancestry, and some of his connections settled in America at the close of the seventeenth century. The names of Potts, Spencer, and Biddle are connected alike with the annals of patriotic endeavor and business sagacity in his native State of Pennsylvania. His father, Samuel Baird, established himself in the legal profession at Reading, where the subject of these notes was born on the 3d of February, 1823. His mother, Lydia M. Biddle, from whom young Spencer inherited his genial and equable temperament, survived her husband nearly forty years. From his father he seems to have derived a love of nature and of outdoor pursuits, and this doubtless had much to do with developing that magnificent physique which enabled him in later years to carry easily an almost unparalleled burden of mental and administrative labor. His father died when Spencer was ten years old. The latter entered Dickinson College in 1836, and graduated at the age of seventeen. Like most naturalists, he early showed a strong interest in animated nature, which was shared and promoted by an elder brother, William M., who was the first to begin the collection of specimens, and in 1843 was the senior author of a joint paper in which the two young students made their début in scientific literature. This, which described two new species of birds, was followed by a list of the birds of Carlisle, Pa., after which the activity of the elder brother was turned in other directions.

With a breadth of view unusual at that day, the mother and grandmother did not attempt to repress the development of the son's mind in the direction of scientific pursuits. At that period it could hardly be hoped that such studies might lead the way to a career satisfactory to parents. The difference between the opportunities of that day and of the present time can hardly be realized, so great has been the change. Fortunately for science and himself, young Baird was permitted to devote the five years following his graduation to the pursuits dictated by his tastes. He formed with Audubon, in 1838, a close friendship, which doubtless had much to do with the choice of the special lines of his subsequent researches. In 1841 and 1842 he undertook long pedestrian tours through the mountains of Pennsylvania. In the latter year he read medicine at New York at the College of Physicians and Surgeons, and about this time began his association with the naturalists Cassin and Lawrence, and a little later with Morris, Brewer, Agassiz, Dana, Desor, and Girard. In 1845 he was chosen to the professorship of Natural History in Dickinson College, which included in its duties the teaching of physiology and geometry, and to these chemistry was added at a later period. His special investigations were not interrupted, and his summers were devoted to long expeditions, which reached in successive years the Adirondack region, Ohio, the mountains of Virginia, Lake Champlain, and Lake Ontario, with rich results in ichthyology and ornithology. In his own collections, during this period, were developed those business-like methods of arrangement and detail for facilitating study which were subsequently adopted and extended, not only in the institutions which grew up under his supervision, but by nearly all other American scientific museums, and which form a system that for usefulness and efficiency has no parallel in any foreign museum up to the present moment.

In 1850 Professor Baird was appointed to the post of Assistant Secretary of the Smithsonian Institution, then well launched on its career of scientific usefulness under the direction of Professor Joseph Henry. Although the Institution had been made the depository of all the national scientific collections, Henry foresaw, with his usual sagacity, that to provide for and maintain a great museum would swallow up the available income of the Smithsonian fund, and render it impossible to promote science in those more important directions contemplated by his wider and more comprehensive plans. Though recognizing the value and utility of a national museum separately endowed, he set his face firmly against the policy of retention and accumulation on the part of the Institution. Biological specimens, from his point of view, were so much raw material to be studied and digested, in which work, and in the publication and dissemination of the results, the Institution might properly join forces with the Government and with private individuals; its part of the labor and expense being as purely supplementary to other agencies as circumstances might permit. The policy of the Institution under Henry was to disperse as widely and freely as possible the worked-up material, and to enlist in the process of elaboration the aid and enthusiasm of every American naturalist, each in his special field.

To make this policy a success, such as it eventually became, required qualifications of no ordinary kind. Not only must the work of mediation be guided by the most advanced biological science of the time, but the individual intrusted with it must possess a spirit of impartial liberality, tempered by a sound discretion in business methods; a thorough knowledge and just estimate of men; an untiring patience to meet the peculiarities and caprices of the independent, and often one-sided, specialists whose coöperation was essential; a geniality to enlist the willing but unscientific colaborer; and an instant detection of humbug in every guise. Providentially for the future of natural science in this country, the need and the man met in the selection of Professor Baird. In qualifications for the work he stood preëminent—head and shoulders above any man of his time, and perhaps above all other scientific men of any time. He joined to a marvellous faculty for systematizing business a capacity for steady and continuous work only limited by his waking hours. His frank, genial, and wholly unaffected manner put the scientist and the laboring man alike at ease. Always busy, he yet always seemed to have time for a friendly chat with every comer. His memory appeared an inexhaustible storehouse of facts on every subject where any desired datum lay ready to his hand. He knew every specialist in the country. Not only did he hold amicable relations with scientists actually at work, but one might think there was not a school-boy of extraordinary genius for birds'-nesting or fishing whom he could not lay his hands on.

His appreciation of the workers did not stop with the recognition of the character of their scientific results. It seemed as if in his mind he had an epitome of all the characteristics of mind and habit of each and every man. In the constant necessity of selection for this or that task or post, which the always increasing scientific activity of the time rendered more frequent from year to year, he was very rarely mistaken in his judgment. In his position he was called upon to advise in nearly all Government appointments which had a scientific bearing, direct or indirect; and the total number of selections which he determined during his career must have been many hundreds, and have included nearly every available person among the younger generation of students. The most surprising element in it all, to those cognizant of the details, was the calm impartiality which he brought to the task. No thought of self seemed to enter into his calculations. To best fit the purpose was his sole criterion, the purpose being always the promotion of science, and it was a very crooked stick indeed which was not fitted by him to some honorable service, as opportunity served. Those who felt themselves the objects of his personal regard sometimes halted for a moment in comical dismay, perceiving themselves frankly moved, like chessmen, in directions which they would not themselves have selected, and did not altogether like, almost as if they were perfect strangers; but an overwhelming sense of Baird's entire devotion to the promotion of science, his perfect unselfishness, and his incomparable good judgment, always carried the day, and the final outcome never discredited his generalship.

These characteristics would have made a great administrator anywhere, but there were other elements in the problem. It is not so hard to select deputies, aids, and workers of every kind when the work of the selector and that of the designated person form duly subordinated parts of a general scheme, or the parts are so constituted as to be capable of purely independent elaboration. But in scientific work, as every one knows, the spirit of emulation is strong; men work often with a single object in view, and the glory of its first elucidation is necessarily for one alone. Doubtless the substantial amity and concord which have prevailed among American naturalists is in part due to their scattered distribution, the vast and, until recently, virgin fields open to research, and the consciousness that there is plenty of work to occupy profitably every willing student and as many more. In scientific as in economic com-

petition the rivalry grows more intense as unoccupied ground diminishes. Nevertheless, from the earliest times of American science there have been controversies, and naturally these have been more active among the leaders. Baird himself having been one of the most prolific contributors to the literature of systematic zoölogy in the United States, it is evident that in promoting the studies of others, and in holding as a trust for the general benefit the vast collections which passed under his control, opportunities must have been numerous for giving precedence to the progress of his own researches rather than of those of others engaged in the same lines. In such cases, we believe, he never hesitated, and the decision against himself was in more than one instance known by him at the time to be of pecuniary as well as scientific disadvantage to his own apparent interests. He never spoke of this sort of self-denial, and it was in a majority of cases known but to a few persons incidentally connected with the researches in question.

If he guided the activity of others as one would use impersonal agencies in the pursuance of a definite end, he was not less exacting with himself. He not only offered freely to others, sometimes constructive rivals, the raw material of research which he controlled, but in many cases he put in the hands of those whom he thought worthy, his own more or less elaborated manuscripts, to use in their investigations, thus waiving his own priority in the field. His insistence on giving full credit to collaborators of every degree, both in publications and in records, labels, and reports, was proverbial. To the tyro treading with uncertain step the entrance ways of science he was ever cordial; always a friend, guide, and helper. While Professor Henry lived, the affectionate loyalty of Baird to his venerable chief was an inspiration to those about him.

That this faithful coöperation would not have been a matter of course with most men, however honest in purpose and devoted to science, will be more evident when it is understood that, notwithstanding the well-known views of Professor Henry, enforced by him on every possible occasion, a great museum actually did grow up on their hands, the inevitable result of the scientific activity promoted by Professor Baird. This museum, only after years of effort, and but shortly before Professor Henry's death, came to take its present semi-independent position, such as he would have originally assigned to it. Until this was consummated, Professor Henry's anxieties were very great. When, by Professor Baird's persistent effort, quiet tact, and unremitting labor, a distinct organization was finally effected for the museum, it was felt by Professor Henry as the greatest comfort of his declining years. The possibilities of antagonism in such a situation are readily perceptible, and nothing could testify more clearly to nobility of character in both than the fact that such differences never germinated between these faithful servants of science.

When Professor Baird succeeded to the office, it was with a modesty almost amounting to timidity that he spoke of the opportunities and duties of the post. His kindly recognition of his juniors was only changed by the shade of seriousness due to added responsibility. Only those who were engaged with him can realize what an amount and variety of labor he willingly undertook. During the period of Pacific railroad explorations and the activity of the Hudson Bay Company's people, fired by the enthusiasm of Kennicott during his sojourn in the North, collections and correspondence poured in upon Professor Baird in extraordinary quantity. Not alone was the shedding of its horns by the antelope on the Western plains, or the nesting of the canvas-back among Alaskan marshes, the theme of eager letter-writing. The Professor and the ladies of his household might often have been seen among the shops seeking novels for the army officer at some isolated post, a necktie for a northern voyager, or the dress goods for a wedding to come off on the banks of the Mackenzie during the crisp Arctic September. It may be imagined that in his home life Professor Baird was altogether lovable, and we cannot feel that we are laying sacrilegious hands upon the veil in saying that not the least of the benefits conferred upon American science was embodied in the influence which extended from that home upon a host of boyish students gathered from year to year under the brown towers of the Smithsonian Institution, slender as to their resources, half Bohemian as to their living, let loose with little restraint in that great disjointed village, the Washington of twenty years ago.

We have dwelt by preference not on Professor Baird's scientific researches, his administrative successes, his creation of organized scientific agencies, like the Fish Commission and the present National Museum, nor on the fame and honors which came to him from far and near. We have thought it better to leave these things, which are evident and accessible, and to speak of our impressions of the genius and traits of character which moulded his life and made it truly great. The latter are embalmed in the consciousness of his contemporaries, and are chiefly unrecorded, while the former may be found in reports and statistics. Two things his experience may be said to have lacked: he never had a personal controversy, nor, so far as we have ever heard or had reason to suspect, an avowed enemy.

HOME RULE FOR SCOTLAND.

EDINBURGH, November 15, 1887.

IN the debates on the Home-Rule Bill of last year the ground was often taken by the opponents of the bill—especially the dissentient Liberals—that they would grant no measure of home rule to Ireland which they would not be prepared to apply to Scotland. During his short campaign in Scotland after the defeat of the bill and the dissolution of Parliament, Mr. Gladstone accepted this challenge, and said in substance that Scotland had an equal right to claim as ample a measure of home rule, if the people desired to have it. In truth, the Scottish nationality is so distinct, and geographically so compact, that a definite proposal of home rule for Ireland inevitably suggested a comparison with Scotland, notwithstanding the enormous differences in the history and circumstances of the two countries.

Two years ago no one would have believed it possible that home rule in the Irish sense would ever be proposed for Scotland, and it is no wonder that many thoughtful men view with a good deal of anxiety the most distant prospect of a revolutionary change in the constitution of a country so prosperous, progressive, and contented as Scotland has been for half a century. The cry is, in a sense, popular, though the people are not in a mood to attend seriously to it while the Irish question is so much more pressing. On the one hand, a Scottish Home-Rule Association in Edinburgh, with ambitious aims, has almost succumbed to the chilling neglect which it has met with. On the other hand, one occasionally hears of prudent chairmen of meetings, with Parliamentary responsibility on their shoulders, sorely embarrassed by resolutions placing Irish and Scottish home rule exactly on the same level. Sometimes they painfully struggle to strangle or modify the resolution at a preliminary conference. Sometimes it is sprung upon them by way of amendment, and enthusiastically carried.

It is not uninteresting to inquire how far the call for home rule in Scotland is based on any real and well-founded discontent, or is only the evanescent growth of a shallow sentiment. In an important sense the problem of the peaceful union of England and Scotland has actually been solved on the principle of home rule. Scotland retained her own laws, her judicial and administrative system, her Presbyterian Church. All these public institutions were, at the union, materially different from those of England. They have remained so ever since, and have served to keep distinct that separate nationality of which they were the growth. If the attempt had been persevered in to force on Scotland the Anglican Church, if her laws had been changed, Scotland would have been another Ireland. Left to herself in those essential points, she has prospered. The Union survived the Jacobite troubles of the last century and the severe political régime of the Tories in the early part of the present century without a strain. Since the political enfranchisement of the people which began in 1832, the country has made prodigious advances in wealth and material prosperity.

Starting from that date, two tendencies have been in operation. The public business, the legislative and administrative wants of the country, have increased; and again, with the extension of political power and the spread of education, the people inquire more curiously than before whether their power is real—whether, at least within their own bounds, things are done as they desire, and as quickly, cheaply, and effectively as they ought to be done. For a long time the Scotch elector had comparatively rare occasion to knock at the door of Parliament or a Government department. He bore with long patience the inadequacy of the Parliamentary representation which gave him his share of influence in such matters as the Army, the Navy, India, the Colonies, and Foreign Relations. The towns were self-governing; the counties had also an imperfect form of local government. The Lord Advocate, who, as chief law officer of the Crown and public prosecutor, had administered the law when it pressed heavily on public liberty, continued to be the ordinary and not unpopular channel of communication between the Government and the Queen's subjects in Scotland. He exercised a great but undefined general influence on the part of the Government, and managed Scotch Government bills, which were few in number. They were settled according to the wishes of the Scotch members, no one else pretending to know anything about them; and there was plenty of time for the moderate amount of discussion demanded. When a new branch of administration was formed, for the Poor Law, for example, or Lunacy, a board in Scotland was established, for which the Lord Advocate, who was loosely attached to the Home Office, was practically responsible in Parliament. By and by the business of the country increased, while the machinery for performing it seemed to become rather less than more efficient. During the last thirty years there has been a great increase in the number of public works undertaken locally under statutory powers, such as railways, schemes for water supply, and improvement of towns. These schemes, whether they originate in a private bill or a provisional order by a department whose sanction is required, are taken to London and fought out by the parties interested

before committees of both houses of Parliament, at a ruinous cost to the rate-payers. This is one of the most practical grievances; another is, that, in the present congested state of Parliamentary business, Scotch bills are crowded out. Ministers and whips regard Scotch business with impatience. The bills and votes of money are introduced at the very fag-end of the session, and are passed, if passed at all, without adequate discussion in the small hours of the morning. That is the complaint, and it is not without foundation. Again, Scotland has become seized with the impression that while her contributions to the Treasury are proportionately larger, her receipts from the Treasury, whether in the shape of the salaries of public officers or for any public purpose, are comparatively niggardly.

Meanwhile, as it becomes difficult to obtain a hearing in Parliament, it becomes more difficult to find a Minister in his office who would attend to a piece of Scotch business. The influence of the Lord Advocate declined as he became more closely subordinated to the Home Office; an accumulating series of statutes relating to local economy and government cast new duties on the Home Secretary, who was advised by the Lord Advocate. But the Lord Advocate had no power to enforce his advice, and, therefore, was not a responsible Minister to whom the public could look. This was the underlying cause, and not mere jealousy of professional lawyers, which prompted the efforts of a large number of Scottish members during more than thirty years to get a Minister for Scotland appointed. This has now been done. His powers have been grudgingly doled out, and his position may probably require to be further strengthened; but in this office as it will be eventually constituted, the Scottish people will have a Minister whose business it is to understand their wants and their system, and who will have power to press their views upon the Cabinet.

The difficulties above mentioned show that Scotch home rule, as it has hitherto existed, has with great advantages combined some disadvantages. The dividing line between the English and Scotch systems of administration has become so deeply graven that Scotch business must be treated separately in Parliament, and, when time is limited, it runs the risk of not being dealt with at all. So Ministers elude the grasp of applicants who seek to gain their attention to subjects which they do not understand. Now, say the Home-Rulers, why not remedy this by creating a Parliament to sit in Scotland, to dispose of purely domestic affairs, with an executive responsible to it? You propose it for Ireland; why not for Scotland? The business, they say, would be secure of immediate attention. It would be better done by persons all of whom understood and had a legitimate interest in it. On the foundation laid in such a scheme many special hopes are built. Dissenters hope that the question of disestablishment, long ripe, would be at once settled. Some churchmen are equally confident that it would be negatived. Temperance reformers sigh for a Parliament which would speedily give full effect to the principle of local option. Land reformers and labor reformers have great faith in the radical grit of a Scottish Parliament. Possibly aspiring workingmen see a better chance of taking an active share in the direction of affairs.

It is said, in answer, that the difficulty of getting public business done is to a large extent common to all parts of the kingdom, and, so far as it admits of remedy, can be remedied by other means; and, secondly, that there are inherent objections to the scheme of a Scottish Parliament, which far outweigh the possible advantages. Let us very briefly examine these propositions. Even assuming that Irish business was got rid of, or reduced to reasonable proportions, the congestion of other business in Parliament presses severely on the whole kingdom, though most on Scotland, owing to her separate position. All parties are prepared for a large scheme of devolution in connection with a reconstitution of local government, and this might do much to remove one of the most vexatious and serious of the Scottish grievances. Another hope lies in the development of the office of Secretary for Scotland. The public want to know where to have the Government. This office has hardly been taken seriously by any Government, though it has already been filled by some distinguished men. If Scotland is to be contented, the office should be an important one and very carefully filled.

As to objections to the scheme of home rule, perhaps the gravest is one that has been advanced in the case of Ireland, though I think with much less weight: May Scotland not be a great loser by the change? Is there to be an English Parliament also? Logical Scottish home-rulers say yes; but even if Englishmen accept the arrangement, not because they want it, but as a kind of afterthought to make a Scottish scheme foursquare, is there no peril to the relative influence of the Scottish nation in the general Government of the Empire? Scotland's little Parliament would be side by side with another seven times as numerous and powerful. Might not a separation and antagonism of interest be organized and fostered by this means? No doubt her representation in the Imperial Parliament would continue. But, after all, domestic affairs are the main part of the public business of the country. Thus, while the members for Scotland mix with the others in all business, their general influence, their chance of individual influence, is increased. As a body of delegates representing a Scottish Parliament, their position would be altered for the worse. In such circumstances it would scarcely be possible for so large a number of the Government to be Scotchmen as sat on the Treasury bench in Mr. Gladstone's last administration. The country, too, would be a loser if large questions of domestic policy were not deliberated on in full Parliament.

There is perhaps a latent element of regret and discontent which no scheme of home rule can remove. Scotland is a nation, if ever there was one, and yet her tie to England, with all that it bestows, has deprived her of some things that belong to a nation. London is a metropolis that brooks no second. It draws away many of the flower of the Scottish youth for commerce, for the army and navy, for the learned professions. Every man who can afford it makes London his town residence and sends his son to an English public school also. All the State and ornamental posts of Government are centred in London. In an old country this is felt. To a certain extent the Government is looked upon silently as a kind of absentee landlord. If, however, the upper stratum of society in Scotland is somewhat impoverished by the attractions of London, the great spread of culture and civilizing influences among the middle and lower classes is a still more important fact.

I have only touched on some of the misgivings which Scottish home rule suggests to many minds, attractive as it is to others. It is, as has been said, for the Scottish people to decide whether or in what shape they will make such a claim, and there is little doubt that they will come to a conclusion with the deliberation and prudence commonly attributed to the nation. C. D.

ALONG THE NORTH AFRICAN COAST.

SMYRNA, November 5, 1887.

AT Tangier, Morocco, in September, the tourists in search of health were arriving in considerable numbers, and the two principal hotels, very good and cheap, were filling up. The shooting is good, and includes boars and partridges, the former being now in great abundance within twelve miles of the city. Travelling is safe and easy, and one does not hear of robbery, theft, or molestation of any sort by the natives. The city is not changing its character; it is still the same neglected, dirty, and peculiarly Moorish town, with its fringe of foreigners—their legations watching each other—Jews, Arabs, and European renegades. The surrounding country can be called very interesting and charming, consisting of hills, ravines, enough vegetation to please the eye, the Atlas Mountains in the distance, and the ocean on one side, usually with bold high bluffs at the shore. Within a distance of five miles the roads are good enough for horseback travelling at a rapid rate, and one sees a considerable number of villas and residences amid large gardens and groves, in fine locations for health and view. Carriages or wheeled vehicles are not used at all, on account of the state of the roads, but horseflesh is cheap and good, and the "barbs" are wonderful saddle animals. The facilities for living are exceptional; the hotels are good, while the market is not surpassed anywhere for plenty or cheapness. One finds here people from Gibraltar and neighboring Spanish and French cities in search of health and novelty. The place offers much to amuse those having out-door tendencies, while there is an absence of man-milliners, fashionable promenades, and late hours. One can hunt, ride, explore hill and dale, with occasional Roman remains, and enjoy a pure high atmosphere at the villas (often rented) in the hills away from the city.

I should judge that France has probably the most persevering ambition in Morocco. Her officials are not weaklings, and, though nothing is said, their manner suggests cheerfulness in regard to the future. The Spanish appear to be equally and perhaps more sanguine with regard to their claims, but Spaniards do not show much physical *grip*, if I may use the word; they expect a great deal, but are slow to act at moments requiring decision and force. The Italians have pretty well hidden their intentions, if they harbor any. Under these circumstances France will take hold, I have no doubt, unless prevented by Europe at large. The country is so fertile and rich that one is utterly surprised it was not long ago annexed or *protected* by some one of the Powers. It is only equalled by Algeria. As is well known, two grain crops, and even three, can be produced annually (with irrigation), while fruits, grapes, and many of the semi-tropical plants for food and the arts grow in abundance. The climate is very healthful, though hot in the summer months.

News of the Sultan's state of health causes more or less constant speculation, but correct information cannot possibly be obtained as to this. Small wars are perpetually going on with the Arabs in the interior, and intrigue and mystery reign here at the court as elsewhere in Moslem States. The army numbers some twelve to fifteen thousand, more or less under foreign instruction and arms. It is quite likely that Morocco could and would make a far stronger struggle than Tunis did. Here, as nowhere else, can one see the tall, gaunt, ascetic

Moslem, and he passes you with often a scowl or sullen stare. The faces remind one of their hard, abstemious lives and utter faith in their religion, and of the types one so much sees in church pictures and portraits. But it is bewildering to come across a circle of great big fellows squatting on the ground, with their dark skins and white robes, bartering over a few almonds, for instance, or melons, for hours. A strict Moslem is a healthy being, and many here are physically magnificent. They are, however, addicted to smoking kiff or kief—a species of hemp, narcotic in its effects, which they mix with tobacco, and which is markedly injurious. The Sultan has ordered its prohibition, but this has very little effect apparently. One can readily go back here some hundreds of years in imagination, as there cannot have been much change in that time, seeing the manner of living, the implements, customs, and beliefs of the inhabitants. Trade, of course, is restricted, but there are no taxes to speak of. Imports and exports pay a low percentage, however, and, with other petty annoyances from the native officials, foreign trade does not amount to much at present, nor does it seem to be desired. With a stable Government, Morocco should be wealthy and prosperous. There is daily communication with Gibraltar, whence it is easy to go promptly to any part of the world.

Oran, Algiers, and Bona, in Algeria, are very much like ordinary French towns, having the same municipal governments, street scenes, cafés, theatres, and the like. Oran exports enormously of grain—report says more than Algiers—while a great and increasing wine trade is predominant in the latter city. One is struck by the extent of the vineyards in the country between Oran and Algiers, and probably this vast quantity of rather coarse red wine makes up the bulk of the "Bordeaux" wine sent to all parts of the world under new labels. It goes to Bordeaux in casks. There are some brands of the native wine, both red and white, that are fairly good.

Life in Algeria seems active enough. The climate at this season is charming, there is good sport, the cities offer many attractions, with fine shops, squares, and parks, and handsome equipages. The garrisons at the principal points are large—in Oran five thousand, in Algiers seven thousand, with bodies distributed elsewhere in varying numbers—in all, some thirty thousand in the country. The roads are excellent, and the railroads fairly efficient—extending from Algiers westward to Oran, eastward to Bona and Tunis, and southeastwardly and southwestwardly to Constantine and to a lake region near the frontier of Morocco. The French system seems to have thus far brought some order out of the former chaos at least, with means of communication by rail and good roads, the telegraph, good breakwaters, and artificial harbors, and to have fostered agriculture generally. Recently extensive drought has caused much loss to farmers, and it is proposed to grant, by Government, ample supplies of seed to farmers in need of it.

In all northern Africa one must concede to Algeria the palm for its resources, extent of agriculture, and evidences of superior order and civilization. There are no roads elsewhere from the Atlantic to the Nile, nor is there anything to commend among the degraded populations one meets with. In the city of Algiers the natives are not disturbed in their religion or ordinary customs of worship and living, and the part where they live, congregated in their tomb-like rookeries and narrow quarters, is still a most unique and interesting spot for the tourist and stranger. French health officers daily inspect and observe the condition of the streets, urinals, and markets, however. In winter the number of visitors to Algiers is now very large, and, besides good hotels, parties can rent furnished houses, apartments, or even villas for the season, which is said to be gay, the Governor and leading authorities continually entertaining. The country adjacent to the city is surpassingly beautiful; and the smooth, level roads leading along green and abundant vegetation, with much diversity of landscape, the Atlas Mountains in the distance, and the Mediterranean on one side, all combine to form a very pleasant country for the traveller in search of an agreeable winter climate or new scenes.

Tunis will not be released by the French unless very unlooked-for circumstances arise. It is true that there are not more than a thousand troops in the country, but Algeria is not far away, and a railway connects with Bona, containing a garrison of some thousands. One sees at the mast-head the flags of France and Tunis together side by side, but streets in the city of Tunis are named and numbered in French, the new quarter and boulevard (completed eight months ago) is all French, and some thousands of shopkeepers, artisans, café and hotel people are to be found there. There is a good first-class hotel, quite new and comfortable, besides some second-rate ones. The Italians are in considerable numbers, and are no doubt strongly opposed to the French "protectorate." From Goletta, the port of Tunis, one travels to the capital by an Italian railway. There are legations and consulates from the European countries, but none from the United States. The French have not yet succeeded in interfering with any of the smells of the city, and these arise from utter lack of drainage, heaps of refuse and decaying matter, and from the close, narrow, and tunnel-like streets. The bazaars are wide and usually cleaner, but even here one must be well seasoned to annoyances of sight and smell to keep up. Tunis offers more to the traveller in the way of quaint streets, blind alleys, large bazaars, and queerly costumed people than any city in Africa, to my knowledge. It is not yet much frequented by tourists, and things and places wear a totally different aspect from what they do in either Tangier, Cairo, Algiers, or Tripoli. One is struck by the number and influence of the Jews. Without them trade would come to nothing, as they possess most of the money and the commercial skill and habit. Their men are large, handsome fellows in rich burnoose and turban, while their women still wear the trousers of embroidered muslin or linen, short burnoose, and small, rimless, conical hat. The natives are much lower in the social scale, as a rule. If any part of the population *invited* the French protectorate, it occurs to one that it must have been the Jews, and it was without question a shrewd move. The Tunisian troops are still seen, and the native authority has a semblance of existence, but the future evidently belongs to the red-legged zouave and the overshadowing French official class.

Carthage still remains a fruitful field for the excavator. The museum in the Chapter House in the rear of the Cathedral of St. Louis, now approaching completion, is being constantly added to. These buildings are on the top of the hill, on the supposed site of the ancient temple of Æsculapius, and are large and prominent objects, imposing and beautiful in structure and design. In one great room are arranged the various objects, with three large glass cases of coins and jewelry, many shelves of pottery, busts, parts of statuary, inscription tablets, and so on. The only Punic remains consist of coins, oil-lamps, and vases of pottery, and some bits of jewelry, and pins of copper and iron; and this part of the collection is very limited. The bulk of the museum is of Roman origin, and includes many fine fragments of marbles, tablets, and inscriptions, as well as a large lot of coins, vases, arms, and elaborate capitals. The garden wall is a mass of flat tablets and inscriptions, with now and then a part of a column, capital, or fragmentary statue. One of the priests has charge of the museum, and seemed to be an accomplished and learned man. He showed considerable curiosity concerning New York, stating that he had once been there.

The gas corporation of Tunis is giving the Cardinal Archbishop (who controls all excavations) much assistance, and they are cleaning out the mud, rubbish, and water from the large underground cistern nearest the seashore—for what purpose I could not ascertain. The aqueduct ruins still offer building materials, stretching from the mountains eighty-seven miles away. All over the fields and the vast site one easily finds openings letting down to the house walls below, and, though much is problematical concerning the accuracy of location, one is interested in visiting and seeing the sites of the various gates of old Carthage, the great temples, the amphitheatre, the house of Hannibal, the various cisterns—three groups of them; those on the east, nearest the sea, being extraordinary in size and present condition. The water gate and artificial harbor are easily traced, while the above-named cisterns and baths are not all destroyed even now. All along the shore from Cape Carthage to Goletta, a distance of five miles, one finds traces of huge foundation walls, pillars, and columns. In a hut I saw a marble capital of great beauty serving as a table. Most of the site is now in fields, the hills, apparently, not being fertile, while some of the foreign legations occupy the best parts with fine country residences, large gardens, and parks. The villages of Mersa, Sidi Bou Said, and Sidi Daoud are all on the confines or within the old site. There are also the palace and baths of the present Bey of Tunis and some general officers (natives), a line of railway (branch of the Italian line from Goletta to Tunis), and an old fortification. The legations belong to England and France.

The means for travel and mail communication between Tunis and Europe are very ample, and are mainly in the hands of the French. From Algeria there are daily mails to France, trains run frequently over the several roads, and, when the lines of railway projected in Tunis are completed, the block of northern Africa known as Tunis and Algeria will be a compact and well-in-hand French colony, with undoubtedly a great future.

C. A. Siegfried.

THE QUEEN OF WESTPHALIA.—III.

Paris, November 8.

The Queen of Westphalia took leave of the Emperor Napoleon, whom she was never to see again, on the 20th of April, 1814, at Nemours. The next day she started for Montereau, and was arrested on the road by the Comte de Maubreuil, who had once been attached to the household of King Jerome. Maubreuil examined all her baggage, seized a box containing 84,000 francs in gold, and ten boxes, one of which was full of her jewelry. She joined her husband at Berne, and continued to resist all the entreaties of her father. She went afterwards to Styria, where the Emperor of Austria had offered her an asylum for herself and her husband. She was confined at Trieste of a son, who afterwards entered the army of Würtemberg, and died in 1847 at Villa Castello, near Florence.

At the Congress of Vienna the King and Queen of Westphalia found no supporters. The King of Würtemberg had little influence, and he plainly told his daughter that no member of the Bonaparte family could become possessor of any sovereignty, great or small. He was going to the Congress merely to watch over the affairs of his own kingdom. "Take," he said, "the map of Germany, and look at it; you will be convinced that if it was four times larger than it is, it would not suffice to satisfy the hopes of those who wish to retake their possessions and to satisfy their insatiable love of aggrandizement" (October 6, 1814). Her father reminded her of "the difference between old dynasties, whose existence was lost in the obscurity of time, and lucky adventurers whose ephemeral existence ceased almost as soon as it had begun." He had been somewhat imprudent in giving his daughter to one of these "adventurers," and his advice to him would have come better from another mouth. "If you wish to be happy and to see your husband happy, try to persuade him to put aside whatever can remind him of the past, to live as a private individual, without pretensions, to prefer domestic pleasures to all others."

Queen Catharine lived at Trieste simply enough. It was there that she heard of the return of Napoleon from Elba. Jerome left Trieste secretly in a Neapolitan ship on the night of March 26. He had previously spread the rumor of his being dangerously ill. He succeeded in arriving at Sinigaglia, and joined King Murat on the 28th of March. Prince Metternich had invited Jerome to leave Trieste and to go to Prague, a few days before Jerome left Trieste. He was probably aware that the ex-King of Westphalia was still in correspondence with the Emperor Napoleon. What was Queen Catharine to do? Her father wrote to her offering her his hospitality; she could not well refuse it, but she wrote to him: "Hear again the repetition of an oath I will make to you: no power shall separate me from my husband, whatever his fate may be." She asked him never to pronounce the name of Jerome before her and before her son.

She remained in Göppingen during the great events of the Hundred Days, surrounded by spies, and unable to write to her husband, who had joined Napoleon. She saw her father, but the interviews were short and painful, as the King of Würtemberg had conceived a real aversion to Jerome and all his family. Baron Stölting, her secretary, was arrested in the month of June at the Castle of Göppingen and taken to Ulm. He was accused of having formed a conspiracy to kidnap the young Prince, son of Jerome, and bring him to his father. (Baron Stölting became secretary of King Jerome under the Second Empire, and died at the Palais Royal in 1853.) Her father informed her on the 27th of June, 1815, that Napoleon had been forced to abdicate a second time, and that "a provisory government had been established in Paris, composed of Fouché, Carnot, etc., which had sent plenipotentiaries to the general quarters of the sovereigns to ask for a peace, which would be refused them so long as there remained a man or a child in France with the name of Bonaparte." She answered this somewhat ferocious declaration with much dignity: "I should be sorry if you believed that the news you give me had overpowered me. For many years I have been accustoming myself to misfortune; only a weak soul succumbs to it; mine is strong in its sentiments as well as in its duties. Whatever be the fate of my family, I will share in it. I have no other thought or ambition than to follow my husband."

Jerome had been with his brother at Waterloo. Queen Catharine was very uneasy about him. He had been slightly wounded, and she begged her father to be allowed to join him in Switzerland. She wrote to Jerome: "I need not repeat to you that I will follow you everywhere, to any place that you may name or that may be named to us. You are my happiness. Our misfortunes are dreadful, but what can be to me all the reverses of fortune if you remain to me?" She was afraid that Jerome would be murdered. Maubreuil, who had robbed her of her diamonds (worth three millions of francs), had not been prosecuted, and she believed him capable of any crime. Her furniture had been sequestrated, and she could not obtain its restitution, notwithstanding the direct intervention of the King of Würtemberg and of the Emperor of Russia. She dreaded the worst things from the Bourbons and their supporters. She asked again for the intervention of the Emperor of Russia, but her father showed her that the situation was no longer in 1815 what it had been in 1814. "In 1814 the Bonaparte family had its existence assured by a treaty; the allied Powers had therefore the right to protect its members, and to insure the execution of the treaty. Napoleon has violated it; he tried to remount the throne of France; his brothers, by staying by him, by partaking of his usurpation, by fighting under his flags against us, have become our enemies, and will be treated according to the laws of war and the law of nations." He blamed Jerome for having secretly left Trieste, where he remained under the protection of the Austrian Government, and for having fought in the armies of the Emperor. Resignation and patience were all he could now recommend.

Queen Catharine, having heard through the newspapers that Napoleon had left for England, asked permission to go to England also. She had no news of her husband; her father informed her that Napoleon had delivered himself up to the English on the 16th of July, 1815, at Rochefort; he had with him only Joseph Bonaparte, who did not follow him on board the *Bellerophon*. Jerome was concealed somewhere in a country-house, in the neighborhood of Paris. On August 2 the King of Würtemberg writes to his daughter that nothing is yet known of Jerome; he informs her that Napoleon will probably be kept in captivity in the other hemisphere. "Lucien is a prisoner in the citadel of Turin, Joseph is under strict watch at Rochefort. The widow, Letitia Bonaparte, and ex-Cardinal Fesch have been transported with an escort to Rome, where the Pope answers for them. Hortense Bonaparte is banished from France and transported to Switzerland. When Louis and Jerome are found, their future fate will be decided." He discourages the idea of Jerome and his wife ever going to England to live. "How could the person who has possessed Hanover and Brunswick, and who still affects to be called the Count of Hartz, live in England otherwise than at Court? It is on account of the bragging (*jactance*) of your husband, and of his continual pretensions, that it is more difficult to settle his fate than that of his brothers."

Finally, the King of Würtemberg consented to extend to Jerome the hospitality which he had always offered to his daughter. Jerome left France, with the connivance probably of Fouché, and arrived at Göppingen on the 20th of August; he had not seen his wife for five months. He was allowed to keep only one Frenchman in his service, M. Abbatucci. The ex-King and ex-Queen stayed at the Castle of Ellwangen. There were a thousand details to settle between the father-in-law and the son-in-law—questions of etiquette, questions of money. The temper of the King of Würtemberg was not of the best, and the ex-King of Westphalia had at times most unreasonable pretensions. Jerome would not give any account of his fortune, of his debts; he refused to be under any sort of tutorship. His father-in-law wished him to place all his fortune in an estate in Würtemberg; Jerome refused. King Friedrich wrote to his daughter: "The orders which I have given are irrevocable, and the insolent opposition of Jerome Bonaparte will not prevent me from fulfilling my engagements towards my allies. Submit, therefore, or fear my anger and its consequences. Do not forget that it is not an asylum which I have given to your husband, but a State prison, much milder than would have been the fortress of Wesel."

Jerome protested he would not be treated as a prisoner, and, after a long struggle, the King of Würtemberg allowed his daughter and his son-in-law to leave his kingdom and go to Austria. Jerome was not allowed to bear the title of Count of Hartz, and took on his passport the name of Prince de Montfort. He went with his wife to various places—to Heimburg, Erlau, Schönau, and Trieste. In this last place were born Princess Mathilde on the 27th of May, 1820, and Prince Napoleon on the 9th of September, 1822. Princess Mathilde still lives in Paris. She was married to Prince Demidoff, and afterwards separated from him. She has never taken any active part in politics, and is well known as a patron of art and of literature, a friend of Sainte-Beuve, of Dumas fils, of the Goncourts, of Taine (till the publication of his last volume on Napoleon). Prince Napoleon is well known; he has just published a volume in answer to the attacks of Taine on Napoleon. He is a brilliant speaker and writer, a living image of his father Jerome and of the Emperor Napoleon. He was exiled, together with his eldest son, Victor, at the same time as the Comte de Paris and the Duc d'Orléans.

In 1823 Jerome Bonaparte and his wife left Trieste for Rome, and in 1831 they took up their residence in Florence. Queen Catharine, who had long been in delicate health, became very ill in 1835, and was advised by her doctors to leave Florence and go to Switzerland. She chose a country-place in the neighborhood of Lausanne, but she did not live much longer, and ended what she called "sa vie errante" on the night of November 29–30. She showed in her last moments the same fortitude she had always shown in her life. Her three children were brought to her bedside. She blessed them and said: "I feel that death is approaching; I fear it not. What I have loved best in this life is you, Jerome." She then added: "I wish I could have taken leave of you in France." Jerome and her eldest son remained with her to the end; the two younger children, Mathilde and Napoleon, were taken away. Thus ended this truly noble woman, whom Providence had placed in the most extraordinary and trying circumstances, and who had always followed the straight path of duty. She had been the most tender of daughters, she became the most devoted wife, and she never abandoned nor betrayed the man whom she had married, though she had not chosen him.

Correspondence.

FLOWERS AND FRUIT IN CALIFORNIA.

To the Editor of The Nation:

Sir: Your issue of October 27 contains an excellent letter dated Los Angeles. The writer, however, was in a few instances misled by the incorrect information to which the tourist is always exposed. He quotes, without endorsing,

the assertion that "sweet peas have no fragrance at all in California." I cannot say how this may be in southern California, but in this part of the State they fill the gardens with fragrance every summer. I cannot myself see that any species of flowers is impaired in fragrance here; but that is, of course, a question for each one's personal perception.

A brief sojourner might be misled by the fact that flowers most fragrant every morning and evening are nearly scentless at noon in warm weather; or there may be a difference in this respect between southern California and this part of the State.

Your correspondent is distinctly in error when he says the pepper tree (*Schinus molle*) "does not flourish in northern California." By "northern California," as distinguished from "southern California," is always meant the whole region north of Tehachepi Pass, more than two-thirds of the State, or at all events north of Fresno. The phrase is very misleading. The whole region from Tehachepi to at least the latitude of Sacramento is properly central California; but in Mr. Finck's meaning my home in Alameda County, within thirty miles of San Francisco, and about two hundred north of Tehachepi, is undoubtedly far north of the line between northern and southern California. As I write, I can look from my window upon a magnificent specimen of the pepper tree. There are hundreds in the neighborhood, and all through this and the adjoining counties they flourish. In the purely local climate of San Francisco—situated as it is upon a fog-swept peninsula—many trees and flowers fail that grow vigorously but a few miles inland. Close to the great pepper tree of which I spoke grow orange and lemon trees heavily laden with fruit. The eucalyptus is abundant even to weariness, and grows to such a height that it is sometimes uncomfortable to look to the top of it. Even the banana grows, blossoms, and "sets" fruit in the open air here, but will not ripen fruit. Nearly one hundred miles north of here, in Yolo County, the date palm has perfected its fruit in the open air, and one hundred and eighty or two hundred miles north, oranges have been grown. One hundred and twenty-five miles north of here they are going largely into the growing of oranges for market. It is very hard for our Eastern friends to understand that climate in California is not a question of latitude only, but depends even more upon situation, chiefly upon the trend of the mountains. It is also affected by altitude and the ocean winds.

Once more. Mr. Finck implies distinctly that the line of the almond falls further south than Los Angeles. The almond is a staple crop in this neighborhood, and the many acres covered with almond trees are spread white in the time of bloom, and in the autumn many tons of the nuts are sent to market from here.

RAINFALL ON THE PLAINS.

To the Editor of The Nation:

Sir: When Mr. Adams wrote "The Rainfall on the Plains," published in your last issue, he could not have seen the original text of Gen. Morrow's address at the Sidney Fair. If he had, he would not have said that "his explanation of the increased rainfall and the causes of the increase was *somewhat different* from that given by Gen. Morrow." In fact, the explanations are identical. Prairie fires, trampling buffalo, rain rushing off in torrents, ploughing, are all prominent in both explanations, and are all introduced for the same purpose. The chief difference is that the baked earth, which, according to Gen. Morrow, had "become as compact as a rock," according to Mr. Adams "had assumed a brick-like consistency." So remarkable and numerous are the coincidences between the letter and the address that, if the letter-writer had read the address (which was delivered on the fifth of October), he was clearly guilty of plagiarism. Witness the following paragraph of Morrow:

"I have always thought that there was an abundance of moisture in the clouds of this interior section of the country, but that conditions favorable to its precipitation in the form of rain and dew were wanting. The earth and the sky are reciprocal in their relations. They give to and take from each other. A parched desert, having nothing to give in return, receives no moisture from the passing clouds. For countless ages these prairies have been scorched by fires, pelted by storms of rain and hail, and trampled upon by innumerable herds of wild animals. The effect of this has been to pack the earth until it has become as compact as a rock. The forcing or beating power of rain and hail is far greater than the ordinary observer comprehends. When rain falls on a primitive soil, the larger part of it runs off in torrents and finds its way to the sea. The baked, storm-beaten, and animal-trampled earth, like a sick man, refuses its nourishment. Beyond doubt this is the reason why you have so many physical proofs around you of enormous devastations committed by running water. When the ground is tilled, this will cease. Cultivated ground absorbs a large proportion of the water that falls upon it, and retains it like a sponge. It thus becomes a reservoir of moisture for the nourishment of crops in seasons of drought. The turning over of the soil in large tracts of country presents to the atmosphere a vast absorbing surface. The soil gives this absorbing moisture slowly back to the atmosphere by evaporation. Thus year by year, as cultivation of the soil is extended, more of the rain that falls is absorbed, to be given off by evaporation, or to remain in store to nourish plants and grasses." R.

Wisconsin, November 26, 1887.

BESSEMER-STEEL PROCESSES.

To the Editor of The Nation:

Sir: Without denying that the Bessemer-steel makers may be guilty of the enormities with which you charge them in a late issue, and, indeed, admitting that profit rather than philanthropy is uppermost in what they are pleased to call their minds, I am not sure that you have stated the chief reason why the basic Bessemer process has not gained a strong foothold among us. Very grave doubt, I believe, exists among steel-makers as to the possibility of conducting the basic process with profit in this country. It is much more expensive than the common or acid Bessemer process; moreover, the range of composition of the crude material, or pig iron, applicable to it is much more limited than in the case of the acid process. Not all pig iron and not all ore which is unfitted for the acid process is fitted for the basic. The presence of a moderate proportion of phosphorus unfits an ore for the acid process, and very many American ores are thus excluded, of which, however, relatively few are fitted for the basic process, simply because, though they have too much phosphorus for the one, they have not enough for the other. A place in which the basic process is to thrive should offer, besides cheap and suitable fuel and cheap transportation to market, a large supply of iron ore, at once very cheap and highly phosphoric, for the presence of a large proportion of phosphorus, larger than our otherwise suitable ores usually contain, is quite as essential to the basic process as its absence is to the acid.

The basic process was tried at one of our largest and most intelligently conducted works some years ago, but abandoned. Another very extensive works, built in 1881–'82, was expressly and admirably designed so as to employ either acid or basic process; but its enlightened managers have never been able to convince themselves that the latter would be profitable with the existing relations between the cost of phosphoric and that of non-phosphoric ores.

It may not, therefore, be unreasonable to consider that we do not use the basic process, chiefly because it is not thought fitted to our conditions, rather than because of lack of enterprise on the part of our steel-makers. Indeed, enterprise is hardly what they lack.

Very respectfully, Henry M. Howe.

Boston, November 21, 1887.

WOMEN IN INDIA.

To the Editor of The Nation:

Sir: Some time since you reviewed the book published on the social condition of women in India, by Ramabai, a Brahmin lady of much intelligence and highly educated. The feature brought out into terrible distinctness was the wretched position of the widows. Your readers will doubtless recollect that it was shown that girls were often betrothed or even married in childhood. In case the man or boy to whom they were so contracted died, they were held to be widows, so that a child of five or younger might be the widow of a man or boy whom she had never seen. But the social position of the widow, whether becoming one in childhood or later, was shown to be in every way most wretched. She is little better than an outcast, is treated as an inferior, is reviled and made to feel her existence a burden. Superstition is at the bottom of it, for it is held that the fact of becoming a widow is the proof and also the punishment of crime or sin committed in a previous existence, and that she deserves all the misery she is made to suffer. To escape all this, many are driven to a life of shame. Of widows it is estimated that there are twenty millions—figures that include an amount of suffering and wretchedness perhaps unparalleled elsewhere on the surface of the earth.

It is the great desire of Ramabai's life to do something towards breaking up the miserable system that produces this evil. Her book was written in order that its proceeds might afford means to this end. Her friends—entirely without suggestion from herself—have determined to aid in the undertaking by a subscription which has already had a favorable start. Messrs. E. W. Clark & Co., bankers, have consented to act as treasurers, and those who may desire to lend a helping hand to a most excellent undertaking can send contributions to them at 35 South Third Street, Philadelphia.

L.

A STRUGGLING PERIODICAL.

To the Editor of The Nation:

Sir: Notice has been given in some of the philological publications that the *Archiv für Lateinische Lexicographie und Grammatik* will probably be discontinued after this year, because of the lack of the necessary support.

The editor has carried on the work partly at his own expense. He has mapped out the whole field of Latin literature, and apportioned it among a large body of scholars, who, under his direction, are uniting their efforts for a common purpose. The immediate outcome of their systematic investigation in the domain of grammar and lexicography is this periodical, the success of which being assured, the plan looks forward to a complete Thesaurus, so much desired. Unless a more substantial interest is immediately taken in this matter, the project must be abandoned.

There is no journal so peculiarly helpful to

the Latinist, and no earnest student can read a single number and then feel that he can do without it. Will not American scholars do their share towards the maintenance of such a laudable enterprise at this critical moment?

E. M. Pease.

Bowdoin College,
Brunswick, Me., November 23, 1887.

Notes.

Little, Brown & Co., Boston, will shortly publish 'Five Hundred Dollars, and Other Stories of New England Life,' some of which have heretofore appeared in the *Century*.

A collection of papers and notes by Rear-Admiral Simpson, U. S. N., and Sir Edward Reed, M. P., entitled 'Modern Ships of War,' will be published directly by Harper & Bros., along with 'Women and Men,' Col. Higginson's contributions to *Harper's Bazar;* 'A Prince of the Blood,' by James Payn; and 'A Magnificent Plebeian,' by Miss Julia Magruder.

'Pilgrims and Puritans,' a book of easy reading for children about to begin the study of United States history, has been prepared by Miss N. Moore, and will be published this month by Ginn & Co.

The pleasant news comes from Paris that M. Henri Bouchot, author of the admirable essay on 'Le Livre' recently Englished as 'The Printed Book,' is now preparing 'Les Reliures d'Art de la Bibliothèque Nationale,' which will contain a hundred reproductions. It will be published by Édouard Rouveyre.

The new house of Boussod, Valadon & Cie., which succeeded the old house of Goupil & Cie., has gone into the publication of beautiful books illustrated by the processes they control. For the holidays this year they promise a sumptuous edition of M. Ludovic Halévy's delightful Franco-American novel, 'L'Abbé Constantin,' with reproductions of a host of drawings by Mme. Lemaire.

Hachette announced, November 1, for immediate publication, two more volumes of his "Grands Écrivains Français"—'Turgot,' by M. Léon Say, and 'Voltaire,' by M. Ferdinand Brunetière. The 'George Sand,' by M. E. Caro, has just been issued in the same collection.

Another recent publication by the same house is 'Arques et Ivry,' by M. B. Zeller (Boston: Schoenhof). This is one of the little volumes of their "Histoire de France racontée par les contemporains," of which the preceding volume, issued in September, was 'Les Trois Henri: le Valois, le Lorrain, le Béarnais.'

Still another is the 'Essais sur l'Allemagne impériale,' by M. Ernest Lavisse, of which the greater part appeared in the *Revue des Deux Mondes* in separate papers. These collected articles are preceded by a long preface, which the reader will not be likely to find long, so clearly and attractively has the author presented his views of the causes of the political position of affairs in western Europe. M. Lavisse knows his subject well, and can approach it upon many sides in a way that gives to all he says a very attractive freshness. The book is interesting throughout, and is written with vivacity and vigor, and generally, what was scarcely to have been expected of a work written in Paris at the present time, with great moderation.

The crude execution of a whimsical idea gives us 'Addresses of the Dead,' by Charles C. Marble (G. W. Dillingham). The author's intent was to indicate the burial-place of distinguished Americans. His selection is a "queer lot," to begin with, and his indications cannot be trusted. For example, Wendell Phillips's grave is not in Boston. Mr. Marble's resources are so extremely limited that he cannot finish out the dates of birth and death of such noted persons as George P. Marsh, Lucretia Mott, and John Neal. Then he mangles his names, giving us H. W. Hallec*t*, Mme. Jumal, H. *W.* Gorringe, Zac*k*ariah Chandler, Ma*t*thew Carey. He repeats information, as on pages 28, 40. Finally, he gives no index of places, without which half his object is defeated.

Mr. Parkman has been able to prefix to the new edition of his 'Montcalm and Wolfe' a portrait of Wolfe at the age of sixteen, direct from the original, taken from life by Highmore when the boy received his first commission and was about to join the army. Other engravings have been made from copies. The Paris *Temps* of Nov. 14, by the way, contains a report of the remarks of M. Geffroy before the Académie des Sciences Morales et Politiques on the occasion of the presentation of Mr. Parkman's 'France in America' to that body. After reviewing the work at some length, the speaker described the manner in which the historian had prepared for his task, referring especially to his collection of manuscripts "unique par sa richesse, et fameuse même en Europe." M. Geffroy praised the vivacity and picturesqueness of his narrative and its strict impartiality, saying that the writer, leaning neither to the French nor to the English, remains "avant tout Américain," and closed with the remark that Mr. Parkman had rendered a special service to France in bringing into clear light some titles to glory which had hitherto been ignored, or appeared to be in danger of being forgotten.

Reviewing *St. Nicholas* in the two bound volumes for 1887 (The Century Co.), one comes upon serial articles which are now newly upon the market in the shape of books, some of which we notice elsewhere. Apart from these biographical, historical, and humoristic contributions, what most prominently emerges from the general miscellany is the articles relating to our civil war.

Mr. Stockton's 'The Hundredth Man' leads the fiction in the twelfth volume of the *Century*. Mr. Kennan's "Visit to Count Tolstoi" is the most interesting single article, though Mr. Wilson's "Finding Pharaoh" and Mr. Edward Atkinson's "Low Prices, High Wages, Small Profits" (which appears to be omitted from the table of contents) are also conspicuous. But of these, as of Mr. Atwater's series of papers on food, the Lincoln and the war papers, etc., we have spoken monthly, and need not now recapitulate.

The seventh number of 'Battles and Leaders of the Civil War' (The Century Co.) concludes the battle of Shiloh, and, after a general article on the contending navies, by Prof. J. R. Soley, begins the narrative of early coast operations against the Confederacy.

The first number of an illustrated weekly, entitled *Garden and Forest*, will appear in this city early in February. It will be devoted to horticulture in all its forms, landscape gardening, and forestry, and will be under the direction of Prof. Sargent of Harvard University. This is a promising field for a journal characterized by good taste and scientific accuracy.

Mr. Max Ohnefalsch-Richter begins this month at Nicosia, Cyprus, publication of a weekly paper, the *Owl*, devoted exclusively to topics concerning that island. French and English will be the two admissible languages for correspondents. A learned collaboration is promised. There will be monthly plates of illustrations.

An *Architectural Review* is to be issued by the Architectural Society of the Boston Institute of Technology. It will for the present confine itself to publishing the first-mention designs of the Department of Architecture.

The Boston Art Students' Association has published a small pamphlet called 'The Art Student in Paris,' copies of which may be had of Mr. G. H. Blair, at the Museum of Fine Arts. It is a very practical guide to all students who seek the art metropolis of the world, and will be especially useful for young women. The good faith of the compilers, and their desire to conceal none of the hardships and dangers of studio life abroad, will fortify where they do not deter. A few pages are devoted to Munich. The details include climate, restaurants, boarding-houses, schools, fees, color merchants, regulations for copying from the galleries, "doctors recommended," and churches.

The *Popular Science Monthly* for December republishes the Duke of Argyll's paper entitled "A Great Lesson" from the September number of the *Nineteenth Century*. The Great Lesson that the Duke discourses upon is the upsetting of Darwin's subsidence theory of coral reefs by the later researches of Mr. John Murray of the *Challenger* expedition. In the opinion of the Duke, the overthrow of the Darwinian theory of corals is complete. In the November number of the *Nineteenth Century* Prof. Huxley gives some attention to the Duke's article, which he characterizes as "containing a greater number of statements which are demonstrably incorrect, and which any one who ventured to write upon the subject ought to have known to be incorrect, than I have ever seen gathered together in so small a space." Readers of the *Popular Science Monthly* who are not acquainted with the literature of a given question, will be very apt to infer that the republication of any scientific article carries the opinion of the editor that the writer whose name appears is at least qualified to discuss the subject, although, considering our common frailties, his views may be erroneous. Prof. Huxley shows the contrary to be the fact in the present case.

No. 24 of the Maryland Historical Society's publications is devoted to brief sketches of Luther Martin, by Henry P. Goddard, and of Nathaniel Ramsay, by W. F. Brand, D.D. Luther Martin was the strenuous advocate of the rights of the smaller States in the Constitutional Convention of 1787, and his speeches in opposition to the instrument furnished Calhoun with many of his nullification arguments, and the abolitionists with effective weapons against a pro-slavery Union. He was a celebrated lawyer, being counsel for the defence in two of the celebrated cases of his time, namely, the impeachment before the United States Senate of Judge Samuel Chase in 1804, and the famous trial of Aaron Burr. With all his ability, Martin had the besetting sin of excessive indulgence in liquor, which clouded his later career. Stricken with paralysis, he lived for six years dependent upon his friends. In 1822 the Maryland Legislature passed the extraordinary act requiring every lawyer in the State to pay an annual license fee of five dollars, the proceeds to be "for the use of Luther Martin." He died at the age of eighty-two at the house of Aaron Burr, who had given him a home in his infirm old age. The author proposes to expand his interesting sketch at some future time into a biography, and it is to be hoped that he will do so. Col. Nathaniel Ramsay, the second of these Maryland men of note, was brother to the historian David Ramsay, and gained fame by his successful efforts to check the British at Monmouth after Lee's retreat. He afterwards held various State and Federal offices of importance.

A recently issued *Boletin* of the Mexican

Geographical and Statistical Society contains a list of members and a catalogue of its collections. The maps are described very fully, fifty pages being devoted to those of Mexico alone.

The November Proceedings of the Royal Geographical Society contains but a single paper, which is descriptive of a journey made last year by Mr. Ernest A. Floyer in the rarely visited region in Egypt between the Nile and the Red Sea. It strikes one oddly to read of a spot close to the desert where, over a cliff, "fell a feathery cascade of softest, greenest maidenhair fern. Over the green moss and through the clustering sprays trickled innumerable streams of water into two crystal pools below, which reflected on their pure surface the branches of a Syrian fig-tree." This and the account of a snow-clad mountain in January make it hard to realize that it is a part of Egypt, barely 200 miles from Cairo, of which Mr. Floyer is writing. In the course of his travels he passed up the Wady Russafa, which is so like an artificial road that but for two defiles, each 200 yards in length, one could drive an omnibus from the Red Sea to the Nile. He also visited the famous Roman granite quarries of Mons Claudianus, where he found an enormous pillar, weighing 256 tons, awaiting transportation. The paper is accompanied by an excellent map.

Roberts Bros. renew their French calendar for another year, still clinging in their ornamentation to the fleur-de-lis, which, seeing the present crisis in France, is perhaps less anachronistic than it appears.

On the 5th of September ratifications were exchanged at Berne, Switzerland, concluding the International Copyright Convention, which was signed at that place September 9, 1886, and which now goes into force December 5, 1887. The contracting Powers are Great Britain, France, Spain, Germany, Belgium, Italy, Switzerland, Hayti, Tunis, and Liberia; the signatures of the first three States including all their colonial possessions. The British Government has printed as a blue book, under the heading, 'Switzerland, No. 1, 1887' (Parliamentary Papers, C.-5167) the complete text, in French and English, of this important treaty; and a summary of its stipulations appeared in the *Nation* for April 1, 1886, pp. 275–277.

—The Christmas *Harper's* is devoted to the conventional short story which one expects to find in the holiday annuals, except that the ghost is not called upon; romance there is in plenty, and the sort of sentiment that has become popularly associated with the season runs riot. A poem, by Mr. Will Carleton, represents it in the most offensive form—the mock-heroic convict who teaches the millionaire a lesson in Christianity by committing a burglary, gives himself up to the police, and is a good Samaritan ever after. This is not practical philanthropy; it really throws no light on how to be helpful to released convicts. On the contrary, it intimates very pointedly that the lonely ex-robber in the snow is several hundred per cent. better than the bondholder in the lighted chapel, and is rather fitted to teach than to learn goodness. The story as a poem is bad enough, but as a piece of morals it is even worse. At the other end of the scale of Christmas sentiment "Captain Santa Claus," by Capt. Charles King, is very attractive in tone and in its simple characters, and is pervaded with the kindness of human nature; no one can read it without a warm glow of pleasure. Mrs. Phelps contributes a strong, crude piece of sensationalism in her well-known style; Charles Egbert Craddock tells again of reconciliation upon the mountain-side by means of the saving power of family affections; and Miss Rives relates a pitiable story of Virginia, on the old *Lear*-motive, not without some characterization and a well-marked scene or two, but unnecessarily cruel in its catastrophe. Unless tragedy is inevitable, it is always felt as gratuitous pain, and the author has no right in art to wring our hearts merely for her sweet will. The illustrations of the number are singularly well printed, and many of them are of the highest excellence in their art. They embellish the article on "Old Garden Flowers," they turn Praed's poem into a picture-gallery, and they are distinctly a help to Mr. Aldrich's dramatic episode, "Pauline Pavlovna," in setting the scene before the reader with something of stage-effect. This poem is the sole piece of literature in the number, and it is enough to say of it that the author handles the dramatic line as well as the lyrical, and the line itself is stronger, with a vivacity and edge of its own. A special feature of the number is a colored lithographic plate illustrating the precious stones of the United States, very beautifully executed.

—In the December *Atlantic* the leading place is held by a paper, by Mr. E. H. House, upon the wrongs done to Japan by the Western nations through the treaty-making power, written with unusual vigor and feeling. The occasion of it is the failure of the recent conferences between the Japanese and the diplomatic corps. The specific wrongs complained of are that the Japanese Government is restricted from laying a customs duty of more than five per cent. ad valorem upon imports, and that the administration of justice in cases in which aliens are concerned is taken completely out of their hands. The customs duties being practically unavailable for revenue, the burden of taxes falls directly upon land, and hence arise hardships as well as fiscal difficulties. Mr. House points out the success of the Japanese in the ordinary conduct of governmental affairs, particularly in the postal service, the coinage, and the tribunals; and urges, with superfluity of argument, that they are abundantly able to take care of their own fiscal policy and the courts, so that no defence for the present system can be grounded upon their "barbarism." He reminds us that the United States were originally responsible for the error of the Japanese in their first treaty, which has been the model of the later ones, and calls upon us to sign the draft of the new and honorable convention shelved by our State Department, because, he intimates, of a suggestion from England. A half-day's work at Washington would be an incalculable service to Japan. Certainly we are largely responsible for the indignity that Japan suffers. When one reflects that Hawaii and Peru, profiting by our example, override the Mikado's authority, it seems incredible; and there is every likelihood that the diplomatic body is selfishly interested in the continuance of the old régime. We remember in what disgrace our own Consul was lately recalled from "administering justice" there. Since the change of ministry arising out of the failure of the Conference, it is possible that Japan may take the daring course, and declare the treaties at an end. The Powers would hardly fight on that issue, however diplomats bluster. Meanwhile it is both wise policy and moral duty for us to follow the most liberal and just course towards Japan, since we opened her ports. The review of the situation by Mr. House is very able, and awakens profound sympathy. It is not the first time that he has done good service for Japan. We note with regret the conclusion of Mr. Hamerton's papers. The remainder of the number, distinguished by a lightly satirical poem from the editor, is remarkably well sustained.

—About fifteen years ago the Tyneside Naturalists' Field Club of Newcastle, England, issued a series of photographs of the finer trees in their neighborhood, as well as of some that had been dismally destroyed by the effluvia of adjoining chemical works. The idea was soon taken up by the New England Society of Orange, N. J., whose tree "portfolios," however, were not carried beyond a second issue. We are now glad to receive Part 1 of a fresh series from another quarter, 'Trees of Reading, Mass.' It is published in that town by Mr. F. H. Gilson, at $1.50 per part—a moderate charge for five heliotype plates exceptionally well photographed, with accompanying letter-press. The gem of the present collection, pictorially, is the Nehemiah Bancroft Elm, a tree of rare size and symmetry; but the greatest curiosity is the Capt. Geo. Batchelder Sassafras, which has the extraordinary circumference of eight feet at four feet from the ground, and a height of over sixty. One does not need to have associations with Reading or with New England to enjoy these views, and we hope Mr. Gilson will find a widespread encouragement. We are glad to learn that he has in contemplation a larger undertaking of the same nature, 'The Noted Trees of Eastern Massachusetts.' There is no surer way to protect trees from vandalism than to give them a local fame and interest.

—So important an undertaking as the new *American Journal of Psychology* (published at Baltimore by N. Murray) merits fuller notice than our space will permit. The editor, Prof. G. Stanley Hall, is well known to the readers of the *Nation;* and that the Johns Hopkins University should be the place where the undertaking originates, will surprise nobody after so many previous proofs of the tendencies that prevail in that institution. Prof. Hall desires, as he tells us, "to record the psychological work of a scientific, as distinct from a speculative, character which has been so widely scattered as to be largely inaccessible save to a very few." "Several departments of science, sometimes so distinct from each other that their contributions are not mutually known," have furnished of late years psychological material, and Prof. Hall aims to bring such material together, so that hereafter the student of psychology may have better guidance in directing his own work and in surveying the work of others. How serious and straightforward are the purposes of the *Journal* may best be seen from the nature of the leading articles in this number. The first place is occupied by an elaborate investigation by Dr. Warren Plympton Lombard of the variations of the normal knee-jerk, in their relations to the activity of the central nervous system. That the extent of the knee-jerk varies with the general state of the organism has long been known, but, as Dr. Lombard points out, the absence of any exact instrumental measurement of the variations of the phenomenon under normal and abnormal conditions still prevents the knee-jerk from taking "its proper place as an aid to physical diagnosis." Dr. Lombard, therefore, has undertaken the task of providing methods for "striking the ligamentum patellæ a blow of known force," and for "recording the extent of the resulting knee-jerk." With these instrumental aids he has gone on to make some six thousand experiments upon himself, with results which this paper records. The knee-jerk is found to be subject to great variations, and these are affected by the time of day, by the emotional condition of the subject, by fatigue, by irritation of the skin, by excitement of the subject's

attention, by various voluntary acts, by the influence of music, and by changes of the weather, as well as by other influences. The paper, with its few thousand experiments on one man, leaves us, as Dr. Lombard says, only at the very beginning of a research whose medical and psychological importance is almost certain to prove very great. Then follow a paper on "Dermal Sensitiveness to Gradual Pressure Changes," by the editor and Yuzero Motora. Mrs. Christine Ladd Franklin describes "A Method for the Experimental Determination of the Horopter," and Dr. Joseph Jastrow discusses the Psycho-Physic Law in its relation to the traditional scale of star magnitudes. Then follow a number of elaborate book reviews, several shorter reviews, and a goodly collection of notes. One wonders whether it will be possible, even for this indefatigable editor, to spread so full a feast once every quarter henceforth.

—By way of a criticism of this first number there occurs to us a remark which may seem very ungracious, but which is not meant to be so. The exclusion by the editor of "speculative psychology" as such from the scope of his journal might, indeed, be interpreted as a necessary result of the division of labor in our day. But, alas, the captious reader of the lengthy and able book reviews is tempted to declare, with some amusement, that the exclusion of "speculation" from this journal apparently means that only the editor shall be allowed the privilege of speculating in its pages. For surely Prof. Hall is disposed to speculation, and he can in no wise wholly drive out nature, try as he will. The "dangerous chasm between mind and matter" is, we learn on p. 145, "slowly closing," by virtue of the researches of modern neurology. In fact, the "undevout neurologist," as one "might almost say," "is mad." Though (p. 146) "the psychological movement" must be "kept, in the severest sense, experimental and scientific," yet (p. 162) the "experience of a man who has had the invaluable training of abandoning himself to long experimental research," is described as producing a feeling of the "organic unity" of nature, a feeling which has a sense "far deeper than what speculation knows." In short, for Prof. Hall, experimental work is full of general philosophical suggestions, and he continually, if often rather vaguely, gives expression to these suggestions. Surely those pious feelings of the experimenter, when he reflects on the "organic unity of nature," and knows his feelings to have such a deep sense—these are not matters "in the severest sense experimental and scientific." They are fragments of metaphysics; and when Prof. Hall speaks of them, as he does, so often and so warmly, he "speculates," like the born philosopher that he is. Shall none of his contributors be permitted to do likewise? But we hasten to explain the ungraciousness of our words. What we really mean is, that while a journal mainly devoted to the recording of experimental work in psychology is, indeed, a great boon, no editor of such a journal ought to hope to bar out "speculation" from his pages altogether. That Prof. Hall has in his own work broken his own rules in the first number of his journal is not to his discredit, nor does he mean to give himself liberties that he forbids to his contributors. What is illustrated in his inconsistency is simply the impossibility of drawing any arbitrary line outside of which "speculative psychology" shall lie. The whole matter is simply a question of more or less, and while the work of this journal will, of course, be mainly empirical, it will undoubtedly contribute a great deal to speculation in our country.

PERRY OF JAPAN.

Matthew Calbraith Perry: A Typical American Naval Officer. By William Elliot Griffis. Boston: Cupples & Hurd. 1887.

In this biography the entertaining author of 'The Mikado's Empire' and 'Corea, the Hermit Nation,' partly continues the series of works which we owe to his former residence in Japan, and partly ventures into fresh woods and pastures new. His prime motive was to satisfy the curiosity of the Japanese themselves in regard to the man who forced them into the current of Western civilization. To do this, however, was to supply a real want in American history, no other life of Perry having been written; and it is clear that, whatever restraints the thought of his Japanese audience may have imposed on Mr. Griffis, his domestic audience more largely and immediately shaped the treatment of his subject. He offers his narrative for the edification of the youth of both nations, the Japanese especially.

The work is sure of a favorable reception and a permanent place in public and private libraries. It is not likely that any other admirer of Perry will ever make the laborious researches which Mr. Griffis has cheerfully undertaken, condensing the fruit of them into a moderate-sized volume easily handled and read. His original draft, he says, was very much more extended, and on some accounts it is to be regretted that he had to abandon the larger scale. For this reason, possibly, there is a lack of chronological precision in the progress of the life; and certainly a freer handling, with plenty of space, would have enabled Mr. Griffis to substantiate with documentary evidence his positions in disputed matters, and to make more perspicuous some complicated historical phases, like the revolution in Japan. Take the claim he makes for Perry as the originator of our naval-apprenticeship system. Perry's crucial experiment, made with a picked crew and under no restriction, was a flat failure. "The *Somers*," we read in the appendix, "sailed away full of happy hearts beating with joyful anticipations, yet destined to make the most painful record of any vessel in the American navy." What happened? "On this sad subject," our author replies, "either to state facts or to give an opinion, we have nothing to say." He mentions a "real or imaginary mutiny and its consequences," desertion, and attempts to be released by civil process. But this leaves us wholly in the dark, and we do not even so much as get a word from Perry himself on a theme about which he must needs have written much in explanation and self-defence. Here not to go into particulars exposes the biographer to the imputation of partisanship, and this is eminently the case when we come to the dispute with John Randolph over the alleged flogging on the *Concord* in 1830. This was Perry's ship, and she carried Randolph on his mission to Russia. The Minister made odious comparisons between the treatment of the sailors and of negro slaves, and asserted that during the voyage he saw more flogging on the *Concord* than could be witnessed on his plantation in a much greater length of time. We are told that, "supported by his own officers, who voluntarily made flat contradiction of Mr. Randolph's assertion, Perry convicted the erring Virginian of downright falsehood." "Two sets of his papers on the subject are now in the naval archives," and we ought to have had extracts from them and Randolph's *ipsissima verba*, in order to be persuaded that the latter falsified what he saw. But we must be content with Mr. Griffis's assurances.

This last topic suggests another direction in which expansiveness would have been desirable. Perry is credited with having done much 'by his methods" to abolish flogging in the navy. Making every allowance in abatement of Randolph, we are forced to conclude that these methods had availed little towards the end aimed at when Perry had supreme control, as on the *Concord*. Moreover, when asked for his official opinion as to the advisability of abolishment, on the eve of its being enacted, he began by taking the testimony of old sailors—very much as a slaveholder might have asked his slaves whether they wanted to be free; and, after all, he recommended a *gradual* change. This shows that he was subdued to the barbarous system he had worked in, and that he had no innate abhorrence of it. He had, of course, both directed floggings and administered them with his own hands, for the most trivial as well as for the most serious offences. Still, conceding all that Mr. Griffis claims for his hero on this head, we can but think that our author missed his opportunity to set off Perry against the system in a way that would have been truly profitable to the youth alike of America and of Japan. Flogging has been abolished less than forty years, yet how few know the atrocity which attended it, or what floating hells of cruelty and vice our naval vessels were when Perry came up in the service. A book for his purpose lay ready to Mr. Griffis's hand—for, though now rare, it may be found in public libraries. We mean McNally's 'Evils and Abuses in the Naval and Merchant Service Exposed,' published in Boston in 1839. It appears to us useful, not to make extracts from it here, but to borrow some inedited annotations upon it by a common sailor shortly after the book appeared—a witness, moreover, of many of the abominations recorded in it.

"In 1824," he says, in the manuscript before us, "I shipped for the first time in the United States Navy under the command of Commodore John Rodgers. As I had been some time in his British Majesty's Navy, I considered myself an adept in the usages of a man-of-war. But I was mistaken, and soon found out I was destined to experience treatment to which I had before been a stranger, and which I considered that no officers belonging to any civilized country could adopt. . . . I joined the United States ship *North Carolina*, lying at Norfolk Navy-yard, in September, 1824. . . .

"I have seen men punished for being ugly on board of a man-of-war. When I belonged to the *North Carolina* 74, a man by the name of David Seeley, who had spent the best part of his time on the ocean, and was much broken in health by hard usage, was washing his clothes on a cold winter's morning, when the first lieutenant came along and demanded who he was. 'I am a man,' was the reply. 'Did you come out in this ship?' 'Yes, sir.' 'You lie—I never saw you before, and, d——n you! stand up to that gun; you are too ugly to be seen about decks.' The boatswain's mate was called, and the poor old tar received thirteen lashes for his deformity.

"It was the order to face inboard, when called to stand by your hammocks, and to keep perfect silence. One evening, while obeying this order, a man stepped on my toe. In a whisper, I told him to get off. The first lieutenant came off the poop deck and called me out of the ranks, and very politely told me to pay him a visit to the bow gun in the morning. Accordingly I went, when he gave me thirteen lashes, and asked me if I knew what it was for. I told him that I did not know. 'I saw your lips moving, you d——n son of a b——,' was his answer.

"I have seen him come along the gangway and knock down men, giving them a black eye, and then punish them for having the same. The man told him he gave it to him, when he called him a liar, and ordered him thirteen lashes.

"While lying in Hampton Roads we experienced some heavy snow-storms, and the first lieutenant ——."

But why linger in American and slave-cursed waters under the very shadow of the lash? Let us proceed to that Mediterranean station which was deemed an officers' paradise—always looked

upon in time of peace as the most desirable, to use Perry's own words. The huge *North Carolina* having moved in 1825 to Spanish waters, Mackenzie, who afterwards hung the mutineers of the *Somers*, wrote admiringly "'of the herculean form and martial figure of the veteran [Rodgers],' who as monarch reigned over 'the hallowed region of the quarter-deck,' the 'band of music in Moorish garb,' the 'groups of noble-looking young officers.'" "A 'thousand eyes are fixed' on 'the master spirit,' hats are raised, soldiers present arms, the 'side boys' detailed at gangways to attend dignitaries—eight to an admiral, four to a captain—are in their places, and the blare of brazen tubes is heard as the Commodore disembarks." So Mr. Griffis; but our man-of-war's man shows the other side:

"In the *North Carolina* 74, under John Rodgers, a man by the name of Robert Patterson got intoxicated and gave insolence to the Commodore, for which he received thirty-six lashes with the cats. A man by the name of Henry Blake took French liberty, was compelled to stand on the capstan all night, in the morning he received twenty-four lashes with the cats. He died cursing Commodore Rodgers. Off Malaga, a man by the name of Peck (formerly an editor of a paper in Boston) and a boy by the name of Martin Clark got intoxicated. A whip was rove from the main yard-arm, and the culprits slung in a carpenter's pair of trousers, with a bottle of three quarters of water and one of rum tied round their necks. They were then run up to the yard-arm and ordered to drink; but as they put the bottles to their mouths, the rope was let go, and they descended a distance of forty feet or more into the water. This was fine sport for the young officers. After this was repeated a number of times, they were taken on board, more like dead men than alive ones, but not before Clark, the boy, was severely hurt by striking the sheet anchor. The Commodore, fearing Peck might publish the affair to the world, made him schoolmaster for the cruise. Poor fellow, he was blown up in the steam frigate *Fulton*."

If we followed our sailor guide deeper into this Inferno, he would take us to the *Delaware* under Commodore Crane and Captain Mix, the *Java* and the *Warren*, under Captain Skinner, and, worst of all, what he calls the "masterpiece of tyranny," the *Constellation*, under Captain Wadsworth. And we should see him, in his last cruise, in the same *North Carolina* in which he first sailed a dozen years before, still recording outrageous inhumanity, though under a new commander (Ballard) and in South American waters.

We have not space to discuss some ethical questions which naturally arise when a clergyman is the biographer of a warrior. Mr. Griffis, too, expressly disclaims any intention "to glorify the profession of arms, to commend war." Perry's part in the Mexican war is extenuated on the ground that he was not in sympathy with the aggression, which Mr. Griffis properly characterizes, and that he simply obeyed orders. Some of his Southern associates and subordinates evaded that necessity on the eve of the civil war by resigning from the navy, and this in Perry's case would have been a high moral lesson for youth. The Prince of Würtemberg having held that to be happy it was enough to discharge well the duty to which one was set, Not so, answered his correspondent, Rousseau. "Surely, Turenne, when devastating the Palatinate with fire by order of his Prince, did not enjoy true happiness." And if we substitute virtue for happiness, we feel how poor was the excuse of any soldier or sailor who participated in the Mexican war against his conscience. As our Frenchman wrote, on another occasion, of his persecutors, the Parlement of Paris, "They ought not to say they did their duty, but that they plied their trade." The invasions of Mexico and of Japan had this in common, that they were concocted by a strong Power against a weak. Whatever may be said of their results, they were not justifiable in the forum of morals; and we feel a natural doubt as to just what instruction high-minded boys or young men will draw, if left to themselves, from Perry's relation to both. We have endeavored in this notice to reinforce Mr. Griffis's meritorious work in its quality as a tract—if we may so term it without disparagement.

CHILDREN'S BOOKS.—II.

VARIOUS pleasant little stories of Nora Perry's are collected in 'A Flock of Girls and Their Friends' (Ticknor & Co.). Miss Perry knows how to make her maidens very bright, kindly, and spirited, and to teach moral and practical lessons in a very acceptable way. These stories of girls just as they are, and just as they ought to be—of girls at home, at school, in social life, working for a living, or helping some charity—are all of the present day, except two charming ones of Revolutionary times. None will lack pleased and profited readers.

The name of Hjalmar H. Boyesen is, of course, a guarantee of interest and originality in any book bearing it. In 'The Modern Vikings: Stories of Life and Sport in the Norseland' (Scribners) we find a series of delightful tales, most of which at any rate have already been eagerly perused by readers of *St. Nicholas*. Presented in book-form, with a picture on the cover of the descent of a steep hill on *skees*, they are very taking.

Readers of *St. Nicholas* need no introduction to Mr. Palmer Cox's 'The Brownies Their Book' (Century Co.). The little people whom his pencil has created are frolicsome, mischievous, good-hearted, as in the Old World imagining of them, but no European artist would have corporealized them as he has done with his "American humor." That some of the humor evaporates when the cartoons are massed together in a book, we are not prepared to deny. Still, even the monotony of the type is relieved by the repetition of certain constant characters, like the policeman, the Fenian, the Chinaman, and the dude. The jingling narrative is in keeping with the pictorial accompaniment.

Mr. Andrew Lang throws off a free translation of a folk-tale from French Flanders in 'Johnny Nut and the Golden Goose' (Longmans). The interjection of his own humor is naturally for the delectation of older readers, as in the parting shot—"Do not you believe any learned man who tells you that Johnny is the Sun, and that the Goose is the Sun, and that the Passing Belle is the Moon, or nonsense of that kind, which, my dear children, is *far too common!*" Whether the illustrations, by Am. Lynen, were made expressly for this edition, we are not informed. They are quaint and often truly decorative, and the book altogether is a very attractive redressing of an old, old tale.

The frequent recurrence of old ideas, sometimes scarcely veiled under new forms, is what a reader of the many fairy books compiled for the present generation must expect; and, however interesting such recurrence may be to students of folk-lore, it will hardly make stories more attractive in the eyes of young people. There is a fair amount of novelty in 'Fairy Legends of the French Provinces' (T. Y. Crowell & Co.), translated by Mrs. M. Carey, with an introductory note by J. F. Jameson of Johns Hopkins University, but there is no lack of striking resemblances to things we have all read before. The tales are taken from two different French publications, but the original sources are carefully noted; for example, at the end of the story of "The Tailor and the Hurricane" we find a statement that it was "Told by Barbe Tassel of Plouaret (Côtes-du-Nord.") The latter part of this story, by the way, is almost identical with one which we meet in Mrs. Burton Harrison's 'Bric-à-Brac Stories.' There is a good deal that is exaggerated and a good deal that is revolting in this book, as in many others of its kind. It seems a pity that these rough tales, which come so unpolished from the mouths of the people, could not all be refined and softened by the genius of an Andersen before being placed in the hands of children.

Charles Carleton Coffin follows up his 'Boys of '76,' 'Boys of '61,' etc., with 'The Drum-Beat of the Nation' (Harpers). It treats of "The First Period of the War of the Rebellion, from its Outbreak till the Close of 1862." It will be followed by two other volumes, thus making a much fuller history of the war than is contained in 'The Boys of '61.' The opening chapter, entitled "Causes which brought about the War," is rather ambitious in its scope for this grade of historical work. The author's endeavor to focus light from all points on the origin of our civil strife results in confused and hurried passing from topic to topic, even when these are of great importance and demand either much abler handling or to be let alone. To sum up even part of the antagonisms between freedom and slavery from the times of our Saxon ancestors to the conspiracy of the Secessionists, in the space of a few pages, is too much to attempt, and the resulting chapter not only is far from scholarly, but lacks clearness. The State's Rights doctrine and controversy, for instance, need much better elucidation. The two succeeding chapters, called respectively "The Conspiracy" and "The Uprising of the Nation," are more satisfactory; and here the brisk style, so little suited to philosophizing, comes in well enough to make the narrative move on with a good deal of animation. In the next chapters we come upon the first battles, and are soon plunged into details of marches and fights, of which there is no lack to the end of the book. To some people these subjects are interesting, to others they will always be dull, no matter how well told. But Mr. Coffin does his best to enliven the monotony of such writing with entertaining anecdotes and with graphic touches, which bring near to us the thoughts and feelings of those stirring times. His abuse of the historical present, however, is a grave fault of style. All in all, the book is well adapted to interest and instruct the young reader. There are many illustrations—portraits of famous characters, maps of battle-fields, etc., etc. The paper is tinted, the type very clear.

'Historic Girls,' by E. S. Brooks (Putnams), is a companion to 'Historic Boys,' by the same accomplished story-teller. The several volumes of this writer exhibit an unusual degree of skill in choosing attractive subjects from various periods of history, and working them up in fitting guise for the reading of our boys and girls. The girls of the volume before us have flourished at all epochs from Zenobia of Palmyra to Mata-oka of Pow-ha-tan (Pocahontas); and one must not be surprised in so multifarious a collection to detect here and there errors of fact, more or less serious. The stories appear, however, in the main to follow faithfully the authorities, and we cannot blame a writer, in stories of this kind, if he has more regard for romantic interest than for absolute historic verity. The stories are worth telling on their own account, and will serve at once to give their young readers some knowledge, and to quicken the historical imagination. Less pardonable is it, because really misleading, to speak of France and England in the third century, and

to say that the Burgundian land had been given to the *Goths* in 413. Neither should *Septimius* Severus be called *Septimus*. On page 25, 255 A. D. is a misprint for 285, and on page 76, 493 for 496.

Mr. James Baldwin, whose 'Story of Siegfried' and 'Story of Roland' have gained their author a well-deserved reputation as a story-teller, has prepared for the Christmas season 'A Story of the Golden Age' (Scribner), a happily conceived and executed introduction, one might call it, to classical mythology. The story is built about the adventures of the youthful Odysseus, who is carried from his home in Ithaca by his tutor Phemius to visit his grandparents, and to whom, in the course of his travels, various legends of classic mythology are related. It therefore at once contains a collection of heroic stories, and serves to conduct the young hero to the threshold of the Trojan war. The purpose of the writer is not to give "a simplified version" of Homer, but "to pave the way, if I dare say it, to an enjoyable reading of Homer, either in translations or the original." Surely nothing can be more laudable than to excite a taste for the greatest works of literature, and help to an understanding of them. The illustrations, by Howard Pyle, are of the best—at once beautiful and inspired with the classic spirit.

Mr. Church appears to have given up the work of reproducing stories from the ancient poets, in which he made his first reputation, and to be now essaying more original productions in the line of historical fiction—at once in wider fields of history, and for readers of a more advanced age. His 'Count of the Saxon Shore' (Putnams) and 'With the King at Oxford' (Dodd, Mead & Co.) show a clear advance in merit over his last year's productions. They are, moreover—at least the 'Count of the Saxon Shore'—not distinctively "boys' books," although well adapted to the reading of young people. This book is, in fact, an historical romance, with varied and exciting adventures, and presenting a really valuable picture of a little-known period. The characters are well drawn—that of Carna, the British maiden, particularly well; while the Count Aelius, the Saxon captive Cedric, the Romanized Briton Martianus, and the usurping Emperor Constantine are hardly less so. Mr. Church is fortunate in his choice of a period and a locality so wholly fresh and unhackneyed, and at the same time possessing so great historical interest. The story is ingeniously made to introduce the great Druid temple which we know as Stonehenge; and a Pictish raid, with the capture and sack of Winchester (Venta Belgarum), adds interest to the narrative.

'With the King at Oxford' is set in a more familiar period, and one well ransacked by writers of fiction. The writer has, however, contrived even here to find a comparatively fresh point of view, in taking for his hero an Oxford student, and depicting his life during the siege of that city and the other events of its life. We have a military campaign introduced, and the battle of Naseby is well described. Thus, the hero being a boy, the book may in a sense be called a book for boys, at least more so than its companion volume. The style of it is a not unsuccessful imitation of that of the seventeenth century, and it contains a number of pleasing historical illustrations; the illustrations of 'The Count of the Saxon Shore' are on the whole poor.

It is not easy to make interesting sketches out of slight material, and if we feel some disappointment in reading 'The Boyhood of Living Authors,' by W. H. Rideing (T. Y. Crowell & Co.), this difficulty must not be forgotten. There is at any rate pleasant information in the book, if not much boy life. Perhaps the trouble is in the title—it seems to promise more than can be performed, as reason soon tells us. The accounts of Clark Russell, Howells, Stockton, and Boyesen are among the most interesting. We have seen two or three of these sketches before.

Two little shilling books, bearing the imprint of the Society for Promoting Christian Knowledge (E. & J. B. Young & Co.), gather together some scattered tales for the young by the lamented Mrs. Ewing. One, 'The Peace Egg,' introduces a Christmas mumming play, with full stage directions, mostly an expurgated compilation from five versions of this sort of Christmas drama, with some little joiner-work by Mrs. Ewing. Her researches preparatory to her task are related in a pleasant manner, and convey a good deal of curious information. 'Dandelion Clocks' consists of six stories, of which "So-So" and "The Kyrkegrim Turned Preacher" are conspicuous for their humor, as "The Trinity Flower" and "Ladders to Heaven" are for their pathos. Here we have Sunday-school literature at its best, and were it only for her style, Mrs. Ewing's cessation from her labors would be cause for sincere regret by those who rightly value this element in juvenile fiction. But she had insight, sympathy, tact, refined and delicate feeling, combined with a fancy which will long delight both young and old. Both volumes, we ought to say, are charmingly illustrated.

'His Little Royal Highness,' by Ruth Ogden (E. P. Dutton & Co.), is a story of our Jersey coast in the vicinity of New York, "printed by Ernest Nister of Nuremberg," and evidently illustrated by an Englishman who has never been within a thousand miles of Sandy Hook light, a wreck, or a life-saving station. Withal, it is a handsome product of the press, and, for the author's part, conspicuously above the level of juvenile books. Nothing better has come to our table during the present season. We recommend it as truthful, wholesome, and entertaining, and helpful in the cultivation not only of good morals, but of literary taste.

A lad of rare courage and integrity is the hero of Mr. Homer Green's 'Burnham Breaker' (T. Y. Crowell & Co.). The scene is laid in the Pennsylvania coal-mines, and permits the author to introduce some very graphic sketches of life under ground. These are much better than the other parts of the story, which, while its interest never fails, is a little too spun out. The catastrophe in the mine, though vigorously described, is evidently introduced, not because it was essential to the story, but for the sake of the description. Still 'Ralph Burnham' is a good example to set before boys.

Having overrun all parts of the globe with his "boy travellers," Mr. Thomas W. Knox seeks new worlds to conquer in the domain of natural history. His 'Dog Stories and Dog Lore' (Cassell) is a compilation, with the usual pretext of children who are partly actors, partly listeners, and to whom the author deals out practical information about the care of dogs, along with accounts of their sagacity and other qualities, which form the staple of his narrative. His pictures are a medley, of all dates and grades of production. It would be strange if Landseer and Harrison Weir did not turn up in such a collection, but one is less prepared for Bewick, who was, nevertheless, just about a hundred years ago, the designer of the Spanish pointer on page 138, woful as is the falling off from the original engraving. Bewick's 'Quadrupeds' has likewise furnished a canine anecdote, but a very large part of Mr. Knox's assortment has been drawn from newspapers, chiefly American. If he has had recourse to the fresh and well-authenticated stories scattered through *Nature* of late years, we have overlooked the fact. We infer that Mr. Knox, like Charley in this book, has been "studying Italian," and we cite the following defective proverbial expression, as indicative of the progress attributable to either the man or the boy: "*Si* non *e* vero *e* ben trovato" (p. 73).

Mary E. Banford's 'Look-About Club' (Boston: D. Lothrop Co.) gives an account of a family club organized by some dwellers in the country, and of the curious creatures they found in the brooks and fields. It is pleasantly written, and is among the best of the books we have seen which are intended to interest small children in natural history. The only slip we have noticed ascribes an Indian population to Catalina Island, California, and a habit on their part of worshipping crows. There have been no Indians on these islands for many years, and we doubt if there are any crows, or that the birds, if they ever inhabited the islands, were worshipped, though the crow enters largely into the mythology of most American tribes. About things nearer home the book is more accurate, and the illustrations, though variable in quality, are mostly very good.

Madagascar, the scene of Mr. R. M. Ballantyne's story, 'The Fugitives' (T. Nelson & Sons), is a field which we are surprised that the tellers of stories of adventure have not more frequently used. Though more might have been made of the various incidents in the bitter persecutions of the Christians by Queen Ránaválona, yet the tale is interesting, and there are few readers who will not be surprised at the intelligence, courage, and devotion of the Hova Christians. The story is marred by the introduction of a would-be comic element in a negro, whose extraordinarily absurd dialect is unlike any other which we have ever seen.

'Jack Hooper' (T. Nelson & Sons), by Commander Cameron, is an account chiefly of a hunting journey in South Africa forty years ago. The somewhat monotonous record of game-killing, in which we are at times painfully reminded of the indiscriminate slaughtering by the late Mr. Gordon-Cumming, is decidedly varied at the close by hostile encounters with the Boers, who are naturally exhibited in their worst light. The scenes and incidents of life "in the bush" are admirably described, the author having made a distinct gain on his last book.

Decisive Battles Since Waterloo. The Most Important Military Events from 1815 to 1887. By Thomas W. Knox. Illustrated. G. P. Putnam's Sons. 1887. Pp. 477.

Mr. Knox's book was, as he frankly says, suggested by Sir Edward Creasy's 'Fifteen Decisive Battles of the World,' but, it must be admitted, it is by no means equal in importance or interest to that valuable and most readable work. In the first place, Mr. Knox has not confined himself to describing battles which were really decisive; as his title shows, his scheme includes important military events as well as those which were critical. Hence his narratives lack that special and unique characteristic which gives such a charm to Creasy's descriptions; they are rather chapters from many histories, constructed on the ordinary plan. Then, in the second place, our author has hardly realized what a difficult task it is so to master the details of a campaign or a battle, and so to become imbued with the spirit of the time and with the character of the surrounding circumstances, as to make a really fresh and vigorous story out of the incidents of war. It is almost too much to expect that any man can succeed in such an enterprise if his

plan embraces such a wide range as does that of Col. Knox. We cannot but remark in his pages a certain want of the ease and vigor with which a man describes a story with whose every feature he is familiar, and whose every incident possesses for him a personal interest. Yet this, or something like this, is well-nigh necessary if one is attempting to write of military events in a popular way.

At the same time, looked at as a series of accounts of the most important military events of the world since 1815, this book of Mr. Knox's possesses a decided value. It is not free from mistakes, but it is, we think, substantially accurate. It is evidently the result of much labor; the authorities have been judiciously selected, and the narrative of each battle is accompanied with a useful historical sketch serving to put it in its proper relation to the events of the times. It is a book which cannot fail to be of use to young people, or in fact to people of any age, who desire to know something of the history of the century in which they are living.

We are obliged to point out some errors which should be corrected in future editions. The plan opposite page 93 is not a "Plan of the Gates, Vera Cruz," as stated on page ix., but a sketch of the neighborhood of the City of Mexico. The account of Pickett's charge at Gettysburg is curiously inaccurate. Why Garnett should be singled out as the one "who led his brigade," is not apparent. Why the fire of Stannard's brigade should be spoken of as directed upon Armistead's right, instead of upon the right of the whole division, is not plain, especially as we have just been told that Kemper's brigade was on the right of the division, and Armistead's on the left. We are told, too, that "Armistead's right" recoiled, and Armistead "threw it upon the brigades of Hall and Harron." (This last officer's name was Harrow.) The fact was, that, the whole division inclining to its left under the effect of Stannard's fire and the artillery fire from Little Round Top, the brunt of the attack fell on the brigade of Webb, while Hall and Harrow, not being attacked themselves in front, moved up to their right and joined Webb, whose line had been forced. Nor is it the fact that our troops on that part of our line were "intrenched behind rocks and fences, where bullets could not reach them"; still less that they were driven back "upon their second line of earthworks." There was a low stone wall covering part of our line here, but nothing that could be called an earthwork in any part of it. Mr. Knox must also have forgotten his Italian when he wrote, as he did on page 209, of the events of 1866 and 1870, completing the work of unification and producing "the Italia Irridenta (*sic*) which was the dream of Cavour and for centuries the ardent hope of millions of his countrymen." We had supposed—we may be wrong—that the comparatively recent cry of "Italia Irredenta" referred to Trieste and other outlying regions claimed to be Italian in sentiment and largely in population, but not yet freed from the Austrian domination.

Key to North American Birds, etc. By Elliott Coues, A. M., M. D., Ph. D., etc. Profusely illustrated. Boston: Estes & Lauriat. 1887. Imperial 8vo, pp. xxx, 895, colored frontispiece, 561 wood-cuts in text.

In 1872—fifteen years ago—Dr. Coues published a 'Key to North American Birds' which was a manual of the subject on an entirely new plan, and which has proved to be the most useful, and until recently the only, "text-book" of the subject. It became an invaluable help to the younger ornithologists of the country, and a handy work of reference even for advanced students. After being for several years out of print, a second edition of the 'Key' appeared in 1884, greatly increased in size, practically rewritten, in many ways greatly improved, and again abreast of the subject. In two years the 'Key' was again "out of print," and a new or third edition is now before the public. So far as the main body of the work is concerned, it is a reprint of the second edition, being reproduced from the same plates. There is of course a new preface, reviewing the progress of the subject during the last three years—unusually eventful in the history of American ornithology—and much new matter is added in the form of an Appendix.

Since the publication of the second edition, the nomenclature of North American birds has been greatly changed, through the publication of 'The Code of Nomenclature and Check-List of North American Birds, adopted by the American Ornithologists' Union, etc.,' which, as soon as it appeared, "became the standard and indeed the only recognized Nomenclator in American Ornithology." To adjust the 'Key' to the new nomenclature, the names used in the 'Key' and the Union Check-List are arranged in parallel columns in the Appendix, thus rendering comparison easy between the earlier and the later nomenclature. The author has thus had opportunity to record his individual opinion respecting the status of a number of forms; rejecting about twenty admitted into the Union Check-List, and retaining about ten not recognized in the latter. The subject is further brought down to date by the addition, with descriptions, of some sixty species and sub-species described as new, or discovered to be North American, since 1884. Here, again, the author exercises his selective taste, with, in some cases, we fear, not the happiest results. It serves, however, to give formal emphasis to his conservative protest "against the fatal facility with which the system of trinomials lends itself to sad consequences in the hands of immature or inexperienced specialists," expressed in his preface (p. iii).

In some minor details the 'Key' is not above criticism, and occasional changes in the text, even if relegated to the Appendix, might have been introduced with advantage to the student. Yet the excellences of the work far overshadow its slight defects, which latter detract very little from its general usefulness, and are obviously the fault of too rapid composition rather than lack of knowledge. For many years to come the work must continue to be what it has been in the past, a boon to those interested in the study of North American birds.

Wild Animals in Captivity. Illustrated by Pen and Camera. By J. Fortuné Nott. Dodd, Mead & Co. 4to, pp. 155.

Mr. Nott's preface breathes a very humane spirit, and alleges as his motive for publishing his 'Wild Animals in Captivity' a desire "to assist in extending the field of human sympathy towards some of the most attractive creatures which were created to be our fellow-occupiers of this world." This sympathy does not appear to have any connection in his mind with the origin of species. He is rather a devout "lover of dumb nature." His forty-one full-page plates of animals whose captivity is shown by the undisguised surroundings, are accompanied by entertaining letter-press, in which personal study and observation are mingled with pertinent quotations from the works of naturalists and travellers. Great freshness characterizes what is thus borrowed, and scrappiness has been happily avoided. No one can read the two dozen chapters without pleasure, and few without instruction. The style of treatment is thoroughly popular, and the literary form unpretentious yet skilful. As for the selection of types, the number of rare and unfamiliar ones is very striking. No fewer than six antelopes are pictured, besides an eland and a gazelle. The cat tribe is also well represented. There are three rhinoceroses, three elephants, three of the seal tribe, etc. The original photographs have been reproduced with only moderate success by a mechanical process, but the plates answer all practical purposes. A handsome binding makes the volume fit for the parlor table. We heartily commend it.

Fresh Woods and Pastures New. By the author of 'An Amateur Angler's Days in Dove Dale,' etc. London: Sampson Low & Co. 1887.

This is a small collection of essays, in the form of letters, on incidents and scenes of pastoral English life. Since the author of 'Wild Life in a Southern County' and 'The Gamekeeper at Home' began his charming books, there has been a decided increase in the number of works of kindred character among English writers, many of whom are peculiarly fitted by taste and education to describe graphically the smaller details of rural England, and to give practical and accurate information regarding the animal life there found, from the standpoint of the sportsman and the naturalist. Several chapters of the book under notice are devoted to angling, and No. XI., "A Day with the May Fly Fishers," is the best of these; Letter X., on "Wood Pigeons, Magpies, and Rooks," gives many interesting facts about the habits of these birds. There is nothing tame or commonplace in the little volume, though it treats entirely of common scenes and incidents. Taken as a whole, it gives a pleasant picture of the natural side of English country life in its minor forms, drawn by a close observer who is in love with his subject. There is a large-paper edition handsomely published.

A Short History of England, from the earliest times to the present day. By Cyril Ransome, M. A., Merton College, Oxford. With maps and plans. E. P. Dutton & Co. 1887. 8vo, pp. 476.

Of making histories of England there is no end, and each new candidate is reasonably challenged to furnish reason for its existence, in a field already occupied by so many excellent works. That it should contain any new information is not to be expected; but there is such a large range in the selection of materials, and so great variety in the way of handling, that a book must have positive excellence in one of these ways if it is to deserve a place upon our crowded book-shelves. These qualities Mr. Ransome's book has in a high degree. The reader is struck with a certain freshness in the presentation of the matter, by which in many cases an old story is made to be seen in a new light. The selection of the material, too, is done with excellent judgment, and the book fairly deserves the credit of emphasizing what needs emphasis, and passing over unimportant matter — perhaps the most uncommon merit in histories of this size. We are inclined to regard it as on the whole the best history of England of a grade between the school histories and Green's 'Short History.'

The point of view is moderate and impartial —quite colorless in the politics of the present day, and perfectly fair in the great controverted points of English history. The book is un-

usually well provided with maps, plans of battles, and genealogical tables; but the maps are small and poor, unworthy of so excellent a text.

BOOKS OF THE WEEK.

Alcott, Louisa M. A Garland for Girls. Boston: Roberts Brothers. $1.25.
Allen, F. M. Andy American's Great Discovery. Illustrated. D. Appleton & Co. 50 cents.
Barr, Amelia E. Paul and Christina. Dodd, Mead & Co.
Bates, Fanny B. Between the Lights. Thoughts for the Quiet Hour. A. D. F. Randolph & Co. $1.75.
Battles and Leaders of the Civil War. No. 7. The Century Co. 50 cents.
Blake, H. G. O. Winter: From the Journal of Henry D. Thoreau. Boston: Houghton, Mifflin & Co. $1.50.
Crocker, U. H. Over-Production and Commercial Distress. Boston: Clarke & Carruth.
Elegy in a Country Churchyard; The Breaking Waves Dashed High; Ring Out, Wild Bells; That Glorious Song of Old; It was the Calm and Silent Night; Why Should the Spirit of Mortal be Proud? 6 vols. Illustrated. Boston: Lee & Shepard.
Gibson, J. Chips from the Earth's Crust; or, Short Stories of Natural Science. Illustrated. Thomas Nelson & Sons.
Giles, Rev. C. The True and the False Theory of Evolution. Philadelphia: William H. Alden.
Goldsmith, O. The Deserted Village. Illustrated. Philadelphia: J. B. Lippincott Co. $3.
Goulding, F. R. The Young Marooners on the Florida Coast; or, Robert and Harold. New ed. Dodd, Mead & Co.
Gunton, G. Wealth and Progress; A Critical Examination of the Labor Problem. D. Appleton & Co.
Howells, W. D. A Woman's Reason. Boston: Ticknor & Co. 50 cents.
Jacobson, A. Higher Ground: Hints towards Settling the Labor Troubles. Chicago: A. C. McClurg & Co. $1.
Jordan, D. S. Science Sketches. Chicago: A. C. McClurg & Co. $1.50.
Kendall, May. From a Garret. Longmans, Green & Co. $2.
Kluge, Prof. F. Von Luther bis Lessing. Strassburg: K. J. Trübner.
Krupp und sein Werk. Berlin: Rosenbaum & Hart.
Lang, A. Myth, Ritual, and Religion. In 2 vols. Longmans, Green & Co.
Lossing, B. J. History of New York City. Embracing an Outline Sketch of Events from 1609 to 1830; and a Full Account of its Development from 1830 to 1884. Illustrated. A. S. Barnes & Co. $10.
Macquoid, Katharine S. Mère Suzaine, and Other Stories. Harper's Franklin Square Library. 20 cents.
Marble, C. C. Addresses of the Dead. G. W. Dillingham.
May, H. W. A Treatise on the Statutes of Elizabeth against Fraudulent Conveyances. 2d ed. Boston: Houghton, Mifflin & Co.
McMaster, J. B. Benjamin Franklin as a Man of Letters. Boston: Houghton, Mifflin & Co. $1.25.
Miss Varian of New York: A Newport and New York Society Novel. G. W. Dillingham. 50 cents.
Mitchell, S. W. Prince Little Boy and Other Tales Out of Fairy-Land. Philadelphia: J. B. Lippincott Co. $1.50.
Morris, G. S. Hegel's Philosophy of the State and of History: An Exposition. Chicago: S. C. Griggs & Co. $1.25.
Murray, W. H. H. How Deacon Tubman and Parson Whitney Kept New Year's, and Other Stories. Boston: Cupples & Hurd. $1.25.
Notes for Boys (and their Fathers) on Morals, Mind, and Manners. By an Old Boy. Chicago: A. C. McClurg & Co. $1.
Nott, J. F. Wild Animals in Captivity. Dodd, Mead & Co. $7.50.
Parkman, F. Pioneers of France in the New World. 28th ed. Revised with additions. Boston: Little, Brown & Co.
Paton, W. A. Down the Islands: A Voyage to the Caribbees. Illustrated. Charles Scribner's Sons. $4.
Platt, W. H. Judith Carson; or, Which Was the Heiress? Rochester: E. R. Andrews.
Roemer, Prof. J. Origins of the English People and of the English Language. Compiled from the Best and Latest Authorities. D. Appleton & Co.
Sawyer, W. C. Complete German Manual for High Schools and Colleges. Chicago: J. C. Buckbee & Co. $1.
Schiller, F. The Song of the Bell. Boston: D. Lothrop Co. $2.
Scott, Sir W. The Bridal of Triermain. Illustrated. Boston: Lee & Shepard. $3.50.
Sleight, Mary B. The Flag on the Mill. Funk & Wagnalls. $1.50.
Social Register, New York, 1888. Social Register Association.
Spofford, Harriet Prescott. Ballads about Authors. Illustrated. Boston: D. Lothrop Co. $3.
Spyri, Johanna. Gritti's Children: A Story for Children and Those who Love Them. Boston: Cupples & Hurd. $1.50.
Stanley, Dean. Sermons for Children, Preached in Westminster Abbey. Charles Scribner's Sons. $1.
Stapleton, E. J. Some Correspondence of George Canning. With Notes. In 2 vols. Longmans, Green & Co. $10.
Stickney. A Primer. [Classics for Children.] Boston: Ginn & Co. 25 cents.

8vo, AMERICAN SCIENCE SERIES, $2.50.

HENRY HOLT & CO., New York.

AUTOGRAPH LETTERS!

Every owner of a library should possess autograph letters of the authors represented in it. I will undertake to supply letters of every author, actor, statesman, warrior, or any celebrity of the last four hundred years. These letters should be bound in the books, or framed with portraits, or gathered in volumes. Nothing is more interesting, nor adds more greatly to the interest of a library. It is now the practice to illustrate and extend volumes as freely with autographs as with prints. I am publishing THE COLLECTOR, a monthly journal devoted to autographs, and will send a sample copy to any one desiring it.

OLLA PODRIDA, or a well-digested Melange. Being Odds and Ends. No. 24 selected from the "Literary Junk Shop" of A. S. Clark, 34 Park Row, New York City. Now ready. A. S. CLARK.

HOUGHTON, MIFFLIN & CO.'S NEW BOOKS.

[*READY SATURDAY.*]

Paul Patoff.

A novel, by F. Marion Crawford, author of 'A Roman Singer,' etc. Crown 8vo, $1.50.

'Paul Patoff' is one of Mr. Crawford's most striking stories, in plot, character, dramatic force, and narrative, and is sure to be one of the most popular and noteworthy novels of the year.

Ormsby Macknight Mitchel,

Astronomer and General. A biographical narrative, by his son, F. A. Mitchel. With a steel Portrait. Crown 8vo, gilt top, $2.00.

Professor Mitchel was a man of so varied and brilliant gifts, and achieved such distinction in science and as a military officer, that his memoir is unusually attractive.

The Story of Keedon Bluffs.

By Charles Egbert Craddock, author of 'The Prophet of the Great Smoky Mountains,' 'Down the Ravine,' etc. 16mo, $1.00.

This story is primarily intended for young folks, and cannot fail to interest them greatly, but older readers will find it equally entertaining.

Poems.

By Edward Rowland Sill. 16mo, parchment cover, $1.00.

A book of remarkable literary and personal value. Mr. Sill's poems are marked by a thoughtfulness, delicacy, and incisiveness which place them among the very best of current poetry. His poems previously collected, as well as those printed recently, are now published in a tasteful volume.

Scribner & Welford's

NEW FINE ART

AND

Standard Juveniles.

BOOKS BY MR. HENTY.

"Among writers of stories of adventure for boys Mr. Henty stands in the very first rank."—*Academy.*

Crown 8vo, cloth, elegant or trimmed edges, $2.00 each.
Each book is beautifully illustrated with from eight to twelve full-page pictures.

BONNIE PRINCE CHARLIE: A tale of Fontenoy and Culloden.

A book of the most stirring incident and of historic value.

FOR THE TEMPLE: A Tale of the Fall of Jerusalem.

A story of thrilling interest.

IN FREEDOM'S CAUSE: A Story of Wallace and Bruce.

"Full of stirring action, and will commend itself to boys."—*Athenæum.*

THE LION OF THE NORTH: A Tale of Gustavus Adolphus and the Wars of Religion.

"This book should hold a place among the classics of youthful fiction."—*United Service Gazette.*

THE YOUNG CARTHAGINIAN: A Story of the Times of Hannibal.

"Second to none of Mr. Henty's former tales."—*Pall Mall Gazette.*

TRUE TO THE OLD FLAG: A Tale of the American War of Independence.

"Does justice to the pluck and determination of the British soldiers."—*The Times.*

THE BRAVEST OF THE BRAVE: or, with Peterborough in Spain.

"All lads will read the book with pleasure and profit."—*Daily Telegraph.*

FOR NAME AND FAME: or, Through Afghan Passes.

"Not only a rousing story, but an instructive history of a recent war."—*Glasgow Herald.*

THE DRAGON AND THE RAVEN: or, The Days of King Alfred.

"Perhaps the best story of the early days of England which has yet been told."—*Court Journal.*

IN THE REIGN OF TERROR: The Adventures of a Westminster Boy.

A story of the French Revolution, full of the deepest interest.

ORANGE AND GREEN: A Tale of the Boyne and Limerick.

WITH CLIVE IN INDIA: or, The Beginnings of an Empire.

"Mr. Henty here exceeds himself in stirring adventures and thrilling situations."—*Saturday Review.*

A FINAL RECKONING: A Tale of Bush Life in Australia.

"Mr. Henty has never published a more readable or a better written story than this."—*Spectator.*

WITH WOLFE IN CANADA: or, The Winning of a Continent.

"A model of what a boy's story-book should be."—*School Guardian.*

UNDER DRAKE'S FLAG: A Tale of the Spanish Main.

"A real good story really well told."—*Punch.*

THROUGH THE FRAY: A Story of the Luddite Riots.

"One of the best of the many good books Mr. Henty has produced."—*The Standard.*

ST. GEORGE FOR ENGLAND: A Tale of Cressy and Poictiers.

"A story of very great interest for boys."—*Pall Mall Gazette.*

BY SHEER PLUCK: A Tale of the Ashanti War.

"The lad must be very difficult to satisfy who is not satisfied with this story."—*Scotsman.*

FACING DEATH: A Story of the Coal Mines.

"This is the book we would recommend to give as a present to a boy who is worth his salt."—*Standard.*

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse." —R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE,

With Dictionaries and other Books of Reference,

Comprising in all Translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek.

687 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

PUBLISHED TO-DAY.

BY JOEL CHANDLER HARRIS.

FREE JOE,

And other Georgian Sketches.

Including "Free Joe," "Little Compton," "Aunt Fountain's Prisoner," "Trouble on Lost Mountain," and "Azalia." 12mo, $1.00.

This new collection of the most recent stories by the author of the "Uncle Remus" tales will be welcomed by thousands. Full of sympathy with the characters he portrays, and inimitable in his droll humor and strong delineations of Southern life and character, Mr. Harris has placed these stories on an equal footing with his best previous work.

"Mr. Harris has done nothing better than 'Free Joe and the Rest of the World'—the very title is a sermon."—*Harper's Magazine.*

TWO NEW VOLUMES OF ESSAYS

BY

ROBERT LOUIS STEVENSON.

These two volumes contain many delightful essays on a great variety of subjects, the papers being marked by the same incisiveness of style and vigor and subtlety of thought that characterizes the author's other works.

The Nation.

NEW YORK, THURSDAY, DECEMBER 8, 1887.

The Week.

PRESIDENT CLEVELAND'S first message to the Fiftieth Congress is the most courageous document that has been sent from the Executive Mansion since the close of the war. It addresses itself to the abnormal condition of the public finances, the excessive and oppressive taxation of the people, to the needless withdrawal of money from business channels, ever leading up to the muzzle of a financial crisis, to the efforts made by the Treasury to avert that evil by temporary and doubtful expedients, to the corrupting influence of a surplus of money in the public coffers, and to the whole train of evil consequences resulting from excessive and unnecessary taxation. The plain remedy for this dangerous condition of the national finances is the reduction of taxes to the measure of the public needs. Instead of dodging and ducking and apologizing for the truth which he delivers, the President puts it not offensively, yet in the most downright position before Congress and the country. He tells them that the present tariff is a delusion and a fraud, that it is a menace to all business interests, and that the public finances cannot be carried on without extensive reductions of the revenue, which must be made either by the repeal of taxes on intoxicating liquors and tobacco, or by the reduction of duties on imports.

That the reduction should be made on articles of necessity and not on luxuries, and especially hurtful luxuries, he proceeds to show in the most candid manner. No editorial treatment can add to the plainness of speech which the President allows himself in this discussion. In fact, he lays down a platform for the next national campaign as clean cut as any high-tariff politician could possibly desire. There has been much lamentation in Republican circles of late that the Democrats were "dodging the issue," not coming out squarely, beating about the bush, etc., etc. No such charge will be made against the President. We shall see in due time whether his party sustain him. We have no doubt that they will. Mr. Randall and his handful, who have fought every change in the tariff, large or small, may now go over to the enemy. There is no more room for them in any party which sustains Mr. Cleveland. The message deals with nothing but the public finances and the means of bringing about an equilibrium between receipts and expenses. This is unusual, but under the circumstances entirely wise. In order to make the deepest impression on the public mind concerning the most important if not the only important topic of public concern, it was necessary to present that subject without entanglements. The gun that has been fired will be heard in every corner and hamlet of the country. It will be the subject of village debate and neighborhood meditation. It will compel public discussion in Congress. It will supply parties with an issue that they have long needed. It will clear the atmosphere of a vast amount of malaria, and give people something to think about that bears relation to their daily life. For this, if for nothing else, the President is entitled to hearty thanks. For his splendid courage in "taking the bull by the horns" he will win the praise of all who admire manliness and straightforwardness in public station, whether they approve his views or not. Such an example of plain speaking will not fail of its reward at the hands of a self-reliant and free people.

The decision of the United States Supreme Court sustaining the validity of the prohibition laws of Kansas is of far-reaching importance. It applies not merely to Kansas, but to prohibition legislation in all the States. The opponents of prohibitory laws have based their opposition in the courts mainly upon two grounds: (1.) That while the State could regulate the sale of liquor without invading the constitutional rights of the citizen, it had not the right to prohibit any person from manufacturing liquor for his own use or for export. (2.) That since many breweries and other liquor manufactories had been erected prior to the enactment of prohibitory laws, and since such establishments would become of no value as property, or be very materially diminished in value, if not employed in the manufacturing of liquor, the prohibition of such manufacture by the State is in effect a taking of property for public use without compensation and without due process of law, and, therefore, unconstitutional. It is only a few years since John Bright, in discussing this latter point in an address in England, denounced prohibition without compensation to property thus injured as "legislation by hurricane."

On both these grounds the Supreme Court decides squarely in favor of the Prohibitionists. It holds, in regard to the right of the State to prohibit manufacture, that there is no justification for the charge that in exercising that power it is interfering with the right of each citizen to manufacture intoxicating liquors for his own use as a beverage, since such a right does not inhere in citizenship. If a State deems the absolute prohibition of the manufacture and sale, within her limits, of intoxicating liquors for other than medical, scientific, and manufacturing purposes to be necessary to the peace and security of society, the courts cannot, without usurping legislative functions, override the will of the people as thus expressed by their chosen representatives. On the point of injury to property, the decision is equally explicit. It is held that all property under our form of government is subject to the obligation that it shall not be used so as to affect injuriously the rights of the community and thereby become a nuisance. The State of Kansas had a right to prohibit the liquor traffic. It did not thereby take away the property of the brewers. It simply abated a nuisance. The property is not taken away from its owners; they are only prohibited from using it for a specific purpose which the Legislature declared to be injurious to the community.

At the Prohibition Convention in Chicago last week a resolution that had been previously passed by the Woman's Christian Temperance Union was ratified by unanimous vote. This resolution was in two parts. The first clause "solemnly urges upon all political parties and partisan papers the duty of avoiding in the pending Presidential campaign the personal vilification and abuse that characterized the last." The second declares "that war issues are dead, and that the land should have rest from reviving them for campaign purposes." The spirit of both is commendable, and we would not say a word in derogation of the motives which prompted the Convention to bear testimony in behalf of temperance of language as well as of drink. But it is obvious that no reform can be effected in the former direction unless we know what is meant by "personal vilification." To take one case by way of illustration: Editor Clarkson believed that Mr. St. John, the Prohibition nominee for President, tried to sell out his candidacy to the Republican National Committee for $20,000. Clarkson was a member of this Committee, and conducted the negotiation on that side. We will not undertake to say whether the proofs he offered were sufficient to convict St. John. That he believed them to be so is very clear. Now, the question is whether Editor Clarkson indulged in "personal vilification" of St. John, and whether, in case St. John should be renominated and Editor Clarkson should repeat his charges and bring up his proofs, he would fall under the condemnation of this resolution.

In truth the remonstrance has the air of being a preparation for the reappearance of that great "ladies' man," James G. Blaine. Of course "personal vilification and abuse" are to be avoided, if possible, in all political contests; but whether they can be avoided or not depends on the nature of the objections to a candidate. If these objections are simply political, of course the abuse and vilification heaped on him by his opponents ought to be political only; but if they are personal, the abuse and vilification have to be personal. If an objection to a candidate, for instance, was that he was a thief and a liar, it would be ridiculous to assail him simply on account of his views on the tariff or the liquor question. The best and only remedy we know of for the evil of which these ladies complain, is the careful avoidance by conventions of the nomination of candidates whose personal character is bad, or who are likely to be assailed by charges against them as men, because neither the press nor the people will

ever be persuaded to keep silent about a candidate's private history through fear of using bad language, or, as Senator Sumner said, "muddying the current of debate."

Republican organs have been making a great ado over the fact that the Republican organization in the South broke down after its managers lost their Federal offices, and that consequently few Republican votes were cast in the Congressional elections of 1886 outside of Virginia and two or three other States. It has been loudly asserted that the only reason why there were so few Republican votes was because the Republican blacks were kept from voting by the Democratic whites, and it has been vehemently declared that the small Republican vote was proof positive of Democratic intimidation or fraud. We invite the attention of people who have been taken in by this sort of talk to the returns of the recent election in four counties of Virginia, as contrasted with the vote in the same counties at the Presidential election of 1884, preceding the figures for each county with a statement of its population divided according to race:

	Black.	White.	1884.		1887.	
			Rep.	Dem.	Rep.	Dem.
Amelia	7,340	3,037	1,048	590	748	None.
Greensville	5,650	2,757	1,088	540	671	
Nottoway	8,144	3,012	1,277	453	970	
Sussex	6,701	3,361	1,442	750	916	

To paraphrase Republican reasoning about the small Republican vote in many Southern Congressional districts last year, it might be asserted that the only reason why there were no Democratic votes in these Virginia counties this year is because the Democratic whites were kept from voting by the much more numerous Republican blacks, and that the absence of any Democratic votes is proof positive of Republican intimidation or fraud. In point of fact, the failure of these Virginia Democrats to vote was due to the failure of the party managers to nominate candidates, just as the failure of Southern Republicans generally to vote last year was due to a similar failure on the part of their managers, who had lost their interest in the Republican party when they lost their offices.

The bill proposed by Senator Palmer of Michigan to restrict immigration seems to be based on two distinct ideas. It provides first that a sum of money shall be paid by every person coming to this country, without reference to his character, his means, or his intentions; and secondly, that steps shall be taken to exclude bad men altogether, and especially Anarchists, Nihilists, and persons hostile to our institutions and form of government. Until the means of ascertaining the Anarchical and Nihilistic character and intentions of the immigrant are set forth by the Senator in detail, it would be premature to criticise them; but we think that something may be said about the tariff on persons concerning whose character no question is raised. Duties are either specific or ad valorem, or partly one and partly the other. A specific duty is levied according to weight or measure, an ad-valorem duty according to value. Since it would be manifestly unfair to tax a heavy man more than a light one for the privilege of coming to this country, or a tall man more than a short one, specific duties are clearly inapplicable. On the other hand, ad-valorem duties are well adapted to the case, because it is possible to estimate in a rough way the value of persons in their character as producers. Thus, a fair schedule would be something like this: Women and children $10 per head, coal miners $15, farmers $20, carpenters $30, weavers $40, glass-blowers $50, and so on, up to clergymen and college professors, who ought to pay not less than $100 each. Some discrimination might be fairly made on the score of age. It would not be right to tax a man upwards of seventy years old as much as one under thirty, because the former cannot expect to enjoy the privileges as long as the latter. By combining age with value it might be possible to have the mixed system of duties enforced, prescribing, for example, that a cabinet-maker between thirty and forty should pay $35, and 50 per cent. additional for his presumed efficiency as a worker, while one who had passed the age of sixty should pay only the rate fixed for his trade. The subject admits of many interesting variations.

The question of Secretary Lamar's age has become an issue. The Judiciary Committee of the Senate has established the rule that it will not report in favor of confirming as a United States judge a man who has passed the age of sixty, inasmuch as the law entitles a judge to retire on full pay "after having held his commission as such at least ten years, and having attained the age of seventy years"—the implication of which provision is, in the Committee's opinion, that no man ought to go on the bench so late in life that he cannot serve ten years before reaching the age of seventy. But as the United States law does not (like the law of New York and some other States) require a man to retire at seventy, and as half of the present eight Supreme Court justices have passed that age, the Senate is never likely to enforce the Committee's rule rigorously, but will confirm a worthy nominee the only objection to whom is that he is past sixty, as it did in the case of Mr. William M. Merrick, who was made Judge of the Supreme Court of the District of Columbia in 1885 at the age of sixty-six. At the same time it would be recognized as a valid objection to any man proposed for a seat on the overworked Supreme bench of the United States that he was well on towards seventy, unless he were a miracle of vigor. As Mr. Lamar does not enjoy robust health, his opponents are trying to ruin him as a candidate for Judge by spreading the story that he is sixty-seven years old, and could not be expected long to stand the strain of judicial work. His friends, however, denounce this story as a "campaign lie," and assert that he is only sixty-two. The burden of evidence is decidedly on this side, as he has always given September 17, 1825, as the date of his birth, and the years of his graduation from college and admission to the bar agree with this theory.

It is a curious fact that of late a prejudice against stating their age has grown up on the part of public men who are "getting along in life." During the latter portion of his career, the late Senator Logan sedulously concealed from the compiler of the Congressional Directory the year of his birth, and in every other way sought to hide the fact that if he should run for President in 1888, he would then be almost sixty-nine years old. In like manner Senator Harris of Tennessee, who once made free enough of the fact that he was born in 1818, has for some time past contented himself with saying that he "was born in Franklin County, Tennessee," and rendered it necessary to consult old books of reference to discover the year, the reason being that his present term expires in 1889, when he will be seventy-one, and that he fears knowledge of his age will constitute an objection to his securing the fresh lease of power which he will seek. It is true that Logan knew that Henry Clay ran for President in 1844 at the age of sixty-seven, and was a candidate for the nomination in 1848 at seventy-one, while Harris has seen Ohio elect Payne to the Senate in his seventy-fifth year and Vermont at the same time give another term to Morrill, who is a few months Payne's senior. But Logan and Harris and other Congressmen who follow their example have been right in supposing that great age is held to be an objection to keeping a man in public life in this country much more generally than is the case in England or on the Continent. Probably the strongest influence in producing this state of feeling has been the rule adopted by many States of compelling judges to retire at seventy, and accepted in a modified form by the Federal Government in the provision that a United States judge may accept a life pension at seventy if he has served ten years. It is perhaps a survival of ancient Puritanism that a politician still finds it very effective to quote against an aging opponent the Psalmist's remark that "the days of our years are threescore years and ten," even with such a spectacle as Gladstone to-day presents within a month of completing his seventy-eighth year.

The Anti-Poverty Society is likely to show before the winter is over whether or not it is going to be able to fulfil its mission, which is the abolition of poverty by means of public meetings and collections. The field is about to be widened by the establishment of regular Sunday morning meetings as well as Sunday evening meetings. This has been made necessary by the fact that the Rev. Hugh O. Pentecost, who is perhaps the most irrational of all the disciples of the new faith, is in need of a pulpit to preach from. His anti-poverty doctrines have so impaired his usefulness as a Christian minister that the question of abolishing poverty is threatening to become a personal one with him, unless he can open a morning anti-poverty entertainment with a regular collection of its

own. The evening entertainment is barely competent to pay the rent of the Academy at present, and yet the demands upon the collection taken at it are likely to be largely increased during the winter, for Mr. George's paper is already in the throes of dissolution, and Father McGlynn's prospects of getting a living are becoming more and more dubious. The capacity of the Society, therefore, to abolish the poverty of all its leaders, whose income from other sources has been cut off, is about to be put to a severe test.

The New York correspondent of the Boston *Transcript* calls attention to the fact that not a single paper published in this city on Tuesday morning printed the address made by James Russell Lowell at the Authors' Reading the afternoon before. The correspondent ventures the assertion that, "if these entertainments had taken place in London, the leading morning newspapers in that city would have had every word he uttered." Of course they would have had, and they would have had it because the conductors of the London papers would have reasoned, correctly, that a large proportion of their readers were interested in every word which such a man had to say on a topic of such importance. It is equally true that a large proportion of the readers of such papers as the *Tribune* and *Times* in this city wanted a verbatim report of Mr. Lowell's speech, and were disappointed when they failed to find it. There was a time when the *Tribune* could have been depended upon for it, for it used to give special attention to matters of concern to intelligent readers. The paper's prejudice against Mr Lowell as a Mugwump may have had something to do with its cutting down its report of his speech to a single paragraph, but the performance was only an aggravated illustration of a tendency to depreciate purely literary matters which has long been noticeable in the *Tribune*—although we are glad to say that of late there have been some signs of a change for the better. Even the *Times*, which had no conceivable motive, either political or personal, for slighting the speaker, could not afford the space for a full report.

The humiliating confession must be made that the press of almost any other large city in this country would have done better in such a matter than the New York papers did. If the entertainment had taken place in Boston, or Philadelphia, or Chicago, or St. Louis, it would have been possible next morning to find an exact report of Mr. Lowell's address in some at least of the papers. Indeed, if he had delivered it in some distant American city—better still, if he had delivered it in London, so that it would have cost a good deal to telegraph it—very likely some New York paper would have got it, and then crowed loudly over its enterprise. The reason why it was not published under the actual circumstances of its delivery was, of course, the same reason which has demoralized the morning papers of New York in so many ways, because the managers hold that the public wants "spicy" things and does not want serious things, even when characterized by the incisive style and relieved by the delightful humor of our first essayist. It is the competition for the patronage of the illiterate which has brought even the best of our papers to the point where they "cannot afford the space" for one of the too rare utterances of James Russell Lowell. The best thing about the *Herald's* recent raising of its price is the hope which it holds out that a reaction has at last set in, and that newspaper conductors may again provide such matter as intelligent persons want and are ready to pay a decent price to get.

The conflict between President Grévy and the Chambers continued last week with what may be called varying fortune. He changed his mind about resigning three or four times. Nothing could better illustrate the fickleness of the public with whom he has had to deal in Paris than the support he received in refusing to resign from the street Radicals, who had just been threatening to attack the Élysée if he did not resign. What wrought the change was, comically enough, the fear that Ferry, the author of the Tonquin expedition and the pet aversion of the Radicals, would be elected in his stead. The last excuse he made for holding on was that the Chambers had not spoken out on the subject with sufficient clearness. This difficulty was removed by the vote of the Chamber, 531 to 3, that it was waiting for his promised communication. The deposition of the President by the Chambers, with the aid of street mobs, is wholly unconstitutional. When it first began to be talked of as among the possibilities, the *Temps*, the most moderate and clear-headed of the Republican papers, declared that "it would be equivalent to an overturning of the Constitution, which has fixed the duration of the executive power, and which does not authorize the Republican Deputies to assemble *en famille*, and either depose the President or invite him to quit." And it asked with great force, "With what authority, after having given this beautiful example of contempt for the laws, can the main body of the Republican party enter on its campaign against the revolutionists of the extreme Left and Right?"

The immense advantage that the republic has over any other form of government in France is shown by the small fear there was of anything like revolutionary violence. If a "dynasty" had been lodged in the Élysée, everybody would have been trembling with apprehension, because nobody would have had the smallest idea what would happen after the existing rulers had been driven out. The fidelity of the army even would have been doubted, and the howling mob in the streets have had the secret sympathy of all who hated privileged classes and courts and "royal families." But if one may judge from the Bourse, there was no fear of revolution at all. Everybody knew what would happen when Grévy resigned. The army and the police were perfectly relentless in repressing disorder, knowing that they were not doing it to keep any individual or family in a fat place.

The election of M. Sadi-Carnot as President, and the immediate subsidence of popular excitement, indicate, as nothing else could, the degree of solidity that the republic, as a form of government, has gained in the past seventeen years. In the turmoil of the past two or three weeks, the Bonapartists have been scarcely discerned as a political factor in France. Prince Napoleon issued a manifesto, but it was deemed of no more consequence than the mumblement of a Roman augur over the entrails of a sacrificial bullock. Bonapartism is, to all appearance, as dead in France as Cæsarism is in Rome. The monarchists showed a better front, but it was evident from the beginning that they had no hope except in the discords of the Republican groups. When these discords were allayed, the adherents of the Count of Paris sank to a hopeless, although still respectable, minority. The value of this peaceful devolution of the Presidency from one Republican chief to another is very great, since it betokens the existence of a settled idea and plan of government in France. It is perhaps too soon to say that the day of experiment has wholly passed, but it is certain that the republic is on a firmer foundation by reason of the peril so lately faced and surmounted.

The difficulty of governing Ireland on two different theories is well illustrated by the talk of the English press about the reception given to Hartington and Goschen in Dublin and Chamberlain in Belfast. The law and the Constitution say that the Irish members in the House of Commons represent the Irish people, and are the only proper exponents of their feelings and wishes. But as 86 out of 106 of these hold opinions which are obnoxious to the majority in Parliament, the country is governed and discussed on the theory that the Irish representatives do not represent the Irish people, but that the real Ireland of politics is composed of the few thousand persons who went to hear Lord Hartington in Dublin and those who went to hear Mr. Chamberlain in Belfast. In fact, an article in the *Spectator* recently spoke of "those who welcomed Mr. Chamberlain in Belfast" as if they were a powerful body recognized by the Constitution and entitled to be heard in preference to the Irish representation in Parliament. Of course the Hartington meeting in Dublin, consisting, it is said, of 8,000 persons belonging to the professional and mercantile classes, would be a most important event if it was anywhere provided that Ireland was to be governed by the professional and mercantile classes of Dublin, or, in other words, that the merchants, and bankers, and lawyers, or such of them as were Unionists, were what the French call the "legal country." But inasmuch as these classes are in a hopeless minority in politics, the importance attached to them is, under the present British Constitution, a complete absurdity.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 30, to TUESDAY, December 6, 1887, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND'S message, read to Congress Tuesday, is the shortest delivered for years, and is devoted entirely to a consideration of the tariff, urging strongly the reduction of the surplus by the reduction of the tariff rather than by the repeal of internal-revenue taxes.

The President sent to the Senate, Tuesday, the nominations of Secretary Lamar to be Associate Justice of the United States Supreme Court, of William F. Vilas to be Secretary of the Interior, and of Don M. Dickinson of Michigan to be Postmaster-General.

The caucus of the Democratic members of the House of Representatives Saturday night, December 3, nominated John G. Carlisle for Speaker, Gen. J. B. Clarke of Missouri for Clerk, J. P. Leedom of Ohio for Sergeant-at-Arms, and A. B. Hurt of Mississippi for Doorkeeper. There were five candidates for Doorkeeper, and during the nominating speeches Congressmen Breckenridge of Arkansas and Blount of Missouri came to blows that drew blood on both sides.

The Democratic Senators were in caucus Saturday, but after a session lasting about three hours they went home, leaving as before the situation regarding the seating of Messrs. Turpie of Indiana and Faulkner of West Virginia.

Congress organized on Monday, December 5. There was no deadlock in the Senate as had been expected, the Republicans not objecting to the admission of the two new Senators above named. Mr. Hoar urged that the case of Faulkner, in which there are two sets of credentials, be referred to a committee.

The Supreme Court at Washington has decided the Kansas prohibition cases, sustaining the right of a State, under its "police power," to suppress the manufacture of liquor and the liquor traffic within its limits, without making any compensation to the distiller or liquor-dealer for the value of the property destroyed by such State action.

The Supreme Court has sustained the position of the Virginia officials who were imprisoned by the United States Circuit Court for disobedience to a restraining order which forbade them to bring suits for the collection of taxes, in cases where tenders have been made by tax-receivable coupons cut from the State bonds. The Court orders the release of the officers, and declares that a State, as a political sovereignty, cannot be sued or coerced in the Federal courts.

A question was recently raised at the Treasury Department in regard to the liability to seizure of drawings and paintings executed abroad by members of the "Art Classes for Art Study at Home," and sent to the instructor in this country for criticism. The Department has decided that such articles, if imported by mail, will be liable to seizure, but not otherwise. The Department has sustained the appeal of the Judges of the Appellate Court, First District of Illinois, from the decision of the Collector of Customs at Chicago, assessing duty on certain books imported for the library of said court and claimed to be exempt from duty.

The annual report of Postmaster-General Vilas says it may be fairly affirmed that from the beginning of the current fiscal year the postal service has again become substantially self-sustaining, and the prediction may be ventured that if the revenues be not further crippled and only a similar ratio of increasing expenditure be held, the next fiscal year will yield a surplus, which should, under the same conditions, annually increase. "The time is not far distant when the rate of charges upon letters can be properly lowered to one cent an ounce, and some reduction be permitted in the postage upon merchandise and other matter."

The Commissioner of Agriculture, in his annual report, recommends substantially the abolition of the seed division of the Department, and the transfer of its duties to the State and Territorial experiment stations.

The Pacific Railway Commission has filed two reports, a majority report, signed by Commissioners Anderson and Littler, recommending an extension of the Government's second mortgage on the property, but upon conditions that will insure payment in full; and a minority report, by Commissioner Pattison, recommending the payment of a lump sum representing the present value of the Government's claim.

The increase in the public debt in November was $1,490,350.99.

The Republican National Committee will meet at Washington on December 8, to fix the place of the next National Convention. Eight cities, at least, want the Convention and will have lobbies on hand to urge their claims.

The deadlock in the Council of the Indian Territory was broken Wednesday. The Nationalists stole a march on the Downing party and captured the organization of the Senate. Lacey Hawkins, a full-blooded Cherokee, was elected President of the Senate, and the clerks and other officers were also selected from the Nationalist party.

The Republicans of Boston have nominated T. N. Hart for Mayor, and N. J. Bradlee, the citizens' candidate, has withdrawn. The Democrats have renominated Mayor O'Brien.

Gov. Beaver of Pennsylvania has appointed a commission to make inquiry and report on the subject of industrial education in the State. President Fetterolf of Girard College is a member of the Commission.

The New York Chamber of Commerce on December 1 adopted resolutions favoring "any arrangement for enlarged commercial relations between Canada and the United States which shall seem to the two contracting parties fair and just, and which may contribute to the settlement" of the fisheries question, and suggesting arbitration for any irreconcilable differences that may arise.

The New York Local Committee on Harvard Examinations for Women have decided that it is now desirable and necessary to have a scholarship fund to help deserving women through college. They ask contributions towards a fund of $3,000, which will furnish $150 a year for that purpose.

The jury which has been trying John Most in the Court of General Sessions for using incendiary language at a meeting in Kramer's Hall on the night of November 12, returned a verdict of guilty Tuesday night. They had been absent over four hours, and the verdict was the result of many ballots, on the first of which there was a majority for acquittal. Most's counsel declared that the conviction was brought about by the introduction in evidence of the prisoner's book on explosives, and he asked for a day to argue a motion for a new trial. This will be heard on Thursday.

The members of the Belleville Avenue Congregational Church in Newark have voted, 139 to 84, that the Rev. Hugh O. Pentecost should remain in charge of the church. A resolution was passed that the action of the church did not mean that the congregation approved the views of the pastor upon land taxation or the hanging of the Anarchists, but only that they agreed with him in his religious belief.

The Socialistic element in the Knights of Labor at Chicago have revolted from Powderly again and have reissued the usual batch of charges.

A decision in favor of Massachusetts in the suit of the Commonwealth vs. Western Union Telegraph Company, to recover $10,000 taxes imposed in 1886, has been rendered at Boston. The Western Union Company appealed to the Supreme Court of the United States. It is fighting the tax collector in other States, and the final decision of this case will be awaited with interest.

The Strobridge Lithographing Company's building in Cincinnati was burned down on Thursday; loss $250,000 or upwards. This was the largest theatrical printing-house in the country, and many travelling theatrical companies have lost their colored bills for the season.

The situation of the burning Calumet and Hecla mines is growing very serious. Carbonic-acid gas and steam are now being sent down two shafts of the Calumet and two shafts of the Hecla mines. There is talk of flooding the mine with water, but this will not be done until all other measures fail.

Jacob Sharp was released from custody December 1, on $40,000 bail bonds, and went to his home. He appeared in court, but seemed very feeble.

The Harvard Freshmen have declined the challenge of the Yale Freshmen for a boat-race next summer.

The portrait of George Bancroft presented by himself to Cornell University was unveiled December 1. The lecture-room of Prof. Moses Coit Tyler, where the exercises took place, was filled with Faculty and undergraduates, with a considerable delegation from the Sage College for Women. On a table to the right of the platform stood the twelve volumes of Mr. Bancroft's history, and on the left on a large easel was the historian's portrait. Prof. Tyler and President White spoke.

The Rev. Dr. Joseph Parker of London met the Beecher Memorial Fund Committee December 1, and explained that the trouble with regard to his payment for the delivery of the Beecher eulogy arose from a misapprehension on his part, he having supposed that the arrangements for his proposed visit in June held good for his actual visit in October. The Committee expressed themselves as perfectly satisfied, and adopted a resolution exonerating Dr. Parker from all blame, returning him thanks for the eulogy, and declaring that he had conducted himself as an honorable gentleman and a Christian teacher.

The official majority against prohibition in Atlanta, Ga., is 1,128.

The Syracuse *Daily Courier* and the *Daily Standard* have raised the price of their papers from two to three cents a copy.

Brig.-Gen. William Hemsley Emory, who retired from active military service in 1876, died in Washington December 1. He performed distinguished service during the war, was twice thanked on the field at Hanover Court-house, and had charge of the defences of New Orleans in 1863.

Algernon S. Sullivan, a prominent New York lawyer, died Sunday night, aged sixty. He was the son of an Indiana judge, and came to New York in 1859. He had been Assistant District Attorney and public prosecutor, a prominent member of many clubs, and was known as a Democratic campaign speaker.

John C. Work, one of the old merchants of New York, died Tuesday afternoon, in the eightieth year of his age.

FOREIGN.

President Grévy of France declined to resign December 1, as he had announced, but did resign the next day, and on Saturday, after two days of excitement, in which an outbreak of the mob was feared at any moment, Sadi-Carnot was elected his successor. The Republicans held a caucus at Versailles

that morning, at which Ferry led. The fear of a Parisian riot if he was elected is said to have driven the other factions to unite upon Sadi-Carnot. The balloting for the election of a President began at 2:15 P. M. At 4:15 P. M. the ballot closed, and on motion of President Le Royer the Congress adjourned until 4:45. The result of the first ballot was: M. Sadi-Carnot, 303; M. Ferry, 212; Gen. Saussier, 148; M. de Freycinet, 76; Gen. Appert, 72; M. Brisson, 26; M. Floquet, 5; other candidates, 7. Total vote, 849. Before the second ballot was taken, the members of the Left groups held a meeting. M. Ferry announced his resolution to withdraw in favor of M. Sadi-Carnot, and M. de Freycinet tendered a similar notification. The final ballot stood: M. Sadi-Carnot, 616; Gen. Saussier, 186; M. Ferry, 11; M. de Freycinet, 5; Gen. Appert, 5, and M. Pyot, 1.

The text of M. Grévy's message of resignation, read December 2, is as follows: "So long as I had only to contend with the difficulties that have accumulated in my path, the attacks of the press, the abstention of the men whom the public voice called to my side, and the increasing impossibility to form a Ministry, I struggled on and remained where duty bade me. But at the moment when public opinion, better informed, marked a change which gave me hope of forming a government, the Senate and Chamber of Deputies voted a double resolution which, under the form of an adjournment to a fixed hour to await the President's promised message, is tantamount to summoning the President to resign. It would be my duty and right to resist, but under the circumstances in which we are placed, a conflict between the Executive and Parliament might entail consequences which restrain me. Wisdom and patriotism command me to yield." The Deputies received the message with profound silence.

Since the army surgeons brought to notice the frequency of diphtheria in the French Army, particularly among cavalry regiments, Dr. Longuet has studied the subject, and in a paper read before the Academy of Medicine he has arrived at the following conclusion as to the etiology of the disease: "It is incontestable that not only in the French Army, but in the German Army, the cavalry, though less numerous than the infantry, furnishes three times more cases of diphtheria. It is equally certain that at Paris, for example, the most active foci of this cruel malady are, on the one hand, the largest of the cavalry barracks, and, on the other, a hospital situated near one of the largest stables."

Lord Lyons, British Minister at Washington from 1858 to 1865, and at Paris from 1867 till he was made an earl a few weeks ago, died December 5, aged seventy. His official career extended over fifty years. He succeeded in 1858 to the title of his father, the first Lord Lyons, who commanded the British fleet in the Black Sea in 1855–56.

Despite the order to the press of Russia not to attack Germany, the newspapers continue to print hostile criticisms on the disclosures made regarding the interview between the Czar and Prince Bismarck. They say that if Bismarck is correct in stating that Russian officials misled the Czar, all such officials should be dismissed; and on the other hand, if the statement is untrue or is not proved, the German Ambassador ought immediately to receive his passport.

An official bulletin issued December 1 says: "The local affection in the Crown Prince's throat does not appear to be extending. There is no difficulty of respiration or in swallowing, and the general functions of the body continue perfect." There is small hope, however, of the Crown Prince's recovery, and Queen Victoria will visit San Remo in January for a prolonged stay.

All the members of the Austrian Reichsrath who are school-teachers have been ordered to give up their school duties for the whole period for which they have been elected to the Reichsrath, on the ground that education and politics should be kept separate.

In the Hungarian Unterhaus November 30, Deputy Polonyi asked as to the truth of the report that valuable pictures by Raphael, Dürer, Rembrandt, and others were missing from the Esterházy Gallery, and that antiquities from the National Museum had been replaced with worthless imitations. The report was found to be untrue.

The Unionist banquet at Dublin, Ireland, on the evening of December 1, was a brilliant affair. The leading merchants and professional men and a number of Catholic Unionists were present. The balconies were crowded with ladies. The toast to the Queen was received with enthusiasm, everybody rising and joining in the singing of the national anthem and "God Bless the Prince of Wales." Mr. Kenny, an eminent Catholic barrister, denounced home rule. Mr. Goschen and Lord Hartington devoted most of their speeches to denying statements of the *Freeman's Journal*

William O'Brien in a letter smuggled from Tullamore Jail to a friend in Dublin, says: "Mr. Balfour's statement that I pleaded weak action of the heart and delicate condition of the lungs as an excuse for not being forced to wear criminal clothes, is a cruel falsehood. If Mr. Balfour is acting on the belief that the state of my health renders the application of brute force dangerous, the course he has pursued could not be recommended on the score of humanity. For six days after committal I was subjected to constant threats of force and put on bread-and-water diet. Since securing new clothes I have been unable to change them night or day, for fear of their being stolen."

Mr. Sexton was unanimously elected, December 2, Lord Mayor of Dublin to succeed Mr. Sullivan. In a speech thanking the corporation for the honor conferred upon him, he said that every day developed new attacks upon the lives and liberties of the Irish people. The Lord Mayor ought to be the unflinching organ of prevalent public opinion.

Mr. Sheehy, member of Parliament, has been arrested, and is now in the Sligo prison. He will be brought before the court at French Park, County Roscommon, for examination on the 15th. The second trial of Lord-Mayor Sullivan, for printing in his paper reports of suppressed branches of the National League, took place December 2, and resulted in a conviction. He was sentenced to two months' imprisonment, but without labor. Timothy Harrington, member of Parliament for the Harbor Division of Dublin, was arrested December 2 in London. He is a brother of Mr. Edward Harrington, member of Parliament, who was arrested at Tralee, County Kerry, December 1. The Harrington brothers are both charged with publishing reports of meetings of suppressed branches of the League in their paper at Tralee, and they will be tried in that town. Mr. Sullivan will be treated in prison as a first-class misdemeanant. He has announced that he will not appeal from the decision of the court, but "will suffer his punishment proudly, as he would if it were ten times greater."

The Most Rev. Daniel McGettigan, D. D., Roman Catholic Archbishop of the Diocese of Armagh and Primate of all Ireland, died December 3.

The London *Times* has set spies on Parnell and found him living in Kent under the name of Preston. "A leading Nationalist" says that Mr. Parnell is in a delicate state of health, extremely thin and pale. He had a perfect right to seek repose while Parliament was not sitting. He adds that spies will be set upon the private movements of *Times* writers in retaliation. The spying by the *Times* is condemned by the London press with much unanimity.

Goldwin Smith writes to the London *Times* defending his own consistency on the home-rule question. He says that since he wrote years ago he has seen the Irish in America "trooping blindly to the polls behind a demagogue or priest forming the rank and file of an army of corruption, filling American cities with misgovernment, disorder, and jobbery, swelling the statistics of crime, and reënacting in the Mollie Maguire conspiracies the murderous agrarianism of their own land; trampling on and butchering the unoffending negro, and hunting down the helpless Chinese." He does not think the peculiarities of the race indelible, but strong, and says every statesman should note them. To hand over Ireland to the politicians of New York or Chicago or their mates in the House of Commons, would be the greatest folly and most heinous crime ever deliberately committed by public men.

Mr. Bradlaugh says that if the Government will grant a committee, with power to call for persons, books, and papers, whereon he may sit and examine witnesses, he will undertake to trace several checks paid by leading Tories to get up meetings of the unemployed, preceding the riotous meeting of 1885, including one of Salisbury's, and that Peters received the money. This Peters is a notorious agitator, repudiated by all respectable workmen.

Dean Scott, the great English Greek scholar, and joint author with Dean Liddell of the Greek Lexicon used in colleges, died December 3.

The London *Chronicle* gives a strange account of a trial in Tolax, a village in Malaga, Spain, of some religious fanatics for strange practices. They originally went naked, like Adam and Eve before the fall, but the authorities interposed. Since then they have inflicted wounds upon themselves in imitation of the crucifixion, and burned all their goods, believing a higher power would provide food. A strange part of the affair is that when put on trial they were hypnotized in court by medical specialists—like Irving in "The Bells"—and proved good subjects. It is even alleged that on being ordered to perspire, they broke out in a profuse perspiration. Others were pricked with pins, but gave no sign of pain.

The fastest voyage on record between England and Australia has just been accomplished by the huge steamer *Ormuz* of the Orient Line. She left Suez on the 27th of October, and arrived at King George's Sound eighteen days later, November 14, and landed the mails and passengers in the unprecedented time of twenty-four days from London.

The proposition for a subsidy to an American line of steamers between the United States and the ports of the Argentine Republic, which was so long under consideration by certain Americans, having been accepted by a British line, the flag of the Argentine Republic is to be carried on these ships, and they are to be required to carry eight naval cadets of the republic on every trip.

The Collector of Customs at Amherstburg, Canada, has seized the steam-tug *Bob Anderson*, belonging to Mr. Demars of Detroit, for towing vessels into Canadian ports and not reporting them inward or outward. The vessel has been released on the payment of a deposit of $400, pending the decision of the Department.

The King of Corea will immediately despatch ministers to England, France, Germany, Russia, and America. The consent of China to this arrangement was given with the greatest reluctance. It is believed that Russian agents instigated the King's action. An American man-of-war has already conveyed a minister to Nagasaki.

A CONSTITUTIONAL REFORMATION OF THE HOUSE.

On the 18th of June, 1886, the Judiciary Committee of the Senate unanimously reported, and the Senate unanimously passed, the amendment to the Constitution which was intended to substitute the 30th of April for the 4th of March. The purpose of the amendment was two-fold: First, that the inauguration of the President should take place at a more propitious season of the year, at a time more conducive to public comfort, convenience, and health; second, to do away with that great bane of our national legislation—the short session of Congress. Great credit belongs to Mr. George F. Hoar, who had charge of the amendment, for the fidelity, ability, and good sense with which he brought it before the Senate and procured its passage. When the amendment went to the House, it was referred, properly, to the Judiciary Committee, with whom it remained, illustrating how completely the public will can be thwarted by the inaction of a committee of Congress. It is true that the Committee intended to report it with an amendment, and it is true that a family bereavement added to the delay; but the fact nevertheless remains that so important a measure as a constitutional amendment, which had passed the other branch of the Legislature with unanimity, and received in an unusual degree the commendation of the public press and of many constitutional students, was defeated by the torpidity of a single committee.

That committee undoubtedly intended to report the amendment, but in the turmoil of the short session it was no easy thing to do. Other committees claimed their share of the closing hours; appropriation bills must be passed; a hundred members shrieked to the Speaker at the same moment, and so the last day of the short session of Congress rolled away with the constitutional amendment still in the hands of the Judiciary Committee. At last, at the hour of noon on the 4th of March, the Speaker's gavel fell, and the House of Representatives of the Forty-ninth Congress fell into its biennial chaos: the Speaker ceased to be Speaker, the members ceased to be members, the term of office of everybody save the Clerk and a few custodians ceased, and the country was left practically without the popular branch of its national Legislature.

While this was the condition of affairs in the House, everything remained serene and undisturbed in the Senate. The President pro tem. continued to occupy the chair: the committees remained existent, and, indeed, organized; the secretaries and officers continued at work; the unfinished diplomatic business and the unconsidered nominations of the President were taken up and disposed of as if the 4th of March were an ordinary day in the calendar. The only disturbance perceptible was that a few Senators retired from office and a few new ones were introduced and sworn in, and a trifling rearrangement in the detail or personnel of the committees took place. There was no lobbying, no caucusing, no prolonged election for Speaker, no trading of votes for Clerk, or Doorkeeper, or Sergeant-at-Arms—in a word, the legislative functions of the Senate were as complete and perfect and in as good working order an hour after noon on the 4th of March as an hour before.

On the first Monday of December, in each alternate year, everything has to begin again in the House of Representatives; the entire body has to present credentials; an absolutely entire organization has to be effected; a long interval has to elapse for a new Speaker to select new committees; the thousands of private bills and petitions which consumed hours of time and thousands in money at the last Congress, all have become waste paper—blank paper so far as the business of the House is involved; and they have to be again introduced, again referred, again printed, and again die unacted upon and undisposed of.

The waste of time and money has been enormous; but, worse than this, the waste in getting this cumbrous machine of nearly 400 members into working order consumes so much time that the long session is practically little better than the short one. A host of demoralizing influences also affect the organization. Sometimes there have been dangerous deadlocks, when it seemed almost impossible for the House to organize, as when, in the Thirty-fourth Congress, Mr. Banks was elected, but not until 133 ballots had been taken. The bad element which manages and accomplishes in caucus always effects something, and sometimes rules absolutely. Mr. Robeson in the caucus and Mr. Keifer in the Speaker's chair were not literally sunshine and shadow, but were the products of an imperfect system that requires caucuses, and stores patronage, and breeds manipulators. The Speaker of the House of Representatives has become in many ways the most powerful officer of our constitutional system. There is no other who can do so much to mould or retard or obstruct legislation as he. He appoints the committees, and the committees have power to bring one measure forward and keep another back, and to shape and change and "smother" any. To compel a committee to report, or to censure it for not reporting, or to instruct it to report in a particular way, is no longer dreamt of in Congress.

It follows, of course, that an officer who has the absolute power of appointment, who can make each committee what he pleases, and whose appointments are subject to no censorship and require no approval, must have an immense influence with his committees, and with those outside forces which seek to procure or prevent legislation. The rulings, also, of the Speaker are, in minor matters, practically irreversible, and with such a power before him, and with such gifts in his hand, no one can deny a rapidly growing danger in this House of Congress. The constitutional veto power of the President is paltry beside the undefined power which a determined and unscrupulous Speaker can wield. Finally, there are other officers to be elected besides the Speaker, officers whose salaries are not great, but whose patronage is; and there are, as in other caucuses, votes to be traded and candidates to be pushed and favors to be given and repaid. The whole thing is demoralizing, and no single benefit results from such a system.

Moreover, it involves at present, though not necessarily, another evil. The House of Representatives is elected thirteen months before it assembles to organize. What is worse is, that half of its business existence—the second session of Congress—does not begin until after a new House of Representatives has been elected. That evil the country has several times contemplated, and always with a desire, more or less expressed, that it should be done away with. A notorious illustration of what may happen, and what, indeed, always does happen, although in a less degree and in a less notorious way, was the once renowned "salary-grab session," when the retiring members voted to increase their salaries retroactively just before Congress expired, and men who had been defeated at the preceding November election, and knew that they were doomed to retire from public life, carried back with them this extra pay as so much plunder. While such causes continue to exist, it is inevitable that such effects must follow.

A remedy for this seems close at hand, and nearly a century of experience has demonstrated its feasibility and proved that it does not contain one objectionable element. We refer, of course, to the American Senate. No one has ever noted or perceived a single ill effect proceeding from the continuous organization of the Senate. When the political majority in the Senate changes, some Senator gets up and moves to proceed to the election of a President pro tem., and the change takes place quietly and easily, and without the slightest jar. A notable instance was when the Senate elected Mr. Bayard President pro tem. one day and Mr. David Davis President pro tem. the next. The enormous power of dictating who shall compose the committees is not vested in any one man, but is managed easily by a committee with few changes, and those always subject to censure and disapproval of the Senate. The committees remain organized, and changes are made gradually as new members come in, and the work of the Senate goes on constantly. A consequence of such a system is that the ablest men naturally come to the front. It is inevitable there that the important committees will be composed of the men best fitted to be on them, and that the very strong men of the majority will be chairmen. The diplomatic business of the Senate is great, and so is that relating to appointments, and there is no "previous question," debate being unrestrained; yet the Senate is always in advance of the House in legislative work, and does that work more promptly and more thoroughly. Why, then, should a system which has been proved to be bad be retained at one end of the Capitol, when at the other end of the same building can be found a system which ninety-eight years of experience show to be almost faultless?

The dissolution of the House of Representatives was, of course, suggested by the dissolution of Parliament. At the time when the Constitution was framed, the traditions of the Long Parliament lingered in the public mind, and a morbid fear of Federal usurpa-

tion existed in nearly every State. To bring Congress to an end at stated times was to follow the precedent of English legislation against long Parliaments, and to disarm or forestall the objections against unlimited Federal power. The provision, as framed, was admirably adjusted to the unyielding necessities of the time, and was not ill adapted to a House of Representatives consisting of about seventy men, for the most part intelligent and well-trained statesmen. But in our day the danger which confronts us is the inability of the lower house to move the stagnant legislation of 60,000,000 people. And this is coupled with, and aggravated by, the interval which exists between the election of the members and the organization of the House. Substantially, everybody is in favor of having this interval shortened, and yet there is another side to that question. To make a House all of whose members are elected on the 8th of November assemble in Washington on the 7th of December, then to organize, fresh from the heat and conflict of the election, is an experiment not without danger, while to postpone the assembling of Congress to the middle of the winter, as was proposed by the Crain amendment, is to bring upon ourselves two short sessions instead of one.

After reviewing the entire situation, the question arises whether its difficulties will not be best met and overcome by simply adopting that system which has already been thoroughly tested. A brief and simple amendment to the Constitution will effect the change which (with the change of the day of the inauguration) has been thus formulated:

ARTICLE XVI.

The term of office of the President and the second session of the Fiftieth Congress shall continue until the thirtieth day of April in the year eighteen hundred and eighty-nine; and the thirtieth of April shall thereafter be substituted for the fourth of March as the commencement of the official term of the successive Presidents and Vice-Presidents of the United States.

ARTICLE XVII.

(For form and phraseology of this amendment see the Constitution, art. 1, sec. 1 and 3.)

The House of Representatives shall be a continuing body like the Senate.

The members shall be divided as equally as may be into two classes, so that one half may be chosen every year. The term of office of each class shall begin on the first Monday in December of the same year in which they shall be chosen.

To give effect to this article, the House of Representatives in being at the time of its ratification shall divide the Representatives of the next Congress into two classes, apportioning between them as equally as may be the Representatives of each State. When the two classes are thus formed, it shall be determined by lot which shall hold their seats for two years, and which shall hold their seats for three years, in the first instance. The successors of each class shall thereafter be chosen in alternate years. The terms of office of all Senators and Representatives which otherwise would expire on the 4th of March, shall continue until the first Monday in December following.

"*STATE RIGHTS.*"

THE decision of the United States Supreme Court in the matter of the Virginia debt constitutes, under the circumstances of its announcement, one of the most striking and even dramatic events in our political history. The highest judicial tribunal in the land is now composed entirely of men appointed by Republican Presidents. Years have passed since the last justice who held the commission of a Democratic President disappeared, and although Justice Field, since his appointment twenty-four years ago, like many Republicans of Lincoln's day, has become a Democrat, he has long been the sole representative of that party upon the Supreme bench. A political organization could not ask a better opportunity to interpret the fundamental law than has for years been enjoyed by the Republican party, through its absolute control of the Supreme Court.

The death of Justice Woods a few months ago opened the way for a Democratic President to appoint a Democrat to the highest bench for the first time in a quarter of a century, and a nomination by Mr. Cleveland was expected to reach the Senate early in the present session. As the South has been practically without representation since the outbreak of the civil war (Justice Woods having been really a carpet-bagger in Alabama rather than an Alabamian, and Justice Harlan's home having been only the other side of the Ohio River), it has been universally taken for granted from the first that the President would select a representative Southern man, and for some time past it has been understood that his choice has fallen upon Mr. Lamar. A better representative of that section could not be found. Mr. Lamar served in Congress before the war, and resigned his seat to participate in the secession of Mississippi, and later to enter the Confederate Army; he did his best to establish "State rights" in the old Calhoun sense of the phrase, and to overthrow the Federal Government; he accepted the situation when defeated, renounced the doctrine of secession, and has ever since loyally done everything in his power to promote the welfare of the reunited nation.

The death of Justice Woods was no sooner announced than Republican organs began to lament the fact that the party of "State rights" was to be given a share in interpreting the Constitution, and the chorus of indignation over the dangers thus threatened to the nation has grown louder as the selection of Mr. Lamar has been more plainly foreshadowed. It was ignorantly taken for granted that a Republican Supreme Court had all these years been interpreting the Constitution in a way that favored the latitudinarian views of those politicians who, for partisan ends, have sought to aggrandize the powers of the Federal Government, and it was carelessly taken for granted that Democratic justices appointed from the South would give a very different construction to the rights of the States under the Constitution from that given by Republican justices appointed from the North. This theory has been urged with especial force in reference to the Virginia cases which have long been pending in the Supreme Court. A Western Republican organ expressed the partisan view of the case the other day when it said of Mr. Lamar's appointment: "Regarding the Virginia question, his life-time devotion to and advocacy of the doctrine of States' rights does not permit a doubt as to where he would be found in this issue. If he goes on the Supreme bench, the present Government of Virginia will get the vindication, with every right of repudiation involved, which it is seeking."

We pointed out, however, when this discussion began six months ago, that the theory of the Republican organs was based upon the densest ignorance of the real attitude of the Supreme bench as regards the relative provinces of the States and of the Federal Government. There is no question that the men who carried through the post-bellum amendments to the Constitution generally supposed that a practical reconstruction of the relations between the States and the United States had been effected by these amendments, and that the believers in the Hamilton school considered that the extreme Federal theory had been thus embedded in the fundamental law. But the Supreme Court early showed that this was an utterly false notion. The decision in what are known as the Louisiana slaughter-house cases, rendered in 1872, only a short time after the adoption of these amendments, expressly declared that "we do not see in those amendments any purpose to destroy the main features of the general system" as it had existed before the war. The subsequent decisions, which pronounced "unconstitutional and void" the "Kuklux Act" and the Civil-Rights Act, because the "absurd" theory on which they were based "would make Congress take the place of the State Legislatures and supersede them," ought to have removed any doubt as to the Court's position which had survived the deliverance of 1872. Justice Miller, the oldest Republican in point of service, in his notable address upon the Supreme Court before the Law Alumni of Michigan University last summer, summed up the case when he said: "It may be considered now as settled that, with the exception of the specific provisions in them [the amendments] for the protection of the personal rights of the citizens and people of the United States, and the necessary restrictions upon the power of the States for that purpose, with the additions to the powers of the general Government to enforce those provisions, no substantial change has been made. The necessity of the great powers conceded by the Constitution originally to the Federal Government, and the equal necessity of the autonomy of the States and their power to regulate their domestic affairs, remain as the great features of our complex form of government."

The Virginia cases which were decided on Monday hinged upon the question of State rights. The issue was simply whether the State could be compelled to certain action by the Federal authority. Any inclination towards a broad interpretation of Federal prerogatives was strengthened by the fact that the question of repudiation was involved, and that the interference of the general Government was invoked in the cause of honesty. Every motive which might reasonably influence the court in that direction was thus present. Nevertheless, every Northern Republican justice was found on the side of the State and against the Federal Government. The only note of protest came from the single

justice whose old home was South of Mason and Dixon's line, while the Ohio Republican who presides over the Court, and his Republican associates from other Northern States, were emphatic in their maintenance of "State rights."

"Repudiation Sustained" is the headline which the *Tribune* places over the report of the decision. A despatch to the *Herald* from Richmond says: "The decision of the Supreme Court caused great rejoicing here to-day. It is regarded by all classes as a fixed and final triumph of State sovereignty. Men tossed up their hats and cried, 'Hurrah for Virginia! Hurrah for State rights!'" We have characterized this decision as a striking and, in view of Mr. Lamar's impending appointment, even a dramatic event. Consider the effect upon the public mind if the same decision had been rendered by a Supreme Court entirely composed of justices appointed by Democratic Presidents, and the news had come from the former capital of the Confederacy that men were tossing up their hats over "a fixed and final triumph of State sovereignty." It is not too much to say that the nation would have been convulsed, and that many Northern people would have felt that the war had been fought in vain.

It is most fortunate that the decision has been rendered under circumstances which insure its reception with equanimity. As that prominent Republican Senator, Gen. Hawley, has pointed out, "the tendency towards a consolidation of the entire powers of government is one of the strongest to-day, and one of those most dangerous to the republican experiment as our fathers understood it," and it is well that this tendency should be arrested in so striking a way by a Supreme Court of Northern Republicans. Even the most timorous can no longer dread that the appearance of Southern Democrats upon that bench will involve a dangerous construction of "State rights." Indeed, any careful student of our later history will be constrained to accept the opinion not long ago expressed by a distinguished Republican justice, that, so far as the question of "State rights" in the old Calhoun sense of the phrase is concerned, it is no longer a partisan question, and that in the Supreme Court the best conservators of State rights in the true sense of the words are Republicans.

THE INTER-STATE COMMERCE REPORT.

THE first report of the Inter-State Commerce Commission is a very sober, conservative, and thoughtful document, confirming the impression which their decisions as announced from time to time have already made. They tell us that the operation of the act has been on the whole beneficial. It has cured more evils than it has created—a good many more, we judge. The long-and-short-haul clause, from which so much harm was expected, has not yielded the bad results that were predicted. It has not been put in force in the South generally, nor in transcontinental traffic, owing to peculiarities arising from water transportation and Canadian competition; but these cases are still pending, no final decision having been yet reached. These cases are exceptional. The rule has been established that a higher charge shall not be made for a shorter than for a longer distance, where the shorter is included within the longer. In large sections of the country this rule is now without important exception. It is observed that the rule bears hardest on the weaker companies, the stronger ones complying with it more easily. In cases where strict compliance has not yet been enforced, there has been an approximation to it by the lowering of local rates, or the raising of through rates, or both, showing a general disposition to comply with the law. Upon this point the Commission offer the following commentary, which is fraught with the highest wisdom:

"The act to regulate commerce was not passed to injure any interests, but to conserve and protect. It had for its object to regulate a vast business according to the requirements of justice. Its intervention was supposed to be called for by the existence of numerous evils, and the Commission was created to aid in bringing about great and salutary measures of improvement. The business is one that concerns the citizen intimately in all the relations of life; and sudden changes in it, though in the direction of improvement, might in their immediate consequences be more harmful than beneficial. It was much more important to move safely and steadily in the direction of reform than to move hastily, regardless of consequences, and perhaps be compelled to retrace important steps after great and possibly irremediable mischief had been done. The act was not passed for a day or for a year; it had permanent benefits in view, and to accomplish these with the least possible disturbance to the immense interests involved seemed an obvious dictate of duty."

It is gratifying to learn, also, that special rates and secret rates and rebates are no longer given to favored individuals, or to individuals whom the railroads think they must favor in order to hold their business. The language of the Commission is as explicit on this point as could be desired. The system of secret rebates has come to an end. The Standard Oil case now under advisement is one in which tank-cars not owned by the railroad companies, but by outside organizations, form an element of the problem. Upon this subject the Commissioners say that "a willingness to disregard the rules of equality and justice as between shippers, when it can be made for the interest of the carriers to do so, is as likely to make its appearance in the action of the managers of any one of these outside organizations as in that of the managers of the railroads; for the temptations will be the same, and the same class of persons will be bidding for special privileges and advantages which, before the act was passed, prospered so unfairly upon railroad favors." If all transportation by rail is to come under the same rules of general right and equity, they suggest that some further legislation is indispensable. This is a matter of so great importance that we wonder the Commission did not embody their views in the form of an amendment to the existing law.

Pooling has likewise come to an end. It is interesting to note that while making this announcement, the Commission do not censure the practice of pooling, but on the other hand point out that under the pooling system the decline in rates went on just as it did before, with the difference that there was greater steadiness than under the system of "cutting." In other words, the decline was gradual instead of jerky, and this was to the advantage of the public. One difficulty connected with the abolition of pools, pointed out by the *Railroad Gazette*, we do not see any mention of in the report. In these days of multiplying "Trusts," when the transportation of some articles like oil or sugar is held as a gift in a single hand or in comparatively few hands, it is possible for the Trust to threaten a railroad with the loss of its whole business of a particular kind, unless it shall make a special rate in contravention of the law. Pooling prevented to a large extent this kind of terrorism, since it distributed the earnings derived from such freight among all the roads concerned. "If," says the *Gazette*, "the law prohibits railroad pools, but cannot cope with rings of producers, it simply deprives the railroad men of the power of self-defence. Where the law is strong enough to control everybody, it is right to prohibit carrying weapons; but it is simple madness to try to prohibit some people from carrying weapons when there are other people, whom you cannot control, who are ready to take advantage of their weakness."

The intention of the Commerce Act, as the Commission understand it, was to preserve for the people the benefits of railroad competition. This should be the aim of any further legislation on the same subject. In order that these benefits may be preserved, they deprecate any attempts to establish mileage rates as a revolution in the business of the country, fraught with destructive consequences.

"FAIR TRADE" IN ENGLAND.

THE probability that the English Tories will, when Parliament meets, be driven into some attempt at a return to protective legislation, has apparently become very strong. If one may judge from the proceedings of the late Conservative Congress, this occupies the foremost place in the Conservative mind next to the necessity of keeping Gladstone out of office. It takes precedence of all purely English questions, including the reform of the county government. This latter topic is now seldom mentioned in Tory circles, except in a very guarded way, owing to radical differences of opinion about it among the leaders. It is proposed to give counties some sort of representative government in lieu of that of the justices of the peace sitting in Quarter Sessions; but the high-and-dry Conservatives are very unwilling to let the control of the county boards pass out of the hands of the landed gentry, or, in other words, of the nominees of the Crown. Accordingly, their plan is to keep the elected members of the boards in a minority, and give the preponderance to magistrates and other ex-officio members. This is said to be Lord Salisbury's idea, while Lord Randolph Churchill and the progressives are in favor of making them thoroughly representative and democratic. But the fear of making these differences

public keeps the whole subject in the background, particularly as the rank and file of the party in the country districts are far more interested in the price of wheat and beef than in any change in local government.

Accordingly, as soon as a really large and representative Conservative convention was held, protection at once came to the front. The farmers and landlords want a duty on foreign agricultural products, on the amount of which they are not agreed; but, as the promoters of impracticable schemes are apt to say, "this is a mere detail." To secure the support of the voters in the towns for any scheme which would raise the price of food, something would also have to be done for the protection of manufactures; but nobody has yet pointed out what the manufactures are which could be protected against foreign competition, because, as a matter of fact, there is practically no competition in the English markets on the part of foreigners. There are articles in which foreigners undersell the English producer, but they are few and unimportant, and their total exclusion would have no perceptible effect on the condition of English industry. Consequently, the party has as yet been able to formulate no bid for the votes of the English operatives in factories and mines. The manufacturers have got the home market already, and the fair-traders cannot offer them any other.

This is not all, however. The Liberals have entered the field to show that, as a matter of historical fact, the English farmer never derived any real benefit from the old Corn Laws, that the landlord was the only person who ever profited by them, and that if the duty on grain were reimposed to-morrow, its only effect would be to arrest the progress of rent over a large part of England towards total extinction. Mr. Leadam, an English lawyer who has given considerable attention to the agricultural question, has made a study of "What Protection does for the Farmer and Laborer," in the shape of a chapter from agricultural history which gives a terrible blow to the "fair trade" plan of revenue. He shows conclusively by copious citations from Government statistics, and from the evidence and reports of Parliamentary committees of inquiry, between 1800 and 1841—the period when the Corn Laws were most stringent in their operation—that they never in any degree improved the condition of the farmer; that in fact, at several periods of their operation, a state of things arose very like that which we now witness—a wholesale abandonment of farms by men who had put a small capital into them and found it impossible to make them pay, and had either become bankrupt or were anxious to make their escape before they had lost everything.

The immediate effect of the duties on foreign grain was, of course, to raise the price of the home product. This caused a certain competition for farms, but the rents fixed by the landlords followed up the price of agricultural produce so closely that no profit was left in the business, particularly as the increased domestic competition soon knocked prices down. This result frequently recurred during the period we have mentioned, and the cry of distress was generally followed by a Parliamentary inquiry, in which the landlords always maintained that the whole trouble was due to the fact that the duties were not high enough. They were, in truth, the only men to whom the Corn Laws did any good. Each rise in the duty brought on a fresh batch of farmers to compete for their farms and throw away their capital in rents which the land never could afford. The ruin of the farmers, of course, meant pauperism for the laborer.

A solemn protest was entered on the journals of the House of Lords against the Corn Law of 1815 by twenty-five of the peers. One of those who voted for the law—Earl Fitzwilliam—in an address to the landowners of England twenty-five years later, in 1840, expressed his deep regret at having done so, inasmuch as experience of its working showed him that it was "founded on erroneous principles, and attended by most disastrous consequences." Of its effect on the poor tenants in leading them to offer high rents for farms when prices were high, which they could not get reduced when prices fell, he spoke in the strongest terms. It will be easily seen from all this that the way of the English protectionist is hard.

THE LAND QUESTION IN THE HOME-RULE STRUGGLE.

DUBLIN, November 18, 1887.

IN the month of November the greater part of Irish rents become payable; for on many estates rents are collected but once a year. It is a time, therefore, of anxiety and activity with land agents and landlords, and never more of anxiety than it is this year. For farmers generally it has been a disastrous season; an unprecedented drought has made produce short, and prices have been, as a rule, lower than ever. Comparing the present crisis with former years of distress, the change in the position of tenant farmers is very remarkable. This is partly due to changes in the law, but quite as much to altered public opinion and the strength of the National party. In past years of scarcity and distress, rents were rarely lowered; if tenants were not evicted, they were debited year after year with unpaid balances, till the estate rentals exhibited as due an amount of arrears which no industry, thrift, or good fortune could hope to discharge. Rents have already been lowered by law, and are again about to be judicially reduced; the force of public opinion now restrains landlords who formerly "enforced their rights with hands of iron, while they disclaimed their duties with fronts of brass." Their relations with tenants are now to a large extent regulated by law, instead of by estate-office rules, arbitrary fines, and the caprices of agents and owners. In former times, resistance to the wishes or demands of a landlord was almost unheard of; it was better to endure oppression, rackrenting, petty annoyance, than to resist or resent, and probably be "dishomed" in consequence. Tenants are now to a large extent independent, and no longer live in a state of degrading subserviency. They are becoming accustomed to act together, and recognize the wisdom of the motto, "United we stand, divided we fall." For the first time they are fully represented in Parliament, and their grievances are fully and audibly expounded.

The land question is without doubt the central and critical point in the home-rule struggle, the incidents in which recall and are very similar to those in the struggles which took place 2,000 years ago between the plebeians and patricians at Rome. The Hortensian laws abolished or greatly reduced debts, and allotted land to the plebeians. That is precisely what legislation and agitation have been doing in Ireland. Rents, those ever-accruing debts, have been reduced; arrears have been remitted; and the real ownership of the land has been distributed among the people—for fixity of tenure, at rents judicially fixed, is more properly ownership than the landlord's legal estate in lands held by tenants, which is now reduced to a right of action for rents. The quality and quantity of the landlord's estate in land have been changed and diminished, with this result in addition to the diminution of revenue, that their estates are now unsalable. Up to 1878 land occupied by tenants was a favorite investment for capitalists. The ownership of such an estate gave the landlord political power, social position, a good return for his money, and there was a probability of obtaining an increase of revenue by raising the rents. None of these inducements now exist; the landlord's estate is unsalable, except to the occupiers; and the occupiers have not to buy at competitive prices.

Some economists have drawn a distinction between land as an investment and land as an instrument of production, and this distinction is well illustrated in Ireland. Land is still in demand for possession and occupation purposes, but no longer as an investment. The same distinction is observable in Continental countries. Land is purchased in France and Belgium at prices which, measured by its rent, would not return 2 per cent., while the same purchasers if they borrow on mortgage would pay from 4 to 6 per cent. The estate, using the term in its legal sense, of the investor is different from that of the buyer, who, in addition to ownership, has the occupation of the land, and finds employment on it for his labor and capital, as well as daily enjoyment and a sense of freedom unknown to tenants holding by precarious tenures, or to wage-earning laborers.

The depreciation in value of the landlords' estates is best shown by the prices at which they are ready to sell. Ten years ago estates were seldom broken up for sale to the occupiers except for prices of not less than twenty-five years' purchase of the rents—the legal costs of the tenant's transfer deeds amounting to from one-tenth to one-fourth of the prices of their farms in such cases. Landlords are now selling for from sixteen to eighteen years' purchase on the reduced rents, and paying all the costs of transfer to the tenants. The Marquis of Lansdowne is offering one of his best estates in Queens County for eighteen years' purchase of the rents; the tenants refuse to give more than sixteen. But for the recent evictions, and now the imprisonments and prosecutions under the Crimes Act, this transaction would probably have been settled amicably by the intervention of the National League; but from day to day we are drifting more and more into a state of war.

The result of the Crimes Act has not been to make either the collection of rents or the sale of their estates easier for the landlords, but rather the reverse. Litigation for the purpose of getting fair rents fixed has been stimulated by the Land Act of last session. About 40,000 notices of fair-rent suits have been given during the last two months, and, until these are disposed of, the occupiers will neither invest money in improvement of their farms, nor even cultivate them to the best advantage. What with these evicted and boycotted farms, and estates where the Plan of Campaign has been adopted, a large proportion of the country is

either waste or but half cultivated. The loss of wealth from consequent diminished production is not capable of being estimated, but must be very large. Want of employment for laborers and general discontent necessarily accompany this state of things, from which at present there seems no hope of escape. Archbishop Walsh's kindly proposal for a conference between the antagonistic parties has been knocked on the head, not so much by the landlords' tardy and hesitating acceptance, as by the action of the Government. An indispensable preliminary to a conference would be a cessation of hostilities, the release of the many persons now in prison under the Crimes Act, and a suspension of eviction proceedings. The Government have, however, entered upon a course of action in which they must persevere or fall; and their action is approved of and applauded by the Conservative press. Numbers of prominent Nationalists will, without doubt, soon be in prison.

In attempting to carry out their policy, the Government are daily placed in difficult or ridiculous positions. They must resort either to extreme violence, which would alienate their own supporters, or submit to be defied and permit their proclamations to be evaded and their warrants to remain unexecuted. At present Mr. Cox, M. P. for Mayo, a warrant for whose arrest has been issued, is playing hide-and-seek with the police. Mr. Douglas Pyne, M. P. for Waterford, has fortified himself in a Cromwellian castle on his farm, the walls of which are said to be twenty feet thick, with provisions for some months. The castle might, of course, be easily knocked down by artillery, or more carefully taken down by the Royal Engineers; but as against the civil forces of the Crown it is almost impregnable. The Government has become not only odious but contemptible; but whether they will learn the impossibility of administering a country with representative institutions against the will of the people, and take a new departure next session, or whether they will persevere till they fall, it is hard to say. At any rate the materials for another Irish session of Parliament are being abundantly prepared.

A Land Valuer.

THE ANCIEN RÉGIME.

Paris, November 17, 1887.

Few systematic works have been written on the organization of France under the *ancien régime*—that is to say, before the Revolution of 1789. The elements of such a treatise must be looked for in an infinity of sources. Taine has passed his judgment on the *ancien régime* in his 'Origins of Contemporary France,' but he has chiefly insisted upon the abuses and the defects of the old organization. Tocqueville also approached the subject, trying to find the causes of the French Revolution and of its special character. Some of the chapters which he wrote on this great question are among his best productions. As he well says: "The French Revolution will always be mere darkness for those who look at it alone; it is in the preceding times that you must look for the only light which can bear upon it. Without a distinct view of the ancient society, of its laws, of its vices, of its prejudices, of its miseries, of its greatness, you can never understand what the French did during the sixty years which followed it."

It seems to many as if the history of France were divided in two parts. Some only know what took place before 1789, others only care for what has happened since. There never was, in one sense, a more minute attention paid to history than in our time. We have a *Revue Historique*, an École des Chartes; we require in our historical works the severest criticism and the constant use of original documents. The method is perfect and the result is miserable. All our great publishers have told me that the public for good historical books is becoming every year more restricted; those who care for the history of ancient times become more difficult to please as they become less numerous. Even the *Revue Historique* and the professors and writers who support it are obliged to come nearer to our own time; they are more and more occupied with the history of the French Revolution. They have discovered that the Revolution had diplomats, and are publishing and analyzing their despatches. The Revolution is the great attraction—it is the sphinx of history.

This Revolution was, however, in germ in the *ancien régime;* it had been predicted by many thinkers. In 1710, Fénelon wrote at Cambrai: "As for myself, if I took the liberty to judge of the state of France by the fragments of Government which I see on this frontier, I should conclude that we live by miracle, that it is an old, broken-down machine which still works in virtue of its original impulse, but which will be broken at the first shock." If we come to a nearer epoch, we have hundreds of witnesses who testify against the perpetuation of the old state of things. Mme. Campan, who was attached to Marie Antoinette, writes: "Twenty years before 1789 it was said that the institutions of the old monarchy were falling with a rapid motion; that the people, borne down with taxation, were silently miserable, but began to open their ears to the audacious speeches of the philosophers, who proclaimed their sufferings and their rights." The return of Voltaire to Paris in 1770, and his triumph, was a sort of proclamation of the rights of man, and, strangely enough, all classes took part in this apotheosis. Six years before the Revolution, the "Mariage de Figaro" was played before the court. In a word, it can be said that the Revolution was made in men's minds before it took its material form. Everybody felt that a change had become imminent and necessary. Few knew where the change was to take place.

Was it in the court? We have a good description of the court in a book just published by the Vicomte de Broc, 'La France sous l'ancien régime.' This description is very minute. As he says: "We may judge of the place occupied by royalty after Louis XIV. by the prodigious number of persons attached to the service of the King; his civil household (outside of the military household) embraced no less than 4,000 persons." M. de Broc gives the detail of all the services—the house of the King, the chamber, the ante-chamber, the cabinet, the *garde-robe*, the stables, the *vénerie*, the lodgings and houses, the journeys, the police, the ceremonies, etc. The King had 3,000 horses in his stables (their number was, in the end, reduced to 1,850); there were 500 men in livery. There was, besides, the house of the Queen; under Louis XIV. there were 572 persons in the household of Maria Theresa. A terrible etiquette surrounded the sovereigns; it made them almost slaves. Presentations were one of the King's functions. M. de Broc has made the calculation that from 1760 to 1789, in the course of twenty-nine years, there were no less than 2,078 presentations, a number which corresponds to 826 families. This number will not seem large, as it shows that in the course of one year there were no more than twenty-eight families presented; but this needs an explanation. Once presented, you had a permanent right to certain honors; and when the proofs necessary to a presentation had been made, the presentation of a single member of the family procured the honors of the court to all the representatives of the family who bore the same name.

What were the proofs? The *règlement* of April 17, 1760, adopted by Louis XV., decided that no woman should be presented to the King, and no man allowed to enter his carriages and to follow his Majesty to the hunting-field, without having produced before the genealogist of the King a filiation, established by three original titles on each side, since 1400. This regulation dispensed only the great officers of the Crown, the descendants in the male line of the Knights of the Holy Ghost, the officers of the King's household. A woman was presented, not on account of her own birth, but upon the proofs made by her husband. When you had once received the honors (which consisted, for a woman, in presentation to the King and the royal family; for a man, in admission to the King's carriages), you had a right to be admitted to the receptions of the King and Queen. This regulation excluded families which had recently procured patents of nobility or had recently become ennobled by an office. The court was therefore strictly aristocratic, and it constituted a small nation in the nation. At Versailles there were habitually, at the time of Marie Antoinette, no more than a hundred men and as many women at court; and no more than 500 men and women at the solemn receptions.

The writers of memoirs have given us complete descriptions of the life at court. Less is generally known on a more important point, the King's council. "Le Roi gouverne par lui-même" was the great maxim of government after Louis XIV.; but the King had councillors. His council was subdivided into various committees. Saint-Simon tells us that "on Sundays there is a council of state, and often also on Mondays; on Tuesdays, council of finance; on Wednesdays, council of state; on Saturdays, council of finance." There were also a council of despatches and a council of war, which sat more irregularly. The King did not often attend the council of finance, and the Controller-General had in reality absolute power. "Whatever is called finance," says Saint-Simon, "taxes, duties, impositions of all sorts—new ones, augmentation of the old, *régies* of all kinds—all this is managed by the Controller-General of Finance, with an intendant who acts as his clerk, or quite alone."

From the time of Louis XIV. till 1789 there were only four ministers secretaries of state. The four departments were the Foreign Office, the War, the Navy, the King's Household. The principal officers of state were the Chancellor, the Controller-General of Finance, and the ministers secretaries of state. Many of the ministers of the old monarchy were chosen from the *tiers-état*, outside of the ranks of the nobility; they were "les gens du roi." They were, however, admitted, as well as their descendants, to all the honors of the court, and dispensed from all the proofs usually necessary for these honors. Saint-Simon is never tired of reproaching the kings for their preference for the *roture*, and he sees in the exclusion of the nobility from the active part of the Government a method for obtaining a more absolute subjection from the ministers.

Tocqueville remarked that the existing French centralization had been prepared before the French Revolution. The provinces were divided into two distinct classes, the *pays d'États*, which had their own States or Parliaments, and the *pays d'élection*. The provinces which had their own States, their small Assemblies composed of the three orders, and which, under the name of *don gratuit*, voted their

own taxes, were only the fourth part of the French territory—Brittany, Languedoc, Burgundy, Flanders, Artois, Dauphiné, Provence. The countries called *pays d'élection* were under the immediate authority and tutelage of the royal power. All the provinces were divided into districts called generalities; and each generality was subdivided into elections (hence the name *pays d'élection*). Each generality was administered by an intendant, each election by a subdelegate. There were in all twenty-six generalities; these were the administrative divisions of France. Richelieu was the creator of the office of intendant, his official title being "intendant of justice, police, and finance." The intendant was, in fact, the predecessor of the modern prefect. He had a larger territory to govern, something like three of our present departments. Like the prefect, he was a stranger to the country which he administered, and he had all the attributes of government. The intendants were at first very ill received in the provinces, especially in Brittany, in Béarn, in Languedoc; but by degrees they broke down all local resistance and destroyed the manorial authority of the noblemen. "Know," said Law, the financier, to the Marquis d'Argenson, "that your country is governed by thirty intendants. You have no parlements, no states, no governors; thirty *maîtres des requêtes* sent to the provinces have in their hands the happiness or the misery of the provinces, their abundance or their sterility." Mirabeau, the author of the 'Ami des Hommes,' who was an aristocrat, called them "cette espèce, cette clique." The governors of the provinces had in the end a merely nominal authority; they were something like the lords-lieutenant of modern England. They were all gentlemen, men of the court, and had what Mme de Sévigné calls "du bruit, des trompettes, des violons, un air de royauté." Everything becomes complex in an old country, and the delimitations of the provinces were not identical with those of the generalities. In 1789 there were thirty-eight governments, the most important of which were the Île de France, Normandy, Picardy, Champagne, Brittany, Burgundy, the Lyonnais, Dauphiné, Provence, Auvergne, Languedoc, and Guienne. The governors were often absentees, and their functions were exercised by lieutenant-generals. The Comte de Grignon, for instance, the son-in-law of Mme. de Sévigné, took the place of governor in Provence, in the absence of the Duke of Vendôme.

Everything was ready in 1789 for a great change, but M. de Broc merely describes accurately the state of the country at that time. He does not enter profoundly into his subject, and seems to take it for granted that the revolution which put an end to the absolute government of the King and to the privileges of a class could have been accomplished without any struggle. You must not look in his work, which is a mere compilation of facts, for any analysis of the causes of the great events that filled the end of the eighteenth century and the beginning of the present century. In some senses, it can be said that, even after a hundred years, the French Revolution has not come to an end. France has not yet found that perfect equilibrium of forces which can inspire confidence in the future.

Correspondence.

A LETTER TO FATHER McGLYNN AND HENRY GEORGE.

GENTLEMEN: I am one of several executors who have about determined to abandon to the State eight thousand acres of land. This land is not situated in the wilds of Alaska nor in the deserts of Arizona, but lies within the State of New York. It is, indeed, within eighty miles of the State Capitol, within ten miles of the terminus of the Adirondack Railroad, and only two miles from the highway which leads to the summer resort known as Blue Mountain Lake. It is, moreover, bisected by the Hudson River, and if you will turn to any school atlas and find the point where the Hudson and Indian Rivers meet, you will be able to place the land, for that point is very nearly the centre of the tract.

I am informed that you are deeply interested in the suppression of poverty. The object is most commendable, and has my entire sympathy. I am also informed that you hold that the evil of extreme poverty is caused by the accumulation of land in the hands of too few individuals, and that to exterminate poverty it is necessary that we distribute lands among those who do not now possess them.

Here, then, is your opportunity. The owners will convey this tract to you for a trifling, almost a nominal, consideration, say for ten cents an acre. Undoubtedly in the city of New York you can readily raise so paltry a sum for so commendable a purpose. All that will then remain for you to do will be to remove a thousand or two of the idle and unhappy to this field of immediate independence and future wealth—if wealth be not an objectionable term.

In making this move, your protégés will have all the advantages that our forefathers possessed when they settled New England, Virginia, or Kentucky, and a hundred more besides. The soil and climate are similar to those of Massachusetts and Vermont; fuel can be had for the chopping; the woods are full of game; besides the Hudson and Indian Rivers are numerous streams, and lakes, and ponds; and beyond their purchase the settlers will have the great Adirondack forest at their back for hunting-grounds. Undoubtedly for a year or two they can subsist on fish and game, as the first settlers did of old. When they float logs and timber down the river to Glens Falls, they will find sawmills and canals and railroads ready made. I will guarantee that they will be neither tomahawked nor scalped, nor tortured, nor burned, nor even shot by Indians. If the Anti-Poverty Society sees fit to send them supplies, those supplies will not be transported in a leaky vessel by a four months' voyage, but can be carried in a few hours and dumped at North Creek, the terminus of the road, and within an hour or two of the proposed settlement. Should they have conscientious scruples against patronizing the railroads and steamboats of great capitalists, or should they prefer to travel by the primitive means of the first settlers, they can take sloop to Albany, and then by four or five or, at most, six days of easy marches, over excellent roads, reach their promised land at little cost, and with no peril. When they arrive there, they will find no capitalist to absorb their earnings, and no policeman to restrict their liberty; speech will be as free as the deer, and may be as incessant as the brooks.

In short, here is your opportunity—and theirs. The scheme contains every advantage that was ever set before the men who conquered nature and laid the foundations of this western empire, and, as I said before, a hundred more. It will also enable you to demonstrate that the distribution of land will exterminate poverty.

Respectfully, etc., etc., etc., C. C. N.
WASHINGTON, November, 1887.

[We are able to say that the foregoing proposition is not a mere figure of speech. The tract of land referred to does exist, and is about to be abandoned for taxes. Furthermore, it has been held by one family through four generations, and (if the Anti-Poverty Society does its duty) it can now pass by easy (we had almost said natural) transition from the control of capitalists to the possession of men pining for work and independence. To see a thousand of the followers of Most or the hangers-on of the Society starting off in the character of pilgrim fathers to conquer nature in the Adirondacks and outdo the men of the *Mayflower*, would be the most delightful spectacle of the present decade. Undoubtedly, as in earlier times, a great concourse would assemble on the banks of the river to behold them take sloop for Albany, and the most dejected pessimist would feel a new and lively faith in human nature. If these "hopes for man" do not "take form in fact," most assuredly Father McGlynn and Mr. Henry George must be held accountable. We are constrained, however, to say that our correspondent has been injudicious in one thing: instead of saying that "fuel can be had for the chopping," it would be much more attractive to say—can be had for nothing.—ED. NATION.]

THE DIFFERENCE.

TO THE EDITOR OF THE NATION:

SIR: In writing upon the constitutional crisis in France, the *Evening Post* furnishes a text of so much interest that I will venture to quote it at length:

"The Constitution provides for the stability of the President for seven years, while leaving the Ministers responsible to the Chambers. But the Chambers have now made the President's term almost as uncertain in its duration as the Ministers. They have discovered, and are putting in practice, a device by which it will be possible for the legislative branch of the Government to get rid of any particular President whenever it pleases, by a general refusal to hold office under him. We are saved from such contingencies here by the fact that the President is not elected by Congress, but by the people, and that the Cabinet officers do not sit in Congress and need not care what Congress thinks of them. There is very little doubt that what is happening in France will generally be considered by political observers strong testimony to the value of the independence of Congress enjoyed by the President in this country."

Suppose for a moment that we approach the question from the other side, that of the position of the Chambers or of Congress. I suppose most people here look with mingled pity and contempt on the anarchy and political helplessness in France. It is true that we have a large financial surplus instead of a deficit; that we have not on our borders a mighty German Empire armed to the teeth and awaiting its opportunity, and thus compelling us to submit to the same strain and to nourish an immense military caste; that we have not to carry on vast colonial enterprises; that while in France Monarchists, Bonapartists, and Radicals are ready to fly at each other's throats and to plunge the country into civil war, provided it increases the chances of their success, our form of government is well established, and nobody dreams of overturning it by violence; that we have not an extensive church organization so bound up with reaction and intrigue as to drive the anti-religionists mad with fear and rage; and, lastly, that Congress does not have to manage all the internal affairs of the country. But, apart from these circumstances, is Congress as a working instrument any better than the French Chambers? Can it manage even

the comparatively simple questions of tariff and currency, or has it managed any question of importance since the war? Is it any less given up to politics and President-making? Do the Republicans and Democrats care any more what becomes of the national interests provided they can achieve party success? Are not State and even city politics, divided on these national lines, as unmeaning as the Guelphs and Ghibellines of the thirteenth century? And would not the party leaders just as quickly, if they could—*absit omen!*—set the people to fighting for the purpose of carrying out their own schemes?

Again, bad as is the instability of French Ministries, it is the presence of the Ministry in the Chambers which saves the country from much worse things. They are at least a steadying point, if a very imperfect one. If the Ministry was withdrawn entirely from the Chambers, there would be street-fighting within a week. It is because they have a definite end to which to direct their efforts, that they do not pour out their blind rage against each other.

Now as to the source of authority. We have to keep in mind that in France, as in all representative countries, there is an incessant struggle for power between Executive and Legislature, and that the Legislature always gets the upper hand till the contest comes to armed violence, when it is apt to disappear altogether. In Great Britain and France the Legislature holds all power because it *makes* the Executive. The Queen is permanent, and Parliament, as English writers admit, practically elects a committee to carry on the Government. In France the President is chosen by the Chambers, and is, therefore, dependent upon them, hitherto as to his Ministry and now as to himself. Ministry making and unmaking is, therefore, the chief business both of Parliament and the Chambers. If it is less violent in England, it is because of the character and habits of the people, or rather because of the absence of a large standing army and the system which trains every man from youth to fighting as a business.

It is impossible to overrate the advantage to this country of the election of the President by the people. A Presidential election is worth all it costs both in time and money for its training of the people to work together and to have confidence in each other. But this great advantage is neutralized and supremacy assured to Congress by depriving the Executive of all standing-ground before his constituents. In one sense the President is independent of Congress, as any citizen is who stays at home and attends to his private affairs. But as far as any policy is concerned, or the procuring of any legislation, he is just as dependent upon Congress as the most miserable of suppliants. He must lobby or buy with offices or party service. If, on the other hand, he could, through his Cabinet, have an equal chance with members of Congress to address the country, then he would be independent. Why need the Cabinet resign in the face of an adverse majority any more than now? British and French Ministries must, because the Legislature makes and can unmake them, but Congress can neither make nor unmake a Cabinet. "A refusal to serve" under the President by members would be a matter of indifference, as he could choose his Cabinet outside of them. Congress, again, would find bullying a dangerous business. In that case the people would, nine times out of ten, side with the President. The bundle of sticks is much stronger than the single rods; and members would be quite too careful of their seats to indulge in factious opposition. On the other hand, the strength of the Cabinet, and therefore of the President, would depend upon good behavior. The self-interest of ten millions of voters is quite too divergent to be an active force. That which is common to all, or the vast majority, is admiration of integrity and ability, and contempt for trickery and weakness.

The sum of the matter is, that it lies within our choice to get the advantages of European ministerial systems without their defects.

G. B.

Boston, December 3, 1887.

POST-OFFICE MISMANAGEMENT.

To the Editor of The Nation:

Sir: Your criticisms in the last number of the *Nation* on the action of the Post-office Department in regard to third and fourth-class matter seem to me to be entirely correct, excepting the concession made in these words: "Very likely there is sufficient foundation for this claim, and it would be eminently proper for the Department to insist upon a reform."

An examination of the statute relied upon will, I think, show very positively that there is no propriety whatever in the Department's action. This subject is governed by the Postal Appropriation Act of March 3, 1879, contained in the twentieth volume of Statutes at Large, from pages 355 to 363. Section 17 defines third-class matter as follows:

"That mail matter of the third class shall embrace books, transient newspapers and periodicals, circulars, and other matter wholly in print," etc.

Section 22 defines additions which can be made to second, third, and fourth-class matter. Under the head of third-class matter, the following is the language of the law:

"Upon matter of the third class, or upon the wrapper enclosing the same, the sender may *write* his own name or address thereon, with the word 'from' above and preceding the same; and in either case may make simple marks intended to designate a word or passage of the text to which it is desired to call attention."

Section 23 is the section relied upon in justification of the Departmental action:

"That matter of the second, third, or fourth class, containing any writing or printing other than indicated in the preceding section, or made in a manner other than therein indicated, shall not be delivered, except upon the payment of postage for matter of the first class," etc.

The use of the words "writing and printing" in section 23 was necessary, because additional printing is forbidden upon matter of the *second* class beyond certain printing specified in section 22; but that section says nothing whatever on the subject of printing upon third-class matter, for the reason that third-class matter, as defined in section 17, is "matter wholly in print." The words, "printing other than indicated in the preceding section" can have no reference to that part of the preceding section which relates to third-class matter, as *printing* on third-class matter is not indicated in that section. So far as third-class matter is concerned, section 23 merely forbids any writing, "other than indicated in the preceding section." It seems to me perfectly clear from examining the law carefully, that as to third-class matter the action of the Department is without any warrant or justification whatever.

Another principle of statutory construction familiar to all lawyers is applicable to this matter. The construction which I suggest is the one adopted in practice in 1879, and continued in practice up to the present time—over eight years. No principle of statutory construction is more strongly settled than that a contemporary construction is to be adhered to. The law looks with great disfavor upon anything tending to unsettle decisions which have become rules of business conduct. I am satisfied that an action against the Postmaster would lie at the hands of any person whose third-class matter was refused because it contained printing beyond that permitted by the decision of the Postmaster-General.

This Administration is often referred to by the *Nation* as a business administration. Such vexatious rulings as this suggest that the right to this title may be open to serious question.

Yours respectfully,

William B. King.

Washington, D. C., November 29, 1887.

To the Editor of The Nation:

Sir: As a man and a brother, I ask you why cannot the Post-office Department be conducted with some approach to common sense? In a quiet, humble way, I have been publishing books during the past ten years (I wish it had not been quite so quiet or quite so humble). There has always been a noticeable tendency for books to go wrong in the mails—a tendency which has had a wonderful growth since 1884. It seems desirable that I should print a notice upon my books, requesting the Postmaster to return my books to me if they happen to go wrong. The Government is benefited by this request, as I pay the same postage on the books when returned as when sent out. During ten quiet years my printed notice containing this request has passed through the mails, together with thousands like it, unchallenged. But during the past few days my patrons are being mulcted out of their money, under the claim that letter postage is due on the books they receive, on account of the use of this much worn electrotype of mine. The amount of irritation and profanity aroused is terrible to think of. Indeed, I myself have a special load of sorrow. I am a disgruntled Republican; I am trying to be a Democrat. It is an unwonted road for me; I need encouragement. I am sadly discouraged when I see how strong the likelihood is, when a Democrat obtains office, that he will turn out either a fool or a knave.

My mind is fully made up to two things. If I ever become Postmaster-General (and it is not for me to set limits to the ways of Divine Providence), I shall conduct the Department upon the theory that the Department exists for the benefit of the people, and not the people for the benefit of the Department. If under a still more mysterious Providence I am called to a higher office, my first official act will be to issue the following secret circular: "All office-holders are requested, besought, and commanded to conduct their offices in such a way as to avoid the *needless irritation* of large numbers of voters. Remember 1888."

I think the policies outlined above are admirable. They are original with me, or, at least, there is little in the present management of the Post-office Department to impair this claim to originality.

J.

A HINT TO CIVIL-SERVICE REFORMERS.

To the Editor of The Nation:

Sir: While the President may have succeeded in preventing that "clean sweep" which some supporters of his party (I cannot, in view of his own declaration of principles, called them *his* supporters) have called for, it is notorious that dismissals from office where only party reasons can be presumed have been far too frequent. The system on which many heads of offices proceed seems to be this: They remove all or nearly all the Republicans, so as to make it clear that Republicans who pass the examinations will have little chance of being accept-

ed, or, if accepted, of remaining long in the place. This naturally deters them from applying for examination, and keeps them out of office as effectually as if the Civil-Service Law did not exist. When asked why he has not appointed Republicans, the head of the office can truthfully say, "No Republicans have chosen to apply."

What are we going to do about it when the Civil-Service Law is nullified in this way? Until Congress passes some law regulating dismissals, or the President takes some step, the head of an office cannot be directly controlled in this matter. Indirectly, however, he may be, by making it clear in every such case that there is a large public sentiment against him. An official can break the Civil-Service Law in its spirit, while keeping it in the letter, as long as he has no fear of being called to account. Let him see that he cannot dismiss men without being publicly called on to give his reasons, and the case is altered.

This can be done very simply. When any letter-carrier or other subordinate is dismissed without any reason being stated, let two or three men at once inquire into the matter as far as they can. If they are morally sure that "politics" is the cause, let them prepare a civil letter to the man's chief requesting his reinstatement or the reasons for the dismissal, and get it signed by as many of their neighbors as possible. Some patriotic Democrats, who do not wish to see the public service debauched to give their party a temporary strength, can usually be found to take part. Let the committee present the letter personally, and if the answer is unsatisfactory, publish the correspondence.

"But it will do no good; the man will not be reinstated," I hear some one say. I grant the likelihood of the latter, but not of the former. I have before me the evasive answer of the Postmaster of this city to such a letter as I have described. We have not saved a faithful public servant of fourteen years' standing from dismissal, but we have let the Postmaster see what we think. Now let others follow the same plan. "Gutta cavat lapidem" must be the reformer's motto. Can any one doubt that if protests had been made in all the cases of unwarranted dismissal in the first year of this Administration, the thousands that have disgraced the succeeding years and imperilled Mr. Cleveland's chances of reëlection would have been diminished?

It is late to begin now, perhaps, but not too late. Republican heads are still falling from political guillotines all about us. Reformers say, "What can we do?" The answer is simple, "Protest in every case." C. C. B.

PHILADELPHIA, December 1, 1887.

A DISINTERESTED INDEPENDENT.

To the Editor of The Nation:

SIR: Mr. Charles Krumbhaar, lately elected Sheriff of Philadelphia over the Republican Boss, William R. Leeds, in order to show some recognition of the Independent support which had been given him, asked Mr. Thomas Leaming to take the position of assistant to the Sheriff's Solicitor, Mr. Furman Sheppard, one of the most distinguished lawyers of the city. Mr. Leaming, who has been prominent in all the reform movements that have been instituted in this city of late years, declined the post, for the expressed reason that the Independents had entered into the campaign for the sake of principle, not for office.

To the best of my belief this fact has not yet been reported in the Philadelphia *Press*—which does not believe in independent virtue.

I am, sir, etc., T. W.

PHILADELPHIA, November 29, 1887.

ENGLISH IGNORANCE OF THE UNITED STATES.

To the Editor of The Nation:

SIR: Perhaps you have room for a rather curious instance of English ignorance about the United States. A short time ago the Cornell University library received from Ralfe Brothers, London, some presentation copies of their recent school text-books. Among them was a pamphlet entitled 'Complete Arithmetical Tables and Tables of Foreign Moneys, Weights, and Measures, by Samuel Goodwin, new edition, revised and corrected by A. W. Prior.' The preface states that the fault of most table books is, that they contain information that has become obsolete, but that it is hoped that this revision of former editions of the work is free from that defect. In a table of the value of foreign coins in English money on page 27 I find the following:

"The dollar of the United States of America has four values in different places:

In Georgia and South Carolina	4s. 6d.
In New England and Virginia	6s. 0d.
In Delaware, Maryland, New Jersey, and Pennsylvania	7s. 6d.
In New York and North Carolina	8s. 0d."

The authors are evidently oblivious of the fact that the territory of the United States has been extended beyond the limits of the original thirteen States, and have copied their table from some old arithmetic of the days of the State currencies. In the South Carolina and Georgia currency it required 4s. 8d. instead of 4s. 6d. to make a dollar. The State currencies have been so long superseded that few people in the United States remember their existence, yet the old table, misstated (for instead of the dollar it was the value *assigned to* the shilling that varied), is still given in England as representing our present system, and it would seem that it must be common in their arithmetics, else it would have been corrected in this. Surely we ought not to expect English people to know much about us, if the statement I have quoted fairly illustrates the character of their school-books. H.

ITHACA, N. Y., November 28, 1887.

A STRUGGLING PERIODICAL.

To the Editor of The Nation:

SIR: Respectfully referring to the correspondence in your issue of December 1, under the above heading, we beg to advise American scholars willing to act on Prof. Pease's suggestion, that we shall be pleased to receive subscriptions for the *Archiv für Lateinische Lexicographie und Grammatik*, price 12 marks, $3.50 postpaid in this country, for $2.65 for next year, should the journal be continued.

B. WESTERMANN & Co.

838 BROADWAY, NEW YORK.

Notes.

B. WESTERMANN & Co. will publish for this country an English translation of Prof. Karl Brugmann's 'Elements of Comparative Grammar of the Aryan Languages,' vol. i., from last year's Strassburg German edition.

The Rev. Edward C. Towne is preparing a 'Critical Life of Bacon,' in which Bacon's occupation and way of life during the Shakspere period will receive special attention. The controversy over the origin of the plays will be dealt with in a second volume; and a third will consist of a 'Critical Life of Shakspere.' These works have been for some time in hand.

Harper & Bros. publish directly Mr. Howells's 'April Hopes'; W. P. Frith's 'Autobiography and Reminiscences'; 'The Colonel's Money,' a book for girls, by Mrs. Lucy C. Lillie; and 'Family Living on $500 a Year,' by Miss Juliet Corson.

Ticknor & Co. issue directly 'The New Astronomy,' by Prof. S. P. Langley; 'Women and Work,' by Emily Pfeiffer; 'Olden-Time Music,' by Henry M. Brooks, with an introduction by Prof. E. S. Morse; 'The White Sail, and Other Poems,' by Louise Imogen Guiney; two Aino fairy tales—'The Hunter in Fairy Land,' 'The Birds' Party'; and 'New Waggings of Old Tales.'

Swinburne's tragedy 'Locrine' will have the American imprint of Worthington Co.

'Dainty Desserts for Dainty Dinners,' by Mrs. N. M. Littlehale, and 'In the Sick Room,' are announced by C. A. Montgomery & Co., New York.

G. & C. Merriam & Co. correct a report that a revised edition of 'Webster's Unabridged' is nearly ready. None will be published, they say, for some years.

M. Ernest Chantre's 'Recherches Anthropologiques dans le Caucase' represents a vast amount of labor, physical and scholarly, on the spot and elsewhere, and is expected to throw much light upon the populations that inhabited and proceeded from the Caucasus. It will be richly illustrated. The Paris publisher is Reinwald (New York: F. W. Christern).

The *Writer's* Literary Bureau, Boston, offers to serve as an intermediary between writers for the periodical press and the likeliest magazine or journal. Manuscripts will be read, and the best opening indicated, for a small fee.

Appropriate selections from the writings of Mrs. Juliana H. Ewing are affixed in the form of a pad to the Ewing Calendar for 1888, sent us by E. & J. B. Young & Co. The novelty of this calendar otherwise lies in the embossed ornamentation of the card back, seemingly a bronze electroplate, with a profile head of the charming writer.

The present month witnesses the first issue of a new magazine, the *Woman's World*, edited by Oscar Wilde, and published by Cassell & Co. It is a large quarto of some pretensions, is illustrated, and appears to have no use for men in its collaboration beyond the editor. Women furnish the articles, and the reviews are of books written by women. Mrs. Ritchie (Miss Thackeray) has a paper on the "Grandmother of Mme. de Sévigné," "George Fleming" begins a story, the Countess of Portsmouth discourses on the "Position of Women," Lady Archibald Campbell writes a Shaksperian essay on "The Woodland Gods." We mention also an article on "The Children of a Great City," and one, "The Oxford Ladies' Colleges," by a member.

Unqualified praise must be given to the conception and execution of the American edition of Dean Stanley's 'Memorials of Westminster Abbey,' which A. D. F. Randolph & Co. have brought out, with the aid of the University Press, Cambridge, Mass. It is in three volumes on large paper, bound in simple elegance; and, in addition to the rather scanty cuts of the original publication, three excellent etchings of the Abbey serve as so many frontispieces. The sixth English edition, containing the last touches of the lamented author, has been followed; and as on this side nothing more could be asked for, so the typographical accuracy assured by the printers' reputation, and the customary good taste of the publishers, here exhibited at its best, leave nothing to be desired mechanically. The edition is limited to 600 copies, but the price is moderate.

Prof. Henry Morley's "Cassell's National Library" is nearing its hundredth volume. Some

of the latest issues have been Macaulay's essay on Warren Hastings, Father Jerome Lobo's 'Voyage to Abyssinia,' Bishop Butler's 'Human Nature and Other Sermons,' La Motte Fouqué's 'Sintram, and Aslauga's Knight,' another instalment of Pepys, Shakspere's "King John," with "The Troublesome Reign of King John" added (with some omissions) for comparison, and Beckford's 'Vathek.'

In "Morley's Universal Library" (Routledge) —a larger and more durable publication—the fifty-third number is Harrington's 'Oceana.'

Timely, in the red-backed pocket Thackeray, published by Lippincott, are the two little volumes of 'Christmas Books.'

Mr. Elbridge S. Brooks's 'Story of the American Indian: His Origin, Development, Decline, and Destiny' (Boston: D. Lothrop Co.) is well illustrated, well bound, well printed, but not very valuable. The author's intentions are very commendable; he is full of honest pity for the Indians, and writes as their chosen defender. He condemns everybody, irrespective of nationality or creed, who ever took hold of them. But this kind of impartiality is not justice. To do justice requires not only practical acquaintance with the Indians, a far greater knowledge of historical details and geographical data than the author displays—it demands a very thorough method of criticism. Of the latter the author is wholly innocent. No two instances of Indian troubles have, strictly speaking, arisen in the same manner, no two Indian wars have had the same causes.

The useful but somewhat heavy series of the Johns Hopkins publications upon municipal government has been interrupted by some studies of a less special character; and the last half of Series V. is of a different cast from most of their predecessors. No. 7 is by Dr. N. M. Butler of Columbia College, upon "The Effect of the War of 1812 upon the Consolidation of the Union." The point was worth developing, and is developed with great force and clearness. Probably few of us realize how strong were the "anti-nationalistic" feelings—we may say the anti-nationalistic reaction—after the establishment of the Constitution, among the mass of the people in the early years of the republic. And nowhere did this feeling receive more striking expression than in New England, which had been the special seat of the national sentiment. Dr. Butler gives sufficient illustration of this sentiment before the war of 1812, and then shows the contrast subsequently when "the war had ruined the particularists; it had made all nationalists, if we may use the word." This change is shown in the most interesting manner by citations (among others) from Gallatin's writings before and after the war. But the change was not permanent. New causes revived the old sentiment anew, and "the good effect of the second war with Great Britain was soon swept away by the slavery dispute." No. 8, "Notes on the Literature of Charities," and No. 9, "The Predictions of Hamilton and De Tocqueville," have already been mentioned by us. No. 10 is a translation by Miss Henrietta Leonard of the paper by Prof. Paul Fredericq of Ghent, "The Study of History in England and Scotland," noticed two years ago in the *Nation* of December 17, 1885. The translation is good and idiomatic.

The Report of the Commissioner of Education for the year ending June 30, 1887, states that the Museum connected with the Bureau is already a surprising collection of some 2,500 objects and series of objects, and that the Library contains 19,200 volumes and 60,000 pamphlets, exclusive of duplicates. An appendix is devoted to the schools of Alaska, and to Commissioner Dawson's visit to that Territory last summer after the nominal date of the Report. He had the English missionary, Mr. William Duncan, the paternal autocrat of Metlakahtla, for a fellow-passenger, and witnessed his affectionate reception by the vanguard of his new settlement on the soil of Alaska. Mr. Duncan has taken out his naturalization papers.

The Bureau's Circular of Information No. 2, 1887, is a monograph of 300 pages on "The Study of History in American Colleges and Universities," by Prof. H. B. Adams of Johns Hopkins. This valuable conspectus is confined, for details, to Harvard, Yale, Columbia, Michigan, Cornell, Johns Hopkins, and the chief colleges for women; but statistical tables at the close embrace a much larger number. Views of library interiors enhance the attractiveness and value of this Circular. The biographical particulars introduced by Dr. Adams merited an index of names.

Two papers in the (Syracuse) *Academy* for December deserve special attention. Mr. Samuel Thurber's "Aims and Methods in Modern-Language Teaching" is a vigorous criticism of culture for culture's sake, a plea for the recognition of utility in training, and an argument in favor of so ordering the high-school course as to take up the modern language before the ancient, and to enable applicants for admission to college "to *speak* French or German; to speak within a limited range, of course, but with confidence, seriousness, and dignity." A college examination in either language "should include such an exercise as the following: The candidates should listen to a short discourse in the language in question, and then should write in the same language an abstract of the context of this discourse." Mr. Thurber holds that sufficient "discipline" is attainable from the study of modern tongues, even if the differences from our own and the difficulties be less than in the case of the classics, which can neither be spoken nor written. But "if the study of a language does not lead to a practical command of the language, that study fails. It has secured some discipline, but so has the study that has led to an acquisition; and the discipline in the latter case was a better discipline." Mr. Thurber is confident that competent teachers can be found. Dr. Herbert B. Adams relates pleasantly the history of a well-forgotten attempt a hundred years ago to found "L'Académie des États-Unis de l'Amérique" at Richmond, with the aid of French funds and quasi-control. The building actually erected stood on the familiar site of the burned theatre now marked by a memorial church.

Interesting to the college world is the pamphlet 'Historical Address,' etc., printed at Cambridge, Mass., by the University Press, and containing an address by Mr. Frederick Chase and an oration by ex-Gov. Hoadly of Ohio at the centennial anniversary of the Phi Beta Kappa Society of Dartmouth. Mr. Chase traced the rise of the parent society and the fortunes of its branches—that at Dartmouth having had a very languishing existence. Gov. Hoadly, passing lightly over historical details, considered the present relation of the scholar to "practical politics," and dwelt upon the alarming cost of elections, the assessment of candidates, the corrupt use of money at elections. "Boodle aldermen, bribed legislators, and Star-route thieves are the natural and inevitable result of the present system."

In 1881 Adley H. Cummins published 'A Grammar of the Old Friesic Language' (London: Trübner). We have now to note the appearance of a second edition (same publisher), much enlarged and improved. The 75 pages have grown to 128, of which 34 comprise reading lessons, glossary, and index. The introduction, upon the history of the Friesic nationality, its language, and literature, will not compare, for fulness, with Prof. Hewitt's pamphlet, but the treatment of the grammar is very ample and, in the main, quite satisfactory. The author's view (sec. 4) of *e*, as derived from *i* by a following *a*, is Grimm's old theory, no longer tenable. We regret that the vocabulary is not larger; it is barely sufficient for picking one's way through the texts with the help of guess-work from the cognate languages. In case of a possible third edition we suggest to the author that he follow Sievers's 'Anglo-Saxon Grammar' more closely as his model in phonology and in general tabulation. Siebs's article on the "Vocalismus der Stammsilben in der altfriesischen Sprache" (*Beiträge* xi, 205-261) will be of great help.

Fewer readers will certainly be found for Paul Haupt's paper, "The Assyrian *E*-Vowel," in the *American Journal of Philology* No. 31, than for any of its successors; but not according to the criterion of merit or importance. More open to the mind trained in the Greek and Roman classics are H. C. Elmer's "*Que*, *Et*, *Atque* in the Inscriptions of the Republic, in Terence, and in Cato," and Prof. Gildersleeve's brief return to the subject of the Articular Infinitive in Greek. Prof. Elliott furnishes some supplementary particulars concerning "Speech Mixture in Canada."

Westermann & Co. send us the first number of the quarterly *Orientalische Bibliographie*, edited by Dr. August Müller of Königsberg. It fills sixty-nine pages, classified under the following heads: General; Northern and Central Asia, Europe; Eastern Asia and Oceanica; Indo-Germans; Semites; Africa. Each division is succeeded by mention of significant reviews of the works which it catalogues.

Two new ventures in international bibliography deserve to be chronicled. Mr. Welter, the intelligent Paris bookseller (Librairie Française et Étrangère, 59 Rue Bonaparte), has issued a specimen number of his 'Bulletin Bibliographique International,' the "premier numéro définitif" of which is to appear on the 25th of next January, the subscription to be 3 francs 75 centimes, or, with the index, 5 francs 75 centimes, per year. The contents consist entirely of lists of current books arranged under subjects, with a special heading for announcements. The titles are given with sufficient fulness, but are not uniform, the size of the book being only occasionally stated, which is also the case as regards the place of publication. The pagination is not printed, but the published price follows each title. In general form the publication resembles the well-known 'Allgemeine Bibliographie' of F. A. Brockhaus, and it will be useful to persons wishing to receive prompt notification of Continental publications.

The *Export Journal*, "an International Circular for the Book, Paper, and Printing Trades," to quote its English title, is a monthly, of which the first number was issued in August by Mr. G. Hedeler, Leipsic. The regular departments include lists of new books, music, engravings, photographs, and maps; lists of patents, a directory of trade addresses, etc. The book-titles are brief, without pagination, but give the size, and in all cases state the name of each publisher and the price. They are arranged under language groups, and those in Greek, Russian, Finnish, etc., are accompanied by translations. The reading matter includes a series of "Sketches of Eminent Publishing Houses," the first treating of the firm of F. A. Brockhaus & Co. of Leipsic, and the second dealing with the Paris house of Quantin; useful articles relating to the exporting of books, etc., to the United States, contributed by the United

States Consul at Leipsic, Dr. S. R. Millar; and a variety of shorter articles of interest to booksellers, librarians, and printers, while an account of the "Development of the Book-trade in Leipsic," by Dr. Oskar von Hase, of the firm of Breitkopf & Härtel of that city, is furnished as a supplement. All the reading matter is published in German, French, and English, though of the longer articles only abstracts appear in the two latter languages. The advertisements, of which there is a liberal supply, also frequently appear in polyglot. The subscription price of this useful publication is but fifty cents a year.

—The holiday number of *Scribner's* is most remarkable for its poetry, which challenges attention by its unusual quantity, its ambitious character, and its choice of subject. Mr. Robert Louis Stevenson leads off with a long narrative, in style something between Scott's metrical tales and the old unrhetorical ballad-form. It is the story of the Scotch clansman who had been warned by a ghost that he should die at Ticonderoga, but could find no one who knew the name until the night before his end, when he heard it from his Indian guide. The sort of cleverness it has reminds one of the fate of Aytoun's verse. Miss Guiney puts into Swinburnian rhyme the Roman anecdote of Tarpeia's death, not without such verbal force as is possible in grandiose and melodramatic treatment. Miss Thomas contributes also, not without grace and other fluent qualities, an arabesque of words about Atys. Mr. Dobson tra-la-las an air, rather than makes a poem; and Elizabeth Akers keeps on singing of a ship that drifted away and never came back, until one begins to think that the poem, too, has lost its moorings. There are others besides these, but these are enough. The reader who has still the habit of glancing at verses will have his fill. There is not one line in all these hundreds of measured syllables and chosen words that touches life as it now is; the picturesque accidents of some past age are the source of such slight interest as they awake. It is all no more than the simulacrum of literature. Doubtless it is the best that can be got, at any rate in such quantities; but being what it is, why make it a special feature of a Christmas number? We notice in the index the names of twenty-five poets who have contributed to the last six numbers of this magazine! There is one article, beautiful for its illustrations, especially for the Italian faces, entitled "In Florence with Romola." The stories are by Bret Hart, Miss Jewett, Mr. Sullivan, and Mr. Bunner. The last is a labor tract for the times. Mr. Sullivan, who is an artistic writer and often admirable, spoils a good beginning by an incredible and mechanical ending, forgetting that one cannot deal with the supernatural successfully and at the same time unimaginatively.

—The December *Century* has no holiday character, but it recalls the sacred association of the season by a readable and instructively illustrated sketch of the Sea of Galilee. One of the most entertaining of the articles that follow is Mr. Brander Matthews's account of the special characteristics of the leading Parisian journals and of their history and conduct, with notes on the personnel of the staffs. This will be of interest to newspaperdom, and is not likely to make the press of this country experience anything but pride and self-gratulation at the contrast. Mr. Kennan's paper on the Russian treatment of prisoners held for trial is by a long way the most important in the number. It is directed to showing that we need not assume any homicidal tendency or special qualities in the Russian people because they resort to assassination. The method adopted by the writer is simple statement of what he believes to be facts, with chapter and verse, names, dates, and places; he tells what the persecuted class suffers—not any one person's peculiar hardships, but what may be fairly taken as the common lot—and remarks at the end that to seek unreasoning revenge, direct, personal, final vengeance on some one man's life, may be criminal, unwise, and to be regretted, but is, without the shadow of a doubt, "human." We understand "murder" well enough; what it is worth while to understand a little better, in order to have enlightened sympathy with either Czar or assassin, is the "despotism" which murder is sometimes believed to temper, and Mr. Kennan is a very good teacher. It is with a strange feeling that one turns from this chapter of vivid wrong to Prof. Shields's laborious discussion of a possible union of the Protestant sects; he wishes the Episcopate to be retained in the hypothetical new national American Church, so that the clergy may secure some of their old influence and figure in the life of society. There is an established church in Russia—but the question is hardly in a stage for discussion.

—One of the most graceful of the compliments which Mr. Francis Parkman has received in France on account of his volume on 'Montcalm and Wolfe,' is from the pen of M. M. A. Héron, in a paper read before the Société Normande de Géographie at Rouen, and printed in its transactions as well as in a separate pamphlet by the author. M. Héron makes an extended summary of the events which preceded the fall of Quebec, and translates literally Parkman's account of the battle, and closes as follows:

"The work which has afforded us the opportunity of making this summary recital of these sad events is one of the most remarkable of recent times. Mr. Parkman has developed the most solid qualities of the historian; he possesses the foremost of them all—impartiality. With what art—I might almost say with what love—he has sketched the noble figure of Montcalm. And this is not the only admirable portrait in his work; those of Wolfe, the English hero, of Vaudreuil, and many others are painted with the hand of a master. He does not imagine them; he restores them, if we may use the expression, on the most careful information, and on a crowd of details most scrupulously collected. His narratives of facts and descriptions of places are constructed in the same way. Although the quality of his talent places Mr. Parkman among the picturesque historians, he leaves nothing to fancy. He is always and everywhere the exact and conscientious narrator. He has neglected nothing that was necessary to the exact performance of his duty as an historian. One may say that all the best materials have passed through his hands—published works, manuscripts, official documents of every nature contained in the American, English, and French archives, autograph letters, diaries, and other writings of persons engaged in this war, and traditions collected on the scene of action. Altogether, Mr. Parkman has written one of the most attractive histories we have had given us for many a day. One cannot lay it down after one has begun to read it, so great is the interest of the subject, and so brilliant the talent of the writer, whom the United States may well place in the foremost rank among the historians of our age."

—The compiler of the "Curiosities of Plagiarism" will have to give a special chapter to the Protean reputation of Mme. Reybaud's 'Mlle. de Malepierre.' Three years ago, in the *Nation* (vol. xxxviii, p. 277), we enumerated half-a-dozen English translations and appropriations of this romantic and thrilling tale, no one of which appeared under the original title, or acknowledged its rightful authorship. Most of these versions had the negative virtue of appearing anonymously, but Charles Reade boldly claimed the authorship of his 'Portrait,' and his example, unconsciously, no doubt, is followed by the newest appropriator, one "A. von Bosse," who calls his translation 'Das Lebende Bild.' It appears in the October number of *Ueber Land und Meer*, and the slight variations in it from the original are not improvements, as, it must be confessed, Reade's were. We may add, in this connection, that a new literal translation, with the author's name, appeared last year in London.

—The well-known Egyptologist, Heinrich Brugsch, contributes to the *Deutsche Revue* an interesting account of the Persian mystery-play of "Husain and Hasan," as acted at the Shah's theatre in Teheran. The vast hall, whose walls, inlaid with tiles of turquoise blue, reflected the light of ten thousand candles as well as an electric lantern, was filled with an audience of at least six thousand persons, all dressed in mourning. As at this time, when the religious fanaticism is aroused to the highest pitch, it would be dangerous for a European to be seen, Herr Brugsch occupied one of the closed boxes set apart for the ladies of the harem, which was carpeted, and contained a table on which were sweetmeats and a nargileh. A sermon having been preached by a mollah, an orchestra of flutes and stringed instruments played a melodious but dirge-like overture. The first scene showed the kinsmen of Prince Husain, the son of Ali, holding a conference with the ambassadors of the rival Caliph, in which the evil designs of the latter against the Prince were revealed. This was followed by the entrance of Husain himself at the head of an army and accompanied by a train of camels and dromedaries, caparisoned with red trappings and bearing closely veiled women and bales of merchandise. The marching of this host, consisting of both cavalry and infantry, with gorgeous uniforms which flashed countless points of light, was a superb spectacle. After the army had pitched its camp, the play proceeds until Husain, betrayed by his friends and menaced by his enemies, seeing that his fall is inevitable, resigns himself composedly to his fate. In vain do, first, Mahomet, then Jesus, and, after him, the Mahdi come with offers of assistance. A lion and then a tiger appear in order to defend him, but are driven away. Finally King John of Frengistan [France—is this a survival of the mediæval myth of Prester John?] enters, riding, at the head of an army, in a European coach borrowed from the Shah's stables, and followed by his wife and daughter, gayly dressed in fantastic clothes and carrying red parasols. The army consists simply of Persian soldiers, without any disguise. The infidel King offers to aid the Prince, but this unlooked-for help is also rejected. Husain is bent upon martyrdom, and his death soon follows, amid the sobs and groans of the vast audience, who, in their frenzy of grief, hurl imprecations at the murderers, and can scarcely be restrained from stoning the actors who play this part. In Herr Brugsch's opinion, the play is far superior in mere literary excellence to the Christian mysteries or miracle-plays of the Middle Ages.

—About two years ago (see the *Nation* for December 3, 1885) we mentioned a pamphlet in which Mommsen undertook, from the evidence of coins, to show that the scene of the defeat of Varus by Arminius was at or near Barenau, northeast of Osnaburg. The subject has received a fresh examination the present year in 'Die Kriegszüge des Germanicus in Deutschland'—an octavo of 567 pages, by Dr. Friedrich Knoke of Bernburg. All the German campaigns of the years 14, 15, and 16 are exhaustively discussed, all previous theories stated and examined, and the author's own views—arrived at by a careful personal study of the lo-

calities, as well as of the authorities—stated clearly and supported by ingenious argument. The fault of the book is that it is too complete—every detail of these campaigns is narrated as circumstantially and confidently as if the author had had access to a file of newspapers of the period. For example, after showing that it is very probable that the insurrection which drew Varus from the Weser was among the Bructeri, he proceeds to take this hypothesis as a fixed fact, and, by pointing out the successive stages of the route which Varus ought to have followed, brings him to the Dören Pass, in the Osning range, south of Osnaburg. The hypothesis is in itself reasonable, and is admirably worked out in detail; only it has not a particle of positive evidence in its favor. Mommsen's words ought to be constantly in one's mind, in this and similar problems: "Mehrere Lösungen einer Aufgabe, von denen nur eine richtig sein kann, sind so lange keine, als es nicht gelingt die ausschliessliche Zulässigkeit einer derselben zu erweisen." The campaign in which Germanicus visited the battle-field of the Teutoburgiensian Forest occupies nearly half of the book. The other campaigns are treated with the same exhaustive knowledge of the literature upon the subject, the same personal familiarity with the ground, and the same arbitrary assumption of the author's premises, from which his notion of the campaigns is deduced with great perspicuity and vivacity. There are five maps. These, and the fulness of local and antiquarian detail, make the treatise very helpful to any student of ancient Germany.

ILLUSTRATED HOLIDAY BOOKS.

Engravings on Wood, by Members of the Society of American Wood-Engravers. With an Introduction and Description by William M. Laffan. Harper & Bros. Folio.

Odes and Sonnets. By John Keats. With Illustrative Designs by Will H. Low. Philadelphia: J. B. Lippincott Co.

The Deserted Village. By Oliver Goldsmith. Philadelphia: J. B. Lippincott Co.

Faust: the Legend and the Poem. By William S. Walsh. Philadelphia: J. B. Lippincott Co.

Masterpieces of Modern Painters. New York: A. J. Bishop.

THE volume which heads our list is unquestionably the most important and significant of the art productions of the year. The mere existence of a Society of American Wood-Engravers is a fact that marks the revolution in their art which has occurred in little more than a decade. To those who ask, What is the American School of which we hear? this collection of examples is a superb answer; and foreign artists everywhere cannot fail to be impressed by such an exhibition of technical skill, manifested not by a handful of engravers, but by fifteen, with a surprising evenness on a high level. Some well-known names are wanting from the list of contributors, but as no list of membership is given, we have no means of judging how exhaustive is the present representation. It would not, we think, have been unbecoming to publish in connection with these plates simple biographical details concerning the makers of them—the birthplace and age, the training received, etc. As it is, judging by their names, twelve are manifestly Americans or of English descent, one other may be, while two bear foreign names, and of these one is German-born. The art which they have undertaken to interpret in black and white is likewise preponderatingly American, being foreign in only two instances. The European critic of this volume, therefore, has to do with a national manifestation almost *pur sang*.

One other observation before we pass from the personnel: a woman takes her place beside her male peers. She is, we are told, the only one admitted to the Society, and this of itself is a certificate of proficiency. We are much mistaken if Miss Powell's success do not inspire other women to take up a calling which is so favorable to their sex, since it can be pursued at home under the best conditions there attainable, and at a great distance, if need be, from the scene of publication.

The plates number twenty-five in all, of varying sizes, mostly large. Twenty-three are from oil-paintings, one from a fresco by Giotto, and one from a drawing by Mr. Abbey. They all illustrate the immediate cause of the recent notable advance in wood-engraving, viz., photography upon the block. As to fidelity of interpretation, Mr. Swain Gifford is reported entirely pleased with Mr. H. Wolf's rendering of his "Roadside." And we remark that whereas our American school of painting is preëminently addicted to landscape, our engravers have here chosen in only four instances from that branch, the remaining five-sixths being from figure-pieces—pieces, at least, in which the figures outweigh the setting. Since every subject was the free choice of the engraver, this circumstance seems worth recording by the way. Finally, the arrangement of the plates is alphabetical by artists, and Mr. Bernstrom, partly from his interesting subject (Carl Marr's "Mystery of Life"), and partly from the skill with which he has handled it, opens the series with a certain distinction.

The critic here, as elsewhere, finds it hard to separate the theme from the execution. If that be flat, ungrammatical, unfashionable, repulsive, the excellence of the translator's technique is in danger of being underrated. It is safe to say that a layman casually turning these leaves would, but for Mr. Cole's reputation, pass by his rendering of Giotto with hardly a second glance. The archaic quality of the composition is not to our modern taste, and the engraving appears no less bald and formal. In selecting this cut (his only one) Mr. Cole has more conspicuously than all his associates challenged the judgment not of the public, but of the connoisseur. Mr. Laffan, who furnishes the letterpress, could not, in the nature of the case, be critical; and his discourse, much open to question in its generalities, when it comes to personal appreciation largely consists of phrases having little meaning, and mostly concerned in bestowing praise all around with as great a variety of expression as was practicable. He has, however, done no more than justice to Messrs. A. W. Drake of the *Century* and Charles Parsons of *Harper's* for their part in bringing about the revolution signalized by this volume, though we should have felt bound to associate with these names that of Mr. W. Lewis Fraser of the former magazine. We shall not attempt to pass judgment on the present collection seriatim. Two engravings—the one by Mr. Wolf, already mentioned above, the other by Mr. Frank French, likewise after an oil painting, by G. Gaul—are remarkable examples of faithful reproduction of the works of the artists, not only in color, but in the suggestion of the medium in which they are painted. In these examples the engravers have abandoned for the moment the consciousness of the skilful cutting of the line and of nice "tooling." To Mr. Wolf's achievement we assign the first place. It would be hardly possible, on a block of this size, to handle such a multiplicity of detail in a more masterly manner. We forget the line entirely, and think only of the extraordinary reproduction of the color and texture of the original. As admirable examples of dexterity in cutting the line and skill in tooling, the engraving of Mr. F. S. King after Blashfield, that of Mr. R. A. Muller after a picture by J. G. Brown, and the head of William M. Hunt, by Mr. G. Kruell, are most conspicuous. The criticism which the collection is likely to encounter from European connoisseurs is in the direction of over-refinement. The execution lacks that which foreign engravers strive to attain—boldness, originality, and daring invention in the rendering of textures. Their productions are free from the suggestion of slavish subjection to softness and sameness of line. They aim at richness of color and brilliancy of effect. The contrast is well pointed by Mr. E. Kingsley, whose two examples are marked by more originality of treatment than is seen in many of the others, but are marred by groping after smoothness of texture and by too close cutting.

Mr. Low has undertaken to fill the difficult position of Illustrator in Ordinary to that poetical king John Keats. Two years ago 'Lamia' was published with his illustrations, and it is now followed by a volume of 'Odes and Sonnets,' which in its turn is to be followed, we believe, by other volumes. The success of the 'Lamia' was so extraordinary as to make the publication of a new set of drawings by the same artist and illustrating the same poet peculiarly hazardous. The traditional ill-success of "sequels" and "second parts" was to be feared for it. As the human mind is constituted, "the same thing" becomes wearisome, even if it is a fine thing; and of a series of publications in the same vein the first will always seem to us to have been the best, because it had the freshness of surprise which its successors can never have in the same degree. One must improve in order to seem to hold one's ground. Let us hasten to say that Mr. Low is in the line of progress, and that the work in his present volume is a decided advance upon his earlier effort.

He has hardly been so fortunate in his subject as in the 'Lamia.' While the illustration of a number of short, unrelated poems gives greater scope for that "variety" so much desired of publishers, it entails a lack of the unity of impression which, in a volume like the 'Lamia,' binds the whole together, and increases the force of each drawing by that of all the others. In the decoration of a hall, each fresco helps all the others, and the effect of the whole is one; in a miscellaneous collection of pictures, each is apt to hurt more than it helps its neighbor. The present book is more in the nature of the gallery of pictures than of the nobly decorated hall, and though the pictures are all by the same hand, they are too varied in style and disconnected in subject to be helped by their proximity. The result is a somewhat scattering effect, and an accentuation of that unevenness of merit which is perhaps inevitable in such a collection of work. But this unevenness is not present in a greater degree than in the 'Lamia,' or than in most other such long-breath'd works; or, if it is more noticeable, it is from the higher plane of the better, rather than from the lower plane of the weaker parts. Many of the drawings in the 'Odes and Sonnets' are much better than any but one or two of those in the 'Lamia,' and the least good are as good as the average of those in the earlier book. Of the seventeen principal drawings to the 'Odes and Sonnets' at least twelve are above the average of the work in 'Lamia,' and several of them are better than anything in the latter.

Perhaps the best thing in the book is the frontispiece, a "Nymph" or "Flora," with arms

full of blossoming apple boughs, in which the sweetness and charm of Mr. Low's best work are combined with a high degree of solid and accurate draughtsmanship. The naked Muse of the title-page, pure and lofty in her nudity, is drawn also with a knowledge of form and a fine severity of style that serve to make more incomprehensible the artist's occasional lapses. One of these lapses, in the drawing of the legs and feet of the little winged genius who holds the book bearing the inscription, mars the otherwise charming composition of the dedication. Of the illustrations proper, the best is decidedly that to the "Ode to Psyche," where the sleeping goddess is as lovely a figure as one is likely to find in modern art, and the next best is perhaps that to the sonnet beginning "Bards of Passion and of Mirth," in which the figure of Diana, who has very little right to be there, is so charming that we readily forgive her her somewhat unwarrantable intrusion. The purity of the nude in the hands of a true artist could find no better exemplification than in these drawings, which might well be placed in the hands of youths and virgins for their educational value. Other notable drawings are that entitled "The Eve of St. Mark," a charming figure

"With forehead pressed against the window pane,"

while she reads

"A curious volume, patched and torn,"

and that to the "Ode on Melancholy," with its interesting background of the huddled roofs of mediæval Florence, seen through a loggia with curious symbolic statues.

Mr. Low has throughout taken considerable liberty with his text, his drawings being often parallel with the idea of the poet rather than strictly illustrative of it; but this is not to be wondered at with a text so often unillustratable. Doubtless his imagination has worked the better for the freedom he has allowed it, and the results are finer than would have come of a stricter adherence to the letter of his original. When we have a volume of pictures such as these, graceful in composition, delicate in execution, and full of pure sentiment and poetic feeling, surely we need not quarrel with the artist because we cannot always see how he found the inspiration for them in the poems to which they are attached.

Besides the drawings, there are dainty floral decorations at the top and bottom of each page, and the cover, lining-paper, etc., are also designed by Mr. Low. The so-called photogravure reproductions by the Forbes Company are fairly good, the print, paper, and general make-up are handsome, and the whole book is in every way worthy to take a high place among the most sumptuous of the holiday publications.

Illustration by etching is perhaps rather commoner in Philadelphia, where the votaries of the art are numerous, than elsewhere in this country. It seldom, however, reaches the front rank, and two holiday volumes from that city now before us agree in the mediocrity of their designs. For Goldsmith's 'Deserted Village' six landscapes have been furnished by M. M. Taylor. These are not wholly devoid of feeling for nature, but there is little poetry in them, much crudity of drawing, and a general muddiness. With one exception, however, they add to the attractiveness of the book, which is well printed in large characters. "The Swain responsive as the Milkmaid sung" is, sentimentally considered, comical, and as etching the plate is the most unfortunate of the series.

'Faust: the Legend and the Poem,' also contains six etchings, by Hermann Faber, but the best are unoriginal and artificial, and the poorest absolutely uninspired. The contrast with earlier attempts by great masters is here much more cruel than in the case of the 'Deserted Village.' The accompanying text is not the poem, but an essay upon its origin and development, and an analysis of both parts. This will be found useful by many, especially as Mr. Walsh has availed himself of Engel's 'Zusammenstellung.' But his speculation about the meaning of the poem would have been tempered, for his readers at least, if he had cited from vol. vii. of the *Goethe-Jahrbuch* G. Dehio's "Altitalienische Gemälde als Quelle zum Faust." Here again we have a pretty book, if the pictorial adornment is feeble.

Not much can or need be said of the 'Masterpieces of Modern Painters.' Eleven photogravures after English, French, German, Bohemian, Hungarian, and Russian painters, contemporary or very recent, fill, with the descriptive letterpress, an oblong folio, and make a seemingly attractive or even sumptuous book. The not badly imagined title-page, too, gives a number of portraits of the painters represented by their works. On examination, however, one sees that the photogravures are at second hand from engravings or even from photographs, so that distinctness and fineness of gradation are all lost, and a blurred and washed-out look characterizes the series as a whole. The selection is popular enough—Rosa Bonheur's "Horse Fair," Wagner's "Chariot Race," Frith's "Railway Station," Munkacsy's "Christ Before Pilate," Meissonier's "La Rixe," Detaille's "Defence of Champigny," and other canvases scarcely less well known; with Turner's "Ancient Italy," from the engraving.

FISHER'S CHRISTIAN CHURCH.

The History of the Christian Church. By George Park Fisher, D. D., LL. D. With maps. Charles Scribner's Sons. 1887. 8vo, pp. 701.

To the student of history there is no department so fascinating as that which relates to the development and the struggles of the Christian Church. Rightly considered, it touches upon every side of human activity—mental, moral, and political. To it belong the influences which moulded the barbarian conquerors of the Roman Empire, which presided over the foundation of the nations of Europe, which dominated the Middle Ages, and which have partly resisted and partly assisted the evolution of modern civilization. It concerns itself inseparably with the secular annals of every Christian state, which cannot be rightly comprehended without reference to it; and inasmuch as man's intellect and soul are nobler than the body which they control, so the history of the Church embraces not only the political growth of the European commonwealths, but the vastly more momentous topics of their spiritual and moral advance, the conceptions which have prevailed as to man's place in the universe and his relations to his Creator and his fellow-beings, and the result of these conceptions in directing his daily life. Sometimes a factor of progress, and sometimes of reaction, the influence of religion has always been potent, and no one can pretend to estimate the development of the past or to forecast the future of humanity without an accurate knowledge of that wonderful and complex organization which has manifested itself in so many aspects through the successive centuries, and which we roughly designate under the comprehensive term of the Christian Church.

As an aid to the understanding of the origin, development, and career of this omnipresent factor in modern thought and civilization, Professor Fisher's new work deserves a hearty welcome. It was a bold undertaking to present so vast a subject in the compass of a single volume of moderate size, for the author has rightly estimated his task as not confined to the external manifestations of Christianity. He classifies (pp. 2, 3) the chief topics for consideration in five divisions: (1.) Missions, comprehending the conversion of the Roman Empire, the reduction of the Barbarians, and the efforts to spread a knowledge of the Gospel throughout the world. (2.) Church polity, including the relations between Church and State, which in the Middle Ages led to the hierarchical development and the supremacy of the papacy, and in modern times has presented every variety of connection between the spiritual and the temporal authorities. (3.) Doctrine, embracing the infinite shades of belief which Christians have extracted from Scripture, and through which they have sought to explain the purposes of God and the destiny of man. (4.) The Christian Life, showing the varied influence which Christianity has exercised as a practical system of morality, controlling the lives of its disciples; and, (5) Worship, under which are comprised the successive rituals of the Church, its observance, liturgies, hymns, music, and architecture.

It will be seen that this is a tolerably extensive outline, and one which few scholars in this country could satisfactorily fill up. Professor Fisher's previous works have shown that he possesses the wide acquirements requisite to the undertaking, and the clearness of exposition necessary to render his knowledge available. Yet we cannot but regret that he should not have allowed himself a broader canvas on which to depict the infinite details that crowd each other in the presentation. In these days of microscopic research, when whole volumes are devoted to the elucidation of the infinitely little, it is a relief to meet with a competent scholar who is content with telling, not all that he knows, but only so much as he thinks important for his reader to know; but, notwithstanding this, we occasionally are made to feel that Professor Fisher is doing himself and his subject injustice in the effort at compression. It is evident that he often would fain say more than he does, that he would like to pause for a moment and amplify some point of interest, instead of barely alluding to it and hurrying on to another. He is so anxious to omit nothing of moment, and at the same time to keep within the bounds which he has assigned to himself, that he is sometimes reduced to merely cataloguing that which he would evidently much prefer to develop.

In this superabundance of material the most arduous task is that of selection. Here the personal equation inevitably becomes dominant, and probably no two persons would agree as to the relative importance of individual subjects and the proportion of space to be severally allotted to them. For ourselves, we are free to think that in this the author has sometimes made a mistake. Only four-ninths of the book are devoted to the first fifteen centuries, while five-ninths are given to the Reformation and its results up to the present day. In the earlier portion many topics of interest thus of necessity receive inadequate treatment. The marked influence of paganism and polytheism over the development of Latin Christianity is barely alluded to; the rise and results of the persecuting spirit are worthy of much fuller development than is accorded to them; the German mystics of the fourteenth century are insufficiently treated, and the cognate heresy of the Beghards or Brethren of the Free Spirit is not even alluded to. In the latter portion of the volume the controversies within the early Anglican Church are presented in much detail, while the history of Jansenism and Port Royal is dismissed with

some bare allusions (pp. 412, 436, 442, 496, 500), which give no adequate conception of the causes and consequences of that memorable incident. So, Methodism is elaborately sketched, while there is but a meagre account of the supremely important modifications effected by Napoleon and the Revolution on the Catholic Church in its relations with the State—when, as the author remarks, "the mediæval was transformed into the modern state." It is not that we should wish the omission of anything in the portions which the author has allowed himself to expand—indeed, we know not where the student would find within the same compass the facts concerning the confused and multitudinous sects of Protestant America; but we should greatly prefer that the rest of the subject were treated on the same scale. Professor Fisher evidently has all the materials at his command, and he would perform a real service to the English-speaking peoples of both hemispheres if, in a subsequent edition, he would give them, what he is so well able to do, a complete history of the Christian Church, on a larger scale, enriched with references to the authorities.

Of course, in a book covering so vast a surface and treating of innumerable topics which have been the subject of bitter controversy, it would be easy to raise points for discussion, but this would be unfair. The author's method is necessarily dogmatic; he has no space to waste on debate, and he can only present the conclusions at which he has arrived. Even if the reader may not in all cases agree with those conclusions, he cannot but respect the learning and candor which have dictated them. The whole work is informed with a reverent and believing spirit, and its impartiality is abundantly tempered with true Christian charity.

Guatemala, the Land of the Quetzal. A Sketch. By William T. Brigham, A. M. Charles Scribner's Sons. 1887. Pp. xv., 453.

MANY parts of Mr. Brigham's book certainly merit high praise. In these days, when so many books of travel and description are conceived and written and published on the fly, it is good to meet with such proof of careful investigation and matured study. Few writers have so painfully qualified themselves to treat of the unfrequented regions of Guatemala, and few have made so faithful an examination of the best literature of the subject. The 200 pages recounting Mr. Brigham's personal adventures and expeditions along little-travelled routes are of unusual freshness and interest, even if it must be admitted that his botanical knowledge and enthusiasm sometimes blind him to the limits, in that direction, which ought to be observed by a book designed for general reading, and that, at times, he indulges in a too undiscriminating transcript of his note-books. His account, too, of the foreign and domestic trade of Guatemala is of great value, and his estimate of what the country might be made to contribute to the food-supply of the world, under proper management, is based upon careful observation and inquiry. In his generous appendix he has grouped a great deal of scattered but important information, together with lists of plants and of cabinet and dye-woods, and a well-selected bibliography.

At the risk of making our commendation of Mr. Brigham's performance seem grudging, we must allude to some of the defects with which, in our judgment, his work is handicapped. His style, where he lets it alone, is not open to serious objection, but, unfortunately, he has chosen to write a large part of his book in what is neither English nor Spanish, but a washy mixture of the two. Such a dragging in of needless Spanish words—sometimes italicized, sometimes not, usually translated (which heightens the offence), often left without hint of their meaning (and that gives his practice the appearance of mere whim)—is unworthy of an author who really has something to say, as Mr. Brigham has. It would have to be considered, in any case, as a breach of good taste; but what must be said when, as is the fact, the Spanish thus pitchforked in is very inaccurate? Mr. Brigham seldom uses more than isolated words in Spanish, but even so he manages to get the gender wrong twice (pp. 91 and 307), the accent misplaced or omitted countless times, and three common words misspelled (pp. 147, 283, and 299). In the three instances of his use of a phrase containing the preposition "for," his word is *por* where it should have been *para*. Thus to violate good taste and grammar at the same time is inexcusable. The chapter on Central American mythology might better have been omitted. Mr. Brigham confesses that he is not able to handle that subject critically, and the world does not care to have the old stories over again at the hands of one who is not. Some parts of his chapter on Guatemalan history are so epitomized as to be unintelligible; for example, he speaks of the desire of Barrios to "renew" the confederation of Central American republics (p. 291), without having intimated that it had ever been dissolved. We have also noted here two or three minor errors in statement of facts. We must refer, in addition, to the surprising number of *obiter dicta* which the author allows himself. A certain painting causes him to refer to Sheol in a way that shows him entirely to misunderstand the nature of that Hebrew receptacle of the dead (p. 89). Citing Dr. Stoll's classification of the Indians of Guatemala, which is mainly based on language, he is moved to add his opinion that, one day, there will be a classification of the tribes and races of mankind "in which language will play no part" (p. 271). He cannot state the fact that the law of Guatemala is codified, without congratulating the country that it did not adopt "the result of the tinkering of village Solons and the decisions of wiseacre judges, as is that heterogeneous mass, amorphous and illogical, the common law."

The publishers evidently intended to do the handsome thing by Mr. Brigham, and as far as paper, type, and binding are concerned, they have left nothing to be desired. In their most ambitious attempt to give the book an attractive appearance, however, they have made a sad failure. We refer to the abundant illustrations, nearly all of them from the author's photographs, which are almost all so blurred in the mechanical process of reproduction used as to be practically worthless. It is also a misfortune that in the lettering of the coat-of-arms of Guatemala, which is figured on the cover, there should appear a gross misprint.

BOOKS OF THE WEEK.

Fine Arts.

THE ACADEMY EXHIBITION.

THE autumn exhibition at the Academy contains a number of portraits, but good ones are the exception rather than the rule. "Portrait of Prof. G. L. Andrews" of the West Point Military Academy, No. 152, a fine, soldierly looking gentleman, by J. Carroll Beckwith, is good, and both the firmly modelled head and the blue coat with officers' trimmings are well painted. "Portrait of Rev. Dr. Storrs," No. 98, and "Portrait," No. 267, both by W. M. J. Rice, are clever pieces of painting, and, though somewhat monotonous throughout, are broadly handled and comprehensive, with an aspect of being complete works, and noticeable for the successful rendering of character. In "Portrait," No. 279, by Eleanor C. Bannister, a well-drawn seated figure of a gentleman in a fur-lined cloak, there is strength and vigor. The figure is well placed, and so lighted as to make the head the point of interest in the composition; and if the head itself is a trifle dry in painting, there is no such fault to be found with the hands, nor is there anything to be said in disparagement of the treatment of the drapery. These are painted simply and cleverly, and are given just the proper amount of importance to play their part in the ensemble. Mr. Stanley Middleton's "Portrait of Miss L.," No. 320, a head and bust of a lady in profile, is solid looking and luminous, and is noticeable for careful drawing. All of these are good portraits, and all of them evince knowledge of the painter's art and intelligence in exhibiting it. But besides these there are a round dozen of portraits hung about in the different galleries to which not a word of commendation can be given. It is not necessary to mention them all, but there is a particularly bad one of "Henry Ward Beecher," No. 367, by A. J. Conant, in the west gallery, and another at the head of the stairs in the corridor, "Portrait of Two Children," No. 84, by Eliot Gregory, and yet another "Portrait," No. 198, by F. Tuttle, in the east gallery. What good purpose is served by exhibiting these canvases and their fellows at the Academy exhibition we cannot imagine. The Academy's Committee of Selection should not forget that when they admit this sort of work they rob that which is really meritorious of any distinction they may be supposed to have it in their power to confer. It may be said that this is "only an autumn exhibition," but if it is impossible to hold a good exhibition in the autumn, would it not be better to have none at all?

In landscape the present exhibition makes a creditable showing. "Harvest," No. 242, by J. Alden Weir, is a delicate transcript of an effect of early moonrise in the long twilights of August. A grain-field occupies the foreground of the picture, with part of the grain cut and shocked up, and in the rising ground in the middle distance some clumps of trees and bushes are seen with the pale bluish sky behind them. It is artistic in feeling and tenderly painted, though to the realistically inclined it seems somewhat thin and lacking in decided modelling. Its chief charm lies in the feeling of atmosphere which pervades it and in the quiet repose of nature at the close of day, which the half-cut grain-field, deserted by the harvesters, and the pale moon rising over the horizon poetically suggest.

In "Looking Back from the Beach," No. 122, a small landscape hung in the north gallery, Mr. George H. Bogert, like Mr. Weir, has taken an effect of early moonrise for a subject, but at an earlier hour. In Mr. Bogert's picture, which depicts a sandy stretch of shore with higher ground beyond towards the horizon, the sun, which is back of the spectator, has not yet gone down, as the presence of broad shadows covering the foreground of the picture while the higher banks are yet bathed in light, clearly attests. The sunlight is feeble, and tints the white sand and the herbage with the rosy glow of evening, and the eastern sky is seen still lighted up by the sun's last rays, where the full moon is slowly coming up beyond the hills. This little picture shows truth of observation and a sympathetic way of rendering the effect of nature. It is well painted and is a really subtle bit of color. In the corridor we find a fresh, breezy sort of picture of a plain with a road leading across it to a little hamlet nestled among the trees in the distance, which suggests the influence of Claude Monet somewhat in the decided frankness of some of the color, and which certainly has excellent qualities of light and atmosphere. It is painted by Mr. Joseph H. Boston, and is called "The Road to the Village," No. 52 in the catalogue. An interesting study of sunlight on the grass in a meadow with a group of trees at the horizon is "Sunlight and Shadow," No. 145, by Arthur Hoeber, whose ability as a painter of landscape is also well shown in a larger picture in the east room, "The Road Across the Moors," No. 171, a study of a gray-day effect with a clouded sky, which keeps its place well behind a line of hills darkly outlined against it. In the large landscape with sheep, "Autumn in Picardy," No. 254, by Roswell D. Sawyer, though it is hard and dry in painting, and has the effect of a mural decoration rather than a picture, there is good composition and careful drawing of trees, this last being a merit sufficiently rare in American landscape painting to make it worthy of remark. "A Summer Day," No. 298, by Edward Gay; "The Marsh," No. 303, by E. L. Field, a gray-day effect, broadly and effectively painted, but crude in color; "The Flatlands of New Jersey," No. 308, by R. W. Van Boskerck; "The Month of October," No. 346, by Bruce Crane; "A By-Road in Picardy," No. 400, by Emma E. Lampert, a picture of a roadway overarched by trees, with sunlight falling in patches on the ground; "Autumn Near Munich," No. 150, by Robert A. Eichelberger, and "November Snow," No. 300, by Walter L. Palmer, in which dazzling sunlight shining on snow and the spray of a waterfall tumbling over rocks is painted with much truthfulness of effect, are other good landscapes. In addition to these there are more or less important works by such well-known painters as H. Bolton Jones, W. S. Macy, J. Francis Murphy, William Sartain, F. K. M. Rehn, and Reginald C. Coxe, the last two of whom are represented by pictures of marine subjects.

As for figure painting, there are fewer contributions from prominent men, and what there is of them is not always of the best. Mr. Herbert Denman, whose excellent picture, "The Trio," at one of the exhibitions at the American Art Association's galleries, will be remembered, however, has undertaken a rather difficult subject in a life-size figure of a young woman in a white dress, lying at ease in a hammock out of doors, and has been in the main very successful in painting it. In this picture, "A Midsummer Day Dream," No. 310, sincerity of purpose and sobriety of execution are distinguishing characteristics. There is good honest work in the painting both of the figure and its landscape setting, which deserves hearty commendation. The tone of the white dress in shadow, like that of the head and hands of the figure, is delicate and agreeable; the more so, perhaps, because of the contrast with the light and dark greens of the grass and trees, which appear too vivid and lacking in air. However that may be, it is an interesting canvas, and one of the few important figure pieces in the exhibition.

"Tambourine Player," No. 274, by George B. Butler, a three-quarter length figure of an olive-skinned girl with a tambourine in her hands, is a picture which occupies the centre of the wall in the south gallery. The girl is excellent in character, and the artist has succeeded in getting a pleasing ensemble in his picture, though we may find fault with his methods. It is neither simple in execution nor frank and unaffected in color. It possesses, however, a quality once greatly hankered after by some of the painters in the Society of American Artists, a few years ago. It is called "tone," and is most easily attained by rubbing dirty color over clean color, and then rubbing it off and beginning over again. Others obtain it by using varnish and diluted bitumen as a medium in painting, and still others by scouring the picture with pumice stone, and then piling on more color, to be scoured off in turn when it is hard and dry. Other honest qualities are so evident, though, in Mr. Butler's picture, and there is so much in it that is good, that it is perhaps invidious to dwell on this quality. This painter's other picture, "Boy with Sling," No. 378, in the west gallery, is a full-length figure of a boy in the simplest of clothing, standing with a sling held in his hand. The figure is firmly planted on its feet, and is strongly modelled. The head is well drawn, and, like that of the "Tambourine Player," is good in character and expression. Near by is hung a picture called "The Melodies of the Forest," No. 390, by Charles E. Moss. In an exhibition which may be justly denominated "commonplace" it is refreshing to find more than one picture the object of which is the study of the nude. "The Melodies of the Forest" is a good conscientious study and nothing more, it is true, but the artist, in placing his figure in a sort of sylvan surrounding with grass and trees, and putting a pair of pipes in the boy's hands, has had the skill to do so without detracting from the effect of his study of the model. The flesh is painted in a light key, and is cleverly modelled without excessive depth of shadows.

"Evening at the Lake," No. 186, by William S. Allen, is a little picture of a young lady in a white dress seated on a boat landing on the shore of a lake. Before her the placid water, with boats tied at their moorings floating on its surface, stretches away to the distant shore, where the last rays of the setting sun light up the trees and a single white sail of a passing boat. It is a charming bit, in which the painter has struck a delightful note. It is refined in color, truthful in effect, and in every way pleasing.

"Flowers of the Carnival," No. 180, by C. D. Weldon, a picture of a childish figurante in the ballet sitting in the wings of the theatre, with flowers about her; "Fishing for Minnows," No. 114, by Dora Wheeler, a rather large canvas representing a boy and girl in a boat, which floats in the shallow water at the edge of a pond reflecting the deep shadows of trees on the further bank at the top of the picture; "Shadow Decoration," No. 327, by Charles C. Curran; "A Difference of Opinion," No. 237, by W. H. Lippincott; "Helping Sister," No. 42, by Frank A. Aiken; and "Our Camp in the Rocky Mountains," No. 238, by A. A. Anderson, in which a hunters' camp with figures, and horses, and a man skinning a grizzly bear, are realistically painted in a landscape with tall pine trees and rocky ledges and cliffs of the mountains in the distance—these are some of the most noticeable compositions by figure-painters. There are not so many flower-pieces as usual in the corridor, nor so many pictures of still life. Of the former in the present exhibition there is one excellent one, "Jacqueminot Roses," No. 67, by Matilda Brown; and of the latter, "Still Life," No. 86, by A. B. Shepley, a study of shrimps and oysters, is worth mentioning for good qualities of color.

The Last of the Valois:

And the Accession of Henry of Navarre, 1559–1589.

By Catherine Charlotte, Lady Jackson.

In two volumes. Large crown 8vo. With portraits on steel. Cloth, $9.00.

The portraits to the above work comprise Henry III., Henry IV., Henry de Lorraine, Charles IX., Anne, Duc de Montmorency, Sully, Le Chancelier de l'Hôpital, Gabrielle d'Estrées, and Catherine de Médicis. Lady Jackson's previous works on French history are 'Old Paris,' 'Court of France in the Sixteenth Century,' 'The Old Régime,' 'French Court and Society,' and 'The Court of the Tuileries.'

The Court and Reign of Francis the First, King of France.

By Julia Pardoe, author of 'Louis the Fourteenth and Court of France in the Seventeenth Century.' With numerous portraits and illustrations on steel. A new edition. Three volumes, demy 8vo, cloth, $15.00.

The illustrations to the above work comprise: Francis the First (two portraits by Titian)—Queen Eleanor—The Emperor Charles the Fifth (two portraits by Titian)—Duke of Bourbon and Constable of France (by Titian)—The Chevalier Bayard—Henry the Eighth (by Holbein)—Henry the Eighth Embarking for France—Ignatius Loyola (by Wierix)—Marguerite de Valois, Catherine de Médicis (two Portraits)—The Duchesse d'Etampes—Diana of Poictiers—The Duke of Alva (by Schubert)—Annas de Montmorency, Constable of France—and Julia Pardoe. The cover of the book is from a design by Diana of Poictiers.

Pen and Pencil in Asia Minor.

Or, NOTES FROM THE LEVANT. By William Cochran, Member of the Society of Arts, and formerly of the Asiatic Society, London and Shanghai. Illustrated with Eighty-nine Engravings, made chiefly from Water-Color Sketches by the Author. Demy 8vo, cloth extra, $6.75.

Records of Shelley, Byron, and the Author.

By Edward John Trelawny. New Edition, with two Portraits. 12mo, vellum cloth, $1.75.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Four Notable Books for Holiday Gifts.

The late E. B. Washburne's Great Work.

Recollections of a Minister to France.

1869-1877. By Hon. E. B. Washburne.

Fully Illustrated. 2 vols. 8vo, $8.00.

"Paris is stretched out before us in these notable volumes, and the great panorama of heroism and martyr-like resignation, of plunder and evil passions, and of the smoke of war and strife unfolds itself in colors now grim and lurid and then again soft and tender."—*Philadelphia Record.*

"It is one of the most remarkable works ever published. Its contents are extraordinary."—*The Independent.*

A COLLECTION OF

Letters of Thackeray.

Uniquely Illustrated. 8vo, $2.50.

"The work is in no sense a life of Thackeray; it is a better thing—it is Thackeray living; and we risk nothing in saying it will hereafter be reckoned on the noble list as one of Thackeray's best books."—*Atlantic Monthly.*

Down the Islands.

A VOYAGE TO THE CARIBBEES. By William Agnew Paton.

Superbly Illustrated By M. J. Burns. 8vo, $4.00.

"A breezy style, a fund of humor, and a lively fancy lift the narrative far above the ordinary level of books of travel."—*Brooklyn Times.*

"Of recent books of travel we can think of none so fresh and pleasant as this fine volume. Mr. Paton is a keen observer, with a quick sense of humor, an eye for the picturesque, and a ready pen."—*Philadelphia Bulletin.*

Guatemala:

THE LAND OF THE QUETZAL. By William Brigham.

With over 25 full-page and numerous Text Illustrations. 8vo, $5.00.

"A work of travel and exploration in Central America which not only enkindles interest, but inspires confidence and conveys a wonderful mass of varied and really valuable information, in at the same time a thoroughly entertaining form."—*Boston Literary World.*

"A book of more than ordinary interest both in subject and in treatment."—*Hartford Courant.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 15, 1887.

The Week.

THE most immediate and striking effect of the President's message is the split which it has caused in the Republican party. It is a wedge which sinks deep into a crack that has long been widening between the high-tariff and the low-tariff elements in the party. Our political history does not furnish an instance where a deliverance by the head of one party has commanded such hearty praise from leading representatives of the other as Mr. Cleveland's message has drawn from Republican politicians like Gov. McGill and ex-Congressman Washburn of Minnesota, and from Republican organs like the Chicago *Tribune*. And if Mr. Cleveland's message was the wedge, Mr. Blaine's interview was the mallet which is driving it still deeper into the Republican party. There was no stronger advocate of the Republican candidate in 1884 than the Chicago *Tribune*, but the Chicago *Tribune* now says that "Mr. Blaine's general position will not commend itself to the American people," that "it is the weakest ground Mr. Blaine has ever yet occupied," and that "no national party can expect to go into a Presidential campaign on that issue, no matter who may be its leaders, and win."

While the Republican party is thus split on the overshadowing issue of the day, the Democratic party is more nearly united than ever before. It is a notable sign of the drift that the President's attitude has been approved by the Randall Club of Pittsburgh, the chief Democratic organization of that protectionist Pennsylvanian city. The Democratic party is now beginning to enjoy the advantage of possessing a leader of courage and force, who recognizes the fact that—to use the Chicago *Tribune's* words—"unquestionably an immense majority of the American people believe in remitting a large share of these oppressive taxes which bear upon the producing and consuming classes with crushing weight." If there were Democrats who doubted the wisdom of boldness, they are already shown their error by the testimony of shrewd Republican politicians and newspapers, which perceive and confess that the President has the people on his side.

It has suited some people to say that the depression in Wall Street is due to the fear of tariff legislation. The truth is, that it is due to the fear of no legislation at all—the fear that the Republicans will insist on one kind of surplus reduction and the Democrats on another kind, and that between them the black cloud will grow larger and larger and blacker and blacker. We do not share these gloomy views. We believe the surplus will be reduced in a manner that will satisfy every considerable branch of trade and industry, and without shocking the moral sense of the community by a repeal of the whiskey tax. We believe that the manufacturers themselves know this, although they are just now making a great racket, as witness the following paragraph in Monday's *Tribune*:

"The Joliet Steel Company gives notice that its works are to be closed indefinitely; a year ago orders were booked for 80,000 tons for the next year, but now the mills have orders for not a ton. Mr. Clarke, of the Thomas Company, is quoted as saying, 'Most of the steel-rail mills will shut down before Christmas. The demand was growing lighter, and the President's message drives another nail in our coffin.'"

The simple fact is, that railroad building has slackened because it has been much overdone the past year. Our history is full of just such ups and downs when there was no surplus to be got rid of, and when the Republican party was in full possession of every branch of the Government. The nail in the coffin of the steel-rail combination is a very bright yellow one this year. They have made a million tons, and have kept the price at just the figures which would prevent importations, or have tried to do so. We believe that for a short time they could not hold themselves down to that price, viz., $18 to $20 cost, plus $17 duty. They got the bonus of $17 duty on a million tons of rail, *i e.*, $17,000,000 over and above what similar rails were offered for. The nail in their coffin is therefore composed of solid gold this year, whatever it may have been in the years 1873-78, when they had everything their own way in politics, and when the duty was $28 per ton instead of $17.

According to Mr. Blaine, we shall have, if President Cleveland have his way, to take say a thousand millions worth of additional iron, cotton, and woollen goods which the foreigner is to unload on us, without being able to export any additional merchandise of our own in payment. He apparently thinks we can meet the liability with gold and silver. But he deceives himself on this point. Our total annual product of gold and silver is under $85,000,000. According to the report of the Director of the Mint, the total amount of both gold and silver in the United States in June, 1886, whether in the United States Treasury, the banks, or in private hands, was in round numbers $857,000,000. So that to pay for such an addition to our importations we should have to strip the Treasury, the banks, and private individuals, male and female, of every coin they have in the world, and to take from the miners the whole of their year's gross earnings, and we should still be "short." The only possible chance of escape from this frightful situation would be in an appeal to the mercy of foreigners. We should have to ask them, in the name of our common humanity, not to bring their goods here and impose them on a suffering and impecunious people in such enormous quantities. That they would listen to such an appeal, we confess frankly we do not for one moment believe. A British or German manufacturer, eager for exportation, has no bowels. We verily believe that if we could not pay for them, he would inflict on us the worst of calamities, by giving them away. Cheap foreign commodities are hard to bear, but what are they compared to foreign commodities which cost nothing?

We can hardly be wrong in assuming that "M. H.," who wrote in the *Times* of Tuesday on the constitutionality of Mr. Blaine's scheme, is Matthew Hale of Albany, a lawyer very competent to speak on such a question. Mr. Blaine's proposal is that the whiskey tax should be maintained, first, in order to build fortifications along the coast, and then, when this work was done, and the "National Government should have no use for the money, he would divide the tax among the Federal Union, *with the specific object of lightening the tax on real estate.*" In other words, he would actually raise a surplus by Federal taxation for the "specific object" of helping the owners of a particular kind of property to pay their State taxes! We do not believe any suggestion so extraordinary has ever before emanated from a public man outside District Assembly No. 49 of this city. No American politician has ever laid such an idea before his countrymen at large. As Mr. Hale points out, the Constitution empowers Congress "to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defence and general welfare of the United States"—for these purposes and no others. But here is a man whom one of the great parties is disposed to present for the second time as a candidate for the Presidency, who cuts out a platform for himself, under which Congress would levy taxes simply to help the owners of one kind of property to escape the burdens laid on them by their own States. We abuse Powderly, and Quinn, and their kind a good deal for their folly and ignorance of the laws, but, after this, how can we ever be hard on them again?

Of course, if Congress can tax us for one "specific object" of this kind, it might tax us for a dozen others. It might tax us to make good the losses of sheep-owners from dogs, or to help lower the railroad fares of the suburban population, or to supplement wages in the coal districts, or to provide everybody whose earnings are below $600 a year with a winter overcoat. There is no end to the folly or extravagance to which this theory of surpluses might not lead. And yet the business men of this great mercantile community will probably be asked next summer to put the author of this dangerous tomfoolery in the Presidential chair, and in the interval a vigorous effort will be made to disguise his silliness and ignorance by yelling "free trade" at everybody who warns the public against him. We say his silliness and ignorance, because the whiskey-surplus-in-aid-of-real-estate-owners plan is simply silly; while his notion that if the President's recommendations were followed, we should increase our imports from Europe in

woollen, cotton, and iron and steel goods "tenfold more" than our exports of every description, must be set down to pure ignorance. About the existing surplus he has not a word to say, except to "endorse Mr. Fred Grant's remark that a surplus is always easier to handle than a deficit," as if this were the only good and pertinent thing Mr. Fred Grant said in the late canvass. To our minds his remark on the stump, which he said he got from his father when out riding one day, that "those who rock the cradle rule the world," is a much more forcible argument in defence of a surplus than the one in which Mr. Blaine takes refuge, because it might be readily shown that a surplus is easier to "handle" than a baby, and that there are ten times as many people willing to do it. In fact, there is nothing in the world which so many people enjoy "handling" as a surplus.

The National Republican Committee have issued a call for a National Convention at Chicago at which only those "Republican electors who believe in the American principle of a protective tariff for the defence and development of home industries and the elevation of home labor," and who "would reduce the national taxes and prevent the accumulation of the surplus in the Treasury in harmony with this principle," are invited to be present or to take part in the election of delegates. They may believe in several other things which are specified in the call, but on the tariff only these views will be allowed. After this call had been issued on Friday, the Committee appointed a sub-committee to take charge of the Convention, composed of the following nine men: J. S. Clarkson, A. L. Conger, C. A. Hobart, Powell Clayton, Cyrus Leland, Church Howe, and N. W. Currey, B. F. Jones, and Samuel Fessenden. Eight of these nine are said to be Blaine men in the fullest sense of the term. Powell Clayton is the man who was chosen temporary Chairman of the Convention in 1884. A ludicrous attempt was made then to cover with a halo of military glory Clayton's record as a carpet-bagger by pointing to his loss of an arm, and asking the Convention not to "put down a man who carried an empty sleeve"; the fact being that he had lost his arm by accident. Clayton reappears now with the rest of the Blaine gang "in charge of the Convention," and that body is likely to be the most docile kind of a Blaine gathering ever assembled in the United States if they can have their way about it.

The report of the Secretary of the Treasury calls for little comment, since it follows pretty closely the lines of the President's Message. There are one or two points, however, upon which differences of opinion may be entertained among those who agree with the Secretary generally, and approve his recommendations as a whole. He takes the ground, for instance, that while the purchase by the Government of a $1,000 bond bearing 4 per cent. interest saves $800 in twenty years, yet if money is worth to the people as much as 5 per cent. in their business, there is really a loss of $200 instead of a gain of $800. In stating this view of the public-debt problem he assumes that "the average annual value of money to the whole people may safely be put at not less than 5 per cent." This is really an argument in favor of perpetuating the debt, or at least letting it stand until money in the hands of the people is worth less than the interest paid by the Government. Consequently, it is not quite logical to say, as the Secretary does in the next paragraph, that he is in favor of continuing the purchase of bonds for the sinking fund. In order that the Secretary's syllogism should stand on all fours, it should be stated that the money left in the hands of the people would in all cases be converted into capital and used reproductively at as good a rate as 5 per cent.; that none of it would be spent in drink or on luxuries, or lost in bad investments. It is quite certain that the sums paid in taxes and applied to debt extinction, are saved as effectually as though they were put in a savings bank that could never fail and that could always pay 4 per cent. interest. Is it quite certain that *all* the money left in the pockets of the people would be deposited in savings banks? Is it certain that all would be put in savings banks of this kind? If money is worth as much as 5 per cent. in the hands of the people, why do savings banks pay only 4 per cent. to small depositors and only 3 per cent. to the larger ones? Why do the people put their money in such banks at all if they can make 5 per cent. elsewhere? Where is the institution that will take all the money that people choose to deposit, at all times and seasons, and pay 5 per cent. interest on it, or 4, or 3, or even 2? These questions seem to show that one premise of the Secretary's argument is wanting.

Mr. Andrew Carnegie delivered some telling blows against Anarchy and Socialism at the "Nineteenth Century" Club last week, but none more telling than his calling attention to the published encouragement given to the Anarchists by the founder of the Club, Mr. Courtlandt Palmer, who, as Mr. Carnegie aptly observed, would himself be "a beggar" if it were not for the security of capital and rent. In fact, amateur Anarchists like Mr. Palmer, and clerical Anarchists like the Reverend Pentecost, do far more mischief than the real professionals like Most. They give an air of rationality and decency to the ravings of the professionals. Mr. Carnegie said one other most valuable thing, in protesting against the widespread notion that emigration only brings us "the scum of Europe." The fact is that it brings and has been bringing for two centuries, in the main, the most enterprising, energetic, and thrifty portion of the farming and laboring population of the Old World. It brings the men of ambition, who seek to better their condition, and are willing to toil and endure in order to do it. The Anarchists and other humbugs who have been arriving lately are mere froth on the surface of the stream. Herr Gronlund, who appeared at the Club to argue the case for the Socialists, seems to have disappointed everybody, as Socialists usually do when they undertake to show us how to be Socialistic. It is so easy to denounce capital and describe poverty, and so hard to explain to us how we are to reorganize society in such a way that human laziness and vice and folly shall not interfere with social happiness and prosperity. Small blame, therefore, to the brave Gronlund for having left his audience as wise as he found them.

Another clergyman is about to fall upon the hands of the Anti-Poverty Society for support. The Rev. J. C. F. Grumbine, of the First Universalist Church of Syracuse, has been asked to resign by his congregation because of his espousal of the McGlynn-George doctrines. This will make it necessary for the Anti-Poverty Society to start another service in this city with a collection. Mr. George and Dr. McGlynn have their regular evening service and collection, the Reverend Pentecost is to have a morning service and collection, and there is nothing for it but to give the Reverend Grumbine either a midday or afternoon service with a collection. There is evidently going to be a good deal of poverty to be abolished in this way before the winter is over.

High license is working in Pennsylvania as it does everywhere else. It is causing a great reduction in the number of saloons from the moment it goes into operation. The necessity of getting bondsmen who will become surety for the law-abiding conduct of those taking out licenses, is in its way as great a restrictive influence as the high fee. In order to keep a liquor-store in Philadelphia, for example, under the new law, a man must first pay a fee of $500 in advance. Then he must get two reputable freeholders of the ward in which he wishes to open his saloon, each of whom must own unencumbered real estate worth over $2,000, and must not be engaged in the manufacture of liquors, to go on his bond of $2,000. Then he must have his petition for a license accompanied by the certificate of twelve reputable electors of the ward that they have known him for six months, that they endorse his application and have signed no other such petition in that year. The bondsmen must be among these endorsers and must take oath to their endorsement. It is not surprising that in the face of such requirements the number of saloons in Philadelphia is being reduced enormously. In two of the worst wards of the city there were under the old law 569 saloons. It would require 1,138 separate bondsmen, with real estate worth $2,276,000, to permit all these to take out licenses under the new law, and there is not enough resident property in the wards to furnish them.

The requirement of bondsmen "who are not engaged in the manufacture of liquors" is one of the most direct blows which could be aimed at the liquor traffic. In this city, for example, very few of the ostensible keep-

ers of liquor-stores own them. The real owners are the brewers, who employ the keepers as their agents. Under the Pennsylvania law no man can hold a license for more than one saloon, or can get a license if he has any pecuniary interest in another saloon. This would put a stop to the brewers taking out licenses by the wholesale, in their own names, while the bondsmen provision would put an end to their taking them out in the names of men who were merely their agents. There has been no more prolific source of saloons than this wholesale ownership by the brewers and manufacturers. Combined with a low license fee, it has led to such an enormous multiplication of saloons that they are on nearly every street-corner, and are sprinkled all through the blocks in many parts of the city. In drawing a high-license bill for the next Legislature, the advocates of temperance in this State should take these Pennsylvania provisions into consideration.

The conduct of Mr. Steckler, one of the newly elected civil justices, in rewarding Barney Rourke for his campaign services by giving him a clerkship in his court, is merely a fresh indication of the dangerous extent to which our minor courts have come to be saturated with "politics" in its worst form. Rourke was a leader of the rival political party, but he sold out his party's candidate and worked for Mr. Steckler, and has now received his pay in the form of a clerkship. Such a man's presence as the official of a court is not only a scandal, but is a perpetual obstacle to the impartial administration of justice. It puts a trading politician in a position where he can be useful to his allies. In how many of the other civil-justice courts in the city such men are to be found we do not know, but a startling suggestion of the condition of affairs in our police courts is furnished by the single fact that every one of our eleven police justices is a district machine leader, and sits upon the police bench in the dual character of a district boss and a police magistrate. It would be difficult to conceive of a more pernicious combination of powers than that.

Now that the age of public men is made an "issue" by Mr. Lamar's nomination to the bench, it is interesting to recall the forgotten fact that a century ago, when the Federal Constitution was framed, the Constitution of New York made sixty years the limit of a judge's service, on the ground that after that period the decay of his faculties was likely to impair his usefulness. One of Hamilton's papers in the *Federalist* defends at some length the omission from the Federal Constitution of a provision for removing the judges on account of inability, and argues that the New York limit was unreasonable, inasmuch as "the deliberating and comparing faculties generally preserve their strength much beyond that period in men who survive it." The whole incident seems very odd to people of this generation, but it only illustrates in a striking way the lengthening of the period of human activity which has come about during the past century. The last judge who went upon the Supreme bench, Mr. Blatchford, like the one next to mount it, Mr. Lamar, had celebrated the completion of his sixty-second year, but they both find among their associates, with mental vigor still unimpaired, one of seventy-four and three of seventy-one. It is another evidence of the remarkable wisdom which characterized the framers of the Constitution, that they resisted the then natural temptation to place some arbitrary limit upon the period of a judge's service.

The failure of Plymouth Church to get Mr. Berry must seriously aggravate the difficulty of finding any one to take Mr. Beecher's place, because, now that it has been rejected by an Englishman, the offer of it will seem much less attractive to an American. The disposition of congregations in our great cities to go abroad for their pastors, which has been somewhat marked of late, seems to indicate that there is a greater flow of talent into the ministerial profession in England nowadays than in America. This, if true, is a social phenomenon of some interest; but it would take a good deal of space to analyze it.

President Carnot has at last found some one able and willing to form a Ministry in the person of M. Tirard. The difficulty he has met with in finding such a person, however, indicates pretty clearly that M. Tirard's Cabinet is a very fragile structure, and will not last long. In fact, no Republican Ministry can have much vitality without the support of the Extreme Left, which it cannot get, or of the Extreme Right, which, even if it could get, it would be afraid to accept. The Moderates are cut up into so many "groups" that cohesion is almost impossible, a fact of which all are so well aware that but few are willing to take office under them, through fear of the discredit of a short or fruitless term of service.

The latest appeal of M. de Lesseps for the privilege of issuing a lottery loan, in order to raise more money for the Panama Canal, is met by a crushing article from M. Leroy-Beaulieu in the *Économiste Français*. The most serious part of his criticism is the charge of lying which he brings against M. de Lesseps. He shows beyond a doubt that Lesseps, in his official communication to the Government asking for the lottery privilege, understated the present liabilities of his company by the large sum of 124,000,000 francs. M. de Lesseps, in this communication, stated his bond obligations to be 635,000,000 fr. But the official bulletin of the Bourse for the 12th of November, three days before the communication was written, gave a statement in detail of the company's listed and outstanding obligations, showing that they had reached the sum of 759,000,000 fr., exclusive of the share capital. To grant the request of M. de Lesseps for a lottery loan, says M. Leroy-Beaulieu, would be simply to give the moral support of the Government to the belief that the investment would be remunerative. The Government, he continues, would commit an enormous fault by sanctioning in any manner "the always lying promises of the company."

The main interest of the new fair-trade movement in England lies in the fear that it may lead to a dissolution. That it can lead to any change in British fiscal policy at present is, of course, wildly improbable. Nobody expects this. But it may lead to action in the House of Commons which would break up the coalition of Conservatives and Liberal-Unionists, by compelling the latter, who are all Free-Traders, to vote once more with the Liberals. This would undoubtedly compel a dissolution, and a dissolution is the thing of all things which the coalition dreads, and is determined not to have if it can be avoided. Fifty at least of the seventy Liberal-Unionists would lose their seats for their breach of their pledges to oppose coercion in Ireland, and this would turn the Tories out of power. Their calculation now is to keep this Parliament intact for its full legal term, that is, until 1890 or 1891, by which time, it is hoped, Gladstone will be dead or disabled, and the Irish question would then die out or be got out of the way, and the Irish, through the steady application of the Coercion Act, gradually grow peaceable and fond of the British connection. Hence the emphatic warning which Hartington gave the "Fair Traders" in his speech last Thursday.

The Court of Appeals in England has overthrown the somewhat famous decision of the Queen's Bench in the case of Mr. Bell Cox, the recusant priest. It will be remembered that Mr. Bell Cox ignored Lord Penzance's sentence of six months' suspension from his cure for alleged offences under the Public Worship Regulation Act, on the ground of want of authority of State courts in things spiritual, and thereupon was put in jail. At the expiration of the six months' period application was made for his release, with the argument that, the term of suspension having elapsed, Mr. Bell Cox could not possibly be offending against the sentence. Much was said on the other side about his conduct being a "continuing offence," and the imprisonment being of a penal nature rather than a mechanical or physical means of "suspension" from sacred functions; but the fact being that there was no other means apparent of ever releasing him, and his imprisonment having become an awkward scandal, the Court of Queen's Bench was glad to let him out, on the rather fine point which we have mentioned—that he could not be in disobedience towards a sentence which had expired. The Court of Appeals made short work of this, and held unanimously that the imprisonment was not a mere mode of making the sentence effective, but was of the nature of a penalty for past disobedience. The Court therefore discharged the rule for a habeas corpus, but the Master of the Rolls ventured the hope that Mr. Bell Cox would not be again imprisoned unless for some fresh offence.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 7, to TUESDAY, December 13, 1887, inclusive.]

DOMESTIC.

A GENERAL Christian conference, under the auspices and direction of the Evangelical Alliance of the United States, of which William E. Dodge of New York is President, and Rev. Dr. Josiah Strong of New York is General Secretary, opened in Washington December 7. The meeting lasted three days, and discussed measures upon which all Protestant denominations may be brought to unite to meet certain new and pressing emergencies which have arisen in connection with the great increase of wealth, business, immigration, the changed relations of labor and capital, and the great and growing percentage of our population who are not church members or attendants. The delegates were received at the White House, and President Cleveland made a speech, in which he said: "I am especially pleased to know that your efforts are not cramped and limited by denominational lines, and that your credentials are found in a broad Christian fellowship. Manifestly, if you seek to teach your countrymen toleration, you yourselves must be tolerant; if you would teach them liberality for the opinions of each other, you yourselves must be liberal, and if you would teach them unselfish patriotism, you yourselves must be unselfish and patriotic. There is enough of work in the field you have entered to enlist the hearty cooperation of all who believe in the value and efficacy of Christian teaching and practice. Your noble mission, if undertaken in a broad and generous spirit, will arrest the attention and respectful consideration of your fellow-citizens; and your endeavors, consecrated by benevolence and patriotic love, must exert a powerful influence in the enlightenment and improvement of our people, in illustrating the strength and stability of our institutions, and in advancing the prosperity and greatness of our beloved land."

The annual report of the Secretary of the Treasury shows the present surplus in the Treasury to be $55,258,701. The receipts were $371,403,277, of which $217,286,893 was from customs and $118,823,391 from internal revenues. The expenses were $315,835,428, of which the heaviest items were $75,029,101 for pensions, $38,561,025 for military expenses and rivers and harbors, $47,741,577 for interest, and $47,903,248 for the sinking fund. The increase of receipts over the fiscal year 1886 was $34,963,550. The increase in customs receipts was, in round numbers, $240,000, from internal revenue $2,000,000, and from the sales of public lands and profits on the coinage, $3,000,000 each. The increase in expenditures was $25,449,041, of which over $11,000,000 was for pensions. The decrease in the interest on the public debt was nearly $3,000,000. For the present fiscal year the revenues, actual and estimated, are $383,000,000, and the total expenditures, including sinking fund, $316,817,785.48; estimated surplus, $66,182,214.52.

The report of Mr. Endicott, Secretary of War, shows that on the entire Atlantic and Gulf coast line of 2,870 miles, and the northern frontier of 2,530 miles, the only armament is 142 rifled guns, of which 116 are obsolete and of very low power. The Secretary strongly approves of the recommendation contained in Gen. Sheridan's report touching the extension of all possible aid by the general Government to the National Guard of the different States, and suggesting a system of national encampments for State militia at the entire expense of the national Government. The report says that the results attained in the cavalry, artillery, and infantry schools of instruction justify the expectations of those who established them, and that "the results of the examinations for promotion under the civil-service regulations, which were applied to the War Department in May, were satisfactory. The total number of clerks examined was 1,014, of whom 963, or 95 per cent., passed; and of this number 353, or 35 per cent., obtained an average above 90 per cent.; 51, or 5 per cent., failed to pass, their average being less than 75 per cent."

Secretary Whitney's report was sent to Congress December 9. He says that, with the exception of two cases, the Department has practically abandoned the idea of the unprotected torpedo boat, but he recommends the continuance of experiments in submarine boats. He is opposed to any further appropriations of money for work on the single-turreted monitors. The Secretary recommends the construction of five new ships, as follows: Two armor-clad vessels to cost, exclusive of armament, not more than $6,000,000, one to be built by contract and one in the navy-yards, and three more fast cruisers of the highest type. He says that in six years only four of the present cruising ships will remain serviceable. In other words, the old navy will have disappeared. Encouragement of torpedo experiments is recommended, and suggestion is made that the course in the Naval Academy be reduced to four years.

Henry E. Williamson, the agent at the Crow Agency, has sent in his resignation at the request of the Secretary of the Interior, to take effect on December 31. Mr. Williamson is an uncle of Acting Commissioner of Indian Affairs Upshaw. His removal is the result of an investigation made by Inspector Armstrong during his late trip to the Crow Agency to investigate the causes of the outbreak there. The report alleges that Williamson neglected to comply with the Secretary's orders regarding the advertising of the grazing privileges on the reservation, thus leaving the monopoly in the hands of one syndicate of cattle men; that Williamson made a contract with two persons, named McCormick and McNutt, giving them the exclusive privilege to cut hay on the Crow reservation for sale to the army posts, out of which they made $15,000 a year, and it also makes personal charges.

The Senate Committee on Privileges and Elections voted Tuesday in favor of giving the West Virginia seat to Mr. Faulkner.

The important political incident of the week was a three-column interview with Mr. Blaine, reviewing the President's message, cabled from Paris to the *Tribune*. Mr. Blaine took ultra-protectionist ground, demanding the retention of the tariff intact, the repeal of the internal-revenue tax on tobacco, and the building of a system of coast defences which should use up the surplus. The interview appeared on the morning of the meeting of the Republican National Committee, and is supposed to have set the key for the call for the National Convention. There are indications of a split in the Republican party in the West on the issue. The Chicago *Tribune* repudiates Blaine's tariff programme, and the St. Paul *Pioneer Press* and the Omaha *Bee* endorse the President's demand for tariff reduction.

The Republican National Committee met at Washington December 8, and voted to hold the National Convention at Chicago June 19. The call contains this passage: "Republican electors in the several States and voters without regard to past political affiliations, differences, or action, who believe in the American principle of a protective tariff for the defence and development of home industries and the elevation of home labor; who would reduce the national taxes and prevent the accumulation of the surplus in the Treasury in harmony with this principle; who are opposed to the attempt, now more openly avowed than ever before, to establish a policy which would strike down American labor to the level of the underpaid and oppressed workers of foreign lands; who favor a system of naval and coast defences which will enable the United States to conduct its international negotiations with self-respect; who gratefully cherish the defenders of the country; who condemn and resent the continued and unjust exclusion of rapidly growing Territories, which have an indisputable title to admission into the sisterhood of States; who are in favor of free schools and popular education, a free and honest ballot and a fair count, the protection of every citizen of the United States in his legal rights at home and abroad, a foreign policy that shall extend our trade and commerce to every land and clime, and shall properly support the dignity of the nation and the promotion of friendly and harmonious relations and intercourse between all the States, are cordially invited to unite under this call in the formation of a national ticket."

Mayor O'Brien (Dem.) of Boston was reelected Tuesday by 1,800 plurality. Last year, with a Labor candidate in the field, he had 5,000. The Board of Aldermen stands 8 Republicans, 2 Independent Democrats, and 2 straight Democrats. The Common Council will stand 43 Democrats, 29 Republicans. This insures the continuance of the City Hall Ring.

New Haven gave a majority of 1,200 last week in favor of repairing the old State-house on the green, and against tearing it down. The effective argument was that the city needed more office room, and that the building needed only comparatively minor repairs to put it in good shape.

The General Executive Board of the Knights of Labor has sent out a "secret circular" in reference to the establishment of a Government system of telegraphy, and directs every local assembly to appoint committees and wait upon every Congressman in the separate districts and persuade them to vote for the measure. Powderly, the head of the Knights, is dangerously ill from a hemorrhage.

John Most, who had been found guilty of inciting to violence and murder, was sentenced to one year in the penitentiary by the Court of General Sessions December 8. The motion of his counsel for a new trial was heard and denied.

Henry S. Ives, whose railroad wrecking and failure were the financial sensation of the summer, was arrested Tuesday on a charge of grand larceny in connection with the affairs of the Cincinnati, Hamilton and Dayton Railroad.

E. L. Harper, the bank president who wrecked the Fidelity Bank of Cincinnati, was sentenced there December 12 to ten years in the Ohio Penitentiary. Motion for a stay was denied and the prisoner taken at once to Columbus and incarcerated. The trial of Hopkins, the cashier, is now in progress.

At the morning service in Plymouth Church, Brooklyn, Sunday, the Rev. Dr. Abbott read a despatch from the Rev. Charles Albert Berry of England, declining the pastorate of the church, on the ground that home claims made it impossible for him to come to America.

A special meeting of the New England Society, December 8, nominated this list of officers for the ensuing year: For President, ex-Judge Horace Russell; Vice-Presidents, J. Pierpont Morgan and Daniel G. Rollins; Directors, Woodbury G. Langdon, Henry E. Howland, Henry H. Bridgman, J. H. Horne; Treasurer, William Dowd; and Secretary, L. P. Hubbard. Judge Russell declined to serve another year, and Cornelius N. Bliss was nominated in his place. The election will take place Thursday.

The will of Mrs. Urania Battell Humphrey, widow of the late James Humphrey of the former law firm of Barney, Humphrey & Butler, who died recently in Norfolk, Conn., leaves $90,000 in charitable bequests, including $26,000 to Yale College.

Mrs. Charlotte Augusta Astor, the wife of John Jacob Astor, died Sunday, December 11. Mrs. Astor was born in this city sixty-one years ago, and was the daughter of Thomas S. Gibbes, a man of wealth and culture, who came to New York from South Carolina. Her mother was Miss Van der Heuval, a sister of Mrs. John C. Hamilton. Mrs. Astor was an accomplished and very benevolent woman. Her charities were varied and unostentatious, and amounted in money, it is said, to not less than $100,000 a year. She also gave much time and personal work to enterprises for the good of others. She had but one child, William Waldorf Astor, ex-Minister to Italy.

Arch-Abbot Boniface Wimmer, O. S. B., founder of the Benedictine Order in the United States, died at St. Vincent's Abbey, Pennsylvania, December 8, after a lingering illness. He was born in Bavaria in 1809, and came to this country in 1846 to establish the Benedictine Order. The first monastery was founded at St. Vincent's.

The Rev. Isaac S. Kalloch, ex-Mayor of San Francisco, died on Friday in Washington Territory. He attained sudden prominence for the second time in 1879, when he was shot by Charles De Young of the San Francisco *Chronicle*.

FOREIGN.

The excitement of the week at Paris culminated Saturday, December 10, in an attempt to assassinate Jules Ferry by a man named Aubertin. Aubertin appeared in the hall of the Chamber of Deputies and asked to see both M. Ferry and M. Goblet. M. Goblet did not respond to Aubertin's request for an interview, but M. Ferry did, and on his appearance Aubertin drew a revolver and fired three times at him. Two of the bullets struck M. Ferry. The first passed round the chest, slightly penetrating the flesh, and the second struck on the right side, near the lowest ribs, causing a contusion. The thigh was not penetrated, and the wounds are of the slightest character. The real name of his assailant is Berekein. He is twenty years of age. He states that he is one of a band of twenty revolutionists. The band drew lots, and it fell to him to commit the first crime. Berekein declares that he swore to kill M. Ferry. He was arrested.

The greatest European excitement of the week, next to the shooting of Ferry, was a war scare between Russia and Austria, which has been assiduously cultivated by the German press, but is now declared to have been baseless. The excitement was started by a movement of some Russian troops from Warsaw to the Galician frontier. Two war conferences were promptly held at Vienna, at which the Emperor presided, and the War Office then began taking measures permanently to increase the facilities by which troops can be mobilized and to place Galicia in a better position for defence. These preparations will enable a large force to be thrown into Galicia at the shortest notice. Well-informed persons in St. Petersburg assert that the Russian Government is entirely pacific, and that public opinion in Russia is also in favor of peace; that the Russian movements on the frontier consist merely of the despatching thither of a division of cavalry, not with an aggressive idea, but for the protection of certain localities. This explanation is accepted by the best-informed European correspondents, and at Paris the alarmist rumors were attributed to Berlin financiers operating for a fall in Russian securities, and to the desire of Prince Bismarck to obtain further military credits.

M. Tirard has organized a French Ministry, with the following members: M. Tirard, Prime Minister and Minister of Finance; M. Flourens, Minister of Foreign Affairs; M. Fallières, Minister of Justice; M. Sarrien, Minister of the Interior; Gen. Logerat, Minister of War; M. de Mahy, Minister of Marine; M. Loubet, Minister of Public Works; M. Dautresme, Minister of Commerce; M. Viette, Minister of Agriculture; M. Faye, Minister of Public Instruction. The new Cabinet held a meeting on Monday, when President Carnot read his message to Parliament. The message expresses the hope that the sentiment of conciliation will continue to prevail in both houses. The passage relating to France's foreign policy is couched in the most pacific terms. The Cabinet's reply to the message will declare that the Government's desire is to begin the exhibition year with peace abroad and concord at home, and will demand as a question of confidence three provisional credits. The Cabinet is a moderate Republican body.

The London papers have devoted more space to President Cleveland's message than to any since Lincoln's. The general feeling is that it deals a tremendous blow at the fair-trade or protection party. Nearly all the papers, of varying politics, concur in high praise of President Cleveland's honesty and straightforwardness.

The new English Parliamentary rules will require the House to meet at two instead of four o'clock, adjourn at seven for dinner, reassemble at nine, and sit till half-past twelve. At that hour, by a standing order, the question will be put from the Chair, and thus automatic closure will constantly be at work. More rigorous punishment will be enforced for wilful or systematic violations of the rules. The general management of business is to be referred in the first instance to committees, as in Congress.

Lord Hartington presided at the conference in Westminster Hall, London, December 8, of Liberal-Unionists. Many leaders of the party were on the platform. Six hundred delegates were present. The Earl of Derby offered a resolution in favor of increased exertions to strengthen the Unionist party. He said that the constituencies, especially those of Scotland, showed a marked increase of feeling in favor of the dissidents. The Irish question has been so prolonged that it is possible that the people might say it must be settled somehow; but they should be made to understand that the granting of an Irish Parliament would be no settlement, but only the beginning of an agitation as violent and troublous as the last one.

The delegates of the Scotch Home-Rule Union, who have been making a tour of Ireland, have returned to Glasgow, and report that the Irish people are eager for peace, that their demands are moderate, and that the National League is the chief agency for the maintenance of law and order. They say they are convinced that the Irish are home-rulers, and not separatists. No one in Ireland fears religious persecution. The delegates declare that the measures taken by the present English Government are ineffective, and irritate the mass of the Irish nation.

Mr. Edward Harrington, M. P., was tried in the Tralee Court, Ireland, December 8, on the charge of publishing in his paper, the *Sentinel*, reports of meetings of suppressed branches of the National League, found guilty, and sentenced to a month's imprisonment, but without hard labor. Notice was given of an appeal from the sentence. The jury at Dublin, December 7, brought in a verdict of acquittal in the case of O'Leary, one of the men charged with complicity in the murder of Constable Whelehan at Lisdoonvarna, County Clare. The Judge told the jury that there was no evidence to sustain the charge that O'Leary murdered Whelehan, and instructed them to acquit him. The Attorney-General announced that he would not proceed with a capital charge against any of the seven prisoners who were arrested for connection with the murder, but would have them all indicted for a misdemeanor.

The libel suit of Mr. Joyce, formerly agent for the Irish estates of the Marquis of Clanricarde, against the Marquis for $50,000 damages, has resulted in a verdict for plaintiff, who was awarded $12,500. Mr. Joyce resigned before the troubles with the Woodford tenants culminated in the imprisonment of Father Fahey and many of his parishioners for adopting the plan of campaign against the rents demanded.

The evidence Monday in the cases of Callan and Harkins, on trial in London as dynamiters, proved that drafts on New York were paid in London in favor of Melville amounting to £535. Notes were afterwards cashed signed by Cohen and Callan. Col. Majendie, Inspector of Explosives, declared that the dynamite found in Callan's lodgings was of American make

It is said that great pressure is being exercised to induce Mr. Gladstone to open another campaign, and that he refuses. He is immersed in literary work of various kinds, and will go to Naples in January.

In reply to an inquiry from Mr. Allen Thorndike Rice, on behalf of the *North American Review*, Mr. Gladstone has sent the following cable despatch: "I earnestly hope for an international copyright between the two countries, meaning simply for British works in America and American in Britain. As to substance: it should be copyright by royalty, not copyright by monopoly. As to method, I cannot believe it too difficult for practical men to adjust. As to objects, I not only think freedom will in this, as in other things, give the natural, which is the lowest legitimate price, but also regard the measure as a new and strong tie between the nations whose union I so heartily desire."

Mr. John Morley is seriously ill with an affection of the liver. All his political engagements have been cancelled. He is greatly prostrated, and has been growing weaker since Monday evening.

At the annual meeting of the Central Chamber of Agriculture in London December 7, many provincial delegates took part in an excited discussion over a motion favoring protection. The Right Hon. Henry Chapin, Conservative, member of Parliament for Lincolnshire, deprecated the placing of duties on cereals unless the agitation in favor of bimetallism and the abolition of bounties failed. The motion was carried by two to one.

The Berlin *Magdeburger Zeitung's* correspondent at San Remo says that, during the past few days, the physicians attending the Crown Prince have expressed hopes not only that his life will be preserved, but also that he will completely recover from his throat trouble. Prince William, at a shooting party at Spandau, given in honor of Prince Luitpold, said: "My father feels as well as he did in August last, while he was in Scotland, and he is firmly convinced in his own mind that he will return to Berlin perfectly restored to health." At a meeting of Freemasons in Berlin December 7, a letter was read from the Crown Prince saying: "With God's help I hope that at a not very remote period I shall again be able to reside in Berlin in the enjoyment of good health." Dr. Mackenzie contributes a long and minute history of the case to the London *Medical Journal*, at the conclusion of which he says: "Although the nature of the growth which has lately appeared has not been determined by microscopic examination, it presents every appearance of cancer."

The great scheme for a through Siberian railway from St. Petersburg to Vladivostock, the naval port on the Pacific, is making progress. Communication is already established with Ekaterinburg, and a line to Tiumen is in progress. That covers only about one-third of the distance, so that an enormous territory has still to be crossed.

The newly-elected Hawaiian Legislature has cut down the salaries of all State officials, and has materially reduced the King's salary

TARIFF MADE EASY.

One of the best results to be expected from the President's message is the extent to which the discussion of it during the coming winter will educate the public mind on questions of trade and taxation. It will be read by hundreds of thousands who, it is safe to say, have never before read anything whatever about the tariff. The elementary form into which it is thrown, too, will lead hundreds of thousands for the first time in their lives to think of the tariff as a subject with which plain men, as well as statisticians and manufacturers, are competent to grapple. The President has made it a question of practical politics, and it is through the discussion of questions of practical politics that the American people familiarizes itself with the more recondite matters of government. It was in this way that it was brought so far to understand the laws of currency as to make it easy for the Treasury to get back to specie payments. It was in this way that the public mind was cleared about the "labor problem" only two years ago. It will be in this way that the burden of taxation created by the war will be finally got rid of now. Probably ten times as much will be done during the coming winter for popular enlightenment on this subject, through mere household and newspaper discussion, than could be effected in twenty years through books, essays, or lectures.

How much need there is for popular education in this field has been strikingly illustrated by Mr. Blaine's recent despatch. How much he knows on any subject it is always difficult to determine, because he is just as ready to affect ignorance as knowledge when it suits his purpose. But the chances are that he does know that all international trade is barter; that no nation goes into the foreign market cash in hand as a householder goes to the butcher's; that every nation which buys goods pays in goods, and that gold and silver are only used to settle small balances when the year's accounts are made up. This is not one of the abstruse laws of political economy which are evolved in lecture-rooms from prolonged trains of reasoning. It is one of the facts of daily life with which everybody engaged in foreign trade is perfectly familiar, and which are published every quarter in the Custom-house returns.

Nevertheless, Mr. Blaine had no hesitation in the despatch in assuming that the American public were ignorant of it, and could be readily persuaded that it was possible for foreigners to dispose of enormous quantities of their merchandise in this country without taking away any American merchandise in return. With his usual looseness of speech, he even went so far as to indicate the kind of goods the foreigner would pour in on us if our tariff were lowered in the manner President Cleveland suggests, without accepting either our manufactures or our agricultural produce in exchange. He probably did not know exactly what he was saying when he put the increase of woollen, cotton, and iron and steel goods we should thus receive at "tenfold" what any possible increase in exports would be, but he said it, nevertheless.

Not only did he assume, however, that his public would not know that international trade was barter, and always and everywhere consists of an exchange of commodities, but he assumed that none, at least of his *Tribune* readers, would ask the simple and almost child-like questions: "If the foreigner sends us this immense additional quantity of goods, and will not take either our manufactures or crops in exchange for them, how are we going to pay for them? He surely will not leave them with us for nothing. If he will not take goods, he must insist on getting money, and where is the money to come from?" The answer is, of course, that we have not got the money and could not get it anywhere, because we need all we have for our domestic transactions, for, in fact, our daily purchases and sales. So that if we paid it out in one year for European goods, we should have to fall back on irredeemable paper for home use, and the following year we should have no money to buy anything whatever from the foreigner. Of course, after having "cleaned us out," the foreigner would bring no more of his goods here, any more than a butcher would pursue with his meat a customer who never paid his bills.

But Mr. Blaine presumed that his suggestion would not be thought out. He presumed that it would be accepted in the old way as the answer of a protector of American industry to the nefarious ideas of "a free-trader," and therefore not be examined minutely. But this winter, thanks to Mr. Cleveland, this sort of talk will be examined minutely by plain people. The debate will no longer be confined to manufacturers and college professors. It will go on in every farm-house and workshop in the country, and it cannot go on without the rediscovery of the true nature of foreign trade by the American people. And when they realize thoroughly that it is barter, that the foreigner never brings $600,000,000 of goods here, as he did last year, without taking $600,000,000 worth away, one other fact will be brought home to them with wonderful force and freshness, namely, that under our present tariff every time the American exchanges $100 worth of his merchandise for $100 worth of the foreigner's merchandise, he has to pay $40 as a kind of toll, under the name of "duty," for the mere privilege of making the trade. The $40 are not added to the value of the foreign goods; they are simply taken out of the value of his own, so that every dollar's worth of the foreign goods costs him $1.40. Plain people will ask this winter, with an eagerness they have never displayed before, "What are these forty dollars for? What use is made of them?" They will be told that they are used in part to pay the expenses of the Government and in part to "protect American industry." They will then ask what becomes of the balance, and they will have to be told that it is used to make "a surplus"; that is, to pile up in the Treasury a large sum of money, which no one knows what to do with, but which politicians will be delighted to spend in some way if the taxpayers choose to let them.

THE SURPLUS PARTY.

We have received a letter from a well-known Free-trader of what we may call the root-and-branch school—that is, the school which would, if it could, totally abolish the tariff to-morrow. He stands in the matter of import duties very much where the Abolitionists stood in the matter of slavery, and the Prohibitionists stand in the matter of liquor. He is opposed to all modification or compromise, and looks for victory for his cause solely to a *reductio ad absurdum*. He believes that the high-tariff men, if allowed to have their way, will pursue the logic of their theory to its last limit, and end by demanding total prohibition of foreign trade, and perhaps by trying it, and that then the country will be so disgusted that it will sweep them and their system out of existence. He, therefore, objects to President Cleveland's proposals as likely to postpone this most desirable consummation.

We think he is mistaken, for various reasons. The Protectionists will never get as far as total prohibition, because the United States will always need revenue, and customs duties will always be the simplest and easiest mode of raising it. On this point, too, most moderate men will be apt to agree with the tariff fanatics, so that the tariff question will probably always remain a question of more or less, of this or that, and can hardly ever become—certainly not in our time—a question of yes or no. The difference between slavery and the tariff, as objects of party attack or defence, is that anybody who undertakes to make the tariff prohibitory will have to provide something to take its place as a means of paying the national expenses. The Abolitionist was burdened with no such consideration. To those who asked how the South was to do without slavery, he had the ready answer—do as the rest of the civilized world does.

If there was any real disposition on the part of our tariff fanatics to travel in the direction which our correspondent indicates, they would show it now, and begin to call vigorously either for an advance of duties, or a total prohibition of foreign trade. But instead of pursuing the even tenor of their protective way, they are actually trying to turn themselves into what we may call a Surplus Party—that is, a party which maintains, for the first time in the history of civilized man, that the raising of money by taxation for no definite object is a good thing. Surpluses have been raised before now, but always as what in private life is called provision for a rainy day—that is, as the sinews of war in case of sudden attack by a foreign enemy. This has been part of Prussian financial policy since the foundation of the monarchy. It was part of the policy of the old Bernese oligarchy until Napoleon laid hands on it. In fact, it was the policy which nearly all mediæval sovereigns tried to pursue, though mostly without success, in the

days before national credit, and when the people were thought of by rulers simply as objects of taxation. They all tried to store up a little money, so that when the foe came upon them, as he was apt to do every year or two, he might not find them penniless. But their spendthrift habits were always so deeply rooted that a monarch with a treasure has always been a rare bird. Frederick the Great may be said to be the only one known in modern times, and his only close imitator was the Bernese aristocracy.

Our Protectionists have, however, struck out an entirely new idea. They are now advocating the yearly creation of a surplus, not to be stored up as treasure, but to be spent as fast as it is created; and they have not even taken the trouble to agree on what it should be spent before presenting their idea to the country. They do not want it for a large army; the largest navy they think of would not consume half of it for a single year, nor would the coast fortification which has occurred to Mr. Blaine as a good thing to spend money on. But neither he nor any of his followers seems to care one straw on what it is spent. They are quite ready to agree to any proposal, however extravagant, on this point. They will divide it again among the States, at the risk of seeing the States get into the way of letting the general Government collect all their revenue for them; or use it to fortify our coasts against imaginary enemies; or build a fleet which the country would never consent to maintain; or pay pensions on a scale that would raise our quasi-military expenditure to the level of that of France or Germany, and fill half the population with the expectation of getting at least partial support from the Government. In fact, about the disposition of the surplus they care little or nothing. The important thing with them is to have the taxes which produce it kept up.

Now this would be a distinctly new departure in American finance, as indeed in the finance of the civilized world. We have had surpluses before now, but they came on us as an accident, and were always received as a warning that taxes were too heavy, and needed to be reduced. The notion that a surplus is something to be sought after annually, and cherished as a sign of national health, is a new notion. It would even ten years ago have been treated as the notion of a crank and have been received with a smile. The readiness of the Republican party to adopt it, and to ask the industrious classes to submit to taxation for unknown purposes, shows with what rapidity any political organization travels into folly when it has begun to tax for anything but the payment of the ordinary and natural expenses of Government, as defined beforehand by bill or resolution. As soon as the Treasury is allowed to become in never so slight a degree a resort for people actually in distress, it becomes a resort for that still larger class which thinks it may be in distress some day, and finally for the mere jobbers and speculators, who like to know where they can lay hands on money whenever they "sight" a good thing.

EFFECT OF THE SHORT-HAUL CLAUSE.

The Report of the Inter-State Commerce Commission treats questions of public policy with greater freedom and breadth of view than was possible in their decisions on specific complaints. In their decisions they simply explain what the law is; in their report they also suggest what it ought to be. The Commissioners have already shown that they understand the difficulties of transportation law. They now show that they understand some still more perplexing difficulties of political economy.

In the first place, they have fully grasped the fact that the question of reasonable rates is not always, or perhaps generally, a question between railroad and shipper; it is quite as often a question between rival interests or localities. Many a time when the railroad is the nominal defendant in a case, the real defendant is some body of shippers or consumers for whose sake the existing practice has been adopted, and whom any enforced change will hurt far more severely than it does the railroad itself. Most of the people who voted for the short-haul clause had the idea that local shippers would gain at the expense of the railroads. As a matter of fact, the gain at the local points has been at the expense of competitive ones. In the majority of instances this result has probably been good. It did away with an inequality which was in large measure artificial. But it was not a gain to the shippers, as such, from the railroads, as such. It was, primarily and chiefly, a gain to some classes of shippers at the expense of others—a gain on the part of the country and a few of the largest cities at the expense of the trade centres of moderate size.

To the railroads it was often a matter of comparative indifference. Their readiness to comply with the law varied greatly in different localities. The Commissioners report that the short-haul clause is generally obeyed in the Eastern and Central States, but not by the Southern or transcontinental roads. This difference is partly due to the competition in the South and West of water routes or other carriers not controlled by the statute; but it is still more largely due to the comparative poverty of local traffic in those regions. "It is quite clear," say the Commission, "that the more powerful corporations of the country, controlling the largest traffic, can conform to the statutory rule with much more ease and much less apparent danger of loss of income than can the weaker lines, whose business is comparatively light and perhaps admits of no dividends, and the pressure of whose fixed charges imposes a constant struggle to avoid bankruptcy."

But a serious loss of income to the weaker railroads means a serious loss of facilities to the community which they serve. The old roads cannot raise capital for the necessary extensions. New roads which have been projected cannot be built. If a branch, when left without regulation, can just be made profitable, no one will think of building it when fettered by stringent laws. It was this which produced the failure of the Granger legislation in its more extreme forms. The loss from reduction of facilities was greater than the gain from reduction in rates. One of the most important functions of an intelligent commission is so to interpret and administer the law as to prevent the reaction from reaching this point. As long as the country gains at the expense of the distributing centres, the general effect is probably good, though here and there the evil may predominate. But when it results in a loss of railroad facilities, so that the gain of any shippers is at the expense of general development, the evil, as a rule, outweighs the good.

But how then, it may be asked, shall we account for the state of things in certain countries of Europe, where a system of something like equal mileage rates is enforced by law? So far from offering any difficulty, these countries afford the strongest confirmation of what we have said. It is true that in spite of the strict legal regulation, railroad profits in Germany are as large as in America; but railroad facilities are not. It is not merely that America has nearly five times as many miles of railroad in proportion to its inhabitants. This is natural, because America is a sparsely populated country. The striking fact is that America has three times as much train service per inhabitant as Germany, and this is something in which the denser population should have the advantage. For every 1,000 inhabitants the United States runs trains 9,700 miles annually, or, leaving out the Southern and Pacific States, over 11,000 miles; but Great Britain has a train mileage per 1,000 inhabitants of only 7,500, Belgium of 4,500, France of 3,550, and Germany of only 3,250. The meaning of these figures is, that if a country allows its inhabitants to pay for railroads in any way they can, they will have plenty of railroad service; but if they are only willing to let them pay under certain schedules, they must content themselves with less. America has more local discrimination than England, England more than Belgium, Belgium more than France or Germany. There is no corresponding difference traceable in the average charges, which are low in America and Belgium, and high in England and France. But there is a difference, directly corresponding to the amount of discrimination, in the amount of railroad facilities per head of population.

This is the final result of railroad regulation when carried out on too strict a system. It does not necessarily mean reduction in railroad charges or in the profits of such railroads as are built; but it does mean reduction in railroad facilities for the community. It is for the community to determine how far they will go in this direction. The short-haul clause, as interpreted by the Commission, goes to so short a length that the good outweighs the evil; as Mr. Reagan would have had us enforce it, the evil would have been far in excess of the good. But, in any event, the chief loss does not fall upon rich railroad corporations. It falls primarily upon minor distributing centres; in the second place, upon weaker railroads; and, finally, adjusts itself by a reduction of railroad facilities in the community as a whole.

IRRIGATION IN THE SOUTHWEST.

ENTERPRISES are on foot professedly for the irrigation of large hitherto arid tracts of New Mexico by huge canals, the headwaters of which are to be along the upper course of the Rio Grande. The Rio Grande can be tapped at almost any point (deep cañons excepted, and these are not many and not very long); and below the cañon beginning at San Ildefonso, and above the Jornada del Muerto, ditches may be run parallel to the river course at some distance from it for very considerable stretches. The advantage of such ditches for districts which until now have had to rely upon annual precipitation exclusively, is self-evident. There is, for instance, the level extending between the Sierra de Sandia on the east and the Rio Grande on the west, and from opposite Bernalillo to Bélén, which might be irrigated in this manner very profitably, at least along the line of the proposed canals. How far to the right (looking south) of that line the stream could be disseminated, is another question. But it is certain that the soil of that plateau or low "mesa" is fertile, or becomes fertile, as soon as it can be systematically watered. The same conditions obtain almost everywhere in New Mexico. Water is the great desidera tum. Even the notorious Jornada turns green when it rains, those portions of it excepted that are but heaps of gypsum or alkaline crusts bespattered with lava. The project seems, therefore, a good one, with promise of success; and if the necessary capital is secured, there should be no impediment to its speedy realization.

On the other hand, the volume of water carried by the Rio Grande is not large, it is even exceedingly small for a river of such length and whose fall per mile is so rapid for a certain portion of the (upper) course. After the stream leaves the San Luis Valley, that fall suddenly diminishes; between Peña Blanca and El Paso, a distance of over 300 miles, it is not over five feet per mile. This alone would have slight weight, but the nature of the soil on the river banks, and for some distance beyond, is extremely sandy; it swallows, so to say, the greatest portion of the current. South of the Rio Chama, not a single affluent of the Rio Grande reaches with its waters the main artery, except during heavy storms, when the little Santa Fé, the arroyo of Galistéo, the Jemez, the Rio Puerco, suddenly disgorge floods of turbid waters from an outlet which is usually dry, although, indeed, the "official" mouth, or confluence. The truth is, they all "sink" before reaching the main river. Nearly all the watercourses of the Southwest have this peculiarity, and the Rio Grande itself is sometimes no exception; some years ago it went perfectly dry for a short time at the Sabinal, and at La Joya, fifty miles below Albuquerque.

Under such circumstances the supply of water is small even for the people living along its banks. The query therefore arises: If a certain amount is taken out in order to feed a side channel of magnitude, will there be enough left for the "heirs, executors, and assigns" of those who have used the water for centuries, for the lawful owners of the soil and of the water-privileges pertaining thereto? Or will the effect of such a canal not be simply to turn the river into a new bed, producing tillable land in one place and laying waste what until now has been cultivable? In the present condition of the Rio Grande this result may be expected. True, land in the Rio Grande bottom is difficult to purchase; it is largely held by Mexican families who are not eager to sell their homes; and this, with the unsettled condition of land titles, is a drawback to impatient settlers and speculators. The channel proposed would help to remove such impediments, since it would lay waste such unpurchasable tracts, ruin their owners, and create a new Rio Grande bottom for a fresh stock of occupants. We do not wish to be understood as intimating that a scheme of that kind will ever be contemplated. All that we desire to show is how a canalization on such a large scale might possibly work in the Rio Grande Valley. There is danger of losing on one side what may be gained on the other.

The people who would be threatened with utter ruin by it are not defenceless, however. They have occupied the sites and used its water-supply all their lives; they have old titles—which the treaty of Guadalupe-Hidalgo sustains—to the soil and all the "appurtenances thereto," including the water. They certainly will oppose anything endangering these rights by all legal means, and their position must, in the end, be upheld by the highest courts. Litigation is sure to result from any attempt to turn off the current on a large scale. It will be the same if the attempt should be made in southern Colorado, for if the river is drained there, there is not enough water left south of it to irrigate. Only by saving the outside drainage through means of numerous large reservoirs established on the lower mountain slopes in New Mexico, so as to intercept that drainage before it can be absorbed by the sandy banks of the arroyos, can the water-supply of the Territory be augmented. That drainage is now almost completely lost to the country between the Rio Grande and the mountains. It reaches it only at certain seasons, and then for short hours only. If it were collected all the year round, and stored, it would suffice for the irrigation of the areas between the river and the high ranges, and produce a result which the projected canals will never achieve.

WORKMEN'S PENSIONS IN GERMANY.

IN the account of the German legislation for compulsory insurance which was published in the October number of the *Quarterly Journal of Economics*, it was said that a bill providing for pensions to workmen in case of old age or disability was in preparation. Provision is made by the acts hitherto passed only for the contingencies of sickness and accident; but it has been intended from the outset to provide also for old age and incapacity to work. The bill prepared by the Government for this latter purpose has now been printed. No doubt changes and amendments will be made before it finally becomes law, but probably the main features will be retained, and the last steps thereby be taken in this most curious and significant scheme of social reform.

The bill provides that all workmen who pass the age of seventy, or become permanently and completely incapacitated for work, shall have a pension. Like the previous acts, it affects only workmen, apprentices, servants, and administrative employees having a yearly pay of not more than 2,000 marks ($500). The pension to these is to be due, however, only if contributions, or, in ordinary insurance language, premiums, have been paid on their behalf during a certain length of time, which is to be thirty years in case of the pension for old age, and five years in case of that for disability. We say contributions must be paid on their behalf, for here, as in the case of the other insurance acts, contributions are paid only in part by the workmen themselves. Not more than one-third is paid by them; another third is paid by the employers, and the last third comes from the Imperial Treasury—that is, from taxation of the community at large. The pension in case of old age is 120 marks ($30) per year; that for disability varies from a minimum of 120 marks to a maximum of 250 marks ($62.50), according to the length of time for which contributions have been paid. The sums seem pitiful enough; possibly they have been made small intentionally, in order not to take away all incentive to independent saving or all occasion for calling on children or other relatives for help. The contributions per workman are fixed for the present at 6 pfennigs per day, or 36 marks ($9) per fiscal year. The employers have to advance two-thirds of this, or 4 pfennigs per day, but may deduct 2 pfennigs per day from the stipulated wages of the workmen, so that their net charge is 2 pfennigs per day. The rest of the contributions, as was noted above, is paid by the Empire. For women the payments are two-thirds of those for men, and the pensions correspondingly less. These contributions, or premiums, are, it should be said, merely provisional. Within ten years after the act goes into effect, a new and permanent scale is to be prepared, based on the experience of the workings of the act and of the sums it calls for.

The managers of the pension system are the *Berufsgenossenschaften*, or associations of employers, which were organized in order to carry out the system of compulsory insurance against accident. This utilizes the existing machinery, and effects an obvious saving of expense. The *Berufsgenossenschaften* are to establish separate accounts for the new system, and the funds are to be kept distinct from those collected for insurance against accident.

It does not appear when the act (supposing this bill to become law) is to go into effect. As was noted above, the bill prescribes payment of contributions during thirty years, before a pension for old age shall be due, and during five years in case of the pension for disability. This seems to in-

volve a preparatory stage of many years before the benefits actually accrue to the workman. It is likely, however, that some provisional arrangement will be made for bridging over the time before the scheme gets into complete working order, else the immediate object to be attained, the check to discontent and socialistic agitation, will fail for the time being. The remarkable skill, energy, and patience with which all these statutes have been carried through make it certain that the German legislators will not permit a long period to pass before the last measure of the series actually goes into effect. When this is done, the scheme for improving by compulsory insurance the lot of the poor will have reached its final shape, and will be fairly and completely in operation. What its ultimate result will be, however, cannot be judged with certainty until it has been tried on a generation or two of workmen; and only our children and children's children are likely to know—if, indeed, they know—whether the lot of the mass of civilized mankind can be alleviated permanently by these methods.

THE GERMAN SABBATH.

As everybody knows, Sunday is not kept as a day of rest on the Continent of Europe in the same sense in which it is kept in England or America. That is to say, even those Continental Protestants who think abstinence from toil, properly so called, on the first day of the week a religious duty, differ greatly from English and American Protestants as to the way in which those who abstain from labor should pass the day. The view of the more rigid English and American Protestants is, that not only are we bound not to follow our ordinary pursuits on Sunday, but we are bound not to amuse ourselves, and to confine our reading to religious or devotional books or newspapers. To this length the Continental Protestants—even that very rigid sect of them, the French and Dutch Calvinists—have never gone. They have always allowed "innocent amusements" on Sunday, meaning by that term, if we are not mistaken, all amusements which did not involve violent physical exertion or some form of gambling. The late Count Gasparin, for instance, was very much shocked by President Lincoln's going to the theatre, but it was to him no aggravation of the sin of going to the theatre to go on Sunday. We remember, too, being told by an eminent American divine of the shock it gave him when he first went to Germany as a young man, and delivered his letter of introduction to a prominent German Lutheran theologian, to receive a note from him appointing a meeting on Sunday afternoon in a beer-garden. The meeting took place, and they had a very interesting talk, with the accompaniments of beer and tobacco, without the slightest suspicion on the German's side that his young American friend saw anything unseemly in their surroundings. That the Anglo-Saxon Protestants should, under these circumstances—that is, with so little support from their brethren on the Continent, and with open opposition from the whole Catholic world—have been able to maintain the Puritan Sabbath, even as well as they have done, down to our day, shows the wonderful vigor and tenacity of their character and beliefs.

On one point they have undoubtedly been beaten by the course of events. Their prediction that popular morality would suffer greatly from the decline of Sabbath observance—that is, that as men became less ready to abstain on Sunday from all "worldly amusements," and to devote the day wholly or in great part to religious exercises, their respect for the elementary social virtues would diminish, and that Sabbath-breakers would on the whole be readier to cheat, and lie, and drink, and swear than Sabbath-observers—has not been justified by experience. There is little doubt, in fact, that the spread of the habit of devoting at least part of Sunday to simple recreation, in or out of doors, has done much to sweeten people's tempers and elevate their tastes. In the old days, when the Sabbath-breaker was obliged to conceal his frailty or revolt, he was apt, as in Scotland, where Sunday used to be, and perhaps is, a great day for private drinking among the ungodly, to pass the day in a state of mind which stimulated or fostered all his baser inclinations. From his present freedom to enjoy himself publicly in his own fashion without incurring serious social discredit, he derives at least cheerfulness, and a sort of kindly respect for those who keep the Sabbath without outward signs of condemnation for those who do not take the same view as themselves of its nature and obligations.

But on one other point the friends of Sabbath observance have undoubtedly found themselves somewhat justified by experience. They have always maintained that if Sunday were not kept as a sacred day, its retention as a day of rest from toil would prove very difficult. In this they are apparently right. In all the Continental countries, along with readiness to be amused on Sunday comes also readiness to work. It seems difficult, if not impossible, to enforce a rule which allows people to play lawn tennis, or go to the theatre, or sit in beer gardens, but forbids them to work in factories or keep their shops open. The experience of Germany, which has recently been collected, though in a somewhat imperfect way, by a Prussian Government investigation, seems to contain a great deal of instruction on this point. From returns obtained from thirty out of thirty-five provinces or departments, containing 500,156 manufacturing establishments and 1,582,591 workmen, it was found that 57.75 per cent. of the factories kept at work on Sunday. On the other hand, the larger number of the workmen, or 919,564, rested on Sunday. As regards trade and transportation, it was found that in 29 provinces (out of 35), of 147,318 establishments of one sort or another, employing 245,061 persons, 77 per cent. were open on Sunday, and 57 per cent. of the employees worked on that day.

This state of things has led to a demand in Prussia for legislation absolutely prohibiting Sunday labor. With a view to such legislation, a canvass of the persons interested, both employers and employed, has been made. They were asked whether they were in favor of or opposed to total prohibition. It was found that of those consulted in the great factories or stores only 13 per cent. of the employers and 18 per cent. of the employed were in favor of total prohibition. In the smaller industries only 18 per cent. of the employers and 21 per cent. of the employed were in favor of total prohibition. In trade only 41 per cent. of the employers and 39 per cent. of the employed, and in transportation only 12 per cent. of the employers and 16 per cent. of the employed were in favor of total prohibition. These are very curious figures, and have been tabulated by M. Maurice Block with some care. It is difficult to say how many things they prove, but they prove one thing with tolerable certainty, and that is that the footing of Sunday as a day of rest is almost as precarious in Germany as its footing as a day of religious observance.

THE REVISED CONSTITUTION OF THE NETHERLANDS.

BERLIN, November 24, 1887.

AFTER a contest extending over four years, the revised Constitution of the Netherlands has been adopted by both chambers, and has received the royal signature. Its formal proclamation will take place December 1, and the special election of a new Parliament to confirm it will take place four months later. The reasons which led to this revision were the necessity of regulating the descent of the crown in case of the death of the young Princess Wilhelmine, the redistribution of electoral districts, owing to a change of population, the extension of the suffrage, additional powers necessary to deal with socialistic agitation, and the question of compulsory military service and of national defence. The Constitution has not simply received additional articles, but has been subjected throughout to a careful restatement; and while the substance is essentially the same, slight changes, omissions, and additions have extended to 125 of the 197 articles. Some of the articles are far-reaching in their consequences, and the passage of chapter viii., relating to the national defence, was uncertain until the final vote in the Upper House.

The original Constitution of the Netherlands was adopted in 1815, and the present Constitution after the reform agitation of 1848. The new Constitution, although adopted by more than a two-thirds vote in both houses, must now be subjected to the popular judgment, and ratified by a similar majority in a new Parliament elected expressly for this purpose. There is a striking analogy in the steps by which changes are made in the Constitution of the Netherlands, and the provisions by which amendments are made to the Constitution of the United States, and of some of the separate States. As the First Chamber is chosen directly by the estates of the different provinces, and the Second Chamber by direct popular vote, the voice of the separate governments, as well as the voice of the people, is taken in the ratification of the Constitution. On the adoption of amendments to many of our State constitutions, the people vote directly upon the merits of the proposed amendment, and not, as in the Netherlands, by representatives chosen for that purpose.

The present Heemskerk Ministry came into power as a Conservative Ministry in 1883. The former Ministry of Van Lynden was defeated on a motion to extend the suffrage. Heemskerk

saw that in order to retain power his party must adopt many of the reforms demanded. He immediately proposed the appointment of a committee which should not only consider the question of the suffrage, but should suggest other changes in the Constitution. The Committee consisted of the Minister, Heemskerk, and seven Conservatives and seven Liberals. The first question which demanded solution was that of the succession to the throne. Many of the provisions were vague and difficult of interpretation. The death of the Crown Prince William in Paris, followed by that of his brother Alexander, transferred the succession to the young Princess Wilhelmine. The House of Orange-Nassau was thus left without a male descendant, the son of an heir to the throne. The King's nearest relative and, next to the Princess Wilhelmine, the legal heir to the throne, is the Grand Duchess Sophie of Saxe-Weimar. Here a difficult question arose. According to the Constitution of the Netherlands, every heir to the throne who marries without the consent of the States-General forfeits his claim to the crown. The Grand Duchess Sophie received the consent of the States-General upon her marriage, but her son, the Hereditary Prince of Saxe-Weimar, who had then no prospect of ascending the throne of the Netherlands, married without the concurrence of the States-General. In case of the death of his mother before the Princess Wilhelmine, the crown would be left without a legal heir, or a dangerous conflict might arise and lead to foreign intervention.

The literature to which the controversy regarding the succession has given rise is very extensive. Leading scholars have argued the question from the standpoint of Roman law, of Salic law, of the laws of contemporary descent in other European States, and from patriotic considerations. The Dutch statesmen have always been shrewd to forecast political contingencies which might interfere with their national independence. In case the crown should not devolve upon the descendants of the Grand Duchess of Saxe-Weimar as the sole remaining heir of William II., the succession must be sought in the descendants of other children of William I., viz., in the children of Prince Frederick or of Princess Marianne, who married Prince Albrecht of Prussia, brother of the Emperor Wilhelm. The present representatives of Prince Frederick are the descendants of his daughters, one of whom married Karl XV., King of Sweden, whose only daughter married the present Crown Prince of Denmark, and the other the Prince of Wied. The Prussian heir to the throne would be Prince Albrecht, the present Regent of Hanover, as belonging to the oldest female line. The same provision of the Constitution which would prevent the succession of the children of the Grand Duchess of Saxe-Weimar would exclude these other heirs.

The Constitution provides that in case of a failure of male descendants of the House of Orange-Nassau, born of male heirs to the throne, the crown passes to the female line nearest related to the last King; but it cannot pass to a younger line so long as there are descendants of the older branch or line. The King can wear no foreign crown. By the new Constitution it is provided that in case the crown passes to a side line, the provision of the Constitution requiring the consent of the States-General to the marriage of an heir to the throne shall apply only to marriages contracted after that event. This secures the succession to the Saxe-Weimar line in case of the death of the Princess Wilhelmine, or in case she leaves no descendants. The next in order of succession is Prince Albrecht of Prussia, and after him the children of the Princess of Wied.

The number of members of the First Chamber is fixed at fifty instead of thirty-nine by the new Constitution. The increase of representation is greatest in North and South Holland, where the great commercial cities of Amsterdam and Rotterdam are situated. In place of six and seven members respectively, the number is now nine and ten for these two provinces, increasing their relative importance from 33 to 38 per cent. of the whole Chamber. These States have always exercised a leading influence in Netherland affairs. Of the remaining nine provinces the representation of North Brabant, Gelderland, Friesland, Groningen, and Drenthe is increased by one member each. The members of the First Chamber are chosen, as formerly, for nine years by the different provincial assemblies; the election of members is no longer confined to those who are most highly assessed, but those who have held certain high public positions are eligible as candidates. A third of the Chamber is elected every three years.

The number of members of the Second Chamber is raised from 86 to 100. One member was formerly elected to every 45,000 inhabitants; the number of members is now limited to 100, and distributed according to the number of inhabitants. Members of the Second Chamber must be thirty years old, and are chosen for four years. Their salary is 2,000 florins, with travelling expenses. One-half of the Chamber no longer retires at the end of two years.

The reform of the suffrage has excited more popular interest than any other question associated with the revision of the Constitution. The programme of the Radicals is universal suffrage, compulsory school attendance, personal military service, the abolition of State support of religion, and a law controlling manufactories and for the protection of workmen. Such sweeping changes are contrary to the traditions of the Government, in which the aristocratic and conservative element has held sway for so many hundred years. In the new Constitution the provision imposing a property qualification upon voters is omitted. Heretofore no one possessed the right to vote for members of the Second Chamber unless he paid a direct tax of from 20 to 160 florins, according to the law of the district where he resided. By a provisional electoral law embodying in part the features of the new Constitution, the number of voters is raised from 136,000 to 350,000. This is far from universal suffrage in a country with a population of 4,336,012, and with 800,000 men of legal age to vote. By removing the restriction upon the right of suffrage from the Constitution, it rests with the States-General at any time to extend still further the right to vote. The age of electors, however, remains fixed by the Constitution at twenty-three years.

The question of national defence in the presence of the vast armaments of Europe, and of the extensive fortresses which Belgium has begun on the Dutch border, has occasioned earnest discussion. Corresponding military preparations mean an increase of debt and accompanying taxation and compulsory military service. The present Constitution provides that the King shall see that a sufficient land and naval force is kept in readiness; also, that a volunteer militia shall be maintained. In case of the lack of sufficient volunteers, a draft may be made from all those who have reached twenty years of age. The new Constitution provides that a land and marine force shall be maintained of volunteers and of those *liable to military service*, which shall be regulated by law. The old provision that those liable to service cannot be sent to the foreign colonies of the Netherlands is retained. The provisions respecting a national volunteer militia are omitted in the new Constitution, although a kind of Landwehr for defence will be maintained by the communes or districts. The Minister of War announced, on the passage of this section, that arrangements had already been made in his bureau to carry out these provisions.

Article 187 of the new Constitution provides that the King can declare any district in a state of siege, during which the administration of public order may be intrusted in whole or in part to the military authorities. Power is thus conferred on the Government to deal with any socialistic outbreak.

Among the features of the Constitution which are noticeable, either from their correspondence to the usages of our own country or as presenting distinct features, are the following: Courts are declared open, but the right to hold a non-public session in the interests of order and morality is conceded to the Judge. All decisions and the reasons for them, however, must be publicly pronounced. All breaches of trust or official misconduct on the part of ministers, royal deputies, governors, members of the States-General, and other high officials are brought directly before the Supreme Court (Hooge Raad), either upon the initiative of the King or of the Second Chamber, *during, as well as after, their resignation of office.* Ministerial responsibility is provided for, and the presence of the Ministers in the Chambers can be required. While public sessions of both Chambers are held, one-tenth of the members can require a secret session. The article which made the King and members of the royal family amenable to the Supreme Court is omitted. The Supreme Court has an oversight of the administration of justice, but there is no appeal to it in the case of offences tried by military law, or in questions of military discipline. The security and equality of all before the law, whether native or foreigners, is one of the first articles of the Constitution. Only in times of great national excitement, when the Government is passive in the presence of popular feeling, could such persecution exist as is manifested in the present *Deutschhetze* in France.

The recent rumors of the illness of the King of the Netherlands have revived popular discussion of the future sovereignty of the Grand Duchy of Luxemburg. The relation of the King to Luxemburg is a purely personal one. Luxemburg was granted to William I. by the Treaty of 1815, as an indemnity for the loss of his Nassau lands, which he had been forced to resign. By a family treaty of 1783, between the two branches of the House of Nassau, the Otto and the Walram lines, it was provided that in the succession to the throne of Luxemburg the agnatic rights of the Duke of Nassau should be respected. This was recognized later in the London Conference of 1839, which was called to settle the relations between Belgium and the Netherlands. By this treaty the King of the Netherlands was forced to cede a portion of Luxemburg to Belgium. He was obliged also to secure the renunciation by the Duke of Nassau for himself and his successors of any claim which they might subsequently urge upon this territory. This was granted by the Duke with the express stipulation that any rights which he might subsequently possess on the rest of Luxemburg should remain unimpaired.

The question has been recently raised whether Prussia, as the heir of the sovereign rights of Duke Adolf in Nassau, would not, in virtue of this succession, possess a valid title to the throne

of Nassau. But the succession to Luxemburg is not derived from the possession of Nassau, but is based upon the rights of the Duke of Nassau as nearest agnate of the House of Orange-Nassau, which were not affected by the Treaty of 1867 between Prussia and the Duke of Nassau. In 1885 a Dutch Minister, having proposed to take measures to perpetuate the relation of the crown of the Netherlands to Luxemburg, was informed by the King that the latter had signed the Treaty of 1867 between Prussia and Nassau, and that he wished the Family Treaty of 1783 to be observed. This settles the question of the right of Duke Adolf of Nassau to the throne of Luxemburg upon the death of the King of Holland. Prussia will thus practically acquire possession of Luxemburg in its possession by a German prince. In case the crown of the Netherlands should pass to the House of Saxe-Weimar, a German prince would become ruler of this country. What remote consequences might be connected with either one of these transfers, cannot now be determined.

W. T. H.

"ŒDIPUS" AT CAMBRIDGE.

LONDON, November 28, 1887.

A NOT unimportant topic of the day in London is what the *Times* of Wednesday noticed at great length under the caption of "Œdipus at Cambridge." Of the other newspapers, however, not a few failed to send reporters, and made no extended mention of the performances, which began on Tuesday last and continued through the week. This comparative indifference in some quarters shows that the academical representation of a Greek tragedy has ceased to be a nine days' wonder. These performances have found their proper and permanent place, and they have a public of their own. The treacherous preëminence of a fashionable "fad" they have lost, and it is to be hoped they never may regain it.

Upwards of six years ago this same play was given at our own Cambridge, and it is therefore not necessary to dwell upon the afflictions of *King Œdipus* which are its theme. Mr. Stanford's musical interpretation, the power of which effectually swayed all moods on Tuesday last, treated too hopefully the mystery and gloom of heaven-sent pestilence which overhangs the outset of the play. Had the stage of the Theatre Royal in Cambridge offered room for the solemn entrance of Theban suppliants in mournful progress towards the altars of the gods, then the composer's beginning would no doubt have given fuller expression to the universal woe of Thebes. In this respect Mr. Paine, at Cambridge, in America, was more fortunate than Mr. Stanford has been. Mr. Stanford's overture is brightened by a leading *motif*, which recurs ever and anon during the course of the play, and, unfinished and uncertain at the first, becomes each time more certain and more sad. This pathetic progression begins with notes that echo from the shepherds on the far-off hills, from the uplands of Cethæron, where *Œdipus* once lay so near to death. They recall the Alpine sweets and freshness that breathe from Rossini's overture to "William Tell." This melody escapes pursuit at first only by its elusive recurrence to tempt the hearer on and on till he sits surprised to hear its burden all of woe. Surprised, indeed, but never for a moment overwhelmed. As before suggested, Mr. Stanford's music offers alleviation rather than interpretation to the horror of the woes of *Œdipus* and all his house. The very effectiveness with which this is done interferes somewhat with the intensity of the climax. Mr. Stanford does not help the heavens to fall when *Œdipus* discovers and despairs.

Mr. Stanford's choral masterpiece is the song of the chorus which brings to fullest expression the anti-climax in the plot. Just before the whole mass of accumulated misfortune heaps itself upon *King Œdipus* and ends all hope, there is a moment made for joy—a breathing-space before the tragic end draws near. Here the movement of Mr. Stanford's choral song is *allegro vivace*, and the evolutions of the chorus while singing indicate gladness—perhaps even greater gladness than was here provided for them by Sophocles in the play. In Mr. Paine's "Œdipus" music, on the other hand, the most breathless and thrilling moment was—as is well remembered by those who heard it—the choral song that came immediately after the complete discovery of his woes by *Œdipus*. The relentless forward onset of unfearing and unfavoring fate was borne in upon all hearers by the power of Mr. Paine's interpretation of "Woe is me for you, sons of men!" Mr. Stanford's music was hardly adequate here. Nevertheless, he has earned the lasting gratitude of all scholars for the wonderful care with which he follows in detail the movement of the Greek choral rhythms. It is like borrowing a new sense for the appreciation of poetic form to hear Mr. Stanford's music with close reference to the Greek. Here, and here only, is the right way to teach the more complicated Greek metres. Indeed, no one without fondness for music and some knowledge of it is qualified himself to enjoy, or to help others to understand or enjoy, the choral odes of Greek tragedy. This must be plain to any one who, after hearing Mr. Clark's music for the "Acharnians," an American performance not to be forgotten, takes pains to appreciate Mr. Stanford's most scholarly work.

That the latter has studied his Wagner, and to great advantage, abundantly appears, not in the overture only, but also in the "incidental" music. Perhaps the most marked and magical effect thus obtained was in the trochaic dialogue between *Creon* and *Œdipus*, just at the close. These Mr. Stanford accompanied with short snatches following in the train of each speaker's thought. Thus he aided marvellously the consolatory effect which the playwright intended. Another point where Mr. Stanford excelled was in the dramatic cries of rhythmical horror with which the chorus turned away from *Œdipus* as he entered with blinded and bleeding eyes. Furthermore, his music bridged the difficulties resulting from the adoption of a modern subdivision of the play. This subdivision made the rising and falling of a curtain necessary, and involved repeated entrances and exits of the chorus. All these, with help from the music, were most smoothly and admirably managed. In Sanders Theatre, at our American Cambridge, it would have been impossible—without the greatest difficulty—to have subdivided the play in this fashion. It is therefore well that no attempt was there made to do this or to use a curtain. One further point of essential difference between the American representation and the English one connects itself, as do many others, with the near approach of the ground plan of Sanders Theatre to what we suppose to have been that of the theatre of the Greeks. The chorus was enabled to stand wholly aloof from the actors on the stage. On the other hand, on Tuesday last the many entrances and exits of the chorus had to be made, for lack of independent means of approach, just where the principal actors came and went. Thus the chorus was absorbed, so to speak, into the action of the play. They could not with any plausibility hold aloof from the proceedings on the stage, and intervene only in a formal way by the utterances of their leader. Hence the chorus at the Theatre Royal recalled very often the conventional chorus of modern opera. To give one instance out of many: when *Œdipus*, not dreaming yet that *Laius* was his father, first fears that he may himself be the murderer, the leader of the chorus ends his comforting lines with the words, "Have hope." Last Tuesday the chorus in a body echoed these words, "Have hope." This was certainly effective, as were often the sympathetic gestures by which the chorus expressed their concern in the progress of the action. Their countermarchings, too, which accompanied the choral songs, were often very finely conceived, and always smoothly executed, but this, once and again, savored of the cut-and-dried machine emotion of the chorus in Italian opera.

As far as quality of voice and distinctness of musical enunciation go, the fifteen members of the chorus left little or nothing to be desired. Mr. Ottley of Trinity, their leader, had an exceptionally agreeable voice in the declamation which fell to his share. At the same time it was a blemish to one's enjoyment of the play that the chorus had always to stand half on the right and half on the left side of the front stage, and the leader's position, with the left half always, interfered sometimes with the best effect of his intervention in the dialogue.

As for the acting of the play in detail, *Œdipus* must be mentioned first because of the almost superhuman length and the quite superhuman difficulty of the part. Mr. Randolph of Trinity bravely undertook this arduous rôle, and he deserves many compliments. The first of them is not all his, for it belongs in part to his clothes. He looked as he entered "every inch a king." His acting, however, was not kingly through all the first part of the play, even up to the moment of *Jocasta's* first entrance. Neither did he bring out the darkest side of *Œdipus's* character. Sophocles endowed this King with a certain elemental truculence which does not forsake his *Œdipus* even at Colonus, when he is blinded and exiled in old age. This quality Mr. Randolph did not adequately bring out, either in the utterance of that fearful imprecation upon the unknown slayer of *Laius*, or in the violent altercation with *Tiresias*, or even in *Œdipus's* one-sided quarrel with *Creon*. But Mr. Randolph's acting certainly was admirable in its indication of the unconsciousness with which *Œdipus* first speaks of the murder of *Laius*, and in the scene in which he recounts to *Jocasta* his actual commission of that crime. Here Mr. Randolph's acting resembled nothing in the American play, and here it was truly excellent. At the climax, where *King Œdipus* discrowns himself and breaks utterly beneath the weight of heaped-up misery, Mr. Randolph's manner and his voice fell far short of the tragic power which Mr. Riddle showed at this, one of the most thrilling points in the play.

If I had not seen Mr. Opdycke's *Jocasta* at Sanders Theatre, I should maintain that no amateur performance of the part could give as much satisfaction as that of Mr. Platts of Trinity gave last Tuesday. As it is, I will only record my delight in having seen the part twice acted, and each time so admirably. The two conceptions of the rôle were so different that there is no sufficient basis for comparison. Mr. Platts had perhaps the more adequate appreciation of *Jocasta's* religious awe and fervor at the point where she enters to make propitiatory offerings. Mr. Opdycke certainly was more dramatic at the desperate moment of *Jocasta's* final exit.

In the part of the messenger from Corinth Sophocles gives the same relief from the tragic tension of his plot that is afforded by the guard in the "Antigone." Mr. James of Kings certainly achieved a triumph here. Like Mr. Platts—who took the part of *Clytemnestra's* ghost in the "Eumenides"—Mr. James "has trod ere now the buskined Cambridge stage." There is something in his way of using the English pronunciation of Greek that conciliates the restiveness of ears that rebel against it as most use it. *Creon's* part was played with much ease and grace, but with rather too much kindliness at the end, by Mr. Miller of Gonville and Caius. Mr. Head of Trinity was hindered now and again by his lines in the part of *Tiresias*, and Mr. Ford of Kings did not quite adequately depict the baneful harms of pestilence at Thebes. Mr. Smith of Trinity, as the messenger from the Palace, gave his lines with spirit and effectively. There was, to be sure, a very pardonable lack of perfect ease during and after his long speech.

As to the stage setting, Mr. O'Connor's façade was beautiful, and would have been more so if the size of the stage had allowed him greater height. It was perhaps a mistake to make room for oleanders and stone pines, since these certainly added to a perceptible crowding and cluttering of the scene. Perhaps, though, the façade would have seemed too near the front of the stage in their absence, and certainly it would have seemed higher but for the large-limbed youths who appeared as the evidently able-bodied guards of *Œdipus*. These mutes were one of the great delights of a most delightful representation—they might have stepped on to the stage from Athens in the palmy days of Pericles, when her young men were most comely and well trained.

In closing, I would say that the difference between the two representations of "King Œdipus"—apart from the music, of which I have already spoken—is the difference between painting and sculpture. The American play was sculpturesque, and the English play was picturesque. The Harvard performance, coming directly after the first of them all—the Oxford "Agamemnon"—attempted much that has been neglected by the Committee in Cambridge. This neglect is evidently the result of a long experience in giving play after play, and is abundantly compensated for by achievements in new lines. The best and the most hopeful feature in this last performance is, to my mind, that the Committee have dared to treat the play as their own. In the scenery and the succession of delightful pictures which the stage offered as the play progressed, the presence and the power of contemporary English art were felt. Petty archæological anxieties have apparently less hold upon the Committee from year to year, because, by a large-minded use of modern stage effects, enthusiasm and interest can best be maintained. Thus, it would seem, and hardly otherwise, can we be sure of the yearly performance in Greek of a Greek play.

Correspondence.

THE PRESIDENT'S MESSAGE.

To the Editor of The Nation:

Sir: President Cleveland's message upon the opening of the Fiftieth Congress must be to all honest men a triumphant declaration of high principle and right-minded policy. It is, as it were, a battle-cry of freedom such as has not been heard since the days of slavery. It calls upon Congress to act, and no longer to falter, delay, and attempt to propitiate. It shows the danger of the country, and that the danger is real and present, and not theoretical. It shows, also, that over 14,700,000 workingmen are taxed and oppressed for the sake of an apparent benefit to about 2,600,000, and yet even with this enormous preponderance against any even apparent benefit accruing through protection, it advises generous legislation, so as not to injure this small minority. No sentiments more honest, more able, and at the same time more generous have ever emanated from any of our public representatives.

It must seem to all who read and think over this message that there can be but one opinion upon it, and that there should be a general and unanimous uprising throughout the whole country to sustain its Chief Magistrate, and demand immediate and proper legislation upon the vexed subject of the tariff in accordance with the views expressed in his message. Still, there are many blinded by prejudice, and more, perhaps, by interest, who can and will see no good from any one holding views opposed to protection; and it is now incumbent upon the people of the United States, and particularly upon those who had the honor of electing Mr. Cleveland, to show how small and how weak is that prejudiced and interested party which, by virtue of possession, has for many years been able to oppress the mass of the people of this country. No discussion should be feared or avoided, for though the protectionists may boast that they have the wealth of the country to support them, their opponents have the brains, and, what is much more important, the honesty of the country to oppose thereto. Can there be any doubt as to the result of such a contest?

J. H. L.

Philadelphia, December 7, 1887.

To the Editor of The Nation:

Sir: If I had any lingering doubts about the wisdom of voting for Mr. Cleveland, they would have been wholly dispelled by this last message. There is a chorus of satisfaction among all the friends with whom I have talked upon the subject. Instead of generalities upon the condition of all creation, with a strong intimation of how much it has benefited by his holding office, the President throws everything else aside, goes straight at the one subject of deep and immediate importance to the nation, and does not disguise its seriousness. Instead of facing both ways in view of the near election, and striving chiefly not to alienate anybody, he strikes straight out, and does not shrink from any phase of the question. Without a particle of demagogism or currying of popular favor, he pleads the cause of the toiling millions in the face of the powerful interests which he well knows will turn against him. To say that his financial views are sound, and his reasoning impregnable, is only to express an opinion on an open question: but admiration of the courage displayed, and the temper which, at such a juncture as this, could regard courage as the highest policy, is a thing in which every one can share. Now we shall see whether the people of the United States, as I profoundly believe, value manliness above either protection or free trade; whether they prefer the man who, at the risk of making enemies, dares to say what he thinks, or the man who, while playing into the hands of the powerful interests aforesaid, thinks he can also score a point by caressing the chewers of tobacco.

But I do not write for the purpose of saying these things, which have already been proclaimed by the newspapers. What I do want to point out is how completely, for any present and practical purpose, the President's shot is fired in the air. Congress will pay no more attention to it than to an editorial in any newspaper, while its fate in the committees will be that of the children of Edward IV. in the Tower. There is a Scripture phrase, about a want of economy in the use of pearls, which forcibly suggests itself. If any financial legislation is carried through this winter, it will be the result not at all of the President's injunctions, but of a fierce wrangle of private interests in the committees and the lobby, of which the people know nothing. It will be based very slightly on the national interest, and very largely on the ideas of the party leaders as to what is best for the success, and therefore the spoils, of the Republican or Democratic party. Even Mr. Cleveland's reëlection by an overwhelming majority will only signify endorsement of himself personally, and hardly at all of his financial views, which few of the people will understand, and which will not have had and will not have any direct effect upon the policy of the country.

Suppose, now, at this moment the Secretary of the Treasury had a seat on the floor of the House. Without any aggressive movement on his part, his mere presence would force on a discussion of the subject. Being in accord with the President, he would defend his views. Members would soon begin to get notice from their constituents that they had better pay some attention to what the Secretary said. A national policy would begin to take shape in place of a conflict of local ones, and the election next autumn would turn not merely upon the personality of the President, nor even upon the undefined distinction between Republicans and Democrats, but upon a method of conducting the finances in the interest of the nation. The President has taken a long step towards appealing to the support of the nation. He may yet see his way towards putting it in still more effective shape.

G. B.

Boston, December 10, 1887.

THE UNITED STATES SUPREME COURT AND PROHIBITION.

To the Editor of The Nation:

Sir: In view of the opinion just handed down by the Supreme Court of the United States in the Kansas brewery cases, a short review of the attitude of the same court on the question of State prohibitory enactments, both before and since the adoption of the Fourteenth Amendment, may be interesting.

Before the adoption of the Fourteenth Amendment, no power resided in the Supreme Court of the United States to prevent any State from depriving a citizen thereof of his property, without due process of law. For, whereas, by the Constitution of the United States, a person could not be so deprived by Federal authority, he yet might be by State authority; there being no inhibition, in this respect, upon the States in the Constitution of the United States. Thus the statement is made by Justice Taney, in an opinion delivered long before the adoption of the Fourteenth Amendment: "It is well settled by the decisions of this court that a State law may be retroactive in character, may divest vested rights, and yet not violate the Constitution of the United States." A prohibitory liquor law, therefore, enacted by any State prior to the adoption of the Fourteenth Amendment, even if said law operated in such a way as to deprive a person of his property without due process of law, conflicted in no way with the Constitution of the United States. Hence the declaration of the United States Supreme Court,

in 1847, in the license cases (5 How., p. 577), that "if any State deem the retail and internal traffic in ardent spirits injurious to its citizens, there is nothing in the Constitution of the United States to prevent it from regulating said traffic, or even prohibiting it altogether."

But, by the Fourteenth Amendment to the Constitution of the United States, adopted in 1868, it was provided that "no *State* shall deprive any person of his life, liberty, or property without due process of law." It at once became evident that no longer was it true that a State could divest vested rights and yet not violate the Constitution of the United States. And the question arose, Does an out-and-out prohibitory liquor law deprive a person of his property without due process of law, or, in other words, divest him of his vested rights? The point that it did was made in the case of Bartemeyer vs. Iowa (18 Wall, p. 129), and the United States Supreme Court there stated that, while such was not its effect in the case under consideration, yet that, if a prohibitory liquor law should so operate, in a given instance, as to absolutely destroy and wipe out property lawfully in existence *prior* to its passage, it would probably be in conflict with the Fourteenth Amendment. The same thing was said again by the same court in Beer Co. vs. Mass. (97 U. S., p. 25). The exact language of the court is: "We do not mean to say that property actually in existence, and in which the right of the owner has become vested, may be taken for the public good without due compensation. But we infer that the liquor in this case, as in the case of Bartemeyer vs. Iowa, *was not in existence when the liquor law of Massachusetts was passed.* Had the plaintiff in error relied on the existence of the property *prior to the law*, it behooved it to show that fact." It is fair to presume, therefore (unless the one or two changes in the personnel of the court, since the above language was used, have made a difference in the views of the court), that, had the retailers of liquors continued to sell (after the passage of the Kansas or Iowa prohibitory law) only liquors, viz., ales, wine, and beer, manufactured *prior* thereto, in such sales they would have been protected by the United States Supreme Court.

But the point raised in the Kansas cases just decided is quite a different one. It is whether or not a prohibitory liquor law in instances where, by its operation, property—*i. e.*, breweries, saloon fixtures, etc.—is not absolutely destroyed and wiped out, but only *much depreciated in value*—whether, in such instances, it conflicts with the Fourteenth Amendment. And that it was not improbable that this point would be decided adversely to the liquor-dealer was discernible from the very guarded language of the court in Bartemeyer vs. Iowa, and Beer Co. vs. Mass. The real basis for the holding of the United States Supreme Court in the Kansas cases is well enunciated by the Court of Appeals of New York in the case of Hynehamer vs. the People (3 Kern., p. 435). "It is not sufficient," the Court says, "that they [prohibitory liquor laws] *impair* the value of property in ever so great a degree, because this *destroys* no right. All regulations of trade, with a view to the public interests, may more or less *impair* the value of property, but they do not come within the constitutional inhibition unless they virtually *take away* and *destroy* those rights in which property consists; this destruction must be for all substantial purposes total. Not that some minute and trivial interests would uphold the act; a substantial right of property must be saved, and the provision must be such as may fairly be construed as intended to *regulate* rather than *subvert* and *destroy* property."

Right here let it be noted that it does not follow, because there are exempted from the operation of a prohibitory liquor law liquors to be used merely for medicinal purposes, that, therefore, said law does not "virtually take away and destroy" property rights, and so contravene the Fourteenth Amendment. It is quite probable that, so far as liquors in existence prior to the passage of a prohibitory law are concerned, such a law would be equally unconstitutional, either with or without an exemption in favor of the sale of liquors for medicinal purposes. Say the Court, in Hynehamer vs. the People:

"He must be allowed to know, what is known by all persons of common intelligence, that intoxicating liquors are produced for sale and consumption *as a beverage;* that such has been their primary and principal use in all ages and countries; and that it is *this* use which has imparted to them, in this State, more than ninety-nine hundredths of their commercial value. It must follow that any scheme of legislation which, aiming at the destruction of this use, makes the keeping or sale of them, *as a beverage*, in any quantity and by any person, a criminal offence—which declares them a public nuisance—which subjects them to seizure and physical destruction . . . —must be deemed, in every beneficial sense, to deprive the owner of the enjoyment of his property."

But, to return to the decision in the Kansas cases, while it has been definitely settled that a law—in the nature of a police regulation—greatly *impairing*, but not absolutely *destroying*, property in existence prior to its passage, is not repugnant to the Fourteenth Amendment, as depriving a person of his property without due process of law, it will continue a matter of regret, even with many firm friends of temperance, that, in suddenly stopping a traffic before (as in Ohio) encouraged by the State and protected by its laws, time was not given those engaged therein to convert their property to other uses, or else compensation made them for their loss.

IRVING B. RICHMAN.

MUSCATINE, IOWA, December 9, 1887.

CORRUPTION OF ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Having had occasion lately to examine a recent work on a subject connected with natural science, I was struck by the author's fondness for artificial words manufactured from Latin and Greek, when common English words would have expressed the thought just as exactly and neatly. Of course every science has its terminology, and many barbarous combinations have acquired meanings which cannot be so easily expressed in other ways; but why is it necessary to write 'ligneous' when the writer means 'woody,' and 'nyctitropic' for 'night-turning'? I have known a scientist of another kind to say 'hypotactic' when he meant 'subordinate,' and still another to abandon English 'nest' for Latin 'nidus.' These expressions undoubtedly become familiar to those who use them constantly, and the conception of the thought is brought about with no weariness of the mind; but the young learner finds the real difficulties of mastering a science increased by such artificial ones—an addition of labor of no value educationally.

The evil has become so great in botany, at least, that Sachs calls for a halt. Certainly the importation of undressed Greek roots brings about no genuine enrichment of language. Specialists ought to speak a tongue understood of the people, especially when they are addressing children.—I am, etc.,

W. A. MERRILL.

COLLEGE HILL, OHIO, December 1, 1887.

MAGAZINE READING FOR SCHOOL-CHILDREN.

TO THE EDITOR OF THE NATION:

SIR: In the Editor's Easy Chair of the November *Harper*, Mr. Curtis congratulates the public that, by the liberality of a patron, the magazine is to be used henceforth as a reading-book in some of the schools, and he calls upon the children to rejoice because they are to be entertained and instructed by its pages.

Is there not danger of dwelling too much upon the entertaining of children in the present scheme of education? Does not the child turn readily enough and often enough to the ephemeral in literature? When is his attention to be directed to such written portions of his own tongue as are worthy to be ranked with the classics, if not while he is under tutelage? Cannot most of us recall some teacher who awakened in us the desire to read an author whose works are handed down from age to age, by interesting us in some selected portion of his works? The children who are taught in the public schools particularly need to be shown the best parts of English literature, for it is often their sole opportunity of having their attention called to them. They should have better models of style than are found in the literature of the day. To my mind, neither the teacher nor the pupil should have for his ideal such writings as are found either in the magazines or the newspapers, however worthy these may be. There are not many who attain their ideal, and very few who surpass it. The child of this generation is the "heir of all the ages," and the teacher's business is to show him his inheritance. When he comes to full age, there will be pressure enough from outside to call his attention to the new and the fleeting in literature.

If Mr. Curtis will tell us from his Easy Chair what helped to form his taste when he was a child, and how his style in writing was acquired, I think the school committees and the benevolent patrons of education will be very wise to follow the same methods, in the hope that some of their pupils may attain the same result.

Very sincerely, M. N. S.

NEW BEDFORD, December 5, 1887.

Notes.

'THE FISHES OF NORTH AMERICA' is the title of a work upon which has been engaged for a number of years Mr. Wm. C. Harris, editor of the *American Angler*, and which will soon begin to be published in instalments on a very liberal plan—"If the text and plates of the first part are not satisfactory," the subscriber will not be held to the following parts. The fish have been painted from the life. "In many studies of individual fish, the artist has caught the coloration from at least ten, and often twenty-five, specimens laid before him as they came struggling from the water." Each of the parts will contain at least two colored fish portraits, printed on heavy cardboard, and will average a foot in length. The letterpress will be scientific and narrative, containing much practical information.

Bernard Quaritch, 15 Piccadilly, London, sends us the prospectus of a new and original translation of 'Don Quixote,' by Mr. H. E. Watts, who has labored upon it for seventeen years. It is neither mutilated nor abridged, and will be equipped with an exhaustive commentary, with a new biography of Cervantes, etc. It will fill five volumes, foolscap quarto, and will be limited to 250 copies at sixteen shil-

lings per volume. The first two volumes are set down for the spring.

Mr. Chas. Mackay, LL.D., is about to publish his 'Dictionary of Lowland Scotch,' upon which he has been engaged for several years. It gives the more important words, with their meanings and etymological derivations, together with an introduction dealing with the historical and literary development of the language, and an appendix of Scottish proverbs. A vade mecum for every lover of Burns, Scott, Ramsay, and other Scottish writers, it contains numerous extracts from their writings, and illustrates the poetry and humor of the Lowland vernacular. The first edition, privately printed on Whatman paper, will be limited to 125 copies, each one being numbered and signed by the author himself.

The Industrial Education Association of this city will commence next month the publication of Educational Monographs of moderate compass, with special reference to manual training. President Gilman leads off with 'A Plea for the Training of the Hand.'

'A Course in Bench Work,' embracing both study and practice, and designed for schools and colleges, by Prof. W. F. M. Goss, is in the press of Ginn & Co.

'The Indian Side of the Indian Question,' by the Rev. William Barrows, is a forthcoming book from the press of D. Lothrop Co., Boston.

Houghton, Mifflin & Co. will shortly issue 'The Story of the Old Willard House of Deerfield, Mass.,' by Catharine B. Yale.

Mr. Austin Dobson's volume of 'Selections from Goldsmith,' uniform with his 'Selections from Steele,' will be published at once by the Clarendon Press (New York: Macmillan); and his new sketch of Goldsmith's life will follow shortly in the "Great Writers" series.

We can at this time barely announce the fact that the critical edition of Goethe's Works, issued under the auspices of the Grand Duchess of Saxe-Weimar, and based on documents not available before the opening of the Goethe Archives, has begun to appear (Weimar: Hermann Böhlau; New York: B. Westermann & Co.). Before us are volumes representing three of the four grand divisions of the series, viz., one of the Poems, one of the First Part of "Faust," one of the Journals (1775-1787), and two of the Letters (1764-1775). The form is a convenient octavo. The commentary is massed at the end of each volume. Divisions one and two will fill fifty and about ten volumes respectively; the remaining divisions, an as yet unknown number. The subscription is by divisions, not by volumes.

On the first appearance of M. Eugène Müntz's 'Raphael: His Life, Works, and Times,' we expressed our view of its shortcomings in some of the larger aspects of art biography and art criticism, particularly in its excessive panegyric of the great painter. As a convenient repository of the main facts in his career, and, thanks to the very abundant illustrations, a memorandum of his principal works, we could heartily commend it. The original French version having undergone important revision, a new edition of the English version was plainly called for, and this is now on our table (London: Chapman & Hall; New York: A. C. Armstrong & Son). The volume is beautifully made, and has both the external and the intrinsic qualities of an acceptable gift book. M. Müntz, by the way, has in preparation a similar work on Leonardo, of which the chapter on the youth of this artist has already been published.

The eighth number of the 'Battles and Leaders of the Civil War' (Century Co.) closes the first volume of a genuine and model subscription book. The narrative ends with the loss of the *Monitor*.

Last March the Incorporated Society of Authors held meetings at Willis's Rooms in London to discuss the better protection of authors' rights. Lord Lytton, Sir Frederick Pollock, and Sir Francis Adams presided, and Mr. Walter Besant, Mr. Edmund Gosse, and Mr. John Hollingshead delivered the addresses. These speeches and addresses have now been collected in a plump volume, 'The Grievances between Authors and Publishers' (London: Field & Tuer; New York: Scribner & Welford); the original matter being supplemented by letters from Mr. Tuer (the publisher of the book), Mr. George Smith (of Smith, Elder & Co.), Mr. George Haven Putnam, and Mr. Walter Besant, who sums up the discussion.

MM. E. Guillaume & Cie., who prepared the delightfully original edition of 'Tartarin sur les Alpes' two years ago, have followed up that great success this fall with three books illustrated in the same way. One of these, 'Madame Chrysanthème,' by "Pierre Loti," is issued in conjunction with the *Figaro*, which was also interested in 'Tartarin.' It is most beautifully illustrated after drawings and water-colors by M. Rossi and M. Myrbach; the black-and-white blocks are more successful than those in color attempting a reproduction of water-color effects. The other two books are new editions of George Sand's 'François le Champi' and of M. Paul Deroulède's fiery 'Chants du Soldat.' M. Eugène Burnand is the artist in charge of George Sand's tale, and he has rendered its bucolic flavor excellently.

The International News Co. have received the *Figaro Illustré*, English edition. We have but to repeat what we have just said above as to the colored and black-and-white illustrations. M. Boutet de Monvel's naïf art in portraying children is here shown characteristically in color. The French latitude of text and pictures must be taken for granted.

A light paper, blown up around the circumstance of the writer's having offered boyish verses to Béranger, ushers in *Le Livre* for November. It is from the pen of M. Lemercier de Neuville, and is at least of better quality than the group of indifferent portraits of the poet which accompanies it. The librettist of Mozart's "Don Juan," Lorenzo d'Aponte, to whose morals the theme was entirely congenial, is given a spark of centennial life by Arsène Arüss. D'Aponte drifted to New York, and, as we are told, "died at Columbia College in 1838, in the most distressing poverty." There follows, for the third article, a translation from Petrarch's Latin Eclogues III. and XI., for the sake of their allusions to his love for Laura. Among the news are uncommonly full items, like the report of the second Congress of the Friends of Rabelais on October 9; inedited letters of Voltaire pertaining to investments, from a German source; a curious statement of the extent to which French publishers are plundered by book-thieves, who sell to cheap dealers—these thieves sometimes being printers or binders, who abstract signatures from several volumes till a whole one results; and finally a glimpse of the "Hundred Best Books" mania across the Channel, where it takes the form of "A Library in Twenty Volumes." Altogether, this number of *Le Livre* is above the average in interest.

The most important article in the Christmas number of the *English Illustrated Magazine* is Mr. Fitzgerald Molloy's "What Players are They?" with eleven woodcuts of pictures of the chief performers of the last century. Mr. Molloy is, so to speak, a pupil of Dr. Doran; with a more frequent carelessness and a narrower knowledge of the bio-bibliography of the theatre. This paper is pleasantly written, and it serves as an excuse for the reproduction of paintings by Zoffany and his fellows. Perhaps the most successful portrait is the full-page Peg Woffington as *Mrs. Ford*, engraved by O. Lacour from the picture by E. Haytley.

The *Antiquary* for November begins with an article upon Olympia, by Major E. Gambier-Perry, summing up in a useful manner our information in regard to its history, the recent discoveries there, and the games there celebrated. Of "Famous Birthplaces" we have Hayes Place in Kent, where Lord Chatham died and his illustrious son was born. In an article upon "The Early Custody of Domesday Book," Mr. Hubert Hall takes issue with a previous series of papers by Mr. Round, which maintained that this, together with the other documents of the Exchequer, was kept at Winchester. His own theory is that of "the gradual withdrawal of the records, etc., from Winchester to a new headquarters at London." No reader, he says, of the 'Dialogus de Scaccario' would doubt that the Exchequer, etc., were at Westminster. "Bone Caves," by H. P. Malet, and "John Felton, a Memoir," have each its second part. In the November number Sir J. H. Ramsay continues his valuable series upon royal accounts, with the "Accounts of Edward IV." Mr. Henry B. Wheatley contributes a valuable philological paper "On the Date of the Suppression of the Letter S in French Orthography" in such words as *apostre*, *epistre*, *escriture*. This reform he shows to have taken place in the seventeenth century, and chiefly through the influence of the French Academy, founded by Richelieu. Both numbers contain several other shorter papers.

Wilhelm Friedrich's little Select Catalogue, just received from Leipzig, contains seven excellent portraits of popular authors—Gerhard von Amyntor, Carl Bleibtreu, E. von Hartmann, Hermann Heiberg, Detlev Freiherr von Liliencron, Wilhelm Walloth, and the one authoress, B. von Suttner.

L. Prang & Co. are first in the field—first in our field, at least—with samples of their holiday tokens, ranging from Christmas and New Year's cards, metallic mounts, and velvet and satin-covered blotters, up to real books like this 'Gay Day for 7,' with clever colored illustrations *à la* Kate Greenaway. Flowers form the leading motive for the decorative designs, and often accompany the figure subjects, of which there is none better, among the cards, than the two little winter-clad maidens wishing one another a happy new year over the wall. Some yellow roses and a pansied star please us most in the floral line. The metallic mount "Come, bring the holly," is well devised and very harmonious in tone. Facetiae are not wanting: the overturned bottle of ink points a New Year's moral.

Close upon these domestic productions come those of the London (and New York) firm of Raphael Tuck & Sons. In respect of color printing, the samples submitted to us rank, on the whole, below those we have just been considering, but the variety is prodigious, and there is the greatest difference in the physiognomy (if we may use the expression) of the American and English issues. The Messrs. Tuck send us innumerable cards, of all sizes, and some of leaf and fruit and mollusc shapes. A little landscape on satin attracts us more than some of the card landscapes with decorative backing. Calendars are in this assortment, and a panel copy in colors of the Ansidei Raphael, now in the National Gallery; and a "bevelled porcelain study" of a mounted soldier, seemingly photographic, in a safety-box. The "Artist-

ic Private Card Series" is likely to be popular, furnishing cards in envelopes in a neat paper box.

Christmas leaf-shaped books-no-books also come to us from Geo. R. Lockwood & Son of this city, together with sundry real books in white and gold—'Christmas Flowers,' by Adelaide Ann Proctor, 'Old Christmas Carols,' etc., 'Christmas Eve, or the Angel Guest,' and 'The Star in the East.' Here, in default of illustrations, we have colored borders besides handsome typography. In blue and white and gold is a short body of selections from 'Ben Hur,' 'Seekers After "The Light."' The little etchings are rather primitive in design and execution, but they help make a very tasteful book.

Finally, in this holiday outlook, we must notice 'Kate Greenaway's Almanac for 1888' (Routledge), of which the water-color cover is hardly consonant with the oil prints within; and the same publishers' 'Voices of the Flowers,' illustrating the verses of Whittier, Moore, and Shakspere respectively. The colored plates in this series are formal and of a rather poor grade of color printing.

E. & J. B. Young & Co. are the agents for the illustrated "Peniel Series" of the Castell Brothers, London. 'Gray's Elegy' is one, and Mrs. Hemans's 'Landing of the Pilgrim Fathers' is another. In the latter the "stern and rock-bound" coast of sandy Plymouth is given a tolerable resemblance to the Welsh coast. But these little books are well made and pretty.

Students of Dutch will be glad to have their attention directed to 'Nederlandsche Taal- en Letterkunde: Catalogus van Boeken over Nederlandsche Taal- en Letterkunde verkrijgbaar bij den Boekhandelaar R. W. P. de Vries,' which is not merely the ordinary bookseller's catalogue, although each item is priced and can be furnished by Mr. de Vries. The occasion of the twentieth Congress for the Language and Literature of the Netherlands meeting at Amsterdam has stimulated the compiler to strive to produce a work the completeness and accuracy of which should give it a permanent value, and the result exhibits a bibliographical painstaking which deserves a word of hearty praise. The 1,824 titles occupy 296 small quarto pages, the older and more important ones being printed with extreme fulness and excellent typography, while of collections, "works," and essays, the contents are given. The titles are arranged under topics, and, chronologically, under the centuries, and are followed by an index of authors.

The new universal language has at length obtained academic recognition. The Senate of the University of Munich, the third largest in Germany, has voted to permit Privatdocent Dr. J. E. Weiss to give lectures on Volapük to the students. But there is already room for lectures on comparative international linguistics, for there lies before us Dr. Esperanto's 'Langue Internationale: Préface et Manuel Complet' (and the same brochure in German), published at Warsaw. It cannot be denied that the inventor's name is of good omen. His motto is piquant and combative: "For a language to be universal, 'tis not enough to give it the name."

The fifth annual Convention of the Modern Language Association of America will be held at the University of Pennsylvania, Philadelphia, on the 28th, 29th, and 30th of this month. On the evening of the 28th, addresses will be delivered by Dr. Wm. Pepper, Provost of the University of Pennsylvania, and Prof. James MacAlister, Superintendent of Public Schools of Philadelphia. This and the subsequent meetings of the Association will be open to the general public. Papers will be read by Professors Collitz (Bryn Mawr), Fortier (Tulane University), Shepherd and Primer (College of Charleston), Karsten (Indiana University), Tolman (Ripon College), H. S. White (Cornell University), Wood, Elliott, Goebel, Bright (Johns Hopkins), Kroeh (Hoboken), Lang (New Bedford), and A. H. Smyth (Philadelphia). Attractive social arrangements for the entertainment of the delegates of the Association and their friends have been provided for by the Local Committee.

An Alaskan Society of Sitka has been formed at the instance of President Gilman of Johns Hopkins and President Butler of the College for the Training of Teachers, in this city, for collecting and preserving information concerning the arts, history, language, folk-lore, etc., of the native Alaskans, and the natural history of the Territory, continental and insular. It is also designed to establish a museum at Sitka.

—We omitted mention at the proper time of the July number of the *English Historical Review*, and will now only say, by way of record, that it contained three leading articles—"Aetius and Boniface," by E. A. Freeman; "Byzantine Palaces," by J. Theodore Bent; and "Queen Caroline of Naples," by Oscar Browning. The October number has four articles. The first is "The Movements of the Roman Legions from Augustus to Severus" by E. G. Hardy, an article the materials of which have been largely drawn from inscriptions, the indispensable source of information for the period of the Empire. It will be found of great service for the study of military operations of this period. An important article follows, by Mr. Bryce, "The Life of Justinian by Theodorus"; being an account of a manuscript discovered by him in the library of the Barberini palace in Rome, which he identifies with a work mentioned by Alemanni in the early part of the seventeenth century, as being by Theodorus, the preceptor of Justinian. The work, which is very short, is given in full, and is shown to contain all the items mentioned by Alemanni. The third article is by the historian Gardiner, "Charles I. and the Earl of Glamorgan." The authenticity of the treaty made by Glamorgan with the Irish in 1645 has been questioned, or rather it has been alleged that he acted beyond the powers granted him by the King, in promising to the Irish Catholics not only relief from the penal laws, but also "a freedom of Roman Catholics from the ecclesiastical jurisdiction of the Protestant clergy." Mr. Gardiner's view is that Glamorgan's powers were very large and indefinite, but were not intended by the King to include these concessions. "Taken by themselves, these powers might authorize Glamorgan to do anything. Taken with the instructions, they authorized him to do anything of which Ormond approved." The last article is by an American, Mr. Andrew McFarland Davis, on "The Employment of Indian Auxiliaries in the American War." He shows that the first proposition to employ such auxiliaries was made by the Americans themselves. "America practically failed in her efforts. England succeeded. The responsibility thus assumed by England was far greater than that which success would have imposed upon her opponent. As allies of the American forces, the savages would have been able to vent their passions only on subjects. Acting as auxiliaries of the English, the homes of hundreds of border settlers were exposed to their raids." These articles are followed by the usual number of "Notes and Documents" and "Reviews of Books."

—The Journal of the Royal Statistical Society for September opens with an elaborate paper on the "Mortality Among the Troops Serving in the United Kingdom from Consumption," by Robert Lawson, the Inspector-General of Hospitals. In 1839, the first year for which the statistics are available, the deaths of soldiers by consumption was nearly twice that of those in civil life, being 9.38 per 1,000. In the years 1880–84, the number had fallen to 3.63 per 1,000, as against 2.81 in civil life. Dr. Lawson makes the somewhat surprising statement that the great improvement in the construction and ventilation of barracks and hospitals made about twenty years ago was not followed by the expected decrease in consumption. A decrease was observed immediately, however, after the substitution of flannel shirts for linen or calico, and woollen pants for white linen. In the reports from five foreign stations during the years 1879–84, it appears that consumption prevails most in Mauritius and Ceylon, with a percentage of 3.20 in 1,000, America coming next with 2.78, the Cape of Good Hope and Natal showing the lowest percentage, 1.35.

—Mr. Joseph Rabino gives a singularly clear and condensed "Statistical Story of the Suez Canal." He divides his paper into five sections—political, historical, technical, financial, and commercial, the most interesting figures being, of course, in the last two, though we may mention that the total excavations amounted to 2,649,000,000 cubic feet. The permanent population of the Isthmus, which was 150 in 1859, is now 21,000, including 7,000 Europeans, and not including Suez, but recently an Arab village, now a town of 11,000 inhabitants. The assets in 1870 were £18,211,444, in 1886 £22,917,565, the cost of construction and improvements to date being £20,234,985. The first year in which there were any profits was 1872, when they were £82,-851. The high-water mark was reached in 1883, with profits amounting to £927,499. Last year they were £627,284, or less than any year since 1880. The surplus in 1870 was £5,873,234, at present £6,039,693. The receipts the first year in which the canal was opened for traffic were £754,532, of which £228,750 were from navigation dues. In 1883 they were £2,740,933, of which the tolls were £2,645,504, the total receipts up to the close of last year having been very nearly £25,000,000. The par value of the shares is 500 francs, and they have fluctuated from 165 in 1871 to 3,550 in 1882, the average value in 1886 having been 2,095. The shareholders receive 71 per cent. of the profits, and got their first dividend of £30,153 in 1875. In 1883 their portion was £1,018,524, the largest yet paid. The total amount paid in dividends to the shareholders has been £6,132,740, or 7½ per cent. yearly on their original outlay. They have also, in addition, a coupon bond. Singularly, the expenses for the years 1870 and 1886 were almost identically the same sum, being £754,532 in the former, and £754,567 in the latter year. The number of vessels passing through the canal has increased in sixteen years from 486, with a net tonnage of 436,609, to 3,100, net tonnage 5,767,656. The tonnage dues were 9.95 francs the first year; in 1873 they were raised to 15.17 francs. In 1886 they were 9.49 francs. The largest amount of business was done in 1885, when the dues were lowest, 9.04 francs; 3,624 vessels, 6,335,752 net tonnage, passing through. During eleven years 655,547 troops have been carried through the canal, another remarkable coincidence being that the number of English soldiers in 1885 was 43,813, of French 43,655, and in 1886, English 31,161, French 31,645. Of the 3,100 vessels making the passage last year, nearly five-sixths were English; the French, Germans, and Dutch having the next largest numbers. The United States is

classed among the 18 "all others." In the discussion which followed the reading of the paper in the Society it was announced that, after the proposed widening was completed, the length of time required for the transit would be reduced from thirty-six to twelve hours. And here it may be interesting to notice that the geographical knowledge of the Isthmus at the time of the construction of the canal was so imperfect that a canal was dug from the Nile to supply Ismailia and Suez with fresh water, while it has since been discovered that there is a plentiful supply of fresh water close to the marine canal. Had this been known at that time, Sir Charles Warren remarks in his recent address before the British Association, "it is questionable how far any occupation of Egypt would have been necessary."

— The sixteenth day of this month will be the three hundred and third anniversary of the birth of John Selden, a great name among English lawyers, and that day will witness the first anniversary meeting of a society named in his honor. The "Selden Society" has been founded "to encourage the study and advance the knowledge of the history of English law." We called attention to the "draft prospectus" of this Society earlier in the year, when it was yet in a "provisional" stage, and we then expressed the hope that an enterprise of such possibilities for our law might meet with a support that would enable it to go forward with vigor. This it seems to be doing. A late announcement says that it is hoped that the first volume to be published by the Society may be in the hands of subscribers before the end of the year. This volume will be a publication of Thirteenth Century Pleas of the Crown from the Eyre Rolls, edited with a translation by Mr. Maitland of Cambridge University. These cases are expected to throw an instructive light upon the genesis of our petty jury, and from them we may see how the twelve hundredors and four townsmen of Bracton became the two juries of a later time. How the ordeals of fire and water gradually passed into the modern form of trial will also be illustrated. Each subscriber receives all the publications for the year. The annual subscription is one guinea, and members have no further liability of any kind. The Society is for laymen as well as lawyers. Professor J. B. Thayer of the Harvard Law School continues to be the Honorary Secretary for America, but a number of local secretaries have been named in the larger cities throughout the country—in New York, Mr. Alexander Tison, whose address is 45 William Street.

—We have received the prospectus of an English version of Hachette's collection of "Grands Écrivains Français," which is to be issued under the general title: 'Great French Writers' (Geo. Routledge & Sons). The first volumes to appear will be M. Gaston Boissier's 'Madame de Sévigné,' translated by Mr. Henry Llewellyn Williams; and M. Albert Sorel's 'Montesquieu,' translated by M. Gustave Masson. It is to be hoped that these translations will be more lightly done than that of the prospectus for the original work, which is rendered into very heavy English in the sheet that has reached us. In it the translator talks of the "profound taste for historical researches" of our century, which "it has yielded itself up to with a success unknown to anterior times," and of the "erudite pens" which have engaged in "reviving the great writers of all literature." These are mere eccentricities of style; but the pretentious mistranslations of M. Jusserand's French are more offensive. It would be difficult to bring together a greater number of blunders of all kinds than there are in the translation of the passage beginning "Initiateurs d'abord"—"Imitators first, then diffusers at large, the French were the foremost, in the vortex of the turbulence marking the opening of the Middle Ages, to resuscitate literature. . . . The study of mediæval literature commenced in France ere it was propagated throughout Europe. . . . The realm of Louis XIV. lifted form into honor"—and concluding with "our own electric and scientific era." But even this is not the worst our translator can do. He is quite inimitable when he rises to original work, and supplies passages not in the French, as in the following: "Hence the great thinkers of French literature interest not merely their direct descendants at home, but the strangers around her numerous posterity scattered beyond the frontiers; wherever in England the Huguenots carried arts and crafts, and in the Americas and Australia, where the Canadian *voyageur* and fur-hunter traversed the wilds, where Lieut. Bellot sought for Franklin in the eternal ice, and where La Pérouse planted the red, white, and blue." These novel literary, historical, and geographical views need no comment.

RECENT POETRY.

THE harvest of poetry is this year so great, on both sides the Atlantic, as to make one feel that Sydney Smith's dream must have come true, and that there are now thirty-nine muses and only nine articles of faith. It is perhaps fortunate for the critic that so many of these newborn volumes prove to be *biblia abiblia*, or book-no-books; so many of them are, like the rhymes of Pope's young aspirant,

"Inspired by hunger and request of friends,"

as greatly to simplify the work of selection. The best among recent volumes of American verse is doubtless the reprint of Mr. R. W. Gilder's poems by the Century Company. It is to this author, more than to any other man of his years, that we must look for leadership out of what Mr. Stedman has called the twilight of the poets, in order that we may yet have another productive era in American verse. It is all the more to be regretted, therefore, that he should imitate his favorite Rossetti in rearranging the order of his poems, from time to time, and so confusing their bibliography; recombining them, that is, in separate volumes, after they had once been brought together. The 'Lyrics and Other Poems' of the edition of 1885 are now again divided into 'Lyrics' and 'The New Day,' while 'The Celestial Passion' includes the later poems not embraced in the edition of 1885. We thus have three thin books, separately paged and indexed, tastefully bound in illuminated paper, and altogether offering about the requisite material for a single adequate volume. Such variations mar the unity and definiteness of an author's impression upon the public mind, and give a needless effect of variableness and whim. For the rest, Mr. Gilder's muse, which was always exquisitely graceful, grows stronger with years; and its strength rises with the theme, as in the following sonnet, which, while varying from the now customary Italian form, has a terseness and vigor all its own:

THE SOUL.

Three messengers to me from heaven came,
And said: "There is a deathless human soul—
It is not lost, as is the fiery flame
That dies into the undistinguishing whole.
Ah, no; it separate is, distinct as God—
Nor any more than He can it be killed;
Then fearless give thy body to the clod,
For naught can quench the light that once it filled!"
Three messengers—the first was human LOVE;
The second voice came crying in the night,
With strange and awful music from above—
None who have heard that voice forget it quite;
BIRTH is it named. The third, O, turn not pale!—
'Twas DEATH to the undying soul cried, Hail! (P. 59.)

Miss Edith Thomas represents among what Southey profanely called the "she-poets" of America the same element of promise represented by Mr. Gilder among the men. She is in danger of publishing too much, but her 'Lyrics and Sonnets' (Boston: Houghton, Mifflin & Co.) must be admitted to contain some of her most delicate work, as, for instance, that exquisitely wrought poem, "Frailty's Shield" (p. 31). The external beauty of the book—surely the work of some special artist whom this house has lately retained to design its covers—goes fitly with the contents; and the simultaneous appearance from the same establishment, in soberer guise, of the 'Early and Late Poems' of the Cary sisters, shows conclusively the astonishing advance in the poetic work of American women which dates from the comparatively brief career of Helen Jackson ("H. H."). Before her—Mrs. Sigourney, the Davidsons, and the Carys; since her time—Miss Thomas, Mrs. Perry, Mrs. Deland, and Miss Jennison. It is an astonishing step forward in thought, emotion, and expression.

We should place as easily first among reprinted volumes of poetry, and perhaps among all gift-books for the coming Christmas, the new volume of 'Lyrics, Idylls, and Romances' from Browning (Boston: Houghton, Mifflin & Co.). It far exceeds either of the New York collections (edited respectively by Mr. White and Mr. Mason) in felicity of choice and beauty of external form; and it surpasses the editions of Mr. Rolfe and Miss Hersey in that it is not arranged for school purposes, and has neither preface nor notes. We can suggest no improvement on the selection of poems, except that the poem "Before" should have been given as well as its companion poem "After"; and nothing to improve the details of execution, except here and there a possible change in the punctuation. For example, the editor of this volume, in the closing line of "Childe Roland," strikes out the period which originally divided it:

"And blew. "Childe Roland to the Dark Tower came."

This is the way it appears in the American edition of 1856; and this makes the words in quotation-marks a sort of colophon, or a final recurrence by the minstrel to the keynote of the strain. But it is printed in the present volume:

"And blew "Childe Roland to the Dark Tower came,"

as if the 'Childe Roland' were some particular note upon the horn. The same omission occurs in the careful edition of Mr. Rolfe and Miss Hersey, nor is any explanation given in the notes. If expressly authorized by Mr. Browning, it should be mentioned, for it is well known that many misprints have occurred in the English editions of his works. For the rest, this one little volume contains a sufficient refutation of two common impressions in regard to Browning: that he is needlessly obscure, and that his genius is not distinctively lyrical.

Among English poems not yet reprinted in this country, the reader inevitably turns first to the latest production of "Michael Field"; for, however this author may persist in taking Marlowe instead of Shakspere for a model, there is always some suggestion of the "mighty line." The heroes and heroines cut and slash with words, as in the stage-business; and there is often a forbidding nakedness of human emotion; but power is always hopeful, until it is evident that it is to remain raw and crude, not mellowing with time. No sure light on this point is afforded by 'Canute the Great. The Cup of Water' (London: George Bell & Sons); yet it must be owned that this last play shows a

dawning softness which gives promise. The old gardener says of love (p. 136): "It's all sweet, I reckon, when one is young and of a warm climate inside like the vine-house"; and there is a good deal of this sweet vine-house atmosphere in the play. Another of the sword-and-buckler books is a rather ambitious epic on 'The Death of Roland' (London: Trübner), by John Frederick Rowbotham, author of an extended history of music. It is the first of a proposed series of poetical romances, and though it cannot be called enjoyable, it has a certain interest as based upon a new experiment in epic rhythm. Mr. Rowbotham holds that the hexameter is now ineligible, having been based on Greek music, which habitually ran in pairs or phrases of three bars; whereas modern music is phrased in four bars, and implies rather an octometer, which he employs. So he writes about

"The glory of Roland, the peerless Paladin, and the great rout at Roncesvalles,"

and so on for twenty cantos. In curious contrast to this exalted effort is the dingy little pamphlet 'Low Down: Wayside Thoughts in Ballad and Other Verse, by Two Tramps' (London: Redway). It is coarsely printed on cheap paper of various hues, and stitched with packthread; the poems are dated at many different points in England and America, and there is nothing about them which seems especially vigorous or authentic. 'Underwoods,' by Robert Louis Stevenson (New York: Scribners), has nothing in it quite worthy of the borrowed title; but there is throughout a flavor of the author's characteristic personality which his readers may well enjoy, since he so obviously enjoys it for himself, and so large a part of these poems relates to himself and his friends.

In 'Prince Lucifer,' by Alfred Austin (New York: Macmillan), the author sustains the impression he has always made, of a pair of tongs that do not quite reach the coals. He takes himself very seriously, addresses himself to high themes, brings in the Weisshorn and the Matterhorn as interlocutors, but, after all, we are left unwarmed. Lord Lytton, in 'After Paradise; or, Legends of Exile' (Boston: Estes & Lauriat), is still remoter from the sacred fire, and is so tame that one sometimes sighs even for a touch of that "featherheadedness" with which he has been charged as a statesman. Mrs. Augusta Webster's 'The Sentence' (London: Unwin; New York: Scribner & Welford) is far superior to either of these works; it is a strong, sustained, and rather grim tragedy of the times of Caligula. It is rather a relief to turn from even this to the ever-delicate and fanciful 'Garden Secrets' of the late Philip Bourke Marston, here reprinted separately in a dainty volume (Boston: Roberts), with a biographical sketch by the American friend to whom the blind young poet expressed himself as being so much indebted—Mrs. Louise Chandler Moulton.

Among recent English translations there is a version of Schiller's 'Wallenstein,' by C. G. N. Lockhart (Edinburgh: Blackwood). The volume includes "The Piccolomini" and "The Death of Wallenstein," and omits "Wallenstein's Camp," on the avowed ground that it is hard to render. This would not be surprising, since Coleridge made the same omission, were it not for the fact that Mr. Lockhart, who has resided for many years in Australia, served in the Austrian Army during his youth, and might have been supposed to be attracted by the omitted play of the trilogy. His version is valuable less for its poetic quality than as including many passages omitted by Coleridge, whose notions of the duties of a translator were anything but rigorous. Among books of translation may well be included 'The New Purgatory, and Other Poems,' by Elizabeth Rachel Chapman (Scribner & Welford). These are by the author of a previous volume entitled 'A Comtist Lover, and Other Essays'; but the most valuable part of the present work is a careful paraphrase of cantos xxx-xxxi of the 'Purgatorio,' containing the meeting of Dante and Beatrice. We have received also some volumes of Fitzgerald and Omar Khayyám literature, which must be reserved for separate notice.

One of the most curious things in literature is that law which seems to provide the most ample and luxurious illustrations for the poorest books. This is shown, for example, in the illustrated editions of 'Geraldine, a Tale of the St. Lawrence' (Boston: Ticknor); and of 'Ringing Ballads, including Curfew Must Not Ring Tonight,' by Rose Hartwick Thorpe (Boston: Lothrop). In the former case the reliance of the publishers must doubtless be placed on the value of the new edition as a guide-book; and in the latter on the school-room popularity of the principal poem, although there is certainly something odd in calling a series of ballads "ringing" when there is nothing that rings in any of them, save in that which announces that the curfew must not ring. Of a higher grade as to literary execution, but not, unfortunately, in respect to illustrations, is Mrs. Harriet Prescott Spofford's 'Ballads of Authors' (Boston: Lothrop), based on incidents in the lives of Goldsmith, Johnson, Milton, Cowper, Chatterton, and Shakspere. Even as to this we must complain that the author makes "Louvain" rhyme with "sang" (p. 13), and that the artist represents water-lilies as being wide open at midnight (p. 73). 'Old Homestead Ballads,' by Wallace Bruce (Harpers), is a volume much in the style of Will Carleton's, and perhaps destined to the same sort of popularity—a kind of chromolithograph success.

In America, when all else fails, there is always an interest in looking at the title-pages of new books and studying the geographical range represented. Thus, Miss Jessie Wilson Manning's 'The Passion of Life' (Cincinnati: Robt. Clarke & Co.) takes a new value when we learn that it was written at Chariton, Iowa; 'Letters from Colorado,' by H. L. Wason (Boston: Cupples & Hurd), has a guarantee of local coloring in the fact that it was composed in Wagon Wheel Gap, Rio Grande County; 'The Cabin in the Clearing,' by Benjamin S. Parker (Chicago: Kerr), has poems written in Indiana, Michigan, and Canada; 'A Lost Epic,' by William Canton, seems Canadian, and is dedicated to Queen Victoria (Boston: Lothrop). Of these volumes the last has by far the largest share of power and promise. We can hardly attribute either promise or performance to 'Songs of the Mexican Seas,' by C. H. (Joaquin) Miller (Boston: Roberts), whose mouthing strains have gained nothing in maturity, and have lost something of their novelty since they first charmed an English public that as yet knew not Cody or Sullivan. Mrs. Frances L. Mace, in 'Pine and Palm' (Boston: Ticknor), ranges from the mountains of Maine to the delights of "the New Italy"—which she finds in Southern California—and writes with a good deal of grace and vigor in both latitudes. Mr. David Skaats Foster in like manner takes us, in his 'The Tragedy of the Unexpected' (Putnam), from New Hampshire and its Wentworths to Florida and its Spanish traditions, but leaves his whimsical title unexplained. Gen. Alexander Hamilton publishes, in aid of the Sleepy Hollow Cemetery, at Tarrytown, N. Y., a volume of his tragedies and smaller poems (Dick & Fitzgerald); and the influence they will exert is not inappropriate to the proposed name of the cemetery. 'Songs of New Sweden,' by Arthur Peterson, U. S. N. (Philadelphia: Hart), is an effort that is commendable, if not wholly successful, to put into verse the legends of Swedish colonization on this continent. 'Songs of History: Poems and Ballads upon Important Episodes in American History,' by Hezekiah Butterworth (Boston: N. E. Publishing Co.), is a more elaborate effort in the same general direction; but it can only be said of the poet, as one sometimes hears it said of a favorite preacher, that he has beautiful texts. 'In Realms of God,' by James B. Kenyon (Cassell), has some good Oriental touches; and 'Wind Flowers,' by J. Luella Dowd Smith (Chicago: Kerr), some good German translations. 'Blooms of the Berry,' by Madison J. Caweine (Louisville: Morton), is exuberant and *Poesque*, but not without promise, if years of self-control could be brought to bear upon the author. In 'From Heart and Nature,' by Sarah Knowles Bolton and Charles Knowles Bolton (Crowell), we have the pleasant spectacle of a mother and son travelling together, studying together, and, finally, publishing their joint poems in one volume, the share contributed by each being dedicated to the other. 'Bird Talk,' by Mrs. A. D. T. Whitney (Houghton, Mifflin & Co.), is more graceful and less didactic than most of this author's productions, although the latter quality is not wholly wanting; the illustrations are exceedingly graceful also, but rather too suggestive of those accompanying Michelet's 'Birds' in its English dress.

One of the most attractive of these minor volumes of verse is doubtless 'Songs and Ballads,' by Fanny Raymond-Ritter (New York: F. W. Christern). This well-known musical writer here gives us music in verse, some of these poems having been already adapted as two-part songs, and others bearing on musical subjects. From a series relating to the great composers, and described by the author with unusual honesty as "mostly irregular," we transcribe one on Von Weber, which is both regular and good:

"Thou Oberon, lord of wonderhorn and wand!
Thou Prospero, from thought's isle-solitude
Encircling earth with music's Ariel-mood!
Thou Merlin of the mind's Broceliande,
The magic of thy bardic staff's command
With golden tone has every breath imbued
That floats o'er knightly field or demon wood,
Or gypsy heath or mermaid-haunted strand!
As cruel Viveliane to captive doom
Allured the enchanter through his own wild spell,
To death thy muse drew thee; as, ages long,
His voice pealed forth, prophetic, from that tomb,
So sounds, so shall sound, thine; an oracle
Foretelling destinies yet unknown to Song!" (P. 62.)

Best of all is a thin volume (Houghton, Mifflin & Co.) of the thoughtful and highly finished poems by Edward Rowland Sill, a name long familiar to the readers of our periodicals, and rendered none the less dear by his early death. The world has lost much in a writer who could draw such a thought as this from the tragedy of the Matterhorn:

TRUTH AT LAST.

"Does a man ever give up hope, I wonder—
Face the grim fact, seeing it clear as day?
When Bennen saw the snow slip, heard its thunder
Low, louder, roaring round him, felt the speed
Grow swifter as the avalanche hurled downward,
Did he for just one heart-throb—did he, indeed,
Know with all certainty, as they swept onward,
There was the end, where the crag dropped away?
Or did he think, even till they plunged and fell,
Some miracle would stop them? Nay, they tell
That he turned round, face forward, calm and pale
Stretching his arms out towards his native vale
As if in mute, unspeakable farewell,
And so went down. 'Tis something, if at last,
Though only for a flash, a man may see
Clear-eyed the future as he sees the past,
From doubt, or fear, or hope's illusion free." (P. 107.)

CHILDREN'S BOOKS.—III.

THE announcement of 'New Fairy Tales from Brentano, Told in English by Kate Freiligrath Kroeker' (A. C. Armstrong & Son) will have pleased all who had read the previous selection.

Brentano's ingenious working over of old material amounts almost to freshness. The translator has not been careful of her wills and shalls, but in other respects her vivacious rendering is praiseworthy. We cannot approve the choice of such bloody stories as that of Frisky Wisky or the Myrtle Maiden. It is some years since J. R. Planché brought out his approximately complete version of Mme. d'Aulnoy's Fairy Tales. The Messrs. Routledge now send us an edition cleverly illustrated by Gordon Brown and Lydia F. Emmet. The book is adapted for older rather than younger children. There is humor and ideality in Dr. Weir Mitchell's 'Prince Little Boy, and Other Tales' (Lippincott); but they are unequal yoke-fellows. The humor is often intended for the parent, not the child, and sometimes verges upon flatness, so that we suspect our author's judgment in this direction. The illustrations are likewise dissimilar in degree as well as in kind, the best being very good. Dr. Mitchell for the first time acknowledges the authorship of some of these tales which have appeared in print before. One of his profession in Germany, Dr. Richard Leander, wielded "the delicate pen which alternated by night with the delicate probe and scalpel by day, and sought to relieve the sad web and woof of war with fringe of graceful fancies," producing 'German Fantasies by French Firesides' (Putnams). The translator, whose words we have quoted, has well expressed the merit of these fairy tales, which we heartily commend for their imaginativeness, playfulness, and refinement. They were written during the siege of Paris.

Two genuine Eastern tales in which the supernatural plays no part, have been reproduced from Malcolm's 'Sketches of Persia'—"one of the most agreeable books in the English language," vouches Prof. Child of Harvard, "though it seems scarcely to be known to the present generation of Americans." They compose 'Stories from the Persian: Abdûlla of Khorassan, Ahmed the Cobbler' (Cambridge: C. W. Sever), a little book, daintily printed, and sure to be acceptable to any child, except so far as it feeds in vain a desire for more such excellent moralities.

Joanna Spyri's 'Gritli's Children' (Boston: Cupples & Hurd) resembles other stories from the same hand in certain of its elements and properties, and introduces us once more to Switzerland for the sake of an invalid child. The movement is animated. There are many pathetic incidents, but the general effect of the book is cheering and salutary. The translation is excellent, as heretofore.

Mrs. Molesworth's 'Palace in the Garden' (Thomas Whittaker) is put in the mouths of children, but is really a novel for grown folks, and we cannot think it is improved for either audience by this treatment.

The one-syllable histories of Russia and Japan, prepared by Miss Helen Ainslee Smith for the Messrs. Routledge, show unusual dexterity in that sort of writing, being far less wooden and unidiomatic than most similar attempts have been. It still remains a question, however, whether so much labor is worth while, and whether more difficulties are not created than overcome, as, for example, when one uses the hard word "realm" for the easy word "kingdom."

We shall not subject Mr. Willis J. Abbot's 'Blue Jackets of 1812' (Dodd, Mead & Co.) to the scrutiny which would be prudent after the shortcomings of his 'Blue Jackets of '61. It is enough for us to express our regret that, at the close of the first century of the Republic, books should still be manufactured for the young which tend to keep alive the pernicious national antipathy of Americans for Englishmen. This feeling is distinctly fostered by the author in his present work, and it is aggravated by his presenting the British not only in the light of bullying, tyrannical armed enemies, but as exceptionally brutal in their treatment of impressed and imprisoned American seamen. The truth is, our ordinary naval discipline at that time, and for the next thirty years, had nothing to boast of over that of England. All the "glory" we won by sea in the war of 1812 was with the aid of debased and tortured men whose lot cannot be contemplated without a shudder. To conceal this fact is to hold up a falsehood to the young.

'Boys and Masters' (Longmans, Green & Co.), by A. H. Gilkes, is a story of life in an English public school. The author, who is head-master of Dulwich College, has chosen three or four boys as types, and traced their course through school in a series of sketches rather than in a connected tale. He has evidently a very clear understanding of boys, their ways of thinking and motives to action, and their conversations are natural and unconstrained, but he is not so successful in making the boys themselves real and lifelike to his readers. This is even truer of his portraits of the masters: their talk is well reported, though the meaning of what they say is not always apparent, but they remain shadows, with perhaps a single exception. The frequent use of schoolboy slang and allusions to local customs will, we fear, make it difficult at times for the American boy to understand. It is a thoughtful book, perhaps intended more for masters than for boys, and shows well what a master who is in thorough sympathy with his pupils can accomplish, and also the unconscious influence which an upright boy exerts upon his companions.

'Notes for Boys' (Chicago: A. C. McClurg & Co.), by an "Old Boy," is a series of short essays, somewhat after the manner of the Chesterfield Letters, written by an Englishman for the guidance of his son. He treats of a great variety of topics, from unselfishness, truth, and honesty to the choice of a profession and marriage, in a straightforward, wholesome way, which impresses one both with his good sense and with his clear comprehension of the temptations and dangers besetting a boy on his entrance to business life. All subjects are treated from the standpoint of an Englishman of the middle class who desires his son to be successful, not in the ordinary meaning of the word, but in the making the best use of his opportunities, both for himself and for those about him. In the matter of sports cricket is put first; while of football he says: "I do not think highly; the Rugby game especially is brutal," in which judgment we heartily agree with him. Medicine is placed at the head of the professions, the stage at the foot, and religion is regarded as the foundation of all morals, and is summed up as obedience to the Golden Rule. The author at times is needlessly egotistical, and exceptions could be taken to some of his statements. Occasionally his illustrations are not well chosen. The act of Nicholas in choosing a straight line for the railroad from St. Petersburg to Moscow was by no means a typical instance of a bad ambition. Many fathers, we are sure, would get useful hints from this book, while the boy who should follow its teachings would have a well-rounded character, and be a gentleman in the truest sense of the word, whatever his position in life.

In 'Ways for Boys' (Boston: D. Lothrop Co.), by F. T. Vance and others, youngsters are told in a concise but clear way, aided in many instances by diagrams, how to make kites, tents, menageries, boats, and snowshoes. There are also simple instructions for walking, skating, and tree culture—this last chapter, by John Robinson, being the best and most useful in the book.

Mrs. Mary Treat's 'My Garden Pets' (Lothrop) is a charming little book for old or young. It describes, in unaffected style, the author's observations of some phases of the garden life of certain spiders, ants, and wasps, and offers a few biographical details for one or two celebrated spiders, which may be useful to the future historian. Mrs. Treat gives very clear and interesting evidence of how both spiders and wasps can appreciate favors and kind treatment, even if they can hardly be said to be tamed. She seems, however, to have found the white-faced hornet refractory. The account of the life and raids of the slave-making ant and of the silent, but perfectly efficient, communication which takes place between individual ants, is extremely interesting. The illustrations, by E. H. Garrett, are mostly of inferior quality, coarse, confused, and muddy; but this may be partly due to the printer.

'Our Darlings' (Routledge) is a pretty oblong book of colored plates by "Mars." French designs they are, here reproduced with an English text, and we see the little ones at home, in town, in the country, at the sea-side, at play. Nobody could mistake them for Teutons and Anglo-Saxons, and they are most interesting as foils to the types we are most accustomed to. The drawing is skilful, and as graceful as conformity to French fashions will permit.

RECENT NOVELS.

The Bee-Man of Orn, and Other Fanciful Tales. By Frank R. Stockton. Charles Scribner's Sons.

The Hundredth Man. By Frank R. Stockton. The Century Co.

Fools of Nature. By Alice Brown. Boston: Ticknor & Co.

Love and Theology. By Celia Parker Woolley. Ticknor & Co.

Jack the Fisherman. By Elizabeth Stuart Phelps. Boston: Houghton, Mifflin & Co.

Mohammed Benani: A Story of To-day. London: Sampson Low & Co.

Ismay's Children. By the author of 'Hogan, M. P.,' etc. Harper & Bros.

Tony, the Maid. By Blanche Willis Howard. Harper & Bros.

Country Luck. By John Habberton. Philadelphia: J. B. Lippincott Co.

White Cockades. By Edward Irenæus Stevenson. Charles Scribner's Sons.

The Rose of Paradise. By Howard Pyle. Harper & Bros.

Mr. Stockton's imagination was off on a frolic when it committed him to the creation of 'The Bee-Man of Orn,' and of the many astonishing persons now closely confined in a volume with that "ugly, untidy, shrivelled, and brown" victim of the junior sorcerer. The most morose of critics could find little to growl at in the conduct of any man or beast or demon presented by the genius of the page. There is no reason why he should not, with a clear conscience, abandon himself to the will of the blithe spirit, and make the most of a merry hour. The method by which Mr. Stockton controls the vagaries of his familiar is now too well known to require comment. His work is gravely to demonstrate a grotesque or ridiculous proposition in plain and direct language. The writers of the famous fairy stories of all ages and climes knew the value of this method, and furious

satirists have availed themselves of it at once to cloak their literal meaning and to poison their shafts. Mr. Stockton uses it neither to scourge evil nor to reform abuse, but with the wholly beneficent intention of provoking spontaneous laughter. In the story of "The Griffin and the Minor Canon," there is a hint of more serious purpose. Here the author seems to emulate those achievements of true humorists which are greater though not rarer than is the successful provision of pure amusement. Beneath the fantastic imagery it is not hard to discern the self-seeking, ungenerous, cowardly mob contrasted with the exceptionally modest, unselfish, and courageous individual. The griffin is a novel symbol for even-handed justice, encouraging the good and terrorizing the wicked. He is a creature of most upright soul, of beautiful discrimination and insight. We cannot but regret his demise, and wish that it were possible to resuscitate him. Here and there on the earth's surface may still be found a community which would be none the worse of a permanent griffin to persuade it, by wagging his red-hot tail, to honor and reverence a minor canon.

Perceiving in this charming story some ability to excite grave emotion, to stir contempt for what is contemptible, and admiration for what is admirable, one is naturally anxious to find the author developing positive power in this direction. Unfortunately, in longer works, with scope to show all there is in a man, Mr. Stockton fails to fulfil expectation, however modest, or to satisfy literary judgment, however lenient. Indeed, when we speak of Mr. Stockton as a novelist, we are obliged to imitate Mrs. Wilfer, who, having referred to Bella's "attractions," said she wished to be understood as using the word with the qualification that she meant it in no sense whatever. 'The Hundredth Man' confirms a suspicion suggested by 'The Late Mrs. Null,' that for the vocation of the contemporary novelist, which is to rouse the world to "sympathy with hopes and fears it heeded not," Mr. Stockton has no more capability than has a clever concocter of nonsense rhymes. Confronting the facts of life, the common motives, ends, and actions of common people, his genius is speedily worsted. Before this task the method of which he is master serves only to lead him hopelessly away from the result he wishes to achieve.

'The Hundredth Man' has two themes imperfectly wrought together. The first includes the series of events by which Mr. Harold Stratford proved himself to be the object of his solicitous search, a man preëminent in the fact that no other in a hundred is, or could have been, like him. Mr. Stratford certainly justifies the author's selection. With deliberate intention not to marry Miss Armatt, he separates her as deliberately from her lover. When Miss Armatt, dying for love of somebody, anybody, consents to live at the entreaty of a third man, Mr. Stratford, too late, discovers that he might have loved her. Considering the character ascribed by the author to Stratford and Miss Armatt, the situation in all its ramifications is obtrusively improbable nonsense. But, after all, the characters are only said to belong to them. The people have no real existence; they are lifeless figments of an imagination which is no longer a sprite, nothing but a poor, over-driven beast of burden. If Miss Armatt could be regarded seriously as a representative graduate of a woman's college, then the opponents of any sort of education for women might lift up their voices and rejoice. No adjective could be less appropriate than Tennyson's "sweet" prefixed to such a girl graduate as that. The secondary plot, which embraces the vicissitudes of Vatoldi's restaurant, is not irrational, but is prosy and dull, signifying nothing.

The people in 'Fools of Nature' do not belong to the social contingent of natural-born fools. They are of the multitude driven to indiscretion and folly by natural tendencies which override intelligence and dominate will. The fundamental conception is rather profound, affording opportunity for drawing refined distinctions, and for explaining much in conduct that is irreconcilable with obvious character. The author is not incompetent to develop her conception, but hardly realizes its possibilities. She has almost restricted her illustration of the force for folly that lies in the wisest of us to the fascination exercised by spiritualism over people of good instincts and some intellectual strength. Miss Brown's delineation of Dr. Ricker and exposure of his methods are good, but add nothing to knowledge of a subject of which the daily press keeps the public very fully informed. Much more interesting is the ethical problem presented to Sarah Ellis, when she learns that her fiancé has a divorced wife still living. This wife had wantonly betrayed and abandoned him, and therefore he was a free man, according to law and to Gospel. Miss Ellis's hesitation about marrying him is rather an instance of inherited prejudice than of desirable sensitiveness to requirements of personal morality. Accepting, however, the author's view, it is a pity, for purposes of clever workmanship, that she permits her heroine's decision to be dictated by a medium, again a pity that she does not devise a stronger expedient to compel her to leave her husband. In analysis of Sarah's mental perplexity, some unusually fine points are made, and one regrets that experience which precludes hearty sympathy with her self-sacrifice.

The intrinsic evidence of this clever story is that the author has had limited opportunities for observation. Sarah Ellis is the ideal, and far from a low one, of the New England woman novelist; she is a creature prone to distort into caricature the divine faces of duty, and love, and truth. The young man who marries Sarah is another ideal, far too elegant a person ever to make a boarding-house his habitat, even as he is too modern to indulge in "throes of ecstatic woman worship," or to experience visitations from impalpable substances which sweep upon him "like a soft pall covering the corpse of noisome passions." The New England village people, on the other hand, are realistic studies, well characterized and amusing, while the sketch of Linora, though verging on burlesque, hits hard at a feminine propensity for providing one's self with a romantic background.

'Love and Theology' presents some characters and situations not unlike those of 'Fools of Nature.' Rachel Armstrong is another Sarah Ellis, sturdier, sounder, yet more repellant, and probably a more accurate study of the type. She properly belongs to the days when the whole Christian world was subject to theological tyranny. To-day she could hardly be found outside of Scotland or New England. The character is not lovable, but, until the idea of religious duty shall have become extinct and the practice obsolete, it is one that will challenge interest and remain well worth a novelist's dissection. When Rachel's lover, Forbes, confesses that he has abandoned their mutual faith, and that he can never attempt to preach a doctrine that he does not believe, she renounces him instantly, absolutely. She experiences no doubt, scarcely an impulse of regretful tenderness. She bows to the will of God, but her soul is consumed with wrath and bitterness. This scene between the lovers is noticeably dramatic. Forbes having described the Bible as a work which must always "rank among the best literature," Rachel's horrified repetition of the word "literature" conveys more vividly the idea of her despair, of the sudden wreck of her life's best hopes, than could chapters of analytical description. In the early chapters, the character of Forbes is as fine and consistent as that of Rachel, and much more attractive. When he appears in the West preaching a free-and-easy sort of religion, he is neither comprehensible nor natural. He becomes vague as his creed, fantastic as the ritual devised by himself.

There are many other people in the novel, all unusually well thought out, and each possessing some point of interest. They are principally busied about love and theology, which absorbing affairs are, however, so wrought in with their daily life that the figures are well rounded. A little nonsense now and then would make them more agreeable, and might be borne, even at the expense of naturalness. The vivacity of Virginia Fairfax, and the author's neat, ironical humor, are small leaven for so much gravity. The end of the story is more conventional than logical. It is true that trial exposes to Rachel flaws in her own perfection, and assails the fortress of her self-righteousness. Nevertheless, her reconciliation with Forbes is equivalent to striking her colors—making unconditional surrender.

Miss Phelps's 'Jack the Fisherman' is a heart-rending tragedy drawn from real life—from life that is all reality, grim, pitiless, and most pitiful. Jack is an easy-going, good-tempered fellow. Poverty and drunkenness are his inheritance, and it is preordained that he shall follow the sea. Nothing short of a miracle could save such a Jack from crime and awful death in one shape or another. But no miracle is wrought for this Jack any more than for most of his kind. The nearest thing to a special Providence in his favor is the love of the girl he marries, which, as usual, not only fails to regenerate him, but gives him a legal opportunity utterly to degrade his manhood. Facts similar to those here employed have come under the observation of almost every one capable of observing. We all know that a large part of the world is very bad and wretched, and, when we think of it, prefer that all should be good and happy. Yet it is doubtful whether constant familiarity with the worst and the wretchedest has such power to make us feel the horror of the facts as have this artistic presentation and arrangement of them. Keen penetration into the thoughts and motives of a class but little understood by those more happily born, faithful observation of their miserable lives, a passion of sympathy and very remarkable literary force and finish, all go to make this short story one of the most valuable and striking contributions to the mass of realistic fiction. It is on a level with the realism of George Eliot and of Tolstoi, which is equivalent to saying that it has to do with the enduring realities, not with the trivial, the shallow, and the transitory.

Truly man is born unto sorrow as the sparks fly upward, not alone by the Puritan's stern and rock-bound coast, but also in the land of 'Mohammed Benani,'

> "Where the light wings of zephyr, oppress'd with perfume,
> Wax faint o'er the gardens of Gül in her bloom;
> Where the virgins are soft as the roses they twine,
> And all save the spirit of man is divine."

The spirit of man in the dominions of the Sultan of Morocco is indeed incredibly base, and there is little to choose between the cringing cowardice of the natives and the criminal oppression of them winked at, if not openly abetted, by representatives of foreign Christian

nations. The object of the author of this novel is a serious and noble one, and can be most succinctly stated by a quotation from his preface:

"It is to attract public attention to the evil adjustment of a mechanism which grinds not grain but human creatures between the upper and nether stone of Jewish and Moorish oppression—awful mills to which the placid breeze of consular support imparts continuous motion."

The consular support exposed in the pages of 'Mohammed Benani' is ostensibly Russian, but since no legation or consulate at Tingizirah flies the Russian flag, let him whom the shoe fits wear it. In the thorough and sympathetic development of his serious motive the author is perfectly successful, and his novel should be read with interest and profit by those who, in a general way, have the welfare of humanity at heart, and by those in high places who have power to mitigate the evils so forcibly presented to their notice. It follows almost inevitably that the work is not distinguished by the definite personal interest, the sharp characterization, necessary to insure its recognition as a fine example of fiction. One of the characters says, "If you want to be successful, never write a novel with a moral"; the importance of the author's moral has certainly impaired the success of his novel. The Sultan's envoy, Benani, is little more than a symbol, in burnoose and turban, for the throng of his outraged and despoiled fellow-countrymen. The sensitive, mysterious Eftomah is little more than an allegorical figure. She stands for that universal silence and reserve which the author declares to be the attitude of the East before the inquisitive, analytical, sceptical West. Paulovitch, the Russian humanitarian, and his English wife, Cassimir, the dragoman, and Werner, the Bavarian soldier, have more individuality, are more instinct with life, yet they, too, are one-sided, ever harping on one string. They make little impression except as instruments created to accomplish a mission. But, although the people are abstractions, the events are dramatic and well marshalled, while the setting of the scene leaves nothing to be desired in the way of local color and Oriental gorgeousness.

Remembering the dash, fun, and pathos of Miss Laffan's earlier novels, 'Ismay's Children' is opened with some assurance of coming enjoyment. Expectation is not bitterly disappointed, yet lacks something of satisfaction. The story is, of course, Irish, but the author's vision of Ireland is nearer to that of "A sad votarist in palmer's weeds" than to that of "Laughter holding both his sides." Ismay's children are the victims of an irregular, Scotch marriage, and not until Miss Laffan is nearly done with them is the validity of their father, Captain Mauleverer's, marriage with Ismay D'Arcy established. The reader is not invited to assist in a wild-goose chase after records and witnesses, but to take part in the daily life of an Irish village. Small farmers, shopkeepers, beggars, and the parish priest pass through the pages as naturally as through the shabby, dirty streets of Barrettstown, and their particularly slow transit is only a little more irritating in print than it is in reality. The shadow on the lives of the young Mauleverers seems to hang over all, and the author's interpretation of her characters is tinged with contemptuous bitterness. Her sense of their degradation is stronger than sympathy with their wrongs, and has benumbed her faculty for extracting humor out of the dullest of them. The figure of young Godfrey Mauleverer is romantic and sorrowful. Given his nature and circumstances, he must naturally become a patriot, the unsuspecting tool of self-interested, rascally conspirators. The end of Godfrey is inevitable; he had the character that never controls destiny. The pain inflicted by contemplation of the boy's gloomy career is partly mitigated by the happy fortune in love provided for his sister. Though one hardly sees why Marion Mauleverer should have commanded Lord Ansdale's devotion, it is quite clear that she did, and the author's manner of telling about it is exceptionally delicate and fresh.

'Tony, the Maid' is all but a bit of pure, light comedy. Tony is vivacious and piquant, drawn with admirable reserve. Nothing that Tony does or says could be changed without injury. She is a perfect reproduction of the soubrette of old comedy, with quite brilliant, original individuality. In the delineation of Tony's mistress, the author has unfortunately cast discretion to the winds. There is stuff in Miss Aurelia for refined satire on the ludicrous follies which such limp, timid women are specially liable to commit. It is a pity to see so good a conception ruined by exaggeration. Miss Aurelia's instant captivation by the theatrical boatman, Binder, strains probability. As for her subsequent behavior, it is too utterly imbecile for momentary belief. Mrs. High-Dudgeon is a person who owes her existence to the *esprit gaulois*. Many a year has come and gone since a French caricaturist invented this figure of massive stupidity and snobbery, and called it a British matron. At least two generations of caricaturists, with pen and pencil, have pegged away on the same lines, and a large proportion of society is now firmly convinced that the lady is a genuine and common production of the British Isles. Miss Howard's rendering is coarse and remote from nature, but that will not hinder the knowing from protesting that it is the most lifelike and excruciatingly funny thing imaginable.

If Diogenes Teufelsdröckh could step down to earth out of vast aerial space, Mr. Habberton would give him some points on the "influence," if not on "the origin of clothes." These two great cause-and-effect philosophers would embrace with laughter and with tears, and 'Country Luck' would ever after (by mutual consent) appear as a corollary to 'Sartor Resartus.' Mr. Habberton's rustic hero rises in New York social and business life with a speed and brilliancy comparable only to that of a rocket. He is an honest, industrious, and capable youth, but his historian, profoundly conscious of the inefficacy of such qualities for realizing worldly success, gives them only civil recognition. Clothes! is Philip Hayne's "Excelsior"; Clothes! his "Open, sesame." Before leaving his pastoral home, his aged father counsels him —Put clothes on your back. Arrived in New York, he sees nothing but clothes, dreams only clothes, and, once arrayed in a clothier's first-class business suit, has his foot planted on a rung of the ladder which he is to run up with astonishing celerity. Without presuming to dispute an argument sustained by eminent authority, we may refer to some matters of minor importance, on which Mr. Habberton's observation is so faulty that almost are we tempted to discredit the clothes dogma. He seems to imagine that his Mrs. Tramlay and her daughter are ladies. There are salesladies in America and washer-ladies, but, when Mr. Habberton insists that there are Tramlay-ladies, he abuses the good word too severely, and must be advised to pray for some power of discrimination, together with a better understanding of the English tongue. Mr. Tramlay is a very good specimen of what may be called the rough-and-ready, cash-down business man, but the leisurely Mr. Marge would be most at home in the rôle of "walking gentleman" at a third-rate theatre.

'White Cockades' is an episode of Prince Charlie's wanderings after the defeat of Culloden. His fictitious escape from Windelstrae Manor, and "bloody Cumberland's" brutal subordinates, is no more wonderful than were many of his actual adventures during the six months when he was hunted like a wild beast through the Western Isles and Highlands. The fidelity of the Master of Windelstrae and of his young son is but one instance out of hundreds of a loyalty and devotion unparalleled in history. Mr. Stevenson tells the story simply and without waste of words, but has not quite been able to project himself into the spirit of the time and people. Though his work lacks the personal enthusiasm of his namesake's 'Kidnapped,' and has not, like that, the very smell of the heather, it has certainly the merit of sympathetic imagination.

Traditional belief in the diabolic wickedness of the mariners who flew the "Black Roger," significantly adorned with white skull and cross-bones, is comfortably sustained by Mr. Pyle's story of 'The Rose of Paradise.' The pirates who interrupted the voyage to India of the good ship *Cassandra*, in the year 1720, are an unexceptionable gang of cut-throats, appropriately attired in Turkish trousers and sashes of varied hue. The gentlemen, from a piratical point of view, are such good form that Captain John Mackra's adventure with them should thrill more than it does. The archaic form and spelling adopted by the author fails of its object, which undoubtedly is to lend vivacity to his narrative. It is forced and artificial, detracting very much from the inherent spirit of the events and vigor of the characters.

RECENT LAW PUBLICATIONS.

The development of strikes within the last few years has brought into prominence a very singular part of the criminal law, the doctrine of conspiracy—a doctrine which, in the portentous breadth of its ordinary statement, makes the mere *agreement* between two or more persons to do an unlawful act a crime. It is at best a dangerous doctrine, but it is not quite so bad as that. Fortunately it was made the subject of an admirable little English treatise in 1873 by R. S. Wright, now Solicitor to the Treasury. After having examined all the cases from the earliest times, the author set himself to make a brief statement of the way the law had developed. It was a summary treatment of the subject, but one full of interest and instruction, really indispensable to any lawyer or judge who would deal intelligently with this very perplexed topic. It is, then, a good service which the Blackstone Publishing Company have done in reprinting Wright on the 'Law of Criminal Conspiracies and Agreements.' They have also done well in adding to it as a supplement a presentation of the doctrine of the American cases by Hampton L. Carson of the Philadelphia Bar. Mr. Carson's addition bears no comparison, in point of thorough and skilful workmanship, with that of the English writer; but it will be found very useful, and it shows signs of a practised hand. The subject of "Strikes and Boycotts" is dealt with at length. Forms of indictments and the provisions of the Federal statutes and those of the States are added. The book is one to be heartily commended.

The second edition of Mr. James Schouler's useful 'Treatise on the Law of Bailments, including Carriers, Innkeepers, and Pledge' (Boston: Little, Brown & Co.) "is now stretched to the utmost limit possible for a single volume"; and the author has made "especial effort . . . to present a full and lucid expo-

sition of the law of carriers." We observe two new chapters under this last head, on "Connecting Carriers" and "Transportation of Baggage," but look in vain for any mention of the familiar title of "Inter-State Commerce," a strange omission. In Mr. Schouler's § 544 he states a doctrine which is sound on principle and authority; but it is singular to see it so absolutely said, just as if the famous "Exeter Carrier" had never lived and lorded it in the English courts. Mr. Schouler is right, we doubt not, in treating carriers in connection with the general topic of bailments.

Mr. William Henry Rawle's 'Practical Treatise on the Law of Covenants for Title' (Little, Brown & Co.), first published in 1852, has reached its fifth edition. It is, as lawyers well know, one of our best law books—learned, clean-cut, discriminating, thoroughly well adapted to its purpose as a "practical treatise." And it is also one of the few law books which a legal scholar can read with pleasure, for it opens with skill a difficult and intricate subject. In preparing this edition the text is divided into numbered sections, and this, for purposes of convenience, is perhaps well; but some readers, in law as in gospel, probably find their minds teased a good deal by these unfortunate figures. The author has added many cases to his list of citations, and yet the size of the volume is considerably less than in the fourth edition—a result which has been accomplished by a great deal of careful labor. The main lines of the book are unchanged, but here and there in a quiet way, and in a few places more noticeably, as in the tenth chapter, touching covenants running with the land, and the eleventh, as to the operation of covenants for title by way of estoppel (see the summing up in § 265), much thought and conscientious work has gone into this new edition.

'Commentaries on the Law of Receivers,' by Charles Fisk Beach, jr. (L. K. Strouse & Co.), is a portly volume, having "particular reference to the application of that law to railway corporations, but including in detail a complete consideration of the whole subject." "That I have not overestimated the magnitude or importance of the subject," says the author in his preface, "appears from . . . the fact that within the past twelve years no less than three hundred and ninety-two railways, representing nearly forty thousand miles of road, and having a capital stock and bonded indebtedness of more than twenty-three hundred and ten millions of dollars, have been sold in the United States in foreclosure proceedings." That is an astonishing statement. Of course, in such a novel state of facts the law has developed in some proportionate degree. The courts of Chancery have had to learn how to become an engine for carrying on a vast and complicated business. One curious particular of this development is treated in the chapter on "Receivers' Certificates"—that singular, plausible security which the courts have authorized and supported, "ostensibly for the preservation of the property, and in the interest of the bondholders, but, it is believed, in a majority of the cases in which they are issued, to the hindrance and delay of a prompt foreclosure, to the impairment of the bondholders' security, and to the scandal of the courts of equity." If courts, however, must go into such business, they must also attend to it—and the theory of raising money on the security of the property which they hold, in order to keep it up, seems to be sound. That matter was all argued out in Massachusetts early in the last decade, and in Alabama and elsewhere later. But one need not differ from Mr. Beach as to the practical results of the resort to this highly dangerous expedient. It is interesting to notice what the author quotes from Professor Pollock on this particular matter: "The thing treated of does not exist on this side." That would be more than could be said as to bondholders who have suffered from them—*that* thing exists in England. Mr. Beach's book appears to be a very good one indeed, prepared with judgment and conscientious labor, and written with skill.

'The Doctrine of Cy Pres as Applied to Charities,' by Robert Hunter McGrath, jr. (Philadelphia: T. & J. W. Johnson & Co.), is a neat and very good piece of work, which obtained the Meredith Prize at the University of Pennsylvania, in 1887. It is clear, orderly, excellently well stated; and the author has well supported the last sentence in his book: "The complete growth of a theory founded in excessive religious zeal, pushed to great lengths, but outlasting its cause, and reduced again to limits productive of benefit to mankind, is a spectacle by no means devoid of interest."

Professor Marshall D. Ewell (who is "M. D." as well as "LL. D.") publishes a little 'Manual of Medical Jurisprudence for the Use of Students at Law and of Medicine' (Students' Series, Little, Brown & Co.). "It does not claim," says the author, "to be more than a careful compilation, from what seemed to be the best authorities, of the leading principles of the science." But he adds that it is believed to contain "the substance of all the principles stated in the more voluminous works"—excepting only as regards the two topics of Insanity and Toxicology, which are very shortly dealt with. For the purposes of legal study, books of this class seem to us to have little value. They may be serviceable to a student of medicine; and yet, even for him, the value of this particular work is seriously lessened by the author's resort to a singular expedient for the saving of space—the omission to cite authorities.

"The Science of Law, according to the American Theory of Government," by E. L. Campbell (Jersey City: F. D. Linn & Co.), proceeds upon the view that "the principles of justice are . . . a definite body of immutable principles and hence constitute a true science. . . . We claim that the Intuitional theory is the true one—that there is a law of natural justice." "Our fathers . . . swept away all this political fog at once, and anchored their system in the living rock of God's great law of natural justice—covering all public as all private relations." In reaching details the author goes so far as to say: "Consistency in theory would require that any law which violated a well-settled principle of natural justice should be held to be null and void. And this, to an extent not clearly defined, is the established doctrine, though veiled. . . . It is a common thing for our courts to overthrow duly enacted laws for this reason, even when the principle violated is not distinctly formulated in the Constitution of State or nation." Now that is not at all a common thing—indeed, it is never done. Rather that is true which Mr. Justice Gray has said in Quincy's Reports, pp. 528, 529: "It is believed there is no instance, except one case in South Carolina [1 Bay 252], in which an act of the Legislature has been set aside by the courts, except for conflict with some written constitutional provision." A man must not be misled by the occasional moral fervor of a judge when he is "off duty," as it were, and is merely uttering general expressions. The author of this book has made a serious and thoughtful endeavor to analyze and arrange the fundamental conceptions of law and government, and his attempt is worthy of attention and respect. But it seems to have in it quite too much of the theologic spirit to permit a first-rate handling of the subject.

The fifth volume of the Reports of Decisions rendered by the Supreme Court of the Hawaiian Islands, compiled by William Foster (Honolulu: *Hawaiian Gazette* Co.), has curious matter in it. It includes cases from July, 1883, to October, 1886, and preserves in an Appendix the latest Constitution of these islands, promulgated in July of the present year. This document is modelled on those of our States, but has provisions adapting it to a monarchy. It would please some of our people, for it "has God" in it, to use the current phrase. It begins thus: "God hath endowed all men," etc., etc. Under Art. 70, the judges may be required by the Executive and the Legislature to give opinions on "important questions of law." Several of these opinions are given, of which one, on the "Segregation of Lepers," answers the inquiring Legislature (1) that it is not a crime to be afflicted with leprosy; but (2) the confinement of lepers is not contrary to the Constitution; and (3) the existing statute (1865) to that effect is constitutional. In one case the court takes judicial notice "that many Chinese . . . are engaged throughout the islands in commercial business in a small way." The interminable telephone litigation is going on there, so that now they may be said to have all the blessings of the most favored nations. The general law seems to be largely the same as ours, and our State reports are freely cited. Now and then one's mind gets into a pucker, much as if he were reading the Scotch reports, with their outlandish words; *e. g.*, "The Ili of Piopio, being an ili kupono, is not subservient to the Ahupuaa of Waiakea, by which it is surrounded; and the lessee [thereof] . . . has no rights as a hoaaina of the ahupuaa," etc. This particular proposition is not supported by cases from Barber's Reports and Howard's Practice and the like, but only, perhaps, because it seemed an obvious one, no authorities at all being cited. There are instances of search warrants for opium, issued against Chinese. And by the way, under the Constitution, it is only "male residents . . . of Hawaiian, American, or European birth or descent," that can vote for Representatives or "Nobles"; the Asiatic is left out. In the case of Awa vs. Horner, it is for the first time held that a gift of land to two or more persons creates tenancy in common and not joint tenancy. "The common law is not in force in this kingdom, *proprio vigore*. . . . There are no feudal tenures." And finally, at p. 573, is a case of considerable interest—"In the matter of John W. McCarthy"—in which it is held that the Government may rightfully surrender a fugitive from justice from California, on the requisition of the Governor of that State. The obvious objection had been made that the requisition should have come from the Government at Washington. To this the Court says: "However this may be, and without binding the Court to decide as we now do in any case which may hereafter come before it, we hold, in the case now before us, that the Minister Resident of the United States having requested the intervention of his Majesty's Government, the ground taken for the petitioner is not sustainable." The Arguelles case is cited in another part of the opinion, and it is intimated that the Government may surrender fugitives, in the absence of a treaty, at its discretion.

THE WORDSWORTHS AND THE BEAUMONTS.

Memorials of Coleorton. Being Letters from Coleridge, Wordsworth and his Sister, Southey, and Sir Walter Scott, to Sir George and Lady Beaumont of Coleorton, Leicestershire, 1803 to 1834. Edited, with In-

troduction and Notes, by William Knight, University of St. Andrews. 2 vols. Boston: Houghton, Mifflin & Co. 1887.

THESE memorials remind us how incomplete, notwithstanding the varied sources of our knowledge, is the biographical record of the famous Lake School, and it is a pleasure to observe that they come as a kind of *avant-courrier* of the lives of Coleridge and Wordsworth, and of Thomas Poole of Nether Stowey, now in preparation by competent hands. It is proper to remark that several of the letters are not new, though Mr. Knight does not state the fact; the important passages of the Wordsworth letters are already accessible in the 'Life of Wordsworth' by his brother Christopher—in fact, all that is really of value in shedding light on the character and genius of the poet is there. But reprinting them in connection with the remainder of Sir George Beaumont's literary correspondence has made an enviable memorial for him and his delightful country seat at Coleorton.

Sir George appears to have been one of the most agreeable of men. He had not merely high breeding, but humanity of disposition, delightful companionableness, and the refinement that springs from artistic pursuits. Haydon accuses his manners of a want of moral courage. "What his taste dictated to be right, he would shrink from asserting if it shocked the prejudices of others or put himself to a moment's inconvenience," was the fault that this critic had in mind; but this is only to class him with the men who do not think that the truth is always to be spoken in society, and prefer tact to an aggressive egotism. Sir Humphrey Davy notices especially that he was a "remarkably *sensible* man, which I mention because it *is* somewhat remarkable in a painter of genius who is at the same time a man of rank and an exceedingly amusing companion." Southey was struck by the apparent happiness of his life and the absence of any reference to afflictions or anxieties that he may have experienced, and says that he "had as little liking for country sports as for public business of any kind," being absorbed by art and nature; and, to add Scott's kind words of him in his diary, that excellent judge writes: "Sir George Beaumont's dead; by far the most sensible and pleasing man I ever knew. Kind, too, in his nature, and generous—gentle in society, and of those mild manners which tend to soften the causticity of the general London tone of persiflage and personal satire. I am very sorry—as much as it is in my nature to be—for one whom I could see but seldom." This is a concert of praise which it is a pleasure to associate with the name of the man who was, chiefly, the founder of the National Gallery in Trafalgar Square.

He was a friend of the artists of his time, and a patron of Wilkie and Haydon when they needed aid. In the latter's autobiography there is a bright account of a fortnight's visit paid by these two to Coleorton, which brings the interior life there more vividly to the eye than anything in the letters which fill this volume, though it borrows something from the unconscious humor of the narrator, who always fills the scene with himself in the leading part. One pauses to note a characteristic sentence of the incorrigible beggar in which he breaks out with the indignant remark: "All my friends were always advising me what to do instead of advising the Government what to do for me." Sir George, however, had other friends, and most noteworthy of all, Wordsworth, of whom he first heard from Coleridge. Before meeting him, understanding that they wished to live in the same neighborhood, he bought and presented to Wordsworth the little property of Applethwaite near Greta Hall, Coleridge's abode. Wordsworth never used the ground for the purpose for which it was given, but it remained in his possession. From this time, 1803, a close friendship grew up between the family at Grasmere and that at Coleorton, grounded upon common interests and cemented with mutual exchanges of kindness and regard, so that it survived until the death of Sir George and Lady Beaumont, herself an excellent woman, of whom Crabb Robinson wrote: "She is a gentlewoman of great sweetness and dignity, I should think among the most interesting persons in the country."

When these memorials begin, in 1803, Coleridge was most intimate with the Beaumonts. This was the period just previous to his voyage to Malta, when he was sick in body and mind. The letters he wrote are very painful to read. They are characterized by the complaining and absorbing egotism of the invalid, unfortified by patience, resolution, or even self-respect. The ravages of disease in its physical aspects, the laying bare of bodily conditions and symptoms of decay, would be in themselves intolerably disagreeable, but it is much worse to be obliged to attend at the sick-bed of the mind; and in Coleridge's case the internal weakness of the spirit excites the greatest pity, and this feeling nearly passes involuntarily into disgust. The sensibility of his nervous organization was acute. He speaks of times when, as he was accusing himself of insensibility through incapacity to feel, his "whole frame has gone *crash*, as it were." Under the excitement of his emotions, he dissolves in weakness; the spectacle is not a pleasant one; there is something almost ignoble in such loss of self-control. When Wordsworth recited to him, if one can fancy such a thing, the entire thirteen books on the growth of his own mind, in 1807, Coleridge composed a poem, not very coherent or noble, though personally pathetic, in which he says that when he rose from his seat, he "found himself in prayer." It was apparently not an unusual termination to the *accès* of emotion, and it occurred more than once in his relations with the Beaumonts. The mention of it, however, in his correspondence with them, offends one, not in itself, but by the manner of it; indeed, the manner of his earlier letters is indescribable. Their sentiment is so tremulous and overwrought with fever that they resemble maundering; they are "sicklied o'er" with mental disease, and belong to the pathology of genius. A person in such a state could not fail to be a subject of deep concern, a burden of anxiety always, to his friends. In the earlier years, and in some degree throughout the entire period, Coleridge, whenever he appears, darkens the page.

Perhaps the serenity of Wordsworth's home at Grasmere gains by the miserable contrast. Thither Coleridge came for invigoration; thither, when he finally separated from his wife, he brought or sent the children; and when he could not or would not retire to the hospitality and pleasant companionship of the household where he found the feminine sympathy which he had failed of in his own marriage, Wordsworth would set out to visit him with moral support and cheer. Coleridge is the episode, but Grasmere is the real subject of this correspondence. It is substantially the record of the friendliness subsisting between the Wordsworths and Beaumonts. The common interest which united Wordsworth and Sir George was the love of nature. Landscape was the subject of their thoughts. Sir George painted it, Wordsworth poetized it; in the life of both it was a permanent resource to which they constantly resorted, and they liked to blend their work in this solvent—the pictures of the one becoming a text for the poems of the other, and vice-versa. The large place which natural scenery held in Wordsworth's life is abundantly illustrated in the course of the letters, as one would expect; but the interest he felt in landscape gardening, in modifying wild nature, and his ideas regarding the methods and aims of the art, are brought even more to the front because of the part he had in planning the grounds at Coleorton. Sir George rebuilt at Coleorton, and in laying out the winter garden in particular, he had frequent recourse to the taste of his friend; and as Wordsworth was that year occupying the old farmhouse on the estate, the business of thinking out and overseeing this work was at once diversion and restful employment amid his poetic labors. He wrote at great length on the subject to Lady Beaumont, and laid before her an elaborate plan full of ivy, holly, juniper, yews, open sunshine glades, flower-borders, an alley, a bower, a spray-fountain, a quarry, a distant spire, a pool with two gold-fish, a vine-clad old cottage, and other things which are artificial enough in the reading, but in reality seem remarkably well fitted to mingle the charm of cultivation with the wildness of the evergreens, and make a sheltering retreat where the life of nature would linger longest in autumn and revive earliest in the warm sun.

"Painters and poets," he wrote, "have had the credit of being reckoned the fathers of English gardening," and he felt thus in the line of succession in the art. It is most interesting to observe how he obtains suggestions from the poets, and makes their Pegasus plough his field. He was, of course, opposed to undue interference with nature and the deformity it occasions, and also to the ostentation of the wealth or station of the owner. "It is a substitution of little things for great when we would put a whole country into a nobleman's livery," he says with spirit, and, declaring that the laying out of grounds is a liberal art not unlike poetry and painting, he goes on to protest against the monopoly of nature by the great ones of the earth, upon high æsthetic grounds. "No liberal art," he says, "aims merely at the gratification of an individual or a class; the painter or poet is degraded in proportion as he does so. . . . If this be so when we are merely putting together words or colors, how much more ought the feeling to prevail when we are in the midst of the realities of things. . . . What, then, shall we say of many great mansions with their unqualified expulsion of human creatures from their neighborhood, happy or not—houses which do what is fabled of the upas tree—that they breathe out death and desolation?" These strictures on the aristocratic handling of land he continues for some pages in an interesting advocacy of æsthetic communism—still a suggestive topic. This sense of the beauty and grandeur of nature as a universal boon, the desire to humanize the landscape without robbing it of its own essential character or of the minor charms of its native wildness, and a great delight in his own practical work of improving rubbish heaps, old walls, and broken ground into a winter retreat of sunshine and evergreens and red-berried vines, with nooks and views fit for a poet's walk, are the qualities that still give interest to those half-dozen letters about planting a waste acre of land.

It would be only too easy to select passages to show Wordsworth's tastes, the choices he made, the ensemble he projected, and so on; but the subject is a minor one. On the other hand, his genius, in which susceptibility to nature was

so dominating a principle, seldom finds expression in the prose of his letters with anything like the clearness and purity of his poems. There is one extract, however, which we cannot refrain from giving of a city scene from the country poet:

"I left Coleridge at seven o'clock on Sunday morning, and walked towards the city in a very thoughtful and melancholy state of mind. I had passed through Temple Bar and by St. Dunstan's, noticing nothing, and entirely occupied with my own thoughts, when, looking up, I saw before me the avenue of Fleet Street, silent, empty, and pure white, with a sprinkling of new-fallen snow, not a cart or a carriage to obstruct the view, no noise, only a few soundless and dusky foot-passengers here and there. You remember the elegant line of the curve of Ludgate Hill in which the avenue would terminate, and beyond, and towering above it, was the huge and majestic form of St. Paul's, solemnized by a thin veil of falling snow. I cannot say how much I was affected at this unthought-of sight in such a place, and what a blessing I felt there is in habits of exalted imagination. My sorrow was controlled and my uneasiness of mind—not quieted and relieved altogether—seemed at once to receive the gift of an anchor of security."

This is not poetry, but it is from the same pen as the sonnet on Westminster Bridge.

Besides this taste for landscape, there is, of course, a special interest taken by both friends in what poetry Wordsworth was composing from time to time, but the correspondence contains very little that is purely literary. We find Wordsworth again expatiating on the "awful truth that there neither is, nor can be, any genuine enjoyment of poetry among nineteen out of twenty of those persons who live, or wish to live, in the broad light of the world"—that is, in society; and we hear him again define his aims—"to console the afflicted; to add sunshine to daylight, by making the happy happier; to teach the young and the gracious of every age to see, to think, and feel, and therefore become, more actively and securely virtuous," etc. We come, too, upon the calm and patient confidence in his own immortality, a serene foreknowledge of how the matter would end, though we are sometimes perplexed and amused by some dark spots in his prevision, as when he says that "the people would love Peter Bell" if only the critics would let them. It appears, too, that these poets were discreet in their confidential criticism of each other, and by no means blind to faults. Wordsworth notices that in Southey's verse, notwithstanding picturesqueness and romance and a minor touch or two, "there is nothing that shows the hand of the great master"; and Coleridge, with all his adoration for Wordsworth, even when declaring that he regarded the tale of the ruined cottage in the "Excursion" as "the finest poem in our language, comparing it with any of the same or similar length," could yet put his finger on the very centre of weakness in Wordsworth. "I have sometimes fancied," he says, "that having by the conjoint operation of his own experiences, feelings, and reason, *himself* convinced *himself* of truths which the generality of people have either taken for granted from their infancy, or at least adopted in early life, he has attached all their own depth and weight to doctrines and words which come almost as truisms or commonplace to others."

One finds, however, very little literature in the volumes. What there is, as we have remarked, is mostly old. Their intellectual element is quite secondary to their friendliness. The notes from Southey are mostly solicitations of influence with Government, with the exception of two very characteristic and admirable letters of condolence, written to Lady Beaumont after Sir George's death, from which the Christian temper of the writer receives fair illustration. Sir Walter's are the missives of a friendly and cultivated acquaintance, superficial and amiable, and there are very few of them. Coleridge's later letters are somewhat heavy with the weight of his dulled and bulky mind. Wordsworth's, and those of his sister Dorothy, make the valuable portion of the collection, and, as will have been gathered, they are composed of the ordinary scenes and incidents of a very quiet domestic life, with the details of a journey now and then, or something about a visitor or a birth or a new poem under way—glimpses of the home at Grasmere. The tastes of Sir George and Wordsworth imported into the correspondence the very great element of a living love of nature, and occasional remarks on art and poetry. Those who care to know only what is conspicuous, original, and exceptional in the life of genius will not find anything essential in the volumes; those who are interested and pleased to observe how genius bears itself in those relations of life which it has in common with ourselves, will find pleasant leisurely reading; while to the student of literature they make Coleorton a name with Grasmere and Rydal Mount and Greta Hall.

The Sportsman's Paradise; or, the Lake Lands of Canada. By B. A. Watson, A.M., M.D. Philadelphia: J. B. Lippincott Co.

THERE is in Canada, northwest from the Georgian Bay, and between it and the Ottawa River, a vast tract of wild country filled with streams and lakes and abounding in fish and game. This has been the scene of Mr. Watson's exploits, and his description of it is interesting and trustworthy. He gives a minute account of several excursions of considerable length made by him, the last being the most prolonged; and while he is at times unnecessarily diffuse and his narrative is disconnected, he conveys, on the whole, a very good idea of the troubles and pleasures of life in the woods carried on in situations requiring patience, endurance, and self-reliance. His most important trip was made from Magnetewan after moose, and lasted into November. It was full of hardship, for which success amply repaid the party. A number of deer and several moose were shot, and Dr. Watson and his guide lost more by poor shooting and ignorance of the habits of the animals than they got, their misfortunes and blunders being faithfully chronicled. While the author never hesitates to hold himself up as a true sportsman, he lays no claim to the infallibility in aim and woodcraft which is the besetting sin of writers on kindred subjects, and his modesty in this regard gives the reader faith in the substantial truthfulness of his book.

There is, besides, another vein of entertainment that pervades the whole, and that is the medical attitude from which the Doctor surveys his field of operations. Chapter i. contains several pages on the physical advantages of the chase and the evils of a sedentary life—especially "dyspepsia, insomnia, and hypochondriasis." It says in italics: "It may also be boldly asserted at this point, without entering into any long inquiry bearing on the etiological or pathological conditions of these morbid states, that the man who will engage in the chase with all the enthusiasm of a true sportsman, and will follow the same a few months, will certainly find more benefit from this course of procedure than could possibly be obtained by the most systematic restrictions in the use of food." Dr. Watson believes that two maladies from which he suffered, viz., diabetes and glucosuria, owed their relief to his wild life. He records the wounds of defunct animals in a most professional manner; *e. g.*, a moose was killed by "a shot a little behind the base of his skull, which factured the upper portion of the vertebral column and likewise wounded the medulla oblongata, which injury was followed by instantaneous death." One found dead in the woods "had evidently suffered with severe suppurative arthritis, which was complicated by a necrosis of all the bones entering into this joint" (the knee). Captain Ross, Dr. Watson's guide, is most happily described through several chapters. As he paddles a canoe, "the sight is a grand one, and called to mind the impetuous charge of a squadron of cavalry in war time." The effect on the Captain of seeing a moose is thus stated: "His eyes were fixed, and glared intently on the game he had just discovered. His lips were tightly closed, his teeth completely hidden. The muscles of his face exhibited the most intense excitement and resolute determination. His body was as immovable as a statue," etc.

Another interesting character is Mr. Mildenberger, a German photographer who went on the moose-hunting trip and was lost in the woods for nearly two days. His dream during the night he is lost is thus italicized:

"He imagines that he is fleeing rapidly before the enemy, and we know that he is restless and constantly moving. Behold him now! His eyes are widely open, he glares wildly about him; still he slumbers. In this disturbed sleep he sees the merciless savage peering from behind every forest-tree and bush upon him. He calls aloud, 'What shall I do? I am already surrounded.' He now beholds the brutal, bloody, and fiendish Iroquois Indians creeping stealthily upon him. They are in full war paint and armed with their barbarous instruments of war. This is their moment of triumph over a poor defeated Huron. They have risen to their feet and now rush forward upon our sleeping soldier. The instruments of death are already uplifted, an unearthly yell is heard, which echoes from lake to lake."

Strange as it may seem, the photographer survives and is rescued.

The "story of a romantic wedding and the honeymoon" (pp. 88 *et seq.*) can be highly recommended, though Dr. Watson says: "This story, involving a marriage and a wedding tour, is only a wildflower plucked from our pathway through the wilderness, presented to the reader for momentary gratification." There is enough fine writing in the book to please such of its readers as may not have special fondness for the solid and evidently reliable narrative of sport and adventure it contains; and Dr. Watson is to be thanked for an important contribution to the sporting literature of the country. The volume is copiously illustrated and handsomely manufactured.

English Colonies in America. Volume II. The Puritan Colonies in two volumes. By J. A. Doyle, M. A., Fellow of All Souls' College, Oxford. Henry Holt & Co. 1887. 2 vols., 8vo, pp. 333 and 416.

MR. DOYLE'S second volume, or rather part, has overflowed into two volumes, disarranging so far the symmetry of the plan which began with his volume on Virginia, Maryland, and the Carolinas. As the present section embraces the history of all the colonies of New England till the date of Gov. Joseph Dudley of Massachusetts, it is not surprising that more space was required. Not only are the events more numerous and interesting, but the authorities increase in number, weight, and vitality. Bradford, Winthrop, Hubbard, Williams, and Sewall are authorities without a rival in the annals of our other colonies. Moreover, New England is conceded to be the field in which great social problems have been worked out; and for centuries to come the story of the evolution of popu-

lar government in these colonies will be studied by all who use the English tongue.

Mr. Doyle has made an admirable summary of the history of the Puritan colonies in the seventeenth century. He has gone over the field so often travelled in part by our specialists, and so thoroughly explored as a whole by Dr. Palfrey, and he gives us an admirable résumé of the facts and of the impressions made by them upon the mind of an educated Englishman. He has not contributed a single new fact of importance, and few such remain to be discovered, but he has made a diligent and careful use of the immense collections already in print. Once in a while we detect an expression which shows a lack of entire familiarity with the geography of New England, but generally speaking he gives the true local coloring, and correctly interprets the real value of the events described. If to the knowledge he has obtained from the general writers and the essayists, he could add a familiarity with the vast literature comprised in our town histories, and a personal acquaintance with our forms of government as now in constant use, he would be equipped to write a history unexcelled by any extant or perhaps imaginable.

These two volumes are, for their size, the best of which we have any knowledge to place in the hands of any young person desirous of really knowing the subject. They are attractive in style, full of careful research, impartial in judgment, and doubly valuable as giving the opinions of one not blinded to our faults by ties of birth or education. That the conclusions at which the author arrives are substantially those of our best native historians, is evidence that the truth has at last been reached in regard to this subject, and that we may hereafter reason from sound premises upon the effect which Puritanism has had, and is continuing to have, upon our national life.

Abbeys and Churches of England and Wales: Descriptive, Historical, Pictorial. Edited by the Rev. T. G. Bonney, D. Sc., LL.D., F. R. S., Professor of Geology in University College, London. Cassell & Co. 1887. Quarto. xvi-280.

THE appearance of this book is not in its favor. It has much the look of the merest "parlor-table" trifle; and that without special beauty or daintiness, without or within. The numerous illustrations, scattered about the pages in the hateful, pseudo-picturesque modern fashion, are not attractive upon a first or even a second look. But the more patient or more hopeful student will be gratified by finding a vast deal of sound information and really shrewd criticism in these numerous essays. Any one who cares for English architecture or historical antiquities will find himself the wiser for the study of them. And even the pictures prove to be worth their place in the page, especially some of the interiors, where the clumsy wood-engraving yet retains something of the verisimilitude of the original photograph. Dr. Bonney contributes the introduction and seventeen out of thirty-seven essays on churches, groups of churches, and the like. Thus, after "St. Bartholomew's, Smithfield, and St. Saviour's, Southwark," by Thomas Archer, "Selborne and Eversley; Two Lovers of Nature," by W. Senior, we have "Spires of Coventry," by the editor, and so on; and, luckily, Dr. Bonney's work is rather especially good. It seems that he has looked at English and Continental churches with very discriminating eyes. His fame as a writer on science and on theology and on both together does not prepare one for too ready an acceptance of his views on the ticklish subjects which the title of this book brings to mind; but here, in these pages, is proof of his fitness. He is proved worthy, let him be admitted to the small circle of men who "know themselves" in architectural criticism. It is to be wished that he would avoid the unscholarly and most awkward English use of the word Renaissance, as covering all the revived classic art in England from Elizabeth's time to George Third's, at least. He fidgets in its limitations, as is plainly seen in the introduction.

BOOKS OF THE WEEK.

Abbott, E. Herodotus, Book ix. With notes. Part I Macmillan & Co. 75 cents.
Abercromby, R. Weather. D. Appleton & Co. $1.75.
Andree, R. Allgemeiner Handatlas. Parts 10-12. (Conclusion.) Leipzig: Velhagen & Klasing; New York: Westermann.
Badeau, A. Grant in Peace: From the Appomattox to Mount McGregor. A Personal Memoir. Hartford: S. S. Scranton & Co.
Battles and Leaders of the Civil War. No. 8. The Century Co. 50 cents.
Bert, P. Introductory Steps in Science. For the use of schools. D. Appleton & Co. $1.05.
Boardman, G. D. The Divine Man, from the Nativity to the Temptation. D. Appleton & Co. $1.50.
Bonney, Rev. T. G. Abbeys and Churches of England and Wales. Descriptive, Historical, Pictorial. Cassell & Co. $5.
Boutwell, G. S. The Lawyer, the Statesman, and the Soldier. D. Appleton & Co. $1.25.
Chamberlain, B. H. Aino Fairy Tales. No. 1. The Hunter in Fairy Land. Boston: Ticknor & Co. 40 cents.
Christmas Eve; or, the Angel Guest. From the Swedish. George R. Lockwood & Son. $1.25.
Clark, S. T. My Garden. Illustrated. Boston: Samuel E. Cassino.
Diaz, Mrs. A. M. Byberry to Beacon Street. Boston: D. Lothrop Co. $1.25.
Dieudonné, Florence C. Rondah; or, Thirty-three Years in a Star. Philadelphia: T. B. Peterson & Bros. 75 cents.
Dodge, Grace H. A Bundle of Letters to Busy Girls on Practical Subjects. Funk & Wagnalls. 50 cents.
Engravings on Wood by Members of the Society of American Wood-Engravers. With an introduction and descriptive text by Wm. M. Laffan. Harper & Bros.
Everett, Prof. J. D. Outlines of Natural Philosophy. For schools and general readers. D. Appleton & Co. $1.
Farrer, Rev. F. W. Everyday Christian Life; or, Sermons by the Way. Thomas Whittaker.
Fiske, J. Irving's Life of Washington. Abridged for the use of schools. Boston: Ginn & Co.
Five Hundred Dollars, and Other Stories of New England Life. By C. H. W. Boston: Little, Brown & Co. $1.25.
Foulke, W. D. Slav or Saxon: A Study of the Growth and Tendencies of Russian Civilization. G. P. Putnam's Sons. $1.
Goethe's Werke. Herausgegeben im Auftrage der Grossherzogin Sophie von Sachsen. Division I., vol. 1, Poems; II., Faust, Part 1; III., 1, Journals, 1775–1787; IV., 1, Letters, 1764–1771; 2, Letters, 1771–1775. Weimar: Hermann Böhlau; New York: B. Westermann & Co.
Goff, Mrs. Harriet N. K. Who Cares? Philadelphia: T. B. Peterson & Brothers. 50 cents.
Gray, T. Elegy in a Country Churchyard. E. & J. B. Young & Co. $1.25.
Haigh, A. E. Virgil. Æneid ix. With introduction and notes. Macmillan & Co. 40 cents.

Fine Arts.

AMERICAN ART ASSOCIATION.

THE exhibitions at the galleries of the American Art Association possess a unique interest in the display of works by American painters abroad. At the inaugural exhibition in these galleries in the autumn of 1884 the large quota of such work formed a prominent feature, and, in the prize-fund exhibitions held each year since, these pictures from artists in Paris, of in the French provinces, or in Munich, and Florence, and Rome, have always been found in comparatively large numbers side by side with the work done at home. Here only could this class of work be seen at all of late years, for almost none of it has been sent to the Academy, and usually only small or unimportant things have appeared at the Society of American Artists. One or two artists have had exhibitions of their own in dealers' galleries, such as

those of Mr. Dannat's and Mr. Davis's works at Reichard's; but these have been seen by only a few. In the present exhibition most of the Americans abroad are represented whose work has become familiar to the regular visitors to New York exhibitions, and there are some new names besides. Mr. Simmons and Mr. Davis, who have heretofore contributed regularly, have sent nothing this time, and the absence of any work by Messrs. Boggs, Walter Gay, and Grayson may be noted; but Mr. Eugene Vail, a newcomer, exhibits two large and important pictures; Mr. Julian Story, another newcomer, has a picture of almost vast dimensions; and Messrs. Alexander Harrison, Melchers, Bridgman, Howe, and Butler are represented by characteristic examples of their work.

In the pictures by these artists, who are painting under the stimulus of ardent emulation abroad, we are impressed by two things that show in almost every one of their works, namely, sincerity of intention and directness of purpose. There are, for instance, in this exhibition at least half-a-dozen pictures of single figures, some of them painted full length, others half length, but nearly all of life size, in every one of which the artist seems to have well determined beforehand just how he was going to treat his subject. If out of doors, he was in no doubt whatever whether his effect would be that of sunlight at noonday, or late afternoon, or that of the diffused light in gray weather; if indoors, he made up his mind as to how much light to let in at the window and how he should place his model under it. Then, this being once and for all decided upon, he seems to have set about painting it for the sake of painting, and to have completed his picture as he had begun, without experimenting, and without other embellishment than he found in nature before him. Whether the result be deemed entirely or only partially successful, or if even it be a failure outright, it is yet plain to be seen that he attempted something definite, and carried out his purpose as well as his abilities permitted him to do so. Now, although the quality of "picture-making" or imagination on the part of the artist in thinking out a composition calls for the greatest appreciation when we find it, this other quality which must underlie it, and which is perforce the corner-stone of all sound painting—this simple purpose to do one thing and do it well—deserves high commendation, and the more so as it is none too common in the work of the younger artists at home, who are too apt to try to fly before their wings are full grown. That we can find earnest, straightforward study of nature in the pictures sent here from the same class abroad is exceedingly gratifying. It is one of the most hopeful indications of a coming powerful school of American art we can cite.

As an example of this sort of work "Preoccupation," No. 157, by Eurilda L. Loomis, in which interest is added to the study by a pose expressive of thoughtful rest—a simple and unpretentious, but excellent piece of painting—may be instanced. Other examples of the same thing may be seen in "A Cheerful Old Man of Concarneau," No. 254 A, by R. N. Van Trump, and in "L'Hiver," No. 236, by Robert V. V. Sewell. It is well shown, again, in the picture by Miss Mary L. Fairchild, "Les Confidences," No. 114, where the artist has applied it to a study of two figures—a young and an older woman chatting in a garden. They are frankly painted without any humbug, and look exactly what they were in life—two every-day Frenchwomen talking under a tree; and here are the outdoor light and the leaves of the trees catching the sun, and the brambles growing in the corner, making an enjoyable, healthful picture.

For a piece of out-and-out nature painted by a man who shows himself so thoroughly imbued with it that he cares to make a picture of it for its innate beauty, there is nothing more striking in the exhibition than "Open Sea," No. 130, by Alexander Harrison. The frame encloses a stretch of ocean with heavy rolling billows, not big waves spanked into foam by the wind, but slow-moving masses of water, now rising round-topped and now slipping into long hollows. At the top of the canvas there is a bit of evening sky, and the light of the moon above is reflected here and there on the bosom of the waves. The picture is well painted; the effect is rendered without calling attention to the means.

With this beautiful canvas before us it is hard to understand how Mr. Harrison could have allowed himself to send out such a half-hearted picture as "Le Maïs," No. 131. It is a landscape, showing in the foreground an American cornfield, with the stalks "topped off," and the ears of corn left hanging to dry. A little girl is coming through the field, and in the distance is the early evening sky and a row of massive, round-topped trees, which catch the red light of the setting sun. The distant parts of the picture are successful enough, and there is very good technical work throughout the canvas, but quite unlike nature are the light pinkish earth and the bright yellow cornstalks in the foreground. This part of the picture, moreover, is out of key with the rest, and, taken by itself, looks as if it had been painted at midday. The figure of the little girl is extremely perfunctory. How such an artistic "slip" as this picture is to be accounted for, we are unable to say; but perhaps the fact that it was painted from recollection and notes only, and 3,000 miles away from the scene of the picture itself, may serve in part to explain it—will explain its lack of character at least, if not its incompleteness as a pictorial whole.

"Sur la Tamise," No. 256, by Eugene Vail, is a notable example of successful treatment of a rather difficult effect by an artist of no mean ability, who evidently set to work to make the best picture possible out of a commonplace subject. A heavy row-boat with a couple of children in it, riding on the dirty waters of the Thames, with the walls and towers of smoky London for a background, and all enveloped in a yellow fog, is the subject. Mr. Vail has been attracted by its picturesqueness, and has painted it soundly and with much truth of observation. It is one of the best pictures, taken altogether, that have been sent from abroad in the past year. "Widowed," No. 255, by the same artist, is, like the other, a large picture, and is to be especially commended for completeness and for largeness of style. The widow, who stands on the beach with the storm-beaten sea behind her and her little son at her side, is a life-size figure. In her black dress, which the wind whirls around her legs and blows out to one side, she has a great deal of dignity, and the little boy, sturdily planted on his feet to withstand the force of the storm, is excellently handled. In color the picture inclines to blackishness, and it must be said that its excellence is entirely dependent on the arrangement of the figures, and the comprehensive way in which it is painted, entirely apart from the color quality.

"Moonrise—St. Ives," No. 9, by Howard R. Butler, is a charming sea-shore view, with some fishing-boats drawn up on the beach and a group of children playing on the sands in the immediate foreground. It is a large canvas, like so many others here, and is remarkable for breadth and skilful painting. There is no forcing of the effect—boats, children, the long, white pier jutting out into the sea at the left, the quiet evening sky with the full moon half revealed above a bank of clouds at the horizon, are all truthfully rendered, and the canvas bears throughout the impress of sincerity and true artistic feeling. It is subdued and refined in color.

Those who have been interested in the work of Mr. J. Gary Melchers in previous exhibitions, beginning, if we are not mistaken, with a water-color, "A Dutch Bachelor's Breakfast," in the exhibition of the Society at the Academy in 1885, will find cause for satisfaction in the excellent picture by him in the present exhibition, "In Holland," No. 180. The two figures of Dutch peasant girls in this picture, the one in the foreground with the rake, and the other a little beyond carrying water-pails, are strongly painted in a landscape of simple and impressive beauty. The color is daring, with its introduction of such difficult notes as lilac and blue, but it is agreeable to the eye as a whole, and the drawing is thoroughly good. "Return of the Herd, Uplands of Normandy," No. 133, by William F. Howe, is a large picture, larger than any in this exhibition, where large canvases predominate, except Mr. Story's, and is one of the best pictures of cattle that have been seen in any recent exhibition we remember. There is nothing particularly striking about it; it has no dash and go like Julien Dupré's cattle painting, for instance, and it has no great color quality like Troyon's, or cleverness like Van Marcke's, but it has merits of of its own. For one thing, the cattle are real cattle, with hair on their backs and not chunks of paint. Then, again, they are standing on ground, where one can see their legs down to the hoofs, and see that they are well-drawn legs such as cattle might use to walk on, not wooden legs that do well enough to stick into marsh grass or the water of a pool that covers them up to the knees. Again, Mr. Howe's cattle are standing stupidly on a hillside, each one occupied with himself, and not all grouping and posing around one central animal in the middle of the canvas with his head front to the spectator. To say that Mr. Howe has made a cattle picture without resorting to well-known tricks, and has painted some natural-looking cows in a quiet, handsome landscape, is to say that he has distinguished himself indeed, and this is what he has done.

Two pictures, "The Neighbors—On the Terraces of Algiers" (No. 34) and "A Street at the Kashbah—Algiers" (No. 35), by Frederick A. Bridgman, are conspicuous in this exhibition by their flippant cleverness. True, it is cleverness of the better sort, with an artistic temperament back of it, and it hits oftener than it misses in its brilliant dash; but it remains flippant and insincere. Both pictures evince great self-reliance and consciousness of ability to strike surely at each dash of the brush, and it is such work as only a man with remarkable command of his means could produce. It is by no means petty cleverness, for there is no attempt at anything like mere prettiness. On the contrary, there is a general air of truth, and there is some very delicate and tender color in parts of the work: it is on the side of carelessness that it offends, and leaves the same impression as that made by the violinist who can play *à merveille* if he tries, but who chooses to hurry through his piece and get to the end regardless of a slip or a false note here and there. However, Mr. Bridgman's reputation rests on a solid basis, and perhaps these pictures are not fairly representative of his present work. They are certainly not representative of his best.

"A Shower—Rue Bonaparte," No. 140, by Childe Hassam, a picture of a well-known street in the Latin Quarter, with a long row

of cabs standing in the rain, and, though somewhat tentatively painted, yet in the main a good impression and a truthful piece of work; "Washed Ashore," No. 221, by Charles S. Reinhart, a large picture depicting an incident in fisher life on the Normandy coast, where a rural gendarme, note-book in hand, is jotting down the facts connected with the finding of the body of a drowned man on the beach, and men and women are standing about him; "Episode of the September Massacres, Paris, 1792," by Julian Story, in which the well-known incident of Mlle. de Sombreuil and the goblet filled with aristocrats' blood is the subject—a picture with nothing exceptionally good about it, and no particular faults either, but as the work of a young painter a canvas of considerable promise, and an exceedingly creditable performance in view of the complex nature of the subject, the large number of figures introduced, and the historical requirements of the subject; "A Fool's Fool," No. 57, by Thomas S. Clarke, an interior with a figure in a jester's costume of red surrounded by various articles of studio bric-à-brac tastefully disposed withal, and showing some good qualities of color; "Visit of the Marquise," No. 171, by Henry Mosler, a cleverly painted Breton subject, with figures of peasants and people of quality in the artist's familiar style of treatment of interiors; two carefully painted figure pictures, "The Mandolin-Player," No. 173, and "A Quiet Hour," No. 174, by F. D. Millet; a small picture with figures, "In the Café," No. 147, by Robert Köhler, and "Un Incident au Village," No. 37, by Amanda Brewster, a cottage interior with two figures of a woman and a boy looking out of a window into the street of a French village—are the other most important pictures in the collection among the large number of works from France and other places in Europe.

If the part of the exhibition which we have been considering is interesting, and gives cause for congratulation on the advance of American art as it is exemplified by the artists who are either permanently settled abroad or are there temporarily for the purpose of study, the work in the same galleries side by side with it from the home artists is not less noteworthy. If it is in general less ambitious, it is more diversified, and especially in the field of landscape there is gratifying progress on all sides. In this connection we may mention a remarkable bit of painting in pastel, "Sunlight and Shadow in Prospect Park," No. 66, by Wm. M. Chase; a cattle picture of great excellence, "A Pastoral," No. 258, by Horatio Walker; a good piece of genre painting, "Reminiscences," No. 129, by Charles X. Harris; and landscapes by Messrs. Bogert, Tryon, Ochtman, Minor, and Middleton.

LA FARCE DE

Maitre Pathelin,

With 16 curious illustrations by BOUTET DE MONVEL. Superb album in 8vo. *Couverture de luxe*, $3.00.

DUPRAT & CO., 5 *East 17th St.*,
BOOKSELLERS. NEW YORK.

E. W. NASH, 80 NASSAU ST., N. Y., has just issued a new catalogue of books, among which will be found works on America, Local History, etc. Sent on application.

Worth Buying.

The Count of Monte-Cristo.

By ALEXANDRE DUMAS. With nearly 500 illustrations by Beauce, Staal, and other eminent French artists. 5 vols., royal 8vo, cloth, $15.00.

(Uniform with the superbly illustrated edition of 'Les Misérables' published last season.)

"In many forms has 'The Count of Monte-Cristo' come before readers of English, never in guise so rich and worthy as that now given to it at the Messrs. Routledge's hands."—Literary World.

Notre-Dame.

By VICTOR HUGO. With illustrations from designs by Victor Hugo, Bayard, Brion, Johannot, and other eminent French artists. 2 vols, royal 8vo, cloth, $6.00.

Uniform with 'Les Misérables' and 'The Count of Monte-Cristo.' Pronounced finer than any French edition by Hugo's literary executor (Paul Meurice).

The Toilers of the Sea.

By VICTOR HUGO. With illustrations from designs by Chifflart, D. Vierge, and Victor Hugo. 2 vols., royal 8vo, cloth, $6.00. Uniform with the above.

This edition completes the trilogy of romances (of which "Notre Dame" is the first and "Les Miserables" the second) on which Hugo's reputation so largely rests.

Carmen.

By PROSPER MÉRIMÉE. With illustrations from designs by S. Arcos, engraved by A. Nargeot. 12mo, half levant, gilt top, $5.00.

The fine paper, broad margins, exquisite illustrations, attractive typography, and rich binding make this without dispute the choicest edition that has ever appeared of any of Mérimée's Works.

Sylvie.

Recollections of Valois. By GÉRARD DE NERVAL. Preface by Ludovic Halévy. With 42 etchings by Ed. Rudaux. 12mo, half levant, gilt top, $4.00.

Fragrant with the memories of the days of early love, written in a most tender, charming, yet simple style. Uniform with Merimee's Carmen.'

For sale by all booksellers, or mailed, postpaid, on receipt of price, by the publishers,

GEORGE ROUTLEDGE & SONS,

9 Lafayette Place, New York.

PICKERING'S

Chronological History of Plants.

Man's record of his own existence illustrated through their Names, Uses, and Companionship. By CHARLES PICKERING, M.D., Author of 'Races of Man.' Quarto, 1,238 pages, cloth, $15.00; paper, $14.00; half morocco, $18.00.

For Sale by

LITTLE, BROWN & CO.,

BOSTON, MASS.

OLLA PODRIDA, or a well-digested Medley. Being Odds and Ends. No. 24 selected from the "Literary Junk Shop" of A. S. Clark, 34 Park Row, New York City. Now ready. A. S. CLARK.

A LIFE IN SONG. By Prof. George L. Raymond, author of 'Poetry as a Representative Art,' etc. 16mo, cloth, $1.25.

"It is a new work, this of Mr. Raymond's doing, for which American literature, with its present superabundance of gracefully trivial verse-writing, should be glad to make room. His thought is high and sustained, and the language of his expression the choicest. A fertile imagination and a keen analytic way of regarding life add their values to the poem, which is vigorous in conception and musical in execution. . . . It is impossible not to see in the book indications of a poetic growth that it will be fortunate for American literature if Mr. Raymond cultivates."—*The Week (Toronto).*

BALLADS OF THE REVOLUTION, AND OTHER POEMS. By Prof. George L. Raymond. 16mo, cloth extra, $1.25.

"Notable examples of what may be wrought of native material by one who has a tasteful ear and practised hand."—*Boston Globe.*

SKETCHES IN SONG. By Prof. George L. Raymond. 16mo, cloth, $1.00.

"A work of true genius, brimful of imagination and sweet humanity."—*The Fireside (London, Eng.).*

"Quaint conceits and original and noble thoughts, gracefully put into verse. . . . Mr. Raymond thoroughly understands the true poet's science, man."—*The Literary World (London, Eng.).*

The Nation.

NEW YORK, THURSDAY, DECEMBER 22, 1887.

The Week.

THE Convention of Republican clubs in this city opened in dense gloom on Thursday. There has been considerable talk of late about carrying Virginia and some other States for the Republican candidate next year, but John S. Wise, the last Republican candidate for Governor of Virginia, sent a letter saying: "I write to you despondingly of our ability to enter the next contest as combatants"; while ex-Congressman Lynch of Mississippi, himself a negro, proposed that the Republican party should announce as its policy that when it gets back into power it will confess that negro suffrage has been a failure, and deprive the Southern States of those representatives in Congress to which they are entitled by reason of their negro population! It certainly hardly seemed worth while to gather delegates from all over the country simply to tell them that the Republican party stands no chance in the South next year, and that its whole Southern policy has been radically wrong.

It was announced that the gathering, being largely composed of young men, would bring to the front as leaders some of the young blood of the party, and thus offer an attraction to the new voters of next year's campaign; but the leaders brought forward are chiefly William E. Chandler, William M. Evarts, and Galusha A. Grow. These do not represent young blood in themselves, nor can they be considered as magnets to attract the young blood of others. The two mass-meetings held on Thursday and Friday evenings demonstrated their lack of drawing power, for the attendance at both was very slim. It does not seem likely that the platform of principles put forth on Friday will prove any more attractive. It is devoted almost entirely to "arraigning" the Democratic party for its sins, in the time-honored style, and, so far as it relates to the issues of the present, confines the membership of the party to men who believe that a protective tariff is a thing too sacred to be even revised. In fact, the whole tendency of the Convention was to narrow the party down to the platform of "Blaine and a surplus." The frantic yells which greeted every mention of Blaine's name showed that the majority of its delegates were incurable Blaine men when they came here, and that their main purpose was the organization of a national Blaine machine which should carry his renomination through the National Convention. It is pretty soon to take the field so openly, but the party seems to be so completely paralyzed with Blaineism that there is at present little prospect that the grip of his managers upon it can be shaken off.

The "Blaine and a surplus" policy is already repudiated by so large an element among the Republicans that the party's defeat is rendered certain if it is adopted by the National Convention. There is no mistaking the temper of the Northwestern Republicans; they see and confess that the party cannot carry the country on this issue. The St. Paul *Pioneer Press*, which understands the sentiment of Republicans in that part of the country as well as any newspaper, is perfectly frank about the matter. It shows from the record that tariff reduction and reform is more distinctly a Republican than a Democratic demand; that it is consistent with the recommendations of Republican Secretaries of the Treasury and the earnest request of a Republican President, and that it represents "the demands of great Republican constituencies in the Northwest, expressed through some of their representatives in Congress and approved by their State conventions." For these reasons it declares that "the position assumed by Mr. Blaine in his comments upon the President's message ought not to be and cannot be taken by the Republican party as a whole without disastrous results." The *Pioneer Press* insists that the Republican party must not permit itself to be drawn into an attitude of hostility to tariff reduction, and it concludes with this warning: "When Mr. Blaine, or any other Republican leader, proposes that duties on imports should be left exactly as they are now; when he favors the abolition of taxes on luxuries, and, above all, when he hints at a distribution of public money among the States as a possible means of disposing of the surplus, then not only is he standing on un-Republican ground, but *he is taking a position which, if forced to an issue, the people of this country as a whole will not support.*" It was clear before the President's message appeared that the Republicans could not beat Cleveland with Blaine on the old issues; it is equally clear already that they cannot carry the country against Cleveland on the tariff platform which Blaine made in his Paris interview.

The strength of Mr. Cleveland's position is not shown merely by the endorsement of Republican papers in large cities, like the Providence *Journal* at the East and the Chicago *Tribune* and the St. Paul *Pioneer Press* at the West. It is perhaps more strikingly illustrated by the tone of the rural Republican press. The weekly paper which is published at the county seat and circulates among the farmers, has a great influence, and it means much when one finds a representative Republican paper of this sort, like the Greenfield (Mass.) *Gazette and Courier*, using such language as this about the message: "There can be no two opinions as to its frankness, and among the common people we do not think there will be two opinions as to its meaning. In other words, while active partisans of the opposition shout 'free trade' for political effect, the plain people, in whom Abraham Lincoln placed so much confidence, will look in vain for evidence that warrants any such declaration as to its intent." Of equal significance, too, is the commendation of the President's course expressed by a religious journal of Republican prepossessions, like the Boston *Congregationalist*, which says: "As a religious journal, it does not lie within our idea of our function to discuss opposing questions of finance, as to which the best men differ, and either of which, from a moral and religious point of view, may be as permissible as the other. Yet we may warmly recognize the frankness, directness, and force with which President Cleveland in his message has spoken upon our national financial posture and peril." The warmth of the popular response to the courageous performance of duty by a public man is a most hopeful and encouraging symptom.

The following lucid telegram has been sent on its travels from St. Louis. We believe that it was first published in the *Tribune* of this city:

"ST. LOUIS, December 16.—The effect of the President's message will be demonstrated here in a disastrous manner in two weeks. The Western Steel Works, employing 2,000 men, will be closed. Lack of orders from railroad companies, said to be due to the unsettled condition of the steel market in view of the President's recommendations, is said to be the cause. President Wilcox says: 'If our works close, which will likely occur in two weeks at the latest, it is caused by our company being unable to get orders to keep going. There are lots of railroads under construction, but they are short of money to pay for rails. Another thing against our works is that we have not the latest patterns of other mills to turn out steel. Our machinery is of the old make, which, of course, is a great drawback to manufacturing rails as cheap as other mills, but still we have been doing it.'"

Observe the number of reasons for closing this steel-rail mill: (1) On account of the President's message; (2) lack of orders from railroad companies; (3) railroads would give orders, but they are short of money; (4) this mill has not got the latest patterns to turn out steel; (5) its machinery is of old make and therefore cannot turn out rails as cheaply as other mills. The only thing like this is the familiar narrative of the man who was accused of breaking the brass kettle he had borrowed, and replied that he never borrowed the kettle, and that it was broken when he took it, and whole when he returned it.

The formal departure from the Republican organization in this city of Mr. J. C. Julius Langbein is significant of what is going on inside the Machine. Mr. Langbein has been the leader of the party in the Twenty-second District for many years, and is a thoroughgoing politician. He is in politics for the purpose of "making something," and he now leaves the Republican party because there is no longer anything to be made by remaining in it. He says he leaves because the organization here is in the control of dishonest men, and declares that the party cannot "expect to obtain candidates in the future when defeat stares them in the face more and more every year, through the apathy, indifference, and treachery of its own members." For this and other reasons, he believes that the "Democracy

will win in the next Presidential election." In short, Mr. Langbein, who is a professional office-seeker of the worst kind, and who, as a Republican candidate in November, was cheated by his own party, has concluded that the man who wants to obtain office in the future must get into the Democratic party. This is the significance of his "change of allegiance," and it will be well for the Republican Presidential calculators to ponder it seriously. The disintegration apparent in the Republican organization here is really of far more importance to the Republican party than any other factor in their calculations. If they have no efficient organization in this city to keep down the Democratic majority, there will not be the slightest possibility of their carrying the State.

The course of the Republican majority in the Senate towards the nomination of Mr. Lamar for the Supreme Court has been most discreditable. The nomination was sent in by the President on the second day of the session, and the nominee is so well known to the Senate that there was no occasion or excuse for delay, as sometimes there is, in order to secure information regarding the man. But although the Committee on the Judiciary, to which the nomination went, was appointed twelve days ago, it did not hold a meeting until Monday last, and then put the matter over until after the holiday recess. Meanwhile Northern Bourbons are trying to work up a sentiment against confirmation by appeals to sectional prejudice, although every candid person admits that Mr. Lamar is eminently qualified for the place.

The latest charge brought against Mr. Lamar, as evidence of his unfitness for a place on the Supreme bench, is that "he holds the constitutional amendments invalid." The accusation is based upon his vote against a resolution introduced by Mr. Edmunds in the Senate on the 7th of January, 1879, which affirmed that the amendments are as valid as any other part of the Constitution; but the publication of the full text of the resolution furnishes a complete vindication of Mr. Lamar's attitude. The salient portion of it is found in the words italicized below:

"Resolved, as the judgment of the Senate, That the Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution of the United States have been legally ratified, and are as valid and of the same paramount authority as any other part of the Constitution; that the people of each State have a common interest in the enforcement of the whole Constitution in every State of the Union, *and that it is alike the right and duty of Congress to enforce said amendments, and to protect every citizen in the exercise of all the rights thereby secured, by laws of the general character already passed for that purpose, and by further appropriate legislation, so far as such enforcement and protection are not secured by existing laws.*"

It is easy to show that the Republican judges of the Supreme Court would have been compelled to vote with Mr. Lamar against this resolution if they had been in the Senate, for they have over and over again voted against its doctrine from their seats on the bench. The resolution declared that Congress ought to keep on passing such laws as the Kuklux Act and the Civil-Rights Act, but these measures no sooner reached the Supreme Court than Chief-Justice Waite and the other Northern Republicans of that court declared them "unconstitutional and void," on the ground that the theory upon which they were based—the theory of the Edmunds resolution, that is—"would make Congress take the place of the State Legislatures and supersede them," which the Court bluntly declared "absurd." The *Tribune* asks, "What will be Mr. Lamar's course should it become his duty as a Supreme Court Judge to pass upon laws framed under the amendments?" It is perfectly safe to say that it will be to sustain the sound State-rights doctrine already enunciated by the Republican members of that tribunal.

The call for a National Prohibition Convention outlines a comprehensive platform for the party. It invites the coöperation of all persons who believe that the liquor traffic "ought to be for ever prohibited"; who believe that our election laws ought to be amended; who "favor a general and progressive system of popular education"; who "favor the protection of American labor and American industry and who foster our agricultural interests"; and "who believe that the ballot in the hand of woman will be the death-knell of the liquor trade." This is only a part of the things in which the call says those joining the party may "believe," but we have enumerated enough to show that nobody can say the party has no excuse for existence. There is work enough mapped out here to keep a half-dozen healthy parties busy for the remainder of the century.

The annual report of the Commissioner of Internal Revenue throws a great deal of light on oleomargarine and the law taxing it. After showing that the total receipts from this source for twelve months have been only $950,048, and that this sum can hardly be considered worth going after, the Commissioner turns the law around at a different angle, and says frankly that it must be considered "as a protective measure," and consequently that legislation should be directed to the improvement of its protective features if it is to remain on the statute-book. This is certainly a logical position, and the Commissioner is entitled to credit for the candor of his statements and arguments. If the object of the law was to suppress one industry for the benefit of another, let us adopt means adequate to the end. Let us not pretend either that we are seeking revenue for the Government or looking after the public health. If we are merely looking after the public health and seeking to prevent the manufacture of a deleterious compound to the injury of the consumer, only a nominal tax and a nominal license are necessary—just sufficient to warrant the internal-revenue officers in making their rounds and keeping watch of the business.

Mr. Blair has promptly brought forward again his "Bill to Promote Mendicancy," and had it referred practically to himself as Chairman of the Committee on Education. It will, of course, soon be reported back favorably, and Mr. Blair counts upon the Senate's passing it again as it did two years ago, because his colleagues wanted to get rid of the subject, and believed that it would fail in the House, as it did. Mr. Plumb of Kansas then declared in debate—and not even Mr. Blair ventured to attempt any contradiction: "I say, what every man knows, that I can count on the fingers of my two hands the members on this floor who are actually in favor of this measure, who will dare avow that they are for it as an original proposition, or as one that commends itself to their judgment." It would not take the fingers of more than one of Mr. Plumb's hands now to count the Senators who really believe the measure a wise one to pass under existing circumstances, for men who honestly supported it two years ago have admitted within the last few months that they had lost their old faith in it; but that does not guarantee the body against stultifying itself again by unloading the burden of defeating a scheme which it does not believe in, upon the House of Representatives.

Senator Frye, in making his cutting remarks on Monday about the privilege extended to the Pacific Coast Steamship Company of carrying goods in bond from San Francisco to Vancouver for transportation to various American cities via the Canadian Pacific Railroad, was probably not aware that the steamship company in question is owned principally in New England. It really makes no difference in the general survey of American industry whether the stockholders live in California or in Massachusetts. It happens that they do live in Massachusetts for the most part, and that their property is just as valuable and as sacred as any property in fishing-smacks. It is probably worth more money than that of the whole Gloucester fleet. It is composed of steamships built wholly in American ship-yards. Its earnings go wholly to American citizens. Its seamen are American citizens by a much larger percentage than those of the fishing-fleet. Why, then, should it not have a right to carry goods in bond to Vancouver? Because, forsooth, the Canadians deny us the right to transship fish in bond across their territory. Clearly the Canadians ought not to deny us that right, but to deny the Pacific Coast Steamship Company the privilege of carrying goods in bond to Vancouver for that reason is simply biting one's nose to spite one's face.

It is safe to say that any such law as Mr. Adams of Illinois is proposing to enact, by which the President would be empowered to expel alien Anarchists on his own motion, would speedily fall into desuetude. Timid Presidents, fishing for the labor vote, would fail to execute it. Bold Presidents in executing it would make mistakes which would rouse popular indignation as attacks on personal freedom. It is, moreover, offensive to the legal instincts of ninety-nine out of every hundred Americans to see any man, no matter who or what he is, expelled, transported, or in any manner vexed

or harried by mere executive warrant, or any one man's condemnation. Therefore we trust that any legislation there may be on the subject will make the Anarchists answerable as now to the courts alone. It would seem a simple enough matter to provide for the expulsion of an alien Anarchist on the production in court of his open declarations of hostility to the American Government and to the constitution of American society, or on proof of his real sentiments, in case he denies them. But the question of fact should be left to a jury. The thing to be aimed at is the deliverance of the country from these people by a short, speedy, and inexpensive judicial process. In many cases, doubtless, an Anarchist would leave, on being requested to do so and having his passage paid. His reappearance after expulsion ought to be declared, *ipso facto*, an offence punishable by imprisonment and hard labor.

The Nineteenth Century Club seems to be disintegrating very much like the Knights of Labor. Judge Barrett, having tendered his resignation, has given certain reasons for doing so, which have found their way into the *Herald*. These reasons are two in number: First, the founder of the Club, Mr. Palmer, who is still the mainspring of the organization, has given utterance to opinions on the execution of the Chicago Anarchists which the Judge cannot seem to sanction by continuing to be a member; second, the literary entertainment of the Club has been of a flippant and erratic character of late, and not worth the attention of serious persons. This is equivalent to saying that the founder and moving spirit of the Club is a person of unbalanced intellect, and that the entertainment partakes of the same general character—two propositions which we neither affirm nor deny. The doings of a private society are not usually made the subject of criticism in the press, but they sometimes force themselves into public notice. There are several societies or clubs in this city whose evening "parties" are varied with literary and musical entertainments, but the Nineteenth Century Club is the only one that has appeared to be moved by ambition. "By that sin fell the angels"; and so, it is to be feared, will Mr. Palmer's club.

Some weeks ago we referred to a report that serious trouble had arisen in regard to the public schools of Stearns County, Minn., by reason of an attempt on the part of the Roman Catholics to secure control of them. We are glad to observe that a recent investigation by the State Superintendent of Public Instruction shows that the dangers of the situation were grossly exaggerated by the report. It was charged that the priests had engineered a movement to shorten the school-year of the public schools, in order to compel children to attend the parochial school, whereas the Superintendent finds that the average length of the public schools in the county is more than half a month above the average for the State, and, indeed, is exceeded by only thirteen counties in the whole State, while the wages of teachers, both male and female, are $3 per month above the State average. Many of the country districts are exclusively German and Catholic in population, and in some schools the German language is given an undue prominence; but the Superintendent can find no evidence that religious instruction is given, and he thinks that the other difficulties of the situation will settle themselves.

Great weight will naturally be attached to the remarks of the *Andover Review* upon Dr. Storrs's letter accepting the Presidency of the American Board and laying down his programme. In the December number of that magazine, the editors say that the letter will receive the "general approval of the Liberals." They express their sense of the immense difference between the proposals of Dr. Storrs and the vote at Springfield by saying that "the present Home Secretary cannot carry out this programme without changing, root and branch, his methods." They construct some very neat dialogues supposed to take place between the Home Secretary and such candidates as he has been rejecting, wherein he is shown to be unable to maintain his old position without squarely repudiating the new President of the Board. What is most striking about the attitude of the Andover party, however, is the way they make this concession a basis for demanding a still broader recognition of their views. They say that Dr. Storrs's letter is "purely a temporal and transitional statement"; that, admitting so much, he must admit more; that, if a man may be a missionary who says he does not know what will become of the heathen dead of past generations, a candidate must not be rejected who thinks, with more or less positiveness, that they "still have a stake." They call this standing up for their rights and liberty. Their opponents will doubtless say that it marks their irreconcilable disposition and their resolve to rule or ruin. What all can see is that the controversy is but begun, although the Conservatives said it was for ever ended at Springfield. And, in fact, the *Andover Review* itself, says further of Dr. Storrs's letter:

> "There are great perils in diplomatic adjustments of controversies—the perils of concealment, evasion, substitution of phrases for realities, of compromising formulas for honest, manly thought and utterance. It should not be hidden from view that the policy proposed by Dr. Storrs, however honestly proposed and accepted, is exposed to these dangers. He suggests its delicacy and intricacy in his exposition of it. We believe that the wisest statesmanship for the American Board requires a policy less beset with moral exposures."

One of the causes which operated to reduce Mayor O'Brien's majority in Boston at the recent election was the disgust excited by his attendance at a public reception given to Sullivan, the champion pugilist. The matter has been referred to in Congress by Senator Morrill, as an illustration of the degradation which has overtaken Boston in consequence of the large preponderance of the foreign element in her population, in aid of the bill he has introduced restricting immigration. One's condemnation of O'Brien would be severer but for the reception given to this same "slugger" by the Prince of Wales, who has had far better training in the proprieties of official life than O'Brien has had, and receives an immense salary simply for waiting decorously to succeed to the throne. The Prince's attentions to the pugilist have been very flattering, and, in fact, Sullivan came near, under his patronage, having as much social success in London as "Colonel the Hon. William F. Cody." Moreover, public men of the standing of the Hon. Roscoe Conkling and the Hon. Charles A. Dana, of undoubted American nativity, have attended similar exhibitions in this city. The most unpleasant feature in the matter, for the decent public on both sides of the water, is not so much the discredit Mayor O'Brien has brought on the city of Boston, or the Prince of Wales on the monarchy, as the marked encouragement which these receptions of Sullivan are giving to ring pugilism. The "manly art" declined for many years after the great Heenan-Sayers fight in 1860, but the great growth of athletic sports on both sides of the water during the last ten or fifteen years has revived it in a way which does not say much for our progress in "gentler manners." The marked increase in the class of men of leisure and fortune, too, who are determined to be amused somehow, and are ready to supply large stakes for pugilistic encounters, has had much to do with restoring the old brutal interest in "fistiana." Anyhow, whatever the cause, we seem to be entering on a period of pugilistic enjoyment such as has not been witnessed in England since the last century. "Mills" of greater or less interest are now part of the regular news of the day. And in fact the ring furnishes a fair livelihood to a larger number of young ruffians, between twenty and thirty, than it has ever done.

The Mexican press has been thrown into a genuine flutter over the discovery of the secure foothold obtained by American capitalists in Lower California. A Brownsville newspaper started the cry against the Government of having betrayed the national interests by enormous concessions to corporations of the United States, and of having paved the way to a repetition of the history of the annexation of Texas. Among other things, it is charged that no less than eighteen millions of acres had been made over to foreign speculators, and that a part of this area lay within the zone on the frontier, twenty leagues in width, in which an express law forbids the selling of real estate to Americans. So urgent became the demand for light upon the question that the official organ of the Government was constrained to take notice of the matter. It made a general denial of the charges, especially of the charge that there had been any secrecy in the giving of the offending contracts, or that there had been a violation of the law. It also promised to present at an early day a complete clearing up of the whole affair, in a report which, it said, the Secretary of the Interior was zealously at work preparing.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 14, to TUESDAY, December 20, 1887, inclusive.]

DOMESTIC.

CONGRESS has voted to adjourn from December 21 to January 4 for the usual holiday recess. Little has been done as yet except the appointment of a Committee on Elections, which will consider the contest made by Thobe for Mr. Carlisle's seat. In the Senate some 500 bills have been introduced, and one correspondent estimates that 5,000 are waiting for the first bill day in the House.

The Committee on Rules appointed by the Speaker of the House consists of Messrs. Randall, Mills, Reed, and Cannon. This indicates that Mr. Randall will be Chairman of the Appropriations and Mr. Mills of the Ways and Means Committee. Mr. Randall is understood to have agreed not to obstruct the consideration of such a tariff bill as Speaker Carlisle wishes passed.

Representative George E. Adams of Illinois (Rep.) has introduced a bill in Congress for the exclusion of alien Socialists, which provides in substance that any alien attempting to overthrow the laws of the United States, or to incite to what the Constitution calls domestic violence by advising murder or unlawful destruction of life or property, shall be removed from the United States. It was drawn in consultation with the editor of the Chicago *Staats-Zeitung*, and is supposed to meet the wishes of Mr. Adams's German constituents.

The Virginia Legislature, December 20, elected John S. Barbour for United States Senator over William Mahone. The vote stood—Barbour, 87; Mahone, 49.

The Young Men's Republican Clubs of the country held a convention in this city December 15, 16, and 17. Senator Evarts was elected Chairman, and made a long, but not new, speech. James P. Foster of this city was elected President of the National Republican League, a place that was informally offered to Chauncey M. Depew and was declined by him. The principal resolutions were: "We emphatically refuse to abandon the policy of home protection, on which our unexampled national progress and prosperity are founded. We recognize in the message of the head of the Democratic party a tender to our country of the choice between supporting the laborers and industries of Great Britain and Europe generally on the one hand, and on the other the support of the laboring-men and industrial enterprise of America. We respectfully decline the former, which he recommends, and will stand by our people when we elect a President." Vigorous resolutions protesting against the confirmation of Mr. Lamar as Judge of the Supreme Court were offered and discussed, but squelched in the Committee.

The Republican Anti-Saloon State Leagues held their annual Convention at Syracuse December 15 and 16, and reëlected ex-Judge Noah Davis of New York President, with Vice-Presidents for each county and forty at large; Secretary, Frank Moss of New York; Treasurer, James S. Thurston of New York. Letters of regret were read from Senators Evarts and Hiscock, ex-Mayor Low of Brooklyn, Cornelius N. Bliss, and Edwin A. Merritt of Potsdam. The most prominent Republicans who attended were Gen. N. M. Curtis, John I. Platt, and Luther Cauldwell, although a number of prominent men who did not go were put on the list of Vice-Presidents. Judge Davis declined the Presidency on account of his age, and President Andrew D. White of Cornell was chosen, but also declines.

The American Federation of Labor, an organization of trade-unions, and the principal rival of the Knights of Labor, held its annual Convention at Baltimore last week. Samuel E. Gompers was reëlected President, his salary fixed at $1,200, and it was voted not to appoint a salaried organizer. The per-capita tax of members was reduced from one-half to one-fourth of a cent a month, but a proposition for an assessment of five cents a week on each member, to start a fund to support strikes, was adopted, subject to the approval of the local unions. The resolutions repeated familiar demands of labor organizations. A good deal of antagonism to the Knights was manifested on the floor of the Convention, though the President's speech was conciliatory. While the Federation was holding this prosperous Convention at Baltimore, the Executive Board of the Knights was in daily session in Philadelphia considering the internal dissensions in that order. The most serious trouble is the demand of the anti-Powderly party for an itemized account of the expenses last year, which reached $110,000 in all, and their threat to prosecute the members of the Board in the courts if the account and vouchers are not forthcoming. The General Executive Board of the Knights of Labor has sent out a "secret circular" in reference to the establishment of a Governmental system of telegraphy, directing every local assembly to appoint committees and wait upon every Congressman in the separate districts and persuade them to vote for the measure.

In the State Grange of Pennsylvania December 15, Overseer J. G. McSparren of Lancaster, in his report, appealed to the farmers not to be misled about raw materials, and gave figures to show that to protect a wool industry amounting to $45,000,000 the people pay as consumers an excess of $146,000,000. Then he quoted from figures showing the assessed valuation of farms to illustrate how freight discriminations were unjust taxations, and high tariffs are crippling the agricultural resources.

At the dinner of the Commonwealth Club in this city December 19, "The Surplus" was the topic of discussion. Mr. Everett P. Wheeler made the principal speech, advocating tariff reform, and Mr. R. R. Bowker spoke on the same side. Protection speeches were made by Mr. Robert P. Porter and Mr. M. Dwight Collier. The debate will be continued at the Club's next meeting.

Commissioner Miller of the Internal-Revenue Service has rendered a decision of much importance in prohibition States, to the effect that lists of liquor-dealers having paid internal-revenue taxes are public property, to be inspected or copied at any time in the offices of local collectors. It further provides that this list must give the street and number of the places licensed. The issue arose in Maine, where the internal-revenue collector refused access to such lists to Prohibitionists, who wished to use them to base prosecutions upon.

The purchase of the Chicago *Times* by the syndicate whose purpose was to make it an out-and-out Blaine-protection-Republican paper has fallen through, and on January 1 the paper will pass into other hands, the chief of whom is C. A. Snowden of the *Mail*. Mr. Snowden says the policy of the paper will be independent, more independent than it has ever been before, even when it was under the control of Mr. Storey.

The suit of the State against Thomas C. Platt, to oust him from the office of Quarantine Commissioner on the ground of his non-residence in New York city, was postponed December 20 until January 9. This is looked upon by Platt's friends as the end of the matter.

Mrs. Lucy S. Barber of Alfred Centre, N. Y., who was sentenced to twenty-four hours' imprisonment for illegal voting, will, it is said, abandon her intended appeal. Mrs. Barber's was made a test case, but the other nine ladies who were indicted with her, having failed to come forward with their share of the expense of an appeal, Mrs. Barber will allow the matter to rest.

Forester Frank Parker, who was directed by the New York Forest Commission to look over the State lands on the Catskills and select sites for a deer park, under the act of last winter which appropriates $5,000 to establish it, has made his report. Over on the east branch of the Neversink, in the town of Deming, Ulster County, he found about 500 acres of State lands suitable for a deer park.

The big lumber raft which it was attempted to float from Joggins, N. S., to New York has been lost during a heavy storm off Nantucket Shoals. This was a new experiment in shipping lumber to this market, and would have made a great change in the traffic if successful. The great raft was shaped like a cigar, somewhat flattened on two sides, and having the two ends cut off bluntly. It was 560 feet long, 65 feet wide, 38 feet high, and had a draught of 19 feet 6 inches when launched. It contained 27,000 sticks, varying from 35 to 95 feet in length. An iron chain 2½ inches in diameter ran lengthwise through the centre, and was the rib to which the numerous pieces were fastened by smaller chains. It cost $30,000, and was built and launched on the Bay of Fundy.

The annual report of the Brooklyn Bridge trustees shows that the receipts for traffic for the year were $850,724, against $743,539 for 1886. Of these receipts the railroad furnished $768,768. Over 30,600,000 persons crossed the bridge, of whom nearly 28,000,000 used the railway.

There was a narrow escape from a serious disaster on the Sixth Avenue Elevated Railroad in this city December 20. A train going up town approached the Franklin Street station, and was slowing up just as workmen were putting in a new rail on the west side of the up-town track. It is alleged that the rail was insufficiently fastened when the workmen left it as the train neared them. The track spread, the spikes gave way, and the train left the track, bumping over the wooden ties. The engine stopped when its wheels were within seven inches of the edge of the elevated structure.

The case against Henry S. Ives, the railroad speculator, for grand larceny, was dismissed in the Tombs Police Court December 17.

Daniel Manning, ex-Secretary of the Treasury, is again very ill, and grave fears of his death are expressed.

The eightieth birthday of the poet Whittier was celebrated by the schools of many cities in the country. A congratulatory address was presented to Mr. Whittier signed by the officers and members of the Essex Club, by Gov. Ames, his staff, and the State officials, the judges of the Supreme Court, and all the ex-Governors of Massachusetts, by the judges of the Supreme Court of the United States, by the United States Senators, and many Congressmen and distinguished men.

The Minneapolis, Sault Ste. Marie and Atlantic Railway, a continuous line from Minneapolis, Minn., to Sault Ste. Marie, Mich., was completed last week. A bridge over the river to connect with the Canadian Pacific will be completed, and the through line from Minneapolis to the Atlantic will be in operation January 1. The road from San Francisco to Portland, Ore., was also opened last week.

The four Anarchists hanged on November 11—Spies, Parsons, Fischer, and Engel—and Lingg, who committed suicide the day before, were placed in their final resting-place in one grave in Waldheim Cemetery, near Chicago, on Sunday. There was no disorder. Several speeches were made.

Gov. Joseph R. Bodwell of Maine died December 15, aged seventy. He had earned his own living since he was eight years old, and became through his own exertions the head of the largest granite works in the

country, and was connected with large railroad and lumbering enterprises. He had been Mayor of Hallowell and delegate to two Republican National Conventions.

FOREIGN.

Europe has had another war scare, based upon an article inspired by the Czar, and published in the *Military Gazette* of St. Petersburg. The article declares that Germany and Austria have made a greater increase in their frontier forces and fortifications than has Russia, and that the Russian movements of troops have been merely protective. There have been three war councils at Vienna at which the Emperor has presided, and the Vienna Boerse became panicky December 16. Most of the European correspondents insist, however, that the situation does not portend war before spring.

The Military Council at Vienna, December 19, decided to grant the Minister of War a credit of 15,000,000 florins. The smallness of the grant is held to be proof that Austria does not intend to take aggressive measures.

Preparations are being made in Vienna for holding an international art exhibition in March next, on the occasion of the fortieth anniversary of the Emperor's accession to the throne. Committees for the furtherance of the scheme have been formed in nearly all foreign countries.

The condition of the German Crown Prince is stationary. There is a new small growth in his throat. The Prince is still strong, and last week walked through the streets of San Remo with the Princess and Dr. Mackenzie.

A new bill was introduced in the German Reichstag December 15, authorizing the expulsion of all Socialists who have incurred penalties for violations of the Anti-Socialist Law or by belonging to secret societies, which is forbidden by existing laws. In accordance with the provisions of this bill, most of the Socialist members of the Reichstag may be expelled from Germany. The bill also permits the punishment of any one taking part in a Socialist congress.

The German Reichstag has fixed the following duties on cereals: Oats 3 marks (75 cents), wheat 5 marks, buckwheat and pulse 2 marks, barley 2¼ marks, malt 4 marks, maize 2 marks, starch flour 12½ marks, vermicelli and macaroni 13½ marks, and mill products 10½ marks. The duty on yeast was increased to 65 marks. The proposed duties on rape and rape-seed were rejected by a large majority.

The Saxon Government, in its new budget, has granted a sum of 50,000 marks towards the support of physicians who settle in the poorer districts of Saxony.

The declaration of the French Ministers, read in the Chamber of Deputies December 15, declares that the Cabinet's sole ambition is to continue the work of concord begun on December 3. It promises a financial equilibrium through retrenchment in expenditures, measures for the repression of frauds injurious alike to the Treasury and to French trade; bills dealing with the responsibility for accidents in workshops and factories, and the regulation of hours of labor of children and women; bills providing for a superannuation fund for miners, reform of the bankruptcy laws, and the safety of miners, and bills relating to benefit societies, savings banks, organized poor relief in rural districts, and for the extension of agricultural education, the creation of chambers of agriculture, and the completion of the rural code. Finally, the declaration demands the united Republican vote upon the Ministerial scheme of military legislation. The reading of the declaration was received with indifference, but the appropriations demanded by the Government were voted, 521 to 13.

The Court of Arraignment at Paris has pronounced that no case has been established against M. Wilson, M. Grévy's son-in-law, in connection with the decoration scandals. The charges against him have, therefore, been dropped. The charges against Gragnon and Garon have also been dismissed. Mme. Limouzin has been mulcted in the costs of the trial.

In the French Chamber of Deputies, December 15, on motion of M. Sarrien, Minister of the Interior, the discussion of the alleged revolutionary plotting among members of the Paris Municipal Council was adjourned for a month. M. Sarrien declared that the facts were exaggerated. The Government, he said, would enforce respect for the laws in Paris, and in every other part of the country.

The first issue of nickel and silver coinage in France will appear shortly, amounting to 70,000,000 francs.

The trial of the persons charged with the responsibility of the fire at the Paris Opéra Comique resulted December 15 in the sentence of M. Carvalho, the manager of the theatre, to three months' imprisonment and a fine of 200 francs. The fireman André was sentenced to one month's imprisonment. Carvalho was also condemned to pay 10,000 francs and André 40,000 francs to various sufferers for damage sustained. All the others who were tried were acquitted.

A monument to Edmond About was unveiled December 20 in the cemetery of Père-la-Chaise at Paris. M. Ferry was present. This was his first appearance in public since the assault upon him, and he received congratulations from many friends.

During the past twelve months the French oyster beds have produced no fewer than 600,000,000 oysters, or ten times more than in 1876. The progress does not concern quantity alone; the quality also shows an equally noteworthy improvement. In 1883 France exported 31,000,000, this year the exportation will not be less than 50,000,000. The culture of what is known as the Portuguese "naissain" has been eminently successful in France. Formerly France imported great quantities of them, but her exports this year have been large.

The British agricultural returns, just published, show a decrease of 57,800 acres in the total cultivated area of the United Kingdom, representing a money loss to the country of at least a quarter of a million sterling per annum, unless recovered in approaching years. Other discouraging features are a decline in the number of milch cows, a considerable decrease in corn-growing, some partial abandonment even of root crops, and a steadily increasing dependence on the mere grazing-farming of poor and backward estates.

The English Cabinet has decided to reassemble Parliament on February 9. The Government will try to limit the debate on the address in reply to the Queen's speech to one week.

Mr. Balfour, Chief Secretary for Ireland, addressed an immense assemblage in Free-Trade Hall, at Manchester, England, December 14. In consequence of warnings that a plot had been formed to assassinate Mr. Balfour, the police guarded the approaches to the platform, and were stationed at various points in the hall. The barricades extending around the hall were continued to the Town Hall, where he slept under guard.

The funeral of Linnell, who died in the hospital from injuries said to have been received in the rioting in Trafalgar Square, took place in London Sunday, and was made the occasion of an imposing public demonstration. The procession was a mile and a half long, and it is estimated that there were 100,000 persons in the crowds that thronged the streets throughout the route. Among the pall-bearers were Messrs. Cunningham, Graham, Stead, and William Morris, and Mrs. Besant. All the Extremist clubs in London were represented. Beyond a few isolated conflicts with the police the affair passed off quietly.

The chief incident in the Irish situation has been the publication in the London *Times* of a story that Dr. Hamilton Williams of New York succeeds O'Donovan Rossa in the leadership of the extreme Nationalists in this city, and that Williams has a fund of £200,000 at his disposal to organize assassinations and dynamite explosions by sending to England Irish-American agents who do not work directly, but endeavor to find men among the criminals of large towns to assassinate public men and conduct dynamite explosions. These men are now at work and are well supplied with funds.

The Duke of Norfolk, who went to Rome as the bearer of the Queen's congratulations to the Pope upon his jubilee, has left, curtailing his visit, so the *Gaulois* of Paris asserts, because of the absolute refusal of the Pope to interfere further between the Irish clergy and people. The Papal Secretary, it says, informed the Duke that the Pope had already used his influence with the clergy, but could not ask the priests to cease to be patriots without running the risk of causing the rebellion of a section of the clergy, and the loss of the hold of the Church upon the people. The *Diritto* of Rome, on the other hand, denies that the Duke had any political mission.

The continued progress in the exportation of Italian produce has induced Signor Grimaldi, the Italian Minister of Commerce, to give serious attention to the establishment of a colonial trust bank, which will be shortly founded under the auspices of the National Bank of Italy. Signor Grillon, the Italian Minister of Commerce, intends to found Italian Chambers of Commerce in the principal cities of the United States, to facilitate the commercial relations between the two countries.

Signor Magliani, the Italian Minister of Finance, presented the budget in the Chamber of Deputies December 17. The estimates for the coming year showed a deficit of $2,660,000. This deficit, the Minister explained, was due to the expedition to Massowah. The vote of the Chamber, he said, had already met a part of the additional expense, and the remainder would be covered by means at the disposal of the Treasury.

The Dutch Government introduced in the Second Chamber, December 20, a bill requiring the Dutch East Indies to contribute 4,000,000 florins annually to the exchequer.

Brazilian planters owning 2,500 slaves met at San Paulo last week and resolved to set free all their slaves at an early date, and decided to convene a meeting in December of all the San Paulo planters to agree on a general emancipation of all the slaves in the province not later than the end of 1890.

The Yellow River in China overflowed its banks September 28 in the province of Ho-Nan, completely inundating some dozen other populous cities. The whole area, 7,000 square miles, became a sea from ten to thirty feet deep, where was once a densely populated and rich plain. The former bed of the Yellow River is now dry, and the present lake was the bed of the river centuries ago. The loss of life is incalculable, and the statement is made by missionaries that millions of Chinese are homeless and starving. The Emperor of China has given 2,000,000 taels, and the Chinese have started subscription lists in Shanghai, to which foreigners have liberally contributed. The Yellow River no longer flows towards the sea, but seems intent on converting Eastern Ho-Nan and Northern Ngan-Hoei into a lake. It may ultimately even possibly join the Yangtse.

"BLAINE AND A SURPLUS."

THERE could hardly be a better illustration of the soundness of Dr. Watts's proposition, that "Satan finds some mischief still for idle hands to do," than the situation in which the Republican party finds itself to-day. It has allowed itself to remain ever since the restoration of specie payments in 1879 without any policy or programme. In its canvass it has treated the voters to nothing better than the more hateful memories of the civil war, and dismal predictions of the national ruin which would follow the transfer of the Government to the hands of a party containing fully one-half the citizens of the United States. All exhortations to the leaders to enter on an affirmative course of some kind—to take up the advocacy of some change for the better, either in State or nation, to deal vigorously with some question on which legislation was possible, to push forward even such meagre proposals touching the tariff and administrative reform as found a place in its own platforms, to send the mere machinists, like Platt and Chandler, and ranters, like Foraker and Tuttle, to the rear, and bring to the front, if it had them, men who, instead of for ever "pointing with pride" to the past, were looking hopefully to the future, and had something to say which would kindle the enthusiasm of young men with the only thing which ever kindles the enthusiasm of men who are worth anything, namely, the prospect of action—all such exhortations were vain. They preferred to fold their hands and jeer at the passers-by, and wait for something to turn up, like impecunious corner loafers.

From this there naturally and inevitably resulted a state of demoralization which has had no parallel in the history of parties. Let us, for the benefit of those who may be disposed to think this is a strong assertion, cite one illustration which is unique in its way. We, at all events, know of nothing like it in the politics of this or any other constitutional country. We mean the boast of the principal organ of the party, the New York *Tribune*, that at the elections in this most important State of the Union, the Republican ticket is always defeated when—that is, because—the Mugwumps support it. Now, this allegation is either false or true. If it be false, what are we to think of the condition of an organization which allows its chief spokesman to print, month after month, statements reflecting so seriously both on the honesty and good sense of its members? It is no answer to this to say—as some do—that the editor of the *Tribune* is an absurd person whose utterances are of no consequence. The fact is, that he is the chief journalistic exponent of the ideas, aims, and aspirations of the party, at least in the Eastern States, and the mere willingness of the party in New York to let him do organ work for it is a symptom which cannot be overlooked or made light of.

If, on the other hand, the allegation be true, consider for one moment what it means. It means that a large body of Republicans in New York are so little interested in maintaining the influence and prestige of the party, or in furthering its ideas and increasing its chances of restoration to power, that they are ready at every election to refuse to vote its ticket if they find that some other men, whom they do not like, are going to support it. Hitherto such motives of action have been confined to the playgrounds of kindergartens. But, according to the Republican organ, so little hold has the Republican party now on the affection, or zeal, or interest, or ideas of its members, that they allow infantile spite and jealousy to govern their conduct on election day, and can rejoice over its defeat as readily as over the failure of a dinner party to which they were not invited. And yet this is a party which once led millions in arms to the battlefield, and to which Lincoln spoke at Gettysburg.

Satan does not long neglect an idle man in a cantankerous state of mind. He soon supplies him with work to do, and plenty of it. Nor does he neglect a party which has long stood waiting for somebody to supply it with an issue, and tried to fill up the time with little sleight-of-hand tricks. The main reliance of the Republican party for an issue has, in fact, for years, been its enemies, the Democrats. In so far as Republicans have thought of the future at all, they have calculated on the Democrats doing something which could be condemned, or saying something which could be traversed. On the possibility of the Democrats doing something which could not be safely condemned, or saying something which could not be safely gainsaid, they did not speculate. Consequently, the President's attack on the surplus, which they themselves have often promised to deal with, has caught them as a squall catches a ship with all sail set and the crew drunk. It has taken them unprepared, and, in the first moments of confusion, allowed James G. Blaine to come on deck and take command, and declare that a surplus is a good thing, and ought to be maintained for the benefit of real-estate owners! So that the party is actually committed to-day, as far as it can be committed before the Convention meets, to the cry of "Blaine and a surplus," as the best appeal it can make to the country in 1888. That is, its stock in trade consists of a thoroughly discredited, very erratic, and mendacious politician, and a novelty in finance so ridiculous that its supporters do not venture to discuss it.

A USEFUL LESSON.

THE news comes from Philadelphia that the receipts of the Executive Committee of the Knights of Labor are not now sufficient to pay the regular running expenses of the order. The membership has fallen off to such a degree that the income of the general treasury, it is said, is not over one-fifth of what it was a year ago. Fears are entertained, too, by the officers that they will have to mortgage "the palatial mansion" in North Broad Street which was purchased and handsomely furnished as headquarters, in order to show the capitalist world that workingmen, too, were going to have their share of the luxuries of this life. Moreover, the malcontents and secessionists have preferred a charge against the President, Mr. Powderly, and two of his coadjutors, of having misappropriated $100,000 of the money of the organization during the past year, and they are demanding an itemized account of the expenditure, which it will probably be hard to render, and in default of which they threaten to appeal to the courts. On top of all this sorrow and confusion came the news that Mr. Powderly was laid up with a hemorrhage from the lungs. He is recovering, but we need hardly say that a man liable to hemorrhages from the lungs is not a person who can restore fallen fortunes, whether his own or those of anybody else. Nothing, it is said, has done so much to break him down as the disasters which have overtaken the Order. Their full extent was forcibly brought home to him during a recent lecturing trip he made through the manufacturing towns of New England, when he obtained only very small and unsympathetic audiences. In fact, it is a reasonable expectation that the Order will in a year or two more have ceased to exist even in name.

There would not be much use in drawing the moral of all this for the class of workingmen who contribute their money to build up "noble and holy orders," and pay salaries to "Grand Master Workmen," and buy palatial mansions for "general offices." They, as a rule, give but little heed to what they call the "capitalistic press," and have always to learn their lessons in politics and political economy through more or less bitter experience. But we think we may once more, with some profit, call the collapse of the organization to the attention of those preachers and editors and philanthropists of all grades and callings who persuaded themselves, and tried to persuade others, two years ago, that the appearance of the Knights of Labor on the scene indicated the near approach of a great social and economic revolution, in which the business of running free governments, and in fact the management of industrial production, would be taken out of the hands of the people who work with their heads, and be given over wholly to those who work with their hands and would thenceforward be the rulers of human society. The amount of flatulent sociological speculation, and of vapid warning to the rich to put their houses in order and prepare for the deluge, which this assumption produced, makes one now, on looking back at it, almost ashamed of one's species. A very large proportion of those who indulged in this speculation were what are called "men of education," and it must be admitted that their goings on would go far to justify the contempt with which Powderly and his followers look on brain work. Let us hope that Powderly's collapse will be profitable to them both for doctrine and reproof.

The error into which they fell was this: All popular government, that is, government by universal suffrage, fails to work perfectly solely because it makes greater demands on

the human nature of the community than it is able to meet. The officials are not as skilful and honest and efficient as they ought to be because the people do not vote more wisely. Justice is not better administered because judges are not more learned and upright. Criminals escape because the police are not more active and acute. Capitalists are overbearing because they are too selfish, and the legislators do not know how, or are too easily corrupted, to restrain them. But one of the great excellences of popular government is, that its demands are made on the human nature of the whole community, and not on that of any one class. Every governmental shortcoming is, therefore, as soon as it is discovered, a notice served on every voter that if he wishes any improvement in politics, he must himself improve—that is, he must learn more facts, reason on them better, and look further ahead. In other words, every popular government is as good as the human nature which lives under it will let it be. The Knights of Labor and their thoughtless admirers forgot this. They acted as if there were among the manual laborers of the country a body of legislators and administrators capable of conducting an organization far more delicate and difficult than any existing social organization. They thought they could set up and work something which would make far greater demands on American human nature than the American republic makes, and get them answered, and grow and spread and cover the land, and oust and reduce to insignificance the State and national Governments. They tried to persuade us that Powderly was wiser and abler than Cleveland, and Litchman and Hayes than Carlisle and Randall; but the only reason they ever gave us for thinking so was that Powderly, and Litchman, and Hayes had at one time worked with their hands.

What has collapsed, therefore, and will probably trouble us no more for some years, is the notion that we have hidden away somewhere, in some class, or trade, or calling, a reservoir of capacity and character which has never yet been drawn on for the administration of our Government and the conduct of our business, and that we can, by drawing on it, run factories and keep stores through elected officers better than the owners now keep them, and that a man who has never saved anything, nor conducted any business of his own, is a better custodian of the public funds than the kind of men who now have charge of our Treasury. It is well to have it demonstrated that there is no such reservoir; that we know exactly what we are all capable of in the way of either legislation or administration; and that any one who pretends that he can cure the ills of society by putting in office men who, under the régime of competition, have remained poor and obscure, is simply a charlatan.

THE WAR ALARM.

A FEW years ago, when Skobeleff was the mouthpiece of the anti-German pronunciamientos of the Moscow Slavophils, we pointed out the importance of the Polish element in any conflict between Slavs and Teutons. Influential Russian voices had at that time been raised in favor of reconciliation between Russians and Poles, in spite of the old feud and the difference of religion between them; and these voices had not remained without an echo on the Polish side, the Poles of Posen and other Prussian provinces being almost as keenly exasperated by German efforts to denationalize them as their brethren in Warsaw and Wilna were by the Czar's cruder oppression. It was then thought that some timely concessions to Polish autonomy by the Russian Government might yet efface from the memory of the younger generation recollections of cruel wrong, and persuade the Catholic and Polish Slav to place himself in the van of the Slavic crusade, flying the Greek cross. We expressed our own belief that that side would win which enlisted the Polish nation, and we supported our view by the following observations :

"Making rough estimates, and deducting the Poles subject to all the three Emperors, the population of Russia is about equal to those of Austria-Hungary and Germany combined. The military forces of these allies are vastly superior in quality to those of the Czar, but this superiority would, in a long war, be counterbalanced by the advantages which the leader in the Panslavic crusade would derive from the aid of nearly 15,000,000 non-Polish Slavs of Austria-Hungary (Slovaks, Czechs, Croats, Serbs, Dalmatians, etc.), as well as of 3,000,000 Ruman subjects of that monarchy, men of the Greek faith—if he could only reach and revolutionize them. Count the Poles among the combatants of the allies, and you not only add 12,000,000 to the material they can draw upon, but Galicia remains a shield of Austria-Hungary, the example of the Poles strengthens the fidelity of the Catholic Slavs of that monarchy (Slovaks, Czechs, and Croats), the Slavic phalanx cannot be formed, the struggle assumes the aspect of a fight for and against the Greek cross, and the war is carried on between the Vistula, the Dnieper, and the Düna, where Russia is most vulnerable. Add the 12,000,000 Poles to the military resources of Russia, and you also open to her the road across the Carpathians, the Magyars become immediately crippled by risings of Ruthenes, Serbs, and Rumans—such as ruined the cause of Hungary in 1849—Slovaks and Czechs follow the Polish lead in preferring the claims of race to those of religion, and the monarchy of the Hapsburgs collapses after a terrible agony."

In the years that have passed, Russia has done her best to alienate more firmly the race sympathy of the Poles, continuing the Russification of the "Vistula Country" with remorseless rigor, and thus completely throwing away the advantage which Bismarck's harsh Germanizing attempts in Posen and West Prussia—a consequence, in part, of his late conflict with the Ultramontanes—so opportunely offered her. She has also done her best, by a series of blunders and provocations, to drive the Slavs of the Balkans into the protecting arms of Austria-Hungary. This empire, on the other hand, has consistently proceeded on the internal pro-Slavic path which it entered when it formally became the ally of Germany in 1879, more and more propitiating the Czechs in Bohemia, and completely surrendering Galicia to Polish rule. At the same time a conflict with her eastern neighbor has from year to year become more imminent, owing to dread of aggression on one side and resentment of provocation on the other, both well founded. Russia's chances of winning over the Poles are now almost entirely gone. Only a brilliant beginning of a campaign, followed by an immediate declaration of war on Germany by France, and a solemn promise of a partial restoration of Polish autonomy under the Czar's auspices, might yet turn the scales; but as long as Bismarck's Triple Alliance lasts, nothing of the kind can be anticipated. All that remains to Russia in this matter is to prevent the Poles, in case of an outbreak of hostilities, from ranging themselves as a compact national force on the side of the enemy. To that end Russian Poland must be covered with defensive armaments, and preparations made for a sudden pouncing upon eastern Galicia.

That part of Austrian Poland is evidently marked out by geographical and historical reasons as the first theatre of war, if war is to come. The mass of its population, chiefly in the rural districts, is of the Ruthene race and United Greek persuasion. Kindred to the Little-Russian population of the Russian provinces adjoining Galicia on the east, the Ruthenes have, both by open and secret agitations, fostered by Russia, been brought into a state of hostility to their Catholic and Polish fellow-citizens, inhabiting chiefly the western portions of the province, as well as the capital, Lemberg, and other towns in the eastern half. There has been a great deal of sinning on both sides of the line. The United Greek clergy, occupying ecclesiastically a middle ground between Catholicism and Greek Orthodoxy, lean nationally towards the confessors of the latter. Animosity towards the nobles, who are almost all Catholic, makes the Ruthene peasantry seditiously inclined, and a rising of them against the richer classes might even find imitation in the western districts, as the terrible events of 1846 show. A sudden Russian invasion, followed by a Ruthene rising, would at once cripple the Polish initiative in Galicia, and put Austria-Hungary on the defensive. There is not the least natural barrier, formed by mountain range or river, to such an invasion from either the north or the east, and the temptation to be prepared for it by massing troops in the Government of Lublin, between the upper Vistula and the upper Bug, must be almost irresistible. These troops would be available alike for defence and repression in Russian Poland, and for the capture of Lemberg, Brody, Tarnopol, and other towns in the Ruthene territory.

That Russia has been pushing forward both infantry and cavalry in that direction, she, as her late official and semi-official declarations show, makes no attempt to deny. Only she explains the fact on the ground of defensive necessities. She pretends to be afraid of an invasion by the forces of the Triple Alliance. The Austro - Hungarian Government distrusts the sincerity of these declarations, and hastens its preparations for the defence of Galicia—with the fortresses of Cracow and Przemysl as points of support — or, as Russia believes, or feigns to believe, for an aggressive movement. Each Government calls on the other to cease threatening, and the situation becomes threatening indeed. Austria-Hungary's fears are very natural, considering the excessive

vulnerability of that unnaturally amalgamated empire and the grievous consequences of a sudden defeat. The apprehensions which Russia expresses are apparently groundless. Austria-Hungary could not dream of invading Russia without the active participation of Germany; and what should induce Germany, with her Emperor and the Crown Prince at death's door, and in face of France armed to the teeth and burning with a desire for revenge, to embark in an enterprise of incalculable magnitude and duration?

MOHAMMEDANISM, CANONS, AND IMPALEMENT.

In June last a Church Congress in England desired to have some account of the comparative merits of Christian and Mussulman missions in Africa, among the negroes. They applied to Mr. Bosworth Smith, a writer who has made Mohammedanism a study, and who printed a volume of lectures on it some thirteen years ago, to read them a paper on Mohammedanism in Africa. He declined, thinking he could not do justice to the theme in the twenty minutes to which the Congress confined each speaker. They then asked Canon Taylor of York Cathedral, who promptly responded with a paper in which he not only gave the Mohammedan missions in Africa credit for vastly greater activity and fruitfulness than the Christian, but for vastly more beneficial influence on the mental and moral development of the converts. In fact—to sum up—he pronounced the Mohammedan missions in Africa from every point of view an immense success, and the Christian missions a decided failure. In doing this, too, he was carried away by his subject so far as to claim for the Mussulman faith a morality at least as lofty as that of Christianity. He was consequently warmly assailed, both in the Congress and in the press after the Congress was over, for having absurdly overestimated the Mussulman religion and grossly libelled his own.

The controversy had not gone very far in the periodical press, however, when it took a sudden and somewhat grotesque turn. The question in dispute was whether the religion of Christ was on the whole as well suited for the work of regenerating and civilizing the population of Africa as the religion of Mohammed. Its place was taken in the twinkling of an eye, so to speak, by the question whether Canons Liddon and MacColl had not, in September, 1876, mistaken a stack of beanstalks for a man impaled on a stake by the Turks on the bank of the river Save in September, 1876. The charge occurred in this wise: Canon Taylor was defending himself and Islam as well as he could against the champions of Christendom, among whom one of the most vigorous and persistent was Canon MacColl; but, being hard pressed, he apparently lost his temper and struck Canon MacColl below the belt by saying:

> "Canon MacColl is, we know, able to discern impaled Christians when his fellow-travellers are only able to discern scarecrows on beanstalks."

This was a challenge which Canon MacColl was not the man to decline. He promptly retorted:

> "If this is a specimen of the care with which Canon Taylor takes to master his facts before he rushes into controversy, I am not surprised at his rash conclusions in his case for Islam *versus* Christianity."

He then expresses his joy that this "unbecoming digression" on the part of Canon Taylor has given him an opportunity of "exposing once for all one of the most grotesque travesties of the ordinary laws of evidence that the annals of controversy supply"—an immense task, of course, because the annals of controversy are prodigious in bulk, and contain innumerable grotesque travesties. In two days from the date of this letter the *Times* teemed with letters about this almost forgotten incident of the Russo-Turkish war, when Disraeli and the Tories were upholding the Turk, and the Liberals were busy exposing his atrocities. Canons MacColl and Liddon were going down the Save in a steamer when the Turks were trying to suppress the revolt in Bosnia and Herzegovina, in the autumn of 1876. They saw a man impaled on a stake in front of a Turkish blockhouse in a wild part of the country, and reported the fact in the newspapers. The Liberals thereupon all said, "Ha! ha! You see now what awful ruffians these Turks are." The Tories, on the other hand, said, "Not so. The Turks would scorn to commit such atrocities in our day. They are terrible in battle, but when the fight is over gentle and humane. What the Canon saw was a bundle of beanstalks fastened on top of a pole to frighten away the crows from the crops, a very common phenomenon in these wild countries." The British consuls in Turkey were appealed to to furnish material which might be used in the House of Commons and in the *Times* in support of this theory, to prevent the poison which the Canons were spreading from getting into the minds of the constituencies and helping to weaken the Empire by destroying confidence in the Ministry. Consul Holmes, stationed at Serayevo, the capital of Bosnia, 300 miles away, came to the help of his superiors, and said it was undoubtedly beanstalks, and that the way the Canons came to think it was a man was as follows: "This (the beanstack), on being pointed out to some practical joker among the officers of the steamboat with its accidental likeness to a body, together with the previous conversation with the travellers, suggested the hoax, which, on seeing that it was seriously accepted, was kept up till the end of the journey." Canon MacColl, justly incensed by this "rubbish," charitably pronounced Consul Holmes fit for a lunatic asylum, and struck heavier blows than ever in defence of the impalement, and Canon Liddon valiantly supported him. A crowd of competent witnesses also came forward and testified to the exceeding probability of the spectacle; but the controversy did not wholly die out until the wretched Turk had been beaten black and blue, and the Grand Old Man had come back to power.

Since Canon Taylor's revival of the controversy, Mr. J. Stuart Glennie was moved to write that "the psychological interest" of the subject is greater than any other, which is also Canon Liddon's present opinion, while "Doubtful" writes to the *Times* in order to ascertain whether the impaled man was really a Christian, as the Canon supposed, or only a Turk. Colonel Cecil Johnson also declared that he was informed by the late Hobart Pasha that a man who was on board the steamer with the Canons had confessed to him that he had "gulled them" about the "beanstack," and that, "in his (Colonel Johnson's) opinion, Canon Liddon, in reporting that he had seen an impaled man, had calumniated an innocent nation and caused incalculable bloodshed"—a horrible burden, if true, for the conscience of an ecclesiastical dignitary. To this, however, the Canons have been able to oppose testimony that they had convinced Hobart Pasha that the man who said he gulled them was a liar, and thereby excited the Pasha's deep indignation against the scoundrel. Then comes Mr. Fairfield, and maintains that the Canons did not fully and fairly corroborate each other, and says that Canon MacColl informed a "German gentleman" that he had told nobody at the time of what he had seen except the Captain of the steamer, and that this German gentleman flatly contradicted him, and that, in truth, the Canons gave three separate versions of the tale to three different persons.

At this stage Mr. W. J. Stillman, an American correspondent of the *Times*, and at one time its correspondent in Bosnia, made his appearance on the scene, and averred that Consul Holmes had told him that when he sent good reports of Turkish atrocities to Sir Henry Eliot, the Minister at Constantinople, they were returned to him with orders to modify them, as it would not do to send them home in that shape. Consul Holmes being now dead, Sir Henry Eliot answers that the Consul was too good a man ever to have told any such story, and that Mr. Stillman must be mistaken or worse. To which Mr. Stillman replies that this was what Consul Holmes told him, and that he too was sure that he would not lie about a matter of that kind.

The controversy was raging when the last mail left, and there is no telling when it will end; but the chances are that it will revert shortly to the original subject of the comparative merits, from the missionary point of view, of Islam and Christianity, for Mr. Bosworth Smith has appeared in the December *Nineteenth Century* to make a vigorous flank attack on poor Canon Taylor, in the midst of his troubles about the impalement. He charges that the Canon,

> "without, so far as appeared, any adequate preparation or study of the subject at first hand, rushed with headlong heedlessness upon all the dangers which had deterred or daunted me; and, what more nearly concerned me, that, while the views which he thrust on a sensitive and excited audience were as nearly as possible identical with those which, thirteen years ago, I had promulgated in my book 'Mohammed and Mohammedanism,' they were couched in an exaggerated form, and without any of the modifications or explanations which I should have thought essential."

Further on he makes the still more serious accusation against the Canon of having "promulgated crudities before an influential gathering," probably the most unbecoming offence a divine of his standing could commit, unless

it be Canon Liddon's "calumniating an innocent nation, and causing incalculable bloodshed."

IRISH NOTES.

DUBLIN, December 3, 1887.

THE imprisonment of Mr. O'Brien and Mr. Mandeville, and the doings of the Gaelic Athletic Association, have been here, for some time past, the subjects of most absorbing interest. There is considerable difference of opinion as to whether it would not have been wiser for the prisoners to have accepted the ordinary conditions of prison treatment, as scores of Irishmen have done in the past, rather than, by refusing to submit, endangering their health, increasing the miseries of their situation, and giving undue importance to details of treatment. Our people are peculiarly apt to exaggerate the importance of such matters. "Since the day that Stephens escaped, no such joy has thrilled the universe," said a poor man in Cork to a friend of mine on hearing that Mr. O'Brien had been discovered in a new suit of clothes. No one, however, who knows them doubts the honesty of their intentions, and if, apart from any personal considerations, their object were to make the Government more hated and despised, their success has been complete. Many a man, with but a sleepy interest in public affairs, has been roused by the circumstance of Mandeville's clothes being torn off by a posse of warders on a freezing winter's night, and of O'Brien, one suit being pilfered, having to sleep in his other to prevent a second abstraction. Too much, perhaps, is being made of these things—they have their grotesque as well as their tragic side. When we consider what the Fenian prisoners went through, it is absurd to speak of "torture" in the present cases. The treatment of the Fenians had an intense effect in embittering the relations between England and Ireland, and of the Irish masses towards the Irish classes. So will the prison treatment of to-day—producing perhaps as great an influence, though so much less severe.

The doings at the Thurles Convention of the Gaelic athletic clubs came as a surprise upon many who thought they had a tolerably clear insight into current Irish affairs. In a previous letter I referred to the beneficial spread of athletics over Ireland of late years. In the past few months, differences appeared to have arisen among the clubs, and these differences were aired in the National newspapers in a somewhat too insistent manner for the ordinary reader, who generally has something better to think of than the details of sporting disagreements. Six or seven hundred delegates met in annual convention at Thurles a few weeks ago, and then the truth appeared. Politics was at the bottom of the differences. The overwhelming majority of the delegates endorsed what appeared to outsiders a Fenian policy—the promotion and control of these clubs as "the young manhood" of Ireland, somewhat disgusted with the slow march of ordinary politics—a body of noble Gaels, trained in manly pastimes, and prepared at a moment's warning to change their footballs for knapsacks and their hurleys for rifles. The priests were politely told to mind their own affairs, and the "absence of all political bias" was shown by a refusal to take the advice of the National League, or to pass a resolution of sympathy in favor of political prisoners. A glance through the pages of their official organ, the *Gael*, confirms this estimate of the proclivities of the Association. This quasi-open reversion to physical-force doctrines has, as an apparent split in the Nationalist ranks, been received with favor by opponents of the national cause in Ireland. Upon the one hand, the "Gaels" are being patted on the back, as an open, straightforward set of fellows, above the low tactics of the National League, and determined no longer to submit to its tyranny. Upon the other, their existence is cited as a proof that what Irishmen at heart desire is separation, not home rule. It depends upon how matters here are regarded, whether it is to be taken as an argument in favor of continued sitting upon the safety-valve, or one implying an increased desire that the mass of Irish politicians and their followers should be given a stake and interest in the Government of the country. The archbishops and other weighty patrons of the Gaelic Association have interfered, the influence of wirepullers in the direction of physical force appears likely to be neutralized, and the Association will probably be reconstituted upon lines accordant with the general current of political thought in Ireland.

There was a great Unionist demonstration held in Dublin on Tuesday night to welcome Lord Hartington and Mr. Goschen. The largest available hall was crammed, and there was an overflow meeting. Admission was necessarily by ticket. Many of our people are not sufficiently advanced in political intelligence and amenities to attend meetings of opponents with a simple desire of hearing the other side, or to absent themselves when they cannot agree; many have not got beyond regarding it as a gain to break up and interrupt whenever possible. It is so on both sides. Every one knows that fully one-fifth of the Irish people are opposed to any change in our political constitution. There is therefore nothing new or wonderful in four or five thousand of them being brought together, as they were upon the occasion to which I refer. The meeting was, however, a wise stroke of policy. In no other manner could have been so strikingly shown the extent to which the wealth, station, and so much of the education of Ireland are opposed to home rule. No such gathering on the National side would be possible. Besides several peers, there were present, or expressing full sympathy, some hundred directors of public companies and members of public boards, two hundred and fifty legal and medical men, thirty-five fellows and professors of Trinity College, one hundred and fifty deputy-lieutenants and justices of the peace. Only fifty of the seven hundred who signed the requisition were Catholics; it would, however, be hardly possible to procure a like number of Protestants to sign one on the other side—so nearly is the political cleavage religious. It could in no sense be considered as a meeting of Liberals, although the entire absence of "Kentish fire" or anti-Catholic feeling of any kind was a gratifying feature.

The chair was taken by the President of the Dublin Chamber of Commerce, and an address from that body was one of the features of the evening. It endorsed the policy of the Government, and, regarding the guests of the evening, expressed "admiration and grateful appreciation of the firm, consistent, and statesmanlike opposition which [they had] given to the pernicious and dangerous scheme propounded for the dismemberment of the empire." Neither in the speeches nor the resolutions was there anything of a constructive or conciliatory character. They were affirmative of satisfaction with the present régime, and condemnatory of the Nationalists, whose desires and policy were declared to be of a purely separatist character. Professor Dicey spoke. Many of the best men in Dublin were present. But the situation is summed up in Professor Galbraith's reply upon a late occasion, when he was called upon to acknowledge the size and unanimity of a similar gathering, "It was a great meeting, but which of the divisions of Dublin do you intend to carry at next election?" However great and enthusiastic such meetings may be, whatever the social weight and character of those who attend, how do they permanently expect to maintain influence and position in the country without political influence—entirely out of sympathy as they are with the mass of their fellow-countrymen? Their preservation as a favored class cannot go on for ever. Sooner or later, in some way or other, they will be abandoned by English parties, and the internal affairs of this country will be left to the management of the majority. Would it not be well for them to consider the broken reed upon which they rely (broken unless we be governed like India or a crown colony), and seek to understand and respect the feelings and desires of the majority? A disastrous deadlock is for the present maintained by the persistent refusal of such men to believe what the Nationalist leaders say, or to regard Irishmen in the main as otherwise endowed than with "a double dose of original sin."

Turning to a more general view of affairs, and without expressing any doubt as to what must be the eventual solution of our difficulties, it appears to me evident that there has been of late a considerable numbness over the country. I am told that Irish feeling is now of small account, that the contest has virtually been transferred to the other side of the Channel. This may be so. But what inference would most English be likely to draw from a general cooling down here, except that Mr. Balfour's policy was the right policy? There is not apparent the general enthusiasm and excitement of five years ago. I asked a Nationalist friend whom I knew to be on intimate terms and in sympathy with his farm-laborers what he believed to be their present state of mind. He said they were much more quiescent than they had been—they were not as enthusiastic in talking of the leaders or so apt to display their portraits in their houses. It was perhaps partly that they were getting tired of such long-continued hopeless strain, partly that some were beginning, mistakenly, to think that some of the politicians wanted only to feather their own nests, partly perhaps that, seeing their cause was now taken up by one of the great English parties, there was less need than formerly of exertion in Ireland. My idea is, that the change, if real, is attributable to natural causes. The fierce excitement of the past few years was abnormal, and could with difficulty be sustained. A political party such as Mr. Parnell's, unsupported by the occasional enjoyment of office, inevitably tends to become weaker; physical causes, loss of enthusiasm, the ordinary events of life, tend to draw men away. Irish agitation has always been intermittent. Possibly we may have to wait for the appearance of a fresh generation of political life before this question is settled. Surely the present experiment of government, based upon the belief that Irish national aspirations can be crushed out, will be taken as final! Certain it is that each year which passes over us now lessens the number of those in full work in the movement who would be responsible before the country, who would be capable of speaking with authority for the people regarding any national settlement.

I have no reason to suppose that such views as these are held generally by those who believe in the ultimate success of home rule. It can hardly be doubted that the tendency of the legislation of the past few years has been to satisfy the requirements of thousands of our

people, and to withdraw them from active interest in agitation. All this may be altered. Under the influence of the events of the past few days—the arrest of Mr. Harrington—the deprivation of the Lord Mayor as Chief Magistrate of Dublin of his immemorial right to sit with the judges at the opening of the assizes—his imprisonment—the knowledge that a batch of warrants are out for other prominent men—these are signs that public feeling is again rising. Helpless, widespread indignation and sense of injustice will find some outlet. The landlords are making large reductions. It is evidently their desire to help the Government as much as possible. Regarding agitation from an English (the really important) point of view, these Socialist disturbances in London and the crisis in France cannot but have a disastrous influence. They tend to make the average citizen, ignorant of Irish affairs, feel that it may be better after all, upon any terms, to preserve unaltered the present framework of the Constitution, instead of, by embarking upon changes, to risk permanent and radical unrest.

I cannot agree with friends who maintain that the ascendency party here must before long come to terms with the majority of their fellow-countrymen. The agitation has not weakened them to the extent it suits both parties to believe; they show spirit, and unhesitatingly accept the coercion policy of the Government. They can, under the present Constitution, live free from the influence of the public opinion of the majority. The humiliation and loss of liberty of their fellow-countrymen are nothing to them. Sentences of a month with hard labor on news-venders, for selling in Cork papers which it is legal to sell in Dublin, no more affect them than if they were passed in China; nay, they rejoice at such stringency. Unless Mr. Gladstone returns to office, we must be prepared for many more turns of the screw, for further alterations in Parliamentary procedure, perhaps changes in, or limitation of, our representation in Parliament, before the necessity for compromise is established. Meanwhile we run the danger of effectual reform being indefinitely postponed by the perpetration of some hot-headed deeds of retaliation.

D. B.

The following sentence in my last letter was not worded with sufficient care, and did not convey my meaning: "There is much danger in store for us, in that now, as formerly, the movement is being left to the guidance of such a small body of agitators out of touch with the commercial, and in the main with the cultured classes." What I desired to convey was, that there is danger in the guidance of the movement being apparently left in the hands of so few men, and in the extent to which the leading mercantile and cultured classes are upon the other side. Many of the leaders are eminently cultured men; to none of them, so far as I know, is applicable the term "agitator," as implying an interested adventurer.

TWO GRAVE CONTROVERSIES.

LONDON, December 1, 1887.

THE two questions which just now most agitate society in London are not, as perhaps the journals of the metropolis might induce a transatlantic reader to believe, the home-rule question and the riots at Trafalgar Square, but (1) the revolt of the former managers of the Grosvenor Gallery, and (2) the discussion between the publisher of Thackeray's works here and Mr. Brookfield, son of the lady who furnished the lately printed letters to *Scribner's Magazine*, which has afforded some amusing illustrations of the law of copyright internationally and locally considered.

The Grosvenor Gallery has become a recognized institution in London, and, though originally planned as a sort of refuge for the persecuted by that fossilized despotism in art, the Royal Academy—a place where the Romantic school of art in England could find an opportunity of expanding its glories—it immediately pooled with the Academy, after the manner of some opposition institutions with you, and invited the Academicians to occupy its walls with almost as much privilege as their own. The original *raison d'être* was dropped in view of commercial advantages, and the proprietor, an amateur painter of more pretension than achievement, has since done his best to unite the service of Mercury with that of the Muses in the temple over which he presides. The exhibitions held there had a distinctive character, in spite of the admission of the Academicians, and brought out some artists of unquestionable abilities, yet of a form of talent which would never have met acceptance at the hands of the hanging committees of the more orthodox picture shop in Piccadilly. It became the proper thing to do, for all the world that pretends to taste or "æsthetics" (which seems to be in London rather a fashion, like most others, than a matter of individual faculty), to visit the Grosvenor Gallery, which attained the elevation of skits in *Punch*, and all those forms of playful animadversion which in this country are concomitants of a definite position and rank as institution or individual. The proprietor became a personage in the London art world, and, not to burden himself with details of business, intrusted the general management of the Grosvenor to Messrs. Hallé and Carr—the former a well-known and competent painter, and the latter a writer on art, whose work has been noticed in the *Nation*. With perhaps occasional exceptional interferences on the part of Sir Coutts Lindsay in favor of certain individuals, the two directors or managers (for I am uncertain as to the rank to which they were brevetted) have controlled the exhibition in a most creditable manner, exercising in a catholic and intelligent sense the discretion given them of admission and hanging.

The sensation of all the pleasures connected with the founding of a new and beneficent public institution, and the satisfaction of legitimate artistic aspirations for so many *incompris* and *incomprises* being exhausted, Sir Coutts reverted to the more satisfactory and more permanent recompense measured in pounds, shillings, and pence. Hence the endeavor to set up as universal æsthetical provider. A library and a restaurant were to add to the profits, and so far the guardians of art for art's sake were willing to endure association with illegitimate æsthesia; but when Sir Coutts began to let out the exhibition for evening parties, and, finally, to a smoking club, to which on certain evenings ladies were invited (smoking being on those evenings interdicted), they rebelled. The rooms were let for supper parties and festivities of various kinds — among others, the American Fourth of July celebration, on which occasion the pictures were draped with American and English flags, and the ends of the gallery occupied by superposed portraits of the President and Queen. It became, in short, a kind of superfine music hall, to be let to any applicant; and naturally the artists and owners of the pictures grumbled at the chance of injury to valuable canvases from the incidents of supper parties, balls, smoking orgies, etc. It is reported that on one occasion a playbill was found pasted on one of Mr. Watt's pictures.

Things came to such a pass that the artists to whose contributions the gallery owes most of its prestige, took the matter to heart, and, bearing their interests in mind, Messrs. Hallé and Carr offered their resignations as a protest. Sir Coutts accepted them, and the lovers of "art for art's sake," supporting the protestants, have begun a movement for the organization of a new exhibition, which the wags propose to call the Hallé-Carrnassus, and at which the interests of pure art shall be cared for, while the Grosvenor will be given up to what may most attract the general public—from negro minstrelsy, with Munkacsy's "Christ on Calvary" for a background, to amateur theatricals with the accompaniment of an exhibition of French pictures. The greater part of the funds are, I understand, subscribed for the Hallé-Carr gallery, and libel and injunction proceedings are already in the air, Sir Coutts having publicly stated that Hallé and Carr, by their bad management, had led the Grosvenor to grave losses, and they propose to show that Sir Coutts, by his restaurant, which was a very poor one, and his library, which was unprofitable in many ways, and seems to have been curiously managed, had sunk more than the profit which the exhibition always gave. A few of the most important artists will stanchly support the new institution, but the mass will eagerly sympathize with both parties, give Sir Coutts a dinner-testimonial to their appreciation of his public spirit, another to Hallé and Carr, and afterwards send religiously to both exhibitions. With few exceptions, the English artist is anxious chiefly to get himself before the public as much as possible, and profit thereby in £ s. d.

The Brookfield-Smith controversy is a more serious affair. As probably your public knows, Mr. Geo. Smith of the publishing firm of Smith, Elder & Co. was the legal depositary of all the copyrights of the late Mr. Thackeray, including all letters. When Mrs. Brookfield, from motives which were severely interpreted and commented on by the friends of the Thackeray family, offered to the Messrs. Scribner the letters they have printed, the guardian of the copyrights could not legally oppose the sale, these rights not extending to America; and Mrs. Brookfield proposed to Mrs. Thackeray-Ritchie to look over the letters, and see if there was anything to be objected to, to which Mrs. Ritchie (not approving the publication, and not, at the same time, from an amiability which is characteristic of her, but which was in this case carried to weakness, wishing to have any share in the responsibility), replied, in a letter published against her wish and intention, appearing to approve the publication when really she disapproved of it.

When Mr. Smith, as his legal right was, reprinted the letters here, at Mrs. Ritchie's request her letter was omitted, and no notice was taken of any presumed rights of Mrs. Brookfield in the publication, as, in fact, she had none. Thereupon Mrs. Brookfield's son, at the instigation, it is said, of the Association of Authors for the Furthering of Copyright Interests, to punish Mr. Smith, who has incurred their hostility by his attitude on the question in debate, sent to the *Standard* the following letter:

SIR: Several papers have drawn attention to certain inaccuracies in the dates, and occasional mistakes in the sequence, of the Thackeray Letters which my mother recently compiled and published in *Scribner's Magazine*. I shall be obliged if you will allow me in some measure to account for these.

The letters were sent to Messrs. Scribner for their consideration in the first instance, without any attempt at final arrangement, as my mother expected that the proofs would be sent to her for correction, when any omissions could have been rectified by the help of journals and

other letters in her possession. There was, unfortunately, not time for this to be done. Mr. Lowell most kindly gave his valuable assistance in America to the supervision and identification of the dates and arrangement of the letters—as far as was possible without reference to papers we had at home. Messrs. Scribner's courtesy and liberality in all their dealings with us prevented my mother from throwing any difficulty in the way of the production of the letters at the date they desired. And to meet the claims made by Messrs. Smith, Elder & Co., she was obliged, furthermore, to waive all rights in the publication of the letters in England.

The high position in the commercial world of Mr. George Smith, our "Merchant Prince" publisher, is, of course, a sufficient guarantee for the legality of the course he has pursued. But the volume he has recently produced might have been made more valuable had he had the consideration to seek communication with us before completing his publication.

I am, sir, your obedient servant,
CHARLES H. E. BROOKFIELD,
27A, SACKVILLE STREET, Piccadilly, October 4.

To this Mr. Smith replied in a rather caustic letter, of which the following extract will sufficiently indicate the tone and, *pro tanto*, the scope:

"In your published letter you complain that to meet the claims made by Messrs. Smith, Elder & Co., Mrs. Brookfield was obliged to waive all 'rights' in the publication of the Thackeray Letters in England, and, while admitting the legality of the course pursued by me, you insinuate that it was wanting in something else—presumably in morality.

"It is difficult to conceive that Mrs. Brookfield or yourself should have supposed that she had any rights whatever in regard to these letters, so far as publication is concerned. It is well known that the right of publishing letters belongs to the writer, and not to the possessor of the letters. The copyright of the letters belonged to Mr. Thackeray, his assigns, or his representatives, not to Mrs. Brookfield. As the assignee, by deed, of all Mr. Thackeray's writings, published and unpublished, the copyright of the letters belongs to me. I have not, however, sought to retain the whole of the profits made from the volume published in England; and one-half of them will be appropriated in a manner some months since indicated by me to Mrs. Richmond Ritchie. While, as Mrs. Brookfield has already reaped the advantage of the fact of there being no English copyright in America, in the shape of a payment, said to be a large one—probably a much larger sum than the whole profits of the English volume—I have not thought it incumbent on me to offer her any portion of the profits of that volume."

To this, again, Mr. Brookfield replies, in an angry vein, in substance as follows:

"The want of consideration to which I made allusion was less towards my mother than towards the public, who would have had a more accurate volume had you given her an opportunity of correcting the dates of many of the letters. You are correct in inferring that your conduct appeared to me 'wanting in morality,' nor do the contents of your letter alter my views on this point. I am not in a position, financially, to contest the legality of your course of action, but it appears to me, and to legal advisers whom I have consulted, that it is, to say the least of it, open to argument whether the deed assigning to you the copyright in Mr. Thackeray's writings would be held to include these particular letters, the existence of which was unknown to the assignor, and the publication of which was not at that time in contemplation. Should this opinion be correct, Mrs. Richmond Ritchie's consent to the publication would have been sufficient authority to have enabled us to publish the letters where we pleased.

"I consider that your conduct was conspicuously lacking in morality—since you have introduced the word into our correspondence—when you suppressed in your edition Mrs. Richmond Ritchie's note expressing her pleasure at the publication of the letters, thereby conveying a false impression to the public. With regard to the question of money, the injustice appears to us to be towards Mr. Scribner, and not towards ourselves."

After some minor retorts and repartees, Mr. Smith concludes the correspondence by a letter which has "made sensation." I quote it in part only:

"I should, I confess, have been glad to have received the explanation, which I invited from you, of the meaning of the last paragraph of your letter of the 17th instant. Since its receipt I have seen the representative in this country of Messrs. Scribner's Sons, who repudiates in the strongest manner the idea of any injustice having been done by me towards them. He assures me that those gentlemen are perfectly satisfied with the arrangements made by them with my firm, and with every communication that has passed between them and us respecting Thackeray's Letters, and that he has repeatedly so informed Mrs. Brookfield. The remark contained in your letter must therefore have been the offspring of your own imagination.

"I have already shown that your accusation of want of consideration was wholly destitute of foundation; and with regard to your accusation of want of morality, which rests on a contention that the right to publish the letters in this country really belonged to Mrs. Brookfield and not to me, I have conclusively shown that this contention cannot, for a moment, be sustained. But, to pursue this matter further than I did in my letter of the 18th instant, I am authorized to say that so far from the existence of the letters being 'unknown to the assignor' when the assignment of the copyrights was made to me, Mrs. Richmond Ritchie (then Miss Thackeray) was perfectly cognizant of the existence of these particular letters, and of their possible value as biographical material; that Mrs. Richmond Ritchie wrote the letter on which you rely as a license to publish the letters where Mrs. Brookfield pleased (or as you say, 'where we pleased') in order to satisfy the scruples of the American publishers (scruples which were natural and honorable under the circumstances); and that she had no kind of intention of assigning any rights whatever by that letter.

"There is in this connection one important and significant fact—viz., that before your letter to the editor of the *Standard* was written, Mrs. Brookfield had received from Messrs. Scribner's Sons a separate, additional, specific payment for all her English rights in the volume. These are the 'rights' which you stated in your letter she was obliged to waive to meet the claims made by my firm!"

I will only comment on this interesting discussion to say that it shows still more clearly than we saw before, the necessity of an international copyright to preserve the common decencies of literary life, and prevent correspondence which may be not only annoying to the family of a deceased author or celebrity, but (as is fortunately here not the case) which may be scandalous, from being published.

RENAN'S PEOPLE OF ISRAEL.

PARIS, November 26, 1887.

AFTER the "Abbesse de Jouarre," it was high time that Renan should return to his usual studies and give us some work worthy of himself. He has published the first volume of a 'History of the People of Israel.' This history is in reality part of a more general work. Renan conceived more than forty years ago the project of writing the 'History of the Origins of Christianity.' The volume which appears now, and which is the history of the tribe of Israel in its patriarchal state, ought to have been the first of the series.

"The origins of Christianity," he says, in his Preface, "go as far back as the great Prophets, who introduced morality in religion about 850 before Christ. The prophetism of the ninth century had itself its root in the ancient ideal of the patriarchal life, an ideal partly created by the imagination, but which had been a reality in the distant past of the Israelite tribe. If I have not followed this logical order, if I threw myself, in the 'Life of Jesus,' into the very midst of my subject, it is because the duration of our life is uncertain, and because I was anxious before all to treat of the first hundred and fifty years of Christianity. Then, too, I must confess, Jesus had an attraction for me."

It is quite certain that if, instead of entering into the struggle for literary fame with the 'Life of Jesus' in his hand, Renan had followed the chronological order of the subject which he had traced for himself, and had begun with the volume which lies before me, he would not have become famous as he has. Notwithstanding all his talents, all the harmony and melody of his style, if I may so express myself, his name would probably have remained among the obscure names of the exegetes. The 'Life of Jesus,' if it appeared now, and as a mere continuation of four preceding volumes, would not make the sensation which it made years ago, under the silence of the Second Empire, when there were still bishops in the Senate, before the *Kulturkampf* and the suppression of the unauthorized congregations.

Renan began his work at the end; he wrote first the history of Christ, of the Apostles, of Saint Paul, of the early churches. At the present moment he is writing the history of the early ages of Israel, and his manuscript goes as far as the epoch of Ezra—that is to say, as far as the definitive constitution of Judaism. If he were to die now, this manuscript, he says, would form three volumes. The first is now given to the public; the second will appear in one year, the third in two years. After that, he would have still to write, in one volume, the history of the time of the Asmoneans, and thus he would arrive at Christ; his cycle would be closed, and he could sing his "Nunc dimittis servum tuum, Domine, secundum verbum tuum, in pace."

In reviewing thus his whole 'History of the Origins of Christianity,' Renan asks himself why he did not give his preference to a History of Greece. There are really, he says, only three histories of prime interest for a philosophical mind, the histories of Greece, of Israel, of Rome; and he adds that in the work of civilization Greece had an exceptional part. "The lineaments of human culture drawn by Greece can be enlarged, but they are complete in all their parts. Progress will eternally consist in developing what Greece conceived. Greece had but one failing, but an important failing. She despised the humble, and did not feel the necessity of a just God. Her philosophers, while they dreamt of the immortality of the soul, were tolerant of the iniquities of this world. Her religions remained charming municipal amusements; she never had the notion of a universal religion. The ardent genius of a little tribe established in a corner of Syria was made to correct this defect of the Hellenic spirit. Israel never could consent to see this world so ill governed, under the government of a God supposed just. Her wise men had fits of rage before all the numberless abuses of the world. . . . They were fanatical of social justice."

Rather than see the world wicked, the Prophets wish it to be destroyed; and this ardent appeal for a transformation finally transforms the world. Through the agency of Christ, of the Apostles, who continue the Prophets, a religion is established which comes out of Judaism, and which, at the end of three centuries, imposes itself on the greatest races of humanity. While Renan speaks almost with contempt of the Hellenic religions, which he calls "the little patriotic toys of the ancient cities," he seems to believe that the Christian ideal is less assured of eternity than the liberal rationalism of Greece. "The tendency which leads the nineteenth century to *laicize* everything, to give back a number of things to civil law, instead of the ecclesiastical law, is a reaction against Christianity." He adds, however, immediately, for his mind is like a moving balance, "Even supposing that this movement should continue, Christianity will leave an ineffaceable trace. England and America will long keep remains of the Biblical influence."

The rationalism of the author of the 'Life of Jesus' accepts the world of providence and rejects the world of miracle. He considers the development of Greece, of Israel, of Rome, as providential:

"I say providential, and not miraculous. . . . If there are miraculous histories, there are at least three. The history of Israel, which claims the monopoly of the miracle, is not a more extraordinary fact than the history of Greece. If a supernatural intervention is necessary for the explanation of one, you need it also for the explanation of the other. I will even go so far as to say that, in my view, the greatest miracle in history is Greece."

The Renan of the future, who shall write the history of Greece "avec amour," will be well recompensed for his trouble; the Renan of to-day promises that he shall experience the highest sort of pleasure, "the joy of seeing the evolutions of life at the very centre of the divine egg where life began its palpitations." A moment after, the wavy mind of Renan returns to the Bible: "After all, it is the great consoler of humanity. It is not impossible that, fatigued with the repeated bankruptcies of liberalism, the world should once more become Jewish and Christian." In a lecture which he delivered in 1883, Renan expressed himself thus: "If I could lead a second life, I would consecrate it to the history of Greece, which is even finer, in many respects, than the history of the Jews."

I have dwelt upon these contrasting views, since they show clearly in what spirit Renan is writing his history of the Jewish people. He considers the Old Testament merely as a collection of historical documents. He studies, analyzes these documents, compares their value, separates what seems authentic and what seems purely traditional. The difficulties of such a work, in the earliest part of Judaism, are immense. The mind of Renan can fluctuate for ever in the Hebraic traditions; he can hardly form any conclusion on any point. At the same time, Renan is too much of an artist to remain continually in the vague, in the undefined; he forgets after a while his own objections, he becomes tired of negations, and he finally ends by a vivid picture, an affirmation, a theory. We can only compare the work of his mind to a sort of involuntary crystallization.

Renan first describes the nomadic Semites of the Syro-Arabian regions, living in tents, with flocks, a simple and primitive religion, without temples, statues, or images; less given to idolatry, to ceremonies, than the religions of the sedentary nations. "The nomads are, at the same time, the most and the least religious of men." Among these tribes, he chooses and follows particularly one, which he calls the Beni-Israel. He explains the influence of the Babylonian civilization and of the Egyptian civilization on the nomadic hordes. The Semitic tribes could not but feel this influence. They were in sight of the great empires of the valleys of the Euphrates and of the Nile, as Mohammed, who could not read or write, was afterwards in the presence of Christianity and of Judaism. The sober and neat imagination of Israel condensed some of the traditions of Babylon. "The fine passage: 'In the beginning, God created the heaven and the earth,' was like the cold wind which clears the sky. . . . The free will implied in the word created, substituted for ten thousand fantastic wills, was a progress." The institution of the Sabbath had probably a Babylonian origin; the number seven played a great part in Babylonian ideas and customs.

The Beni-Israel formed among the other tribes a sort of phenomenon. Renan conceives it as a kind of Geneva, forming a sect of the purest spirits. Their relations with Egypt remain a mystery. "One thing only is sure: Israel entered Egypt under a dynasty favorable to the Semites, and left it under a hostile dynasty. The presence of a nomadic tribe on the confines of Egypt was probably for the latter country a fact of very little consequence. There is no authentic trace of it in the Egyptian texts." The Israelites did not read Egyptian, and nothing authorizes us to believe that the religious literature of the valley of the Nile had the least effect on them. Renan is inclined, however, to believe that Israel took from Egypt its sacerdotal habits: "The clergy is a thing of Egyptian origin."

Speaking of Moses, he says: "What shall we say of the man, colossal among the great mythical figures of humanity, who plays the principal part in the departure of Israel? It is very difficult to answer. Legend has completely covered Moses, and, though his existence is very probable, it is difficult to speak of him as one does of other men deified or transformed. His name seems Egyptian." And in a note he says: "The most ancient documents on Moses date from 400 or 500 years after the epoch in which he lived." We cannot give here the account which Renan gives of the Exodus, his description of Mount Sinai, his attempt to explain by natural causes something resembling the crossing of the Red Sea and the events of Mount Sinai. He becomes more original when he represents the life of the Israelites once settled and fixed, the gradual transformation of their institutions, the formation of their laws, the national feeling originating at the same time as the belief in a local, patriotic, natural god.

Renan gives us the story of Gideon, of Saul, of David, as he would the story of some modern Abyssinian chieftain. David, who took Jerusalem for his capital, is described as a sort of young Bonaparte, bold, and, at the same time, unscrupulous; "a prodigy of grace, of elegance, of wit. . . . Capable of the greatest crimes, when circumstances required it, he was also capable of the most delicate sentiments. He could make himself popular; as soon as you knew him, you loved him. His type differed from the dark visages of his companions. He was fair, with delicate features, a soft and easy voice. Ancient texts represent him as 'a player on the cithara and a skilled poet.'" After having told of the beginnings of David, Renan ends by saying:

"We shall see the *brigand* of Adullam and Ziklag adopt by and by the ways of a saint. He will be the author of the Psalms, the sacred choragus, the type of the future Saviour. Jesus will be a son of David. The pious souls who will find delight in the resignation and the melancholy contained in the finest of liturgical books, will think themselves in communion with this bandit. Humanity will believe in a final justice on the testimony of David, who never thought of it, and of the Sybil, who never existed. *Teste David cum Sibylla!* O divine comedy!"

Correspondence.

THE AGE OF THE SEQUOIAS.

To the Editor of The Nation:

Sir: In the interest of sound knowledge and of intelligent discussion, permit me to note one or two points in Mrs. Dall's recent letter to the *Nation* concerning the age of the Sequoias.

(1.) The argument of the letter seems to hinge upon the following statement: "In a climate which produces two or three crops a year of most vegetables, there is nothing to prevent the formation of more than one ring [*i. e.*, of wood] in twelve months." If this means the climate of the Calaveras groves, where snow flies from November till May, and where the summer is too short for a single crop of most vegetables, it is palpably untrue. If, on the other hand, it means the lowland climate of central or southern California, it is not pertinent to this discussion; nor is it in any strict sense true even then, since the furnishing by man of factors which the climate does not supply—such as water or warmth — is plainly a transcending of the natural action of climate. Under strictly natural conditions I know of no annual in California which produces two crops in a single season.

(2.) Your correspondent apparently concedes the force which the ebb and flow of season must have in determining the rhythmic pulses of life whose record is found in these layers of wood. Is it not, then, through a confusion of ideas quite akin to that noted above that perplexities and freaks of growth in the hot-house climate of tropical America are complacently cited as proof that the same kind of uncertainty attends upon growth on the flanks of our Sierra Nevada, where seasons, though not so extreme, are as sharply delimited as they are in Maine?

It seems a pity that science should be continually perplexed and hindered by its apparent votaries—as, indeed, it is—through the presentation, with all the authority which print can give, of uninformed assertion and inconsequent reasoning. Especially is this to be deplored when, as in the present instance, information on all the general questions involved is quite accessible in standard works; *e. g.*, in Dr. Gray's 'Structural Botany,' and in his 'Sequoia and its History.'

In conclusion, and even at the risk of apparent egotism, I must venture to refer to my own studies upon this subject (published in the *Overland Monthly* for March, 1886), if only that I may supplement what was there printed by the assurance that we are not without some direct and positive evidence that the layers of Sequoia wood do correspond exactly with the number of seasons spent in their formation. That such direct evidence is not more abundant is due chiefly to the extreme difficulty of securing any accurate and trustworthy testimony as to the age of young Sequoias. But whatever scarcity there may be here is more than made good by the fulness and the concurrence of evidence in the case of various other conifers associated with the Sequoias, and subject to the same influences. This evidence I hope some time to present.—Respectfully yours,

Cornelius B. Bradley.

University of California, December 7, 1887.

THE FIRST NEW YORK ANTI-POVERTY MOVEMENT.

To the Editor of The Nation:

Sir: I have been not a little surprised, in all that has been published since the great modern uprising for the abolition of poverty began to be agitated, to have seen no reference to an early and vigorous effort to the same end which was instituted under the reign of Wilhelmus Kieft, otherwise called William the Testy, and of which that veritable and honored historian Diedrich Knickerbocker has given us the following account:

"There was nothing in the whole range of moral offences against which the jurisprudence of William the Testy was more strenuously directed than the crying sin of poverty. He pronounced it the root of all evil, and determined to cut it up root and branch and extirpate it from the land. He had been struck, in the course of his travels in the old countries of Europe, with the wisdom of those notices posted up in country towns, that 'Any vagrant found

begging there would be put in the stocks,' and he had observed that no beggars were to be seen in these neighborhoods—having doubtless thrown off their rags and their poverty and become rich under the terrors of the law.

"He determined to improve upon this idea. In a little while a machine of his own invention was erected. This was nothing more nor less than a gibbet of a very strange, uncouth, and unmatchable construction, far more efficacious, as he boasted, than the stocks, for the punishment of poverty. It was for altitude not a whit inferior to that of Haman, so renowned in Bible history, but the marvel of the contrivance was that the culprit, instead of being suspended by the neck, according to venerable custom, was hoisted by the waistband and kept dangling and sprawling between heaven and earth for an hour or two at a time, to the infinite entertainment and edification of the respectable citizens who usually attend exhibitions of this kind.

"Such was the punishment of all petty delinquents, vagrants, beggars, and others detected in being guilty of poverty in a small way; as to those who had offended on a great scale, who had been guilty of flagrant misfortunes and enormous backslidings of the purse, and stood convicted of large debts which they were unable to pay, William Kieft had them straightway enclosed within the stone walls of a prison, there to remain until they should reform and grow rich. This notable expedient, however, does not appear to have been more efficacious under William the Testy than in more modern days; it being found that the longer a poor devil was kept in prison, the poorer he grew."

It is surely a most interesting fact that this crime should thus early have been held in abhorrence in the city which has since exhibited such brilliant examples of moral courage on the part of individuals who, rather than yield to the blandishments of poverty, have even seized upon the property of others, and betaken themselves to Canada, thus setting an example which has exerted a wholesome influence throughout the country, as may be seen by the increasing number who are encouraged to adopt similar means of reform.

The modern experiment of moral suasion will be watched with the greater interest, from the fact that prohibition met with such signal failure at so early a date, and it is to be hoped that the mutual courage inspired in those who now sign the pledge, will render it unnecessary for so many valuable citizens to expatriate themselves, as the only means of fortifying their resolution. H. W. S. C.

Minneapolis, December 12, 1887.

POETRY FOR CHRISTMAS TIME.

To the Editor of The Nation:

Sir: It had occurred to me to think the same with your paper in regard to the Christmas poetry of *Scribner's Magazine*. But since many good people, especially those of tender years and minds, no doubt read such verses in default of acquaintance with literature of the purer sort, might it not be proper for your excellent review to supplement that adverse criticism by directions for finding some truly seasonable poems for the Yule-tide festival?

I have myself made free to suggest a few, but pray reject my selection if you have a better to offer. Then, firstly, one might mention in the King James translation of the New Testament, which, for smoothness and strength, were to be preferred to other English versions, chapters i. and ii. from the Gospel according to St. Luke; chapters i. and ii. from the Epistle to the Hebrews; also, but here from the late *revised* translation, Psalms ii., cx., xlv., lxxii.; and Isaiah ix., xi., lx. Or, finally, even these worthy harmonies of the modern times, to wit: Milton's "Ode on the Nativity"; Pope's gorgeous mosaic, the "Messiah"; and Martin Luther's "Vom himel hoch da kom ich her." Luther seldom so completely forgot the Turk, the *Bapst*, and the Fiend, as in this gentle children's hymn to the Prince of Peace. It sounds better in the German, of course, for we lack that natural use of diminutive endings which quaintly grace the lines:

"Merk auf, mein herz, und sich dorthin,
Was ligt dort in dem krippelin?
Wes ist das schöne kindelin?
Es ist das liebe Jesulin."

The Psalms are more especially commended to the attention of Protestant Episcopalian readers, whose misfortune it often is to gallop through the Psalter a dozen times a year with never an idea of the sense, or substance, or bearing thereof.—I am, sir, yours respectfully,

G. P. C.

New Haven, Conn., December 10, 1887.

ZOLA'S IDEALISM.

To the Editor of The Nation:

Sir: Apropos of Mr. A. Du Four's exception to the originality of the English criticism of Zola as an idealist, may I not in turn suggest that M. Ferdinand Brunetière had anticipated even M. Lemaitre by making that comment in February, 1879? In "Le Roman Expérimental," an essay of that date, since published in the volume 'Le Roman Naturaliste,' he says, "Il nous reste à montrer en terminant que toute cette discussion passe pardessus la tête de M. Zola, qu'en vain il se proclame réaliste ou naturaliste, et que comme romancier, sinon comme critique, il n'a jamais rien eu de commun avec les doctrines qu'il professe." Then, after two or three citations of evident plagiarisms on the part of M. Zola from passages given in Taine's 'Histoire de la Littérature Anglaise,' he goes on: "Si l'observation de M. Zola n'est pas d'un 'réaliste,' j'ajoute que son style est d'un romantique. Chose bizarre! ce 'précurseur' retarde sur son siècle! Ses *Études* sonnent l'heure de l'an 1900, et ses romans marquent toujours l'heure de 1830." On the next page, following a brief comment on the extremes in the execution of that novel of M. Zola's which is probably best known to Americans, he says: "Remarquez-le bien; je ne pose pas la question de moralité ou d'immoralité; le public l'a déjà tranchée. Je ne parle que de 'réalisme' et de 'naturalisme.' . . ."

If it is a question of borrowing, it would seem that M. Lemaitre has borrowed quite as much as Mr. Traill; but among writers so "eminently respectable," why need such a question be brought up?

Of M. Brunetière's criticism of Zola, M. Lemaitre himself says: "N'a-t-il pas reconnu à M. Émile Zola la simplicité d'invention, l'ampleur et la force? Je sais bien que le compliment tient une ligne, et la condamnation cinquante pages; mais remarquez que la banalité romanesque ne lui est pas moins odieuse que le naturalisme facile." Edith Thomas.

Millville, N. J., December 17, 1887.

Notes.

D. Appleton & Co. are preparing for subscription sale in five sections, of twenty plates and eighty pages of descriptive text each, 'Artistic Country Seats,' consisting of types of recent American villa and cottage architecture. The prints will be from nature, by a new American process rivalling the best French, we are told; on India paper, too, mounted on heavy plate paper. Mr. George William Sheldon will be responsible for the letterpress. One thousand copies will be printed, and no more.

'Stories for Children' from Tolstoi's marvellous laboratory, and his 'Napoleon in the Russian Campaign,' one or both translated by Nathan Haskell Dole, are announced by T. Y. Crowell & Co.

Mr. Laurence Hutton is revising for immediate publication a fourth edition of his admirable handbook, 'Literary Landmarks of London,' for which he has prepared a brief supplement, recording the changes wrought in London in the three years since the book first appeared.

Mr. Andrew Lang is editing an enlarged edition of 'Ballads of Books,' to be published shortly in London and New York by Messrs. Longman.

Mr. Charles E. Sprague's 'Handbook of Volapük' (New York: The Office Co.) reached us a little in advance of the report of a committee appointed October 21, 1887, by the American Philosophical Society, to examine into the scientific value of this "universal language." The larger part of it sets forth the desirable basis of such a language, and then application of the principles evolved to the Rev. J. M. Schleyer's system proves it to be "synthetic and complex," unsuited to the needs of modern thought. The Society is urged to take the initiative in forming a better, with the co-operation of learned societies the world over. We may hereafter examine Volapük somewhat closely ourselves.

It would be easy to make many words over the collection called 'Fifty Years of Song: Selections from the Poets of the Reign of Victoria,' by Henry F. Randolph (New York: A. D. F. Randolph & Co.). These words, however, would be wholly of praise, and the substance of them may well be spoken now, while the gift season is still upon us. Let us say, then, in brief, that the compiler's plan has been to divide his poets into groups, thus, "The Earlier Poets," "The Blackwood Coterie and Early Scottish Poets," "The Poets of Young Ireland," "Poets of the First Half of the Reign," "The Novelist Poets," "Poets of the Latter Half of the Reign," "The Writers of Vers de Société," "The Pre-Raphaelite Brotherhood," "The Ballad and Song Writers," "The Religious Poets." Each group is preceded by short biographical notices. The scanty notes are massed at the end of each of the four volumes, and are conspicuously useful in giving the schemes of the longer poems here presented in extracts. Indexes conclude—of authors, pseudonyms and sobriquets, and first lines. Mr. Randolph shows a nice poetic sense and independence in sampling. He has excluded rubbish and kept his selections on the higher levels of his poets, and, while not avoiding the familiar masterpieces, has held steadily in view his purpose to give a general *aperçu* of individuals, of groups, and of the poetic era. The accuracy of the reprints is most commendable in a field where so much slovenliness is tolerated, even by the poets themselves, and transmitted endlessly. Better editing as a whole is seldom seen. These volumes will serve to supplement Ward's 'English Poets,' which is but slightly overlapped, and as a most useful companion to Stedman's 'Victorian Poets.' A simple elegance marks the publishers' part in this achievement.

Having followed up 'Les Misérables' with the 'Count of Monte Cristo,' in the same handsome dress and imperial octavo form, the Messrs. Routledge now return to Victor Hugo, and continue the series with the 'Notre-Dame.' This novel lends itself peculiarly to illustration, and the author's own weird designs grace it, along with many more by Brion, Johannot, and other French artists of eminence, in the greatest profusion. The paper, the print, the general execution, merit the praise we have already bestowed upon the preceding works just named.

In their smaller series of versions from the

French the same publishers offer something more kindly to the hand, and, typographically speaking, hardly less to the eye, for the smaller print is still very legible. The latest issue here is Gérard de Nerval's 'Sylvie,' an idyll associated with the last refuge of Rousseau. M. Ludovic Halévy supplies a lugubrious preface relating the author's suicide by hanging. The small page of letterpress is properly set in broad margins, and bears now and again one of the forty-two so-called etchings of É. Rudaux—pen-drawings they are rather to be styled. The binding is a half-morocco, with flowered-damask sides of dull gold. The total product is very taking.

The 'Rip Van Winkle' published in Boston by S. E. Cassino is quite the best of the holiday output of this firm. It is a quarto volume, well bound in buff and gold, adorned with a frontispiece portrait of Irving in early manhood, and for the rest illustrated, in text and art, by Frank T. Merrill. The designs fall short of an exacting standard, whether as regards draughtsmanship or imagination, the landscapes being especially feeble. Still, they hit the spirit of the legend, and may fairly be said to decorate as well as illustrate. The print is large and clear, and the press-work excellent.

The flowering year of our Northern latitude is happily typified in verse by Mr. Simeon Tucker Clark in 'My Garden' (S. E. Cassino). The poem deserved to be printed by itself in ordinary characters, as is done, after it has been lined out for the decorator, who puts it in fancy characters and surrounds it with the appropriate flower of the season—the arbutus

> "Pink with faint blushes that she bloomed so soon,
> And March, her boisterous lover, came so late,"

and all the rest. The floral representations are by Lena J Ringueberg, and are faithful but not artistic, so that the publisher rightly names them "botanical drawings." However, as such they are meritorious and are associated often with pretty scenery, and the book as a whole is decidedly to be commended.

Mr. C. Klackner, 17 East Seventeenth Street, sends us a proof of a large etching (say 18 x 26) made by Mr. W. L. Lathrop, an American artist, after Jules Breton's "Le Soir dans les hameaux du Finistère," a canvas exhibited at the Salon of 1882, and now an American possession, having formed part of the Seney collection. The subject—a moonlight group of women with distaffs, before a stone cottage on the edge of a rocky barren, with a little by-play of love-making and animal frolic—is difficult for the etcher by reason of its sombre tone, its severity of treatment, and its want of detail. Mr. Lathrop seems to us to have coped laudably with these obstacles, though we cannot feel that this painting, as happens with some, gains by translation into black and white.

Frederick Keppel & Co. have brought out a little 'Catalogue of the Etched Work of Peter Moran,' illustrated with five original etchings, making a pretty souvenir. Mr. Moran's last work here recorded is numbered 133.

Baldwin & Gleason, 61 Broadway, send us some Christmas and New Year's cards, booklets, etc., distinguished by celluloid tablets imprinted with appropriate designs. Tennyson's 'Ring out, wild bells,' is among them, together with a daily pocket memorandum and an ingenious calendar, all in good taste.

Several more calendars for 1888 are at hand. One, for wheelmen, issued by the Pope Manufacturing Company, Boston, is duly furnished forth with reading matter pertinent to life on the road. Another, the "Greek Calendar," is for the public at large, though consisting wholly of extracts from ancient Greek writers. For it Mr. F. W. Peabody, 34 Park Row, New York, has adopted translations of a large assortment of pithy sentiments from poets and philosophers, which will certainly be found edifying as the pad is steadily uncovered. The card on which the pad is mounted is decorated with much taste, and bears in an oval laurel frame a photographic profile of the Hermes of Olympia. Marcus Ward & Co. issue two—"Day Unto Day," a sacred calendar, surmounted by the Madonna della Sedia; and "To-day," a business calendar—both well executed. The backs are utilized for postal information, etc.

A correspondent of the London *Academy* of December 10 tells of the discovery, at his instance, of a new autograph signature of John Harvard. It is affixed, with that of his brother Thomas, "Cittizen and Clothworker of London," to a counterpart lease of certain property owned by the Hospital of St. Katharine, near the Tower of London. The instrument, which has ever since been preserved among the muni ments of the Hospital, bears date July 29, 1635. Entire facsimiles of it are being executed.

The U. S. Military Service Institution, of which Maj.-Gen. Schofield is President, has just issued its quarterly *Journal*. The new number (32) is one of interest, especially to professional readers. "The Artillery and the Ordnance," by C. F. Benjamin, is a remarkably well-written and thorough paper; Capt. J. G. D. Knight, U. S. Engineers, treats exhaustively the subject of "Modern Fortifications and Sieges"; Lieut. A. C. Sharpe handles the more popular subject of "Military Training in Colleges"; Capt. O. E. Michaelis, Ordnance Department, explains the progress that we are making in the improvement of "Field-Artillery Carriage Construction"; and the distinguished and venerable cavalry soldier, Gen. P. St. George Cooke, discusses the more general subject of "Our Army and Navy." Under the head of book reviews there appears a very interesting letter, dated July 31, 1863, from Meade to Halleck, telling why he did not attack Lee at Williamsport after the battle of Gettysburg; and, under the same head, Maj. Asa Bird Gardiner makes an extended and scathing review of McMaster's 'History of the People of the United States.'

We ought sooner to have mentioned the completion in Parts 10–12 of the second edition of Richard Andree's 'Allgemeiner Handatlas' (Leipzig: Velhagen & Klasing; New York: B. Westermann & Co.). This work is certainly one of the best of its kind, and while not free from the trying use of extremely small lettering, it makes all the amends possible, except a magnifier, by furnishing an index embracing more than 100,000 places. This is an unusual concession in German cartography, and enhances enormously the worth of this fine specimen of scientific map-making.

M. L. Conquet vies with MM. Jouaust and Sigaux in raising publishing to the level of a fine art. His latest announcement is most appetizing. It is a new edition of the 'Mémoires du Comte de Gramont,' by Anthony Hamilton, printed on specially made vellum paper, and illustrated with a portrait and thirty-three designs by M. C. Delort—eleven full-page etchings, eleven vignettes at the heads of chapters, and eleven tail-pieces. From the prospectus, containing a specimen of each of these three varieties, the book bids fair to be as fine and as beautiful as the same publishers' 'Chartreuse de Parme'—than which there could be no higher praise.

The Librairie des Bibliophiles has followed up its success of last fall, the 'Aventures Merveilleuses de Fortunatus,' illustrated by M. Éd. de Beaumont, with a kindred work, Chamisso's 'Pierre Schlémihl, ou l'homme qui a perdu son ombre,' most abundantly decorated with drawings by M. Myrbach. The same house issues in the magnificent and tasteful "Bibliothèque Artistique Moderne" a volume of 'Nouvelles de Mérimée—La Mosaïque,' illustrated with designs by seven artists, etched by seven different needles, and with a preface by M. Jules Lemaitre.

M. Octave Uzanne succeeded so well with his novel and strikingly illustrated books on the Fan and the Muff that it was to be expected that he would sooner or later again join hands with M. Paul Avril in another enterprise of the same sort. But 'Le Miroir du Monde' (Paris: Maison Quantin; New York: F. W. Christern) is not as original as the 'Fan,' nor quite as tasteful. M. Uzanne's text is lightly frivolous, and full of pretty gossip about society and love and the arts and sport, and other pleasant topics of that sort. M. Avril's drawings, sometimes reproduced by a cheap process, and sometimes sumptuously rendered by photogravure, are very varying in value; at the worst they are as cheap as the process, and at best they are delightfully decorative.

It is remarkable what perennial difficulties French writers have with English titles and names. The November *Journal des Économistes* has an elaborate statistical article on the Académie des Sciences, Morales et Politiques, in which the names of two of the six foreign members are given, "lord Wm. Ewart Gladstone" and "Stubebs, Exeter," meaning, it is to be presumed, Bishop Stubbs of Chester. In the last *Intermédiaire* a correspondent asks in which novel of Dickens is found "l'histoire de Miss Lirriper Lodgins."

At last, after the lapse of nearly a decade since its inception, the great telescope of the Lick Observatory is complete in all essential parts, and its installation upon Mount Hamilton, California, need be a matter of only a few weeks at the furthest. If scientists and the public have been impatient because of the delay which has unavoidably attended the prosecution of this unique enterprise, that matters little when compared with the additional burdens which the trustees of Mr. Lick's estate have had to bear in consequence. We recall that the glass received its finishing touches in the hands of the Mesers. Clark more than a twelvemonth ago, and was transported across the continent without injury. The enormous hemispherical dome required to protect both instrument and observer was built in San Francisco, and placed in position on the mountain during the early months of the present year. The construction of the tube, nearly sixty feet long, to mount the lens in, and of the axes to support the tube, clockwork to move the telescope, and the host of mechanical accessories necessary in the convenient manipulation of so ponderous an instrument, has been conducted to successful completion by Messrs. Warner & Swasey at Cleveland, and they are now engaged in putting their work in final position on Mount Hamilton. The delicate micrometer, or measuring apparatus, has recently been finished at the shops of the Messrs. Fauth & Co. at Washington, while the huge spectroscope, a most important auxiliary of the great glass, has for a few days past been on exhibition at Pittsburgh, where it was made by Mr. J. A. Brashear. It is unnecessary at present to comment further upon this extraordinary apparatus, which, if no unforeseen difficulties arise, is expected to be in preliminary working condition at the Lick Observatory early in the coming year.

—The Bostonian Society, whose headquarters

are in the Old State House, has reprinted Mr. W. H. Whitmore's sketch of the life of Abel Bowen, who first established the art of wood-engraving in Boston, as Alexander Anderson did in this city and in the United States. The pamphlet has been much enlarged and greatly enhanced in value by the insertion of autobiographic memoranda relating to Bowen's work, as well as by fresh copies of his cuts and heliotypes of admirable portraits of himself and wife and his uncle, Daniel Bowen, founder of what ultimately became the Boston Museum. Bowen says: "I have evidence that Dr. Franklin engraved some devices on wood, and that some were used in the printing of the Continental Money"; and Mr. Whitmore cites the passage in Franklin's autobiography in which he tells of such achievements after he became a printer in Philadelphia—but upon type metal, as Mr. Whitmore thinks. The latter is informed that it was customary to cut the matrix for these ornaments in wood, and then make a metal cast, thus exactly reversing the true process of "white-line" engraving. A silhouette profile for an advertisement, the first cut executed by Bowen in Boston, is given in facsimile from the *New England Palladium* of December 17, 1805. Bowen speaks of copying some of Bewick's cuts, but does not intimate that the Tiger Hunt which he engraved as a business card for himself in 1812, and which is here reproduced on p. 33, was a free and very interesting copy of a design by John Bewick engraved by Thomas Bewick for Somerville's 'Chase' (1796). Bowen's admiration for the master, however, found expression in his being one of the incorporators, in 1834, of the Boston Bewick Company, for the purposes of general engraving. To the *American Magazine*, which it published in three volumes, he contributed a large number of cuts now valuable for the local antiquarian. His 'Picture of Boston' is full of illustrations of public buildings, mostly on copper, for, like the Newcastle genius, Bowen engraved on metal as well as on wood. Bowen had, too, a large number of pupils in his art, including Joseph Andrews, S. S. Kilburn, and Hammatt Billings. Altogether, this pamphlet of Mr. Whitmore's deserves to be caught up by the collector.

—An odd instance of the ignorance of the learned occurs in the last (November) issue of the London *Notes and Queries*, page 427. It is an anecdote communicated by J. O. Halliwell-Phillipps, "told him orally many years ago by Mr. W. O. Hunt of Stratford-on-Avon." Mr. P., doubting "if it had ever been printed," sent it to *Notes and Queries*. This recondite anecdote turns out to be Franklin's well-known story how critics blotted out every word, save the hatter's name, from the sign, "John Thompson, hatter, makes and sells hats for ready money" (Works i, p. 407). Americans associate this story with the Declaration of Independence, as Franklin told it to Jefferson when he saw him nettled by Congressional criticism on the first draft of his great Declaration. It is clear that Mr. Phillipps, though enjoying the Franklinian anecdote for many years, never learned its genuineness or its application or relation to the greatest loss that England ever suffered. How shall we account for this ignorance? Is it because we refuse to see a painful truth—alike in public and private history? The great Philadelphia Declaration—and all its details—must always be as harrowing to the English as Waterloo to the French or Jena to the Prussians. No wonder that this chapter of British foreign relations is skipped, or, if ever perused, is written in water rather than in wax. After all, it remains marvellous that a story as familiar to Yankees as Whittington's cat to cockneys should be a novelty to intelligent Englishmen, and that notwithstanding its momentous political bearings.

—Some time ago we made a note of Professor Hale's little book on the 'Art of Reading Latin,' in which the Cornell Latinist laid great stress on the importance of following the order of the original. To pull a Latin sentence to pieces and put it together again in the English order, is not to read Latin in any true sense, and we are happy to see that this sound doctrine is reinforced by Professor Super's translation of Weil's essay on 'The Order of Words in the Ancient Languages as Compared with the Modern' (Boston: Ginn & Co.)—a classical work, which we venture to say would not have had to wait so long for an interpreter if it had been written in German. Professor Hale insists on the order of the original. Professor Weil's object is to show that the ancient order has its rights as well as the modern; that the arrangement in Latin, for instance, is not a mere juggler's trick intended to puzzle those who are not born to a transpositive language, but a simple process—the order of words being as with us the order of ideas. The practical rule for translating Latin, therefore, is to keep the order of ideas, and if this rule is adhered to, not only will the vicious habit of dissection be corrected, but the translation itself will gain in vigor and point. This is the most important lesson of the first chapter, which has for its thesis, "The syntactic march [to quote Professor Super's translation] is not the march of ideas." In the second chapter the author treats of the "classification of languages in respect to construction," and in the third of the "relation between the order of words and rhetorical emphasis." The book is, as we have said, a grammatical classic. The lines were carefully laid down as long ago as 1844, and the author has meantime found little ground for repentance, and has made few changes in the subsequent editions of 1869 and 1879. Echoing the old saying that "a big book is a big bore," he has declined to expand his suggestive essay into a voluminous work, so that the student will not find minute discussions of the doctrines of the ancient rhetoricians, to which scholars are beginning to attach more importance than they did in 1844, nor a full examination of recent investigations into the Aryan order of words—investigations which seem to have only a moderate interest for M. Weil. The American translator has not added much to the original work. We have an occasional note that will be of service to the student, but no systematic effort to bring the literature up to date. The translation lacks idiomatic ease, but this defect is perhaps inevitable under the peculiar limitations, and we are glad that Professor Super has called the attention of teachers to a manual too much neglected in this country, and that he has made its contents more accessible to American students generally.

—The same subject comes up in Professor Nettleship's essay on "Classical Style in Latin Prose," which forms a part of the introduction to his little book entitled 'Passages for Translation into Latin Prose' (London: George Bell & Sons). Here, in tracing the development of Latin prose style from Cato to Tacitus, the Corpus Professor does not neglect the order of words and the rhythm of sentences; and the vocal side—the sensuous side, so to speak—which M. Weil acknowledges, but only in step-fatherly fashion, comes to its rights. The other two essays—one on "Political and Social Ideas," and the other on "Range of Metaphor"—are interesting and instructive from one point of view, from another tantalizing and irritating. Here half is not more than the whole, and we are not satisfied with mere hints from a man of Professor Nettleship's wide and detailed knowledge of the resources of the Latin language. Compare the essay on "Range of Metaphor" with the corresponding chapter in Nägelsbach, and remember that we have to do not with an author of whose manner specimens might suffice, but with a language. But nothing could be more characteristic of English methods or want of method than the way in which distinguished scholars "favor" the world with crumbs from their intellectual tables. The reader is at most invited to share a meal or two with more fortunate persons, and is not supposed to grumble because he is not taken in as a regular boarder. The "Passages for Translation" occupy just one-half the volume, and one cannot help suspecting that these extracts from the Professor's lectures were intended to bring the book up to marketable size. Still, we are duly thankful for what we have received, and many teachers will be glad to have from so competent a hand this addition to their apparatus for practice in Latin prose composition.

—"A Drift from Redwood Camp," by Bret Harte, which appears in the December *Scribner*, begins the November number of *Les Lettres et les Arts* under the title "L'Épave de Bois-Rouge." The translation is good and the illustrations amusingly idealistic and polished. In "La France au Moyen Age: La Châtelaine," M. Achille Luchaire finds his examples and authorities in the chronicles and sermons and fabliaux of the times, and not in what he calls contemptuously the "fantaisies idéalistes du roman et de la poésie lyrique." M. Eugène Burnand's "En Camargue," illustrated by himself, is a pleasant little sketch of a ride with a native in the great solitary plain of southern France among herds of wild cattle and horses. M. Édouard Blanc's "Le Bleu: Voyage à la recherche du Bleu dont on meurt" is a fantasy about the Ideal, with fantastic illustrations in various tints of blue by Guillaume Dubufe, in which the ideal escapes both artist and author. The most interesting paper is M. Frédéric Masson's "Les Princesses artistes: la Famille Impériale," which is accompanied by reproductions of the work of Queen Hortense; of the Princess Charlotte, the daughter of Joseph Bonaparte, who became the wife of the young Prince Napoléon-Louis, elder brother of the Emperor Napoleon III.; and of the Princess Mathilde, whose charming portrait by Hébert, now engraved for the first time, is the frontispiece of the number.

—To the newly published treatises relating to Petrarch, cited in a late issue of the *Nation* (No. 1168), may now be added 'Die Chronologie der Gedichte Petrarcas' (Berlin: Weidmann), by Dr. Arthur Pakscher, whose independent identification of the autographic manuscripts in the Vatican Library was almost simultaneous with their rediscovery by the French palæographer, De Nolhac. With the help of one of these recovered codices, containing the poet's final copy of his sonnets and canzoni, and by a careful comparison of that with the equally autographic first drafts of several of these poems—long a recognized treasure of the Vatican—Dr. Pakscher has succeeded in establishing beyond doubt that the arrangement of the Canzoniere is, in general, chronological, or, in other words, that its contents form a consecutive record of the writer's varying sentiments and passions—a trustworthy diary of his poetical inspirations. Even from a merely critical point of view the value of this fact is inestimable. Many of the original drafts alluded to are dated, but as the detached folios on which

they are written have not hitherto been read with proper care and intelligence—least of all by Ubaldini, who edited them in 1642—these marginal dates have been of comparatively slight utility either to the biographer or to the commentator of Petrarch. Now they are made to determine the day or month of not a few important events, and to prove that Petrarch deliberately edited his Italian lyrics (with the principal exception of the special introductory sonnet) in the order of their composition. Dr. Pakscher has brought to his aid a critical study of Petrarch's epistles, of the letters and sonnets addressed to Petrarch, and of various other documents, edited and inedited, likely to throw light on the genesis of any of the poetical productions; and the results of all this painstaking investigation, clearly arranged and lucidly stated as they are, form very interesting reading.

—In one of his five chapters he narrates in detail the whole history of the magnificent canzone "Spirto gentil"—both the story of its origin and of the efforts to identify the person to whom it was addressed. By an ingenious process of demonstration he first fixes the exact date of Petrarch's earliest visit to the turbulent, devastated, and neglected Rome; then he indicates, with almost equal precision, the date of composition of the ode; and, fortified with these data, he finds it easy to show that neither the tribune Cola Rienzi, nor either of the Princes Colonna—these being the chief claimants—could possibly have been the "signor valoroso, accorto e saggio," to whom Petrarch directed his stirring appeal for a firmer and more enlightened government of the storied city. Of course, Dr. Pakscher's reasoning is, in part, a repetition of the arguments of previous writers, never, however, so well and so decisively put. The reader will conclude with him, and in agreement with the more sober and acute of the living critics of Italy, that no other candidate for the honor of the dedication so combines all the requisite qualifications as does the knightly friend of Dante, Busone da Gubbio, who, at the date of the famous lyric (1337-8), was one of Rome's two governing senators. Dr. Pakscher's book closes with a table of the compositions which form the Canzoniere, set down in the order followed by Petrarch in his own final revision of the work (Vat. lat. 3195), and with its date, so far as that is at present possible, attached to each. The earliest was written at the age of twenty-three, in the year of Petrarch's first encounter with Laura (1327); the latest in 1358, sixteen years before the poet's death. The culminating period of his poetical activity—so far as the Italian language is concerned—lay between 1334 and 1348. He apparently first decided to publish his 'Fragments in the Vulgar Tongue,' as he styled the Canzoniere, about 1342, for that is the date of the first or prefatory sonnet—a proem which has its only counterpart in the noble and not altogether dissimilar dedication prefixed by Goethe to 'Faust.'

ULYSSES AND THE VENUS OF MELOS.

On the Track of Ulysses, together with an Excursion in quest of the so-called Venus of Melos. By W. J. Stillman. Boston: Houghton, Mifflin & Co. 1888. Pp. vi. and 106.

EVERY year Greece grows more accessible to the traveller. Constantly multiplying connections by steamer with Italy and the western ports of the Mediterranean, the construction of railways and highways in the interior, and the improvement in Athens itself as a place of residence, probably carry ten students there now for every one that visited the country twenty-five years ago, to say nothing of the steady increase in the number of travellers drawn thither by the possibility of visiting the ruins on the Acropolis without personal discomfort. This improvement in the material condition of things, however, has its drawbacks to him who goes to the country as on a pilgrimage. With the locomotive shrieking past the temple of Demeter at Eleusis, and running where once Corinth was, much of the charm of travelling in Greece is disappearing, and the student or enthusiast of the next generation who wishes to feel the Hellas of the past in that of the present will have far to seek. True though this is of the mainland, civilization has as yet left most of the islands unspoiled. Communication between them is still a matter of considerable difficulty, and the accommodations most of them offer to foreigners are not encouraging. Mr. Stillman is therefore one of the favored few who have been able to realize the dream of every lover of Homer in following the wanderings of Odysseus, "whom we unaccountably call Ulysses," over the last part of his course, and in roaming about Ithaca, and leaf-quivering Neritus, and the neighboring shores and islands. The readers of the *Century* magazine have already profited by this journey of Mr. Stillman's, and they as well as many others will be glad both that he has committed the papers there published to the "more or less permanent condition of book form," as he says, and that the publication has been intrusted to Messrs. Houghton, Mifflin & Co., who in paper and letterpress have spared nothing to give the book as attractive a setting as possible.

Mr. Stillman's trip may be said to have begun at Corfu, where

"I found fit to my purpose a little yacht of twelve tons, cutter-rigged and Malta built, the *Kestrel*, with whose master and owner I made my bargain, namely: He was to obey all my reasonable orders for any voyage within the two archipelagos, find his ship and crew of two sailors in all they needed for service and safety, do my cooking, and insure himself, for the sum of £15 sterling a month for three months."

While the yacht was being made ready, he inspected the island of Corfu, which he believes to be the Scheria of the 'Odyssey,' and he gives an interesting sketch of the history and people of the place, concluding with a bit that is most tantalizing to those who have not his liberty to roam about at will:

"And life is so cheap that one who has worn out the world and realized an income of a thousand dollars a year may find a Macarian peace in an upper room of the Bella Venezia, with windows looking out on the beautiful mountains of Epirus, snowclad all winter, and the bright blue of the intervening sea, with the coming, going, and merely passing ships of all nations; and, when the sun is low, have a comfortable carriage to thread the labyrinths of immense olive groves which form almost the only shade in the island."

From Corfu his course lay by Santa Maura (Nericus) to Ithaca, thence to Cephalonia, home of the "great-hearted Kephallenians," the woody Zakynthos, Navarino, the "shore of sandy Pylos," and the Island of Cerigo, where this part of his trip appears to have ended. Of each of the places named Mr. Stillman has something new and interesting to say, now on a question of Homeric topography, now on remains of the Hellenic period that came in his way, and again upon the characteristics of the modern inhabitants of these famous sites. This combination of discussions upon topics of interest to every classical scholar, and practical suggestions to the traveller concerning the guides and people encountered on the way, makes the book one which, in less elegant form, we are sure every visitor to the Ionian Islands would be glad to carry with him as a companion.

In the archæological portion of these papers on Ulysses one cannot help feeling that Mr. Stillman is constantly placed at a disadvantage by the limits and requirements of magazine articles, the main object of which was evidently description rather than discussion, and it would be unfair to him to criticise this feature of them too closely. No one knows better than he, for example, that the question of the date of the 'Odyssey' cannot be settled in two pages, or without the discussion of many more factors than he has been able to introduce into the space at his command. Making a possible exception of Corfu, we are quite in accord with him in the conclusions stated on p. 73, that—

"the general knowledge shown in the 'Odyssey' divides itself into [two] kinds: that which was part of the general geography of the day, . . . and that of which the poet had personal cognizance, which is limited to Corfu, Ithaca, Nericus, and possibly Pylos; and this exclusiveness suggests to us that Homer, a stranger in the West, had come, as I did, simply to follow and study the traces of Ulysses's wanderings."

That the author of the 'Odyssey' had more knowledge of Ithaca and the adjacent lands than mere hearsay could have carried as far as Asia Minor, we think is shown by such detailed descriptions as that in Book XIII., 96 ff., whereas, on the other hand, there is enough to show that his familiarity with the region was by no means perfect. Assuming what we consider the most reasonable hypothesis, that suggested by Mr. Stillman, it becomes a question how far we can hold the poet to account for his topographical allusions: whether, for example, it is wise to attempt to identify the cave in which Ulysses is said to have been left by Alcinous and his companions. This Mr. Stillman does, and he follows Leake in believing the spot now known as *Polis* to be the ancient city of Ulysses, "*if he was an actuality.*"

We notice, in passing, a few trifling slips which a careful revision might have avoided, such as the confusion of Apollo with Helios, p. 23, the statements that "the Greeks of the Trojan war are always called Achaioi," p. 50, and that a colony from the city Samos on Cephalonia "gave its name to the Asiatic island now known under that appellation," p. 52. An illustration referred to on p. 66 is inserted on p. 13.

The last chapter of the book is a reprint, with some unimportant alterations, of an article in the *Century* for November, 1881, upon the "so-called Venus of Melos." This differs from the preceding chapters in that it is decidedly argumentative, being an attempt to prove that the statue in question is not a Venus but a Niké, and that it is none other than the statue which adorned the temple of Niké Apteros on the Acropolis of Athens. Readers of the *Nation* are already aware that in the promulgation of his theories Mr. Stillman is not one to be discouraged by the fact that his views clash with the commonly received opinions of archæologists, but in this case his conclusions are so completely at variance with preconceived notions that the examination they deserve would require much more space than we can give them. The stages by which he develops his argument may be summed up as follows: The character of the filling of the niche in which the statue was found "indicates the haste of an impending attack, or work done in secret," and also "rather that it [the statue] was brought from a distance than that it could be a divinity of the island." In seeking for the most likely place from which it could have been brought, "conjecture points to Athens, not only because the work is Attic, but because we know by the coins of Melos, which in all the latest coinages still bear the

owl of Athens, that Melos belonged to that city as late as she had any allegiance." Athens, then, being probably "the only city likely to send to Melos a treasure of this kind," the question arises, What statue was it? It differs so greatly from the commonly known Venuses of the "Medici" and "Anadyomene" type, the former of which "we may authoritatively accept as the Venus type of the best period of the Venus sculpture," that Mr. Stillman at once rejects the appellation of Venus for it and "for all statues of the heroic type." It is this heroic quality which leads him to regard it as Niké—Victory—and the strong typical resemblance which he detects to the series of Victories in the balustrade of the temple of Niké Apteros leads him to refer it to the same time and school. As we know of but one wingless statue of Victory in Athens, the conclusion is easy, "that the Melian statue is the original Niké Apteros from the little temple on the Acropolis of Athens," and that she is represented as looking up from a shield which she holds, and upon which she has been writing.

Mr. Stillman acknowledges that there are gaps in his argument, and says he does not "wish it to be judged as a demonstration, but as an induction in which a kind of artistic instinct . . . has had the greatest part." However, the question whether the Venus of Melos was the Niké Apteros is one of fact and not of artistic instinct, and we will state as briefly as possible three principal objections to Mr. Stillman's theory, which deprive it of the "highest probability" which he claims for it. First, admitting, for the sake of argument, that the Athenians would have been put to the necessity of carrying the statue to such a distance for purposes of concealment, Melos, far from being the place most likely to have been chosen by them, was one which they would most certainly have avoided, since the island was one of the few in the group of the Cyclades which, from the earliest Hellenic times, were occupied by Dorians. Constantly the friend of Sparta, it became her ally in the Peloponnesian war, and suffered an attack by the Athenians in the year 426, and a second in 416, in the latter of which all her male adults were massacred and her women and children sold into slavery. Athens then attempted to establish a colony on the island, but at the close of the war Lysander restored it to the remnants of its former populations (Thucyd. v, 115, 116; Xenophon, Hell., ii, 2, 9). It is fair to presume that neither they nor their descendants cherished any feeling of affection or allegiance for Athens after that event. The owl, which appears on some late bronze coins of Melos, is the symbol not of Athens, but of Athena, and appears on the coins of such Doric cities as Sparta, Corinth, and Syracuse (Head, 'Hist. Numorum,' pp. 364, 338, 159).

Second, that the Greek ideal of Aphrodite was not entirely deprived of heroic qualities, is proved, first, by the fact that in Sparta, Cythera, Cyprus, and other places in Greece, there were statues of her represented as armed (Roscher, 'Lexicon der Mythologie,' p. 403), which, though exceptional, are sufficient to prove the fact; and, second, because a statue of her by Agorakritos, a sculptor of the fifth century, was used as a figure of Nemesis in the temple of Rhamnos. The Venus de' Medici, which Mr. Stillman regards as the Venus type of the best period of the Venus sculpture, is shown by its inscription to be not earlier than the second century B. C., and is the debasement of a type which originated in the fourth; but was there any better period of the Venus sculpture than that of Pheidias and Alkamenes, both of whom made statues of the goddess? That the former conceived his statue of the Venus Urania—the heavenly goddess, the type of the highest form of love—without a heroic element, is difficult to believe. Moreover, that there was a statue of Venus of the type of the Melian and with the motive assigned to that statue by Mr. Stillman, *i. e.*, holding a shield, is shown by the coins of Corinth, on which it is represented standing in a temple, identified as Venus by the Eros which stands at its side. (*Journal of Hellenic Studies*, VI., 1885, p. 74; pl. liii, G.)

Finally, ancient authors have left us a tolerably definite description of the statue which stood in the temple of Niké Apteros, from which it appears that it was an ancient wooden image (ξόανον) of a most primitive kind, holding in the right hand a pomegranate and in the other a helmet (Harpokration, *s. v.* Νίκη Ἀθηνᾶ). This was an image of Athena Niké, evidently a relic of the time when Niké, before being evolved into a separate being, was still merely an attribute of Athena. In the official records the temple is always spoken of under that name. In his book Mr. Stillman makes no allusion to this figure, but in a note published in the *Century* following that in which his article appeared, he admits its existence, and supposes that it was destroyed at the time of the Persian invasion. But Kalamis, an Athenian sculptor of the epoch following the Persian war, made a copy of it which was erected by the Mantineans at Olympia (Pausanias v., 26, 6). Moreover, Harpokration, in his description of it, quotes Lycurgus, the Attic orator of the fourth century, and Heliodoros, the periegete. Mr. Stillman says that when Pausanias visited Athens, the Niké Apteros had gone, and that he never saw it. It is true that Pausanias does not speak of the statue on his way up to the Acropolis, but neither does he mention the beautiful balustrade which we know must have been there at the time; yet he does allude to the statue twice in other parts of his book (Paus. v., 26, 6, and iii., 15, 7).

In conclusion, we may say that we are entirely in accord with Mr. Stillman in his denunciation of the Tarral restoration, and agree with him that it shocks the dramatic sense beyond endurance.

THE NEW WEIMAR EDITION OF GOETHE.

Goethe's Werke, herausgegeben im Auftrage der Grossherzogin Sophie von Sachsen. Weimar: Hermann Böhlau; New York: B. Westermann & Co. 1887.

EVER since the manuscripts left by Goethe passed into the possession of the Grand Duchess of Weimar, and the fact was made known to the world that her Royal Highness would direct the publication of an edition of Goethe which should be worthy of the poet's fame, the interest of the literary world has been drawn in an unusual degree to the Weimar enterprise. This interest has been fostered by continual references to the subject in the press, by the fact that a considerable number of the ablest and most distinguished men of letters in Germany have been enlisted as collaborators, and, finally, by the fact that all along great pains have been taken to give the affair the aspect of a national undertaking. Thus the appearance of the initial volumes of the new edition is a literary event which seems to call for more than a passing notice.

That there has been hitherto no entirely satisfactory edition of Goethe is a fact well known to critical students. Of the multitudinous Cotta editions, the one possessing the highest critical value is the famous 'Ausgabe letzter Hand,' which appeared in forty volumes in 1827-1830. This edition was, as its name implies, supervised by the poet himself, and represented his best and ripest judgment as to the arrangement of his works. In seeing this edition through the press he gave much more attention than he had ever given before to questions of text, orthography, and punctuation, so that it may be said to represent the form in which the poet himself desired that his work should go down to posterity. But, unfortunately, these forty volumes did not represent their author's entire literary activity. He reserved much important matter to be published after his death by his literary executors. Between the years 1833 and 1842, accordingly, the 'Ausgabe letzter Hand' was augmented by twenty volumes of posthumous works. To this edition a rather elaborate index, occupying one volume, was then prepared by C. T. Musculus, thus making a set of sixty-one volumes.

But within a short time after the death of Goethe, it became evident that the 'Ausgabe letzter Hand' could not remain as a permanent norm. It was on the one hand too large and expensive; it contained many things which the general public did not care for, so that an edition of selected works was evidently demanded. Nor could the old arrangement be adhered to. The posthumous works contained matter which was intimately connected with what had appeared in the original forty volumes. To indicate what is meant: Volume xii., published in 1827, contained the first part of 'Faust,' and some of the first act of the second part. Then the entire second part appeared in the posthumous work. Other similar facts seemed to call imperatively for a new arrangement of the works. The first of the selected and rearranged editions appeared in 1836 in two large octavo volumes. Another came out in 1840 in forty volumes; another, the finest, mechanically, of all the Cotta editions, appeared in 1850, in thirty volumes. Since then the famous Stuttgart house has issued numerous editions in various shapes and sizes. Other publishers also entered the field, and the result is that the public of to-day has its choice from among a great variety of editions, some complete and others incomplete; some illustrated, others without pictorial embellishment; some with excellent introductions and commentary, and others with none at all; some, elegant specimens of bookmaking, and others a continual distress to the reader.

Amid all this variety in the recent editions, we find that, with one, or perhaps we should say two, conspicuous exceptions, they agree in this, that they give no special attention to the text. Each new edition has been reprinted from a model arbitrarily chosen, and not submitted to critical scrutiny. Editors and proof-readers in the early days were not always careful; they corrected supposed mistakes which were not mistakes at all, and allowed actual mistakes to stand, and their sins of omission and of commission have been spread abroad as part of the text of Goethe. The first of the exceptions referred to above is the set of three volumes known as 'Der Junge Goethe,' published by Solomon Hirzel in 1875, which gave the world for the first time a correctly restored text of the poet's youthful writings (1764–1776). The second exception is the well-known edition published by Gustav Hempel, of Berlin, between 1868 and 1879. The editorial work of this edition was intrusted to the most capable hands that could be found, and was admirably done. Each editor undertook a careful study of the text edited by him, and gave a tolerably full list of variant readings. The result was an edition which offered a better text than had been seen before; and this fact, taken in connection with the excellent intro-

ductions, annotations, and indexes which the Hempel editors provided, has made this edition of late years almost indispensable to the student of Goethe. But with all its good qualities the Hempel edition is not pleasing mechanically; the effort to make it cheap resulted in producing twenty-three unsightly volumes of very unequal size, with close print, narrow margin, and inferior paper. Besides this, the editorial work was done while the most important of all sources of information, the Goethe archives at Weimar, were still closed against scholars by the unaccountable caprice of Walther von Goethe.

It thus appears that there is still need of an edition of Goethe containing an authentic text well printed on good paper. To supply this simple need is, apparently, the sole aim and purpose of the Weimar editors. The new edition is to consist, as was noted in a former number of the *Nation*, of four parts: first, the works proper, sixty volumes; second, scientific writings, ten volumes; third, journals; and fourth, letters, the number of volumes in parts three and four not being at present determinable. There lie before us, in all, five volumes, namely, of Part I., volume i, containing lyric poems, and volume xiv, containing the first part of "Faust"; of Part III., volume i, containing Goethe's diary from 1775 to 1787; and of Part IV., volumes i and ii, containing letters written between the years 1764 and 1775. The form of the volumes is a small octavo which imitates closely the octavo impression of the 'Ausgabe letzter Hand,' save that a larger type and a heavier paper have been chosen. The first volume contains two short prefaces, one by Herman Grimm, in which the history of the project is recited and its importance duly set forth, and a second in which Bernhard Suphan, director of the Goethe archives, speaking for the editors, describes the principles upon which the editorial work is to be done. These principles are few and simple, and can be, in fact, summed up in one rule, namely, to follow the 'Ausgabe letzter Hand' as closely and as far as possible, deviating from it only when necessity compels or the very strongest arguments exist. With the effort to present an authentic text and to render an account of all known variants of any importance, the labors of the editors begin and end. Of historical, explanatory, or interpretative comment they give us nothing whatever.

To many, we doubt not, this procedure on their part will occasion at first some disappointment. The feeling is perhaps natural that so competent a band of editors should have been able to furnish, and should have furnished, model introductions to the separate works, and should also have found it possible to provide needed commentary such as would not be impertinent. We were ourselves inclined at first to cherish some such opinion, but upon reflection we are convinced that the German editors are right. Had they begun to insert matter of the kind alluded to, it would doubtless have been very difficult to tell what to print and what to leave out. In that case, too, the already bulky edition must have been made still more bulky and voluminous, and this certainly is not desirable. It is also to be borne in mind that a comprehensive and authoritative life of Goethe is among the further projects of H. R. H. the Grand Duchess of Weimar. This biography will doubtless shed all the light that can be shed by historical research upon the genesis of the poet's works and their relation to his life.

It will be seen, then, that the new Goethe is by no means calculated to supplant altogether the older ones. The helpful commentary and the excellent introductions of the Hempel edition will be as indispensable as ever, and the valuable essays by Goedeke prefixed to the separate works in the later Cotta editions will lose none of their value. The new Weimar edition will meet the needs more especially of scholars, and of such scholarly readers as enjoy the assurance that they have the authentic text of their author just as he wrote it, and that they have also a full apparatus for verifying its authenticity.

CANNING'S OFFICIAL CORRESPONDENCE.

Some Official Correspondence of George Canning. Edited, with notes, by Edward J. Stapleton. 2 vols. New York: Longmans, Green & Co. 1887.

THESE volumes cover but a portion of Canning's career, and even of that portion they do not profess to be a complete record. Mr. Augustus Stapleton, Canning's private secretary, was intrusted by the representatives of the deceased statesman with the task of vindicating his memory from the aspersions of his enemies, in furtherance of which object he published two works, 'The Political Life of George Canning' and 'George Canning and His Times.' The former of these, which appeared in 1831, treats of the period from 1822 to 1827; the latter, which was not published till 1859, by which time many private letters had become available, includes also the earlier events of Canning's life. The volumes now before us consist, therefore, of gleanings from a field already reaped. There is nothing here which had not passed under the inspection of the former editor, and upon the whole we must say that there is little that is of interest to the general reader. For the full comprehension of these letters it is necessary to refer constantly to those which are printed in the works mentioned above; and although the notes of the editor are of great service in supplying deficiencies, they are of course not so satisfactory as the documents upon which they are based. Viewed as materials for the historian, it is well that this correspondence should be collected, but it is in itself too fragmentary to be called history. Many of the letters are of the most trivial character, and the futile attempts of the editor to annotate these impair the credit which his fairness and thorough knowledge of his subject would otherwise assure him. Nevertheless, there are some perplexing features in Canning's career that deserve the explanation which is perhaps only here to be found.

The first problem which Mr. Stapleton undertakes to solve is the absence of Canning from office during the period from December, 1820, to September, 1822. He had apparently had no scruples about serving with the same Cabinet from 1816 to 1820, and Lord Liverpool, a very particular friend, remained at its head. But in 1820 George III. died, and the proceedings against Queen Caroline at once followed. Canning warned George IV. that he could take no part in the prosecution of a person with whom his relations had been so intimate and friendly, and went abroad; but he did not resign until after the Bill of Pains and Penalties had been dropped, and there seems to have been no pressure brought to bear upon him to bring about his resignation. He alleged as his reason the probability that discussions respecting the Queen might now be expected in the House of Commons, and that it would be inconvenient for him, as a Cabinet officer, to absent himself from them, and, as a former confidential adviser of the Queen, to take part in them. It appears certain that the King was disposed to blame Canning for the part taken by his friends in bringing about the failure of the proceedings for divorce; but as the Queen died in 1821, this resentment was probably not very lasting. The true cause lies somewhat deeper, and is characteristic of English political life.

Canning was undoubtedly a Conservative in some respects. He had been taught by Pitt, who converted him from the Radical tendencies of his youth, to look upon the Established Church, the House of Commons and the House of Lords, as then constituted, as integral parts of the Constitution. This was in itself sufficient to keep him in the Tory camp; but in all other respects his tendencies were Liberal. He favored Catholic emancipation and the abolition of slavery, he worked steadily with Huskisson in advocating measures tending to free trade, and he detested the reactionary proceedings of the Holy Alliance. But Lord Castlereagh, supported by the Chancellor and the Duke of Wellington, controlled the foreign policy of the Government, and Lord Castlereagh was the mere tool of Metternich. Canning, therefore, it is not unreasonable to believe, determined to play the part of Achilles. He was unwilling to appear to support the military despots of Europe in the suppression of all attempts to obtain constitutional government, he foresaw that this policy would presently be wrecked by the jealousies of the Powers, and he believed that an opportunity would soon occur for Great Britain to exert her influence in favor of the liberties of the Continent. When that opportunity should occur, he felt confident that the control of the Government must fall into his hands. He was right. Castlereagh died, and Canning succeeded him. The resentment of the King, which Canning had ostentatiously pleaded as a sufficient reason for his not taking a minor office, and which had been only intensified by his standing aloof, proved to be no reason at all why he should not step into power, and direct the affairs of the Empire in accordance with his own convictions and in opposition to those of his sovereign.

It is not surprising that a course which, however politic, was not altogether open, should have made him enemies, and the charges of treachery and intrigue so perseveringly brought against him during the remainder of his career, especially by Lord Castlereagh's family and friends, are, if not justifiable, at least susceptible of explanation. On the other hand, the liberal thinkers of both England and the Continent had fixed their hopes upon him and hailed his accession to power with joy. They beheld an administration of high Tories committed to the support of European liberty in spite of themselves, and under the control of a statesman who tolerated little interference with his plans. The Duke of Wellington believed that the rest of the Cabinet could "keep him in order," but he found that he was mistaken, and was compelled to behold the triumphant advance of principles which he detested from the bottom of his heart.

The situation of Europe was, in truth, at this juncture extraordinary. In obedience to the principles of the Holy Alliance, France had overrun the Spanish territory in order to support the scandalous government of Ferdinand, and was threatening Portugal with like treatment. On the other hand, there was a rebellion in Greece which ought, consistently with these principles, to have been suppressed by the combined action of the Powers. But in this case Russia was hostile to Turkey, and the atrocities of Ibrahim Pasha, who had formed the deliberate design of exterminating the Greeks and populating their country with Egyptians and other Mohammedans, had aroused such a tempest of indignation in Europe that even Metternich faltered. It was

certainly a triumph of diplomatic skill as well as of humanity when Canning, as he said, changed the station of England "from the tail of Europe to the head," and actually succeeded in engaging France and Russia in the enterprise of assisting a people to throw off their allegiance to their rulers. The battle of Navarino was, it is true, fought after his death, but it was the necessary outcome of his policy and is properly associated with his name.

We are inclined to believe that the recognition of the independence of the Spanish-American colonies was really an act of retaliation for the interference of France in the internal affairs of Spain, and that the settlement of the difficulties between Brazil and Portugal was a continuation of the same policy. Canning unquestionably desired to check the meddling of European Powers with one another's internal affairs, but we are not convinced that he had any very genuine sympathy with aspirations for liberty where the interests of England were not involved. It is true that "behind the trenchant weapon of his brilliant and argumentative despatches lay the tremendous resource of invoking the hidden forces of revolutionary Europe," but we do not believe that Canning ever proposed to avail himself of this resource. He certainly opposed the reform of Parliament when the country was almost ready for revolution about it. Still, his foreign policy greatly pleased the Liberals; and Mr. Stapleton's estimate of his career is perhaps substantially correct. It is contained in the following passage:

"Step by step, under the consummate handling of the Foreign Secretary, the headstrong and arbitrary energies of the despotic Powers found themselves checked; everywhere Liberalism began to look up, and reasonable hopes and aspirations arose; outlets and prospects, unconnected with cruel violence and revolutionary madness, opened out in different directions; it became no longer necessary for a Liberal to despair; and all this was Canning's work; and the English Liberals and working classes gladly accepted Canning's sympathetic and generous administration as worth many Reform Bills."

Alberuni's India. An Account of the Religion, Philosophy, Literature, Chronology, Astronomy, Customs, Laws, and Astrology of India about A. D. 1030. Edited in the Arabic original by Dr. Edward Sachau. London: Trübner & Co. 1887.

THE author of this remarkable book was a Moslem scholar who was brought from his home in Central Asia by Mohammed of Ghazna, and settled at Ghazna. Here Alberuni acquired an extensive knowledge of Sanskrit, and investigated the customs, laws, etc., of the Hindus. Bringing to this investigation a mind trained by mathematical and philosophical studies, he made known the results in this work, remarkable alike for the extent and accuracy of its learning and for the careful scholarly spirit evinced by its author. Written in 1030, it is to-day of very great importance for scholars. Its value was recognized long ago, and as far back as 1843 Munk promised to edit and translate it. For various reasons, however, the task has not been accomplished till it was undertaken by Dr. Sachau, who, having now published the Arabic text, will publish the English translation as soon as possible, which will be eagerly awaited by scholars.

The volume before us is a beautiful quarto, in which the Arabic text occupies 318 pages. An index of the words of Indian origin and a long preface add to its value. Dr. Sachau's name is a sufficient guarantee of the accuracy of the Arabic text. Some slips will be noted in the proof-reading of the preface.

BOOKS OF THE WEEK.

Baker, J. F. A Treatise on the Law of Sales of Goods, Wares, and Merchandise as Affected by the Statute of Frauds. Chicago: Callahan & Co. $5.
Brooks, H. M. Olden-Time Music: A Compilation from Newspapers and Books. Boston: Ticknor & Co. $1.50.
Clare, Sister Frances M. Anti-Poverty and Progress. Belford, Clarke & Co.
Conway, R. S. Verner's Law in Italy: An Essay in the History of the Indo-European Sibilants. With a Dialect Map of Italy. London: Trübner & Co.
Corbett, J. For God and Gold. Macmillan & Co. $1.50.
Corson, Juliet. Family Living on $500 a Year: A Daily Reference Book for Young and Inexperienced Wives. Harper & Brothers.
Worthington's Annual. 1888. R. Worthington. $1.50.

"Every child in America should have them."—*New England Journal of Education.*

"The 'Young Folks' Cyclopædia' should be in every juvenile library."—*From a Report of the Connecticut Board of Education.*

YOUNG FOLKS' CYCLOPÆDIA of { *Common Things...$2.50.* / *Persons and Places. $2.50*

HENRY HOLT & CO., Publishers, New York.

"A LITTLE WONDER."

THE POCKET ATLAS OF THE WORLD. A Comprehensive and Popular Series of 54 Maps, illustrating Political and Physical Geography. Prepared by JOHN BARTHOLOMEW, F.R.G.S. Beautifully printed in 32mo, cloth extra, $1; full leather, $1.50.

"A great marvel in a small compass."—*Chicago Advance.*

"A most inviting little tome, . . . legible and intelligible."—*N. Y. Commercial Advertiser.*

"One of the most convenient little books ever published. . . . It is a little marvel of full and compact information, and its maps are excellent."—*Chicago Tribune.*

"A decidedly 'cute pocket atlas."—*Cincinnati Commercial Gazette.*

"Nothing more reliable and convenient in its way has yet appeared."—*Boston Globe.*

"Mr. Bartholomew as a geographer is a sufficient guaranty of its accuracy as well as value."—*The Churchman.*

"Its singularly tasteful and handy shape—a necessity to the traveller and all who 'live in trunks,' while exceedingly convenient to all."—*Congregationalist.*

"It is refreshing to find a thing so new, so unique, so correct, so serviceable. . . . It is all it purports to be, and is more and better than any one would suspect from the title or from any review that could be given it. It is what every student has wanted, what every office and home need. We would not be without it, personally, for several times its price."—*Boston Journal of Education.*

G. P. PUTNAM'S SONS,

27 and 29 West 23d Street, New York; 27 King William St., Strand, London.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

ATLANTIC MONTHLY

FOR JANUARY

CONTAINS:

YONE SANTO: A Child of Japan.
The beginning of a Serial Story by EDWARD H. HOUSE, who incorporates into an excellent story the results of many years' residence and observation in Japan.

THE SECRET. A Poem.
By JAMES RUSSELL LOWELL.

THE DESPOT OF BROOMSEDGE COVE.
The first two Chapters of a striking Serial Story by CHARLES EGBERT CRADDOCK.

THE GOLDEN HESPERIDES.
A delightful narrative of travel in Southern California by CHARLES DUDLEY WARNER.

AFTER "OUR HUNDRED DAYS."
By OLIVER WENDELL HOLMES.

JUDSON'S REMORSE.
A story of country life and character by LILLIE CHACE WYMAN.

THE LOST EARL.
A striking Poem by J. T. TROWBRIDGE.

UNPUBLISHED LETTERS OF FRANKLIN TO STRAHAN.
A London Printer. By S. G. W. BENJAMIN.

CONSTANTINOPLE.
A valuable and interesting description of this picturesque and important city by THEODORE CHILD.

With other excellent Essays, Poems, Reviews, and the Contributors' Club, and

☞ *An excellent Steel Portrait of "CHARLES EGBERT CRADDOCK" (Miss Murfree).*

35 cents a number; $4.00 a year, postage free.

HOUGHTON, MIFFLIN & COMPANY,

4 PARK STREET, BOSTON; 11 EAST 17TH STREET, NEW YORK.

Scribner & Welford's

NEW BOOKS.

The Last of the Valois:

And the Accession of Henry of Navarre, 1559–1589.

By Catherine Charlotte, Lady Jackson.

In two volumes. Large crown 8vo. With portraits on steel. Cloth, $9.00.

The portraits to the above work comprise Henry III., Henry IV., Henry de Lorraine, Charles IX., Anne, Duc de Montmorency, Sully, Le Chancelier de l'Hôpital, Gabrielle d'Estrées, and Catherine de Médicis. Lady Jackson's previous works on French history are 'Old Paris,' 'Court of France in the Sixteenth Century,' 'The Old Régime,' 'French Court and Society,' and 'The Court of the Tuileries.'

The Court and Reign of Francis the First, King of France.

By Julia Pardoe, author of 'Louis the Fourteenth and Court of France in the Seventeenth Century.' With numerous portraits and illustrations on steel. A new edition. Three volumes, demy 8vo, cloth, $15.00.

The illustrations to the above work comprise: Francis the First (two portraits by Titian)—Queen Eleanor—The Emperor Charles the Fifth (two portraits by Titian)—Duke of Bourbon and Constable of France (by Titian)—The Chevalier Bayard—Henry the Eighth (by Holbein)—Henry the Eighth Embarking for France—Ignatius Loyola (by Wierix)—Marguerite de Valois, Catherine de Médicis (two Portraits)—The Duchesse d'Etampes—Diana of Poictiers—The Duke of Alva (by Schubert)—Annas de Montmorency, Constable of France—and Julia Pardoe. The cover of the book is from a design by Diana of Poictiers.

Pen and Pencil in Asia Minor.

Or, NOTES FROM THE LEVANT. By William Cochran, Member of the Society of Arts, and formerly of the Asiatic Society, London and Shanghai. Illustrated with Eighty-nine Engravings, made chiefly from Water-Color Sketches by the Author. Demy 8vo, cloth extra, $6.75.

Records of Shelley, Byron, and the Author.

By Edward John Trelawny. New Edition, with two Portraits. 12mo, vellum cloth, $1.75.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse." —R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE,

With Dictionaries and other Books of Reference,

Comprising in all Translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek.

687 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth, Translator of Dr. Gneist's 'History of the English Constitution.'

HEINE'S TRAVEL-PICTURES: including the Tour in the Harz, Norderney, and Book of Ideas, together with the Romantic School. Translated by Francis Storr. With Appendices and Map.

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M. A.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Brown, B. A., F. G. S., of the Geological Survey of England and Wales. With numerous Diagrams and Illustrations.

WERNER'S TEMPLARS IN CYPRUS. Translated by E. A. M. Lewis.

"Werner was a Freemason, and his religious notions were, at the date of his writing this poem, of a theosophic order."—*Preface.*

PAUSANIAS'S DESCRIPTION OF GREECE. Translated into English, with Notes and Index, by A. R. Shilleto, M. A. 2 vols.

HOFFMANN'S TALES. The Serapion Brethren. First Portion, containing Thirteen Tales. Translated from the German by Major A. Ewing.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel.

GOLDSMITH'S WORKS. A New Edition, containing pieces hitherto uncollected and a Life of the Author, with Notes from Various Sources. By J. W. M. Gibbs. 5 vols.

FOSTER'S ESSAY ON THE IMPROVEMENT OF TIME. Together with notes of Sermons and other Pieces.

CHRISTIAN ICONOGRAPHY; or, The History of Christian Art in the Middle Ages. By the late A. N. Didron. Translated from the French by E. J. Millington, and completed, with Additions and Appendices, by M. Stokes. 2 vols., with numerous Illustrations.

TALFOURD'S LETTERS OF CHARLES LAMB. With Explanatory Notes. New Edition, Revised and Greatly Enlarged by W. Carew Hazlitt. 2 vols.

HAZLITT'S SPIRIT OF THE AGE; or, Contemporary Portraits. New Edition. By W. C. Hazlitt.

A SELECTION.

ANTONINUS.—THE THOUGHTS OF M. AURELIUS.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY.

CERVANTES' DON QUIXOTE. 2 vols. Translated.
COLERIDGE'S WORKS. 6 vols.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon.) 2 vols.
HUGO'S (VICTOR) POEMS. Translated.
MOLIERE'S DRAMATIC WORKS. 3 vols.
PEPYS'S DIARY. 4 vols.
RICHTER'S LEVANA.
RICHTER'S FLOWER, FRUIT, AND THORN PIECES.
SPINOZA'S CHIEF WORKS. Translated. 2 vols.
STAUNTON'S CHESS HANDBOOK.

****New Holiday Catalogue, also a Complete List of Books for the Young, with Synopsis of their Contents, will be supplied on application.*

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Scribner's Magazine.

25 CENTS A NUMBER.

January Number, Now Ready,

CONTAINS:

The first of Mr. ROBERT LOUIS STEVENSON'S monthly contributions entitled 'A Chapter on Dreams.'

The Man at Arms—I.
By E. H. and E. W. Blashfield. Sixteen (4 full-page) illustrations by E. H. Blashfield.

The Great Pyramid.
By Edward L. Wilson. With 21 illustrations, some of which were taken by the magnesium light in the interior of the Pyramid, and now first printed.

White Edith.
Poem by Thomas Bailey Aldrich.

Japanese Art, Artists, and Artisans.
By William Elliot Griffis. With 14 illustrations by a Japanese artist.

Natural Selection.
By H. C. Bunner. A novelette in 3 parts. Part I. With 9 illustrations.

The End of the Beginning.
Story by George A. Hibbard. Illustrated by the author and Francis Day.

American Antiquities.
Poem by Andrew Lang. With a full-page illustration by H. Siddons Mowbray.

First Harvests.
A new serial. Chapters I-III. By F. J. Stimson.

Municipal Finance.
By Clayton C. Hall.

A New Light on Balzac.
By Edward S. Holden.

Poems.
By Charles Edwin Markham, C. P. Cranch, Rennell Rodd, Graham R. Tomson, and E. Cavazza.

French Traits—Intelligence.
By W. C. Brownell.

SPECIAL NOTICE.

To enable new readers to possess the Magazine from the first number (January, 1887), the following inducements are offered:

A year's subscription for 1888 and the 12 numbers for 1887, $4.50.

A year's subscription for 1888 and the numbers for 1887, bound in two volumes, cloth, gilt top, $6.

CHARLES SCRIBNER'S SONS,
743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 29, 1887.

The Week.

MR. EDWARD ATKINSON'S report of the result of his silver mission to Europe is interesting, as his discussions of economic topics usually are, but we must say he fails to show why he was ever sent. He sums up his conclusions in four divisions. The first is, that there is no prospect of any change in the monetary system of Europe. The second is, that there is no prospect of any change in the financial policy of the European States. The third is, that there are no indications that the subject of bimetallism has received any "intelligent or serious consideration in Europe outside of a small circle in each country." The fourth is, that there is "no considerable politically organized body" of bimetallists in any European country, with whom a similar body in this country could coöperate. Now, these facts of the situation have been laid before the public by this as well as by other journals, with such frequency, and with so much elucidation and comment, during the past seven years, that we have been of late afraid to print an article on bimetallism at all, lest we should be presuming too far on the patience of our readers. Moreover, Mr. Manton Marble of this city was sent over on a similar errand to Europe soon after President Cleveland came into office, and brought back substantially the same report. Who is it, then, who insists on having the bimetallic pulse of Europe felt once a year by an American commissioner? Is it possible that the personification of the silver in the Treasury, which the bimetallic orators used to indulge in so freely, has become a reality, and that groans from the injured metal are heard from the Treasury vaults, asking when the day of deliverance is to come? We ourselves know of no fact, however trifling, which would warrant even the most excitable silver man in supposing that the great commercial nations of Europe have the smallest intention of going back to the money of Abraham, Isaac, and Jacob, as Mr. William D. Kelley used to call it. We used to be met when we said this by being told to "look at Gibbs, the Governor of the Bank of England," who was "out for bimetallism." Well, we have looked at Gibbs for many years, and have got quite used to him, and he has ceased to make any more impression on us than Mr. Murat Halstead, once the greatest silver man on earth, who at one time wrote sixteen "silver articles" a day.

Senator Dawes of Massachusetts has introduced a bill to protect the manufacture and sale of pure lard. This is defined to mean the product "usually known as lard, and which is made exclusively of the fresh fat of slaughtered swine." Then follows a voluminous set of regulations to prevent adulterations and to impose penalties upon those who evade the law. The substance which is made use of in the alleged adulteration of lard is the oil extracted from cotton-seed, a pure, nutritious vegetable fat, certainly less liable to do harm to those who use it than the substance known as lard, consisting of the fresh fat of slaughtered swine. It may therefore be suggested that the representatives of the cotton States have a distinct interest in the measure, in order that the superiority of the vegetable fat made from oil of cotton-seed should be fully established, and that it should be recognized by its own name as a useful and valuable article of food. It is well known that cotton-seed oil flavored with the olive is sold under the name of olive oil. It is well known that refined cotton-seed oil is sold and used under its own name for frying, as being superior, cleaner, and better than lard. May it not therefore be expedient that the penalties imposed in the bill of Senator Dawes should work both ways, viz., an equal penalty on those who adulterate the vegetable fats made from cotton-seed with the fats derived from slaughtered swine?

The Providence *Journal* points out a new reason for repealing the duties on wool. Under the present system the duties on woollen goods are put so high, to compensate the manufacturer for the 67 per cent. tax on his raw material, that an irresistible temptation is offered to smuggling by means of undervaluation, false measurement, and false classification. A recent case is cited by the *Journal* where "a New England manufacturer, finding his goods unsalable on his hands, was surprised to find on investigation that the cause lay in the exceedingly low price at which certain foreign goods of his own class were being offered in the American market—so low, in fact, that it was absolutely impossible that they could have paid the full duty. Further investigation disclosed the fact that, while these foreign goods were to all appearances all-wool and were sold as such, yet analysis showed a slight admixture of cotton, put in by the foreign manufacturers to evade the duty. The goods were then sent through the Custom-house classified as cotton mixtures, and paid the low rate provided for such class instead of the high duty imposed on all-wools." This is only one case in many. The variations in the methods of swindling the Government, and the amount of talent employed in the endeavor, will always be in proportion to the rewards offered. These are so great that the *Journal* does not look for any permanent cure from the Undervaluation Bill now pending in the Senate; for, however efficient it may be in the beginning, it will be speedily circumvented by the ingenuity of the smuggler. The only sure way to put an end to undervaluations, false invoices, etc., is to reduce duties to a point where the cost of smuggling and the risk of detection shall leave no profit to the fraudulent importer or consignee. "However it may be with other lines of trade," says the *Journal*, "the woollen manufacturer, should he now be given free wool, could endure a reduction in the tariff on his product to a point where there would no longer be any inducement for the foreign manufacturer to evade it."

The question is often asked why the American wool-grower should object to the importation of Donskoi or carpet wools free of duty, seeing that not a pound of such wool is grown in this country. The answer is that the American wool-grower fears the bad example. He fears that if Donskoi wool were admitted free this year, some other kind would be admitted free next year, and so on. This is such a terrible vista that if the golden fleece of the Argonauts was offered to us at the rate of thirty cents per pound, they would insist on taxing it thirty cents more if it were in the scoured condition. But if it were two-thirds dirt, grease, and burrs, they would let it in at a lower rate. It is a remarkable fact that the wool-growers have made more trouble at the Treasury Department and the Custom-house, and have shown more spite and rancor about Donskoi wool, which does not compete with any American product, but which sustains one of our greatest industries, than almost anything else in the tariff list. It is to be hoped that the full details of this fight may be given to the public in the next campaign.

Mr. Nelson, one of the two Republican Congressmen from Minnesota, has perfected his bill for a revision of the tariff, and Eastern Republicans of the school which believes the tariff too sacred to be touched will be interested in its features. He proposes to put on the free list coal, salt, lumber, hemp, jute, manila, and sisal grass, and manufactures of these articles; molasses and sugar—which would cut off duties aggregating something over $62,000,000. Mr. Nelson is of the opinion that "our farmers need cheap twine, and all our people cheap sugar, rather than cheap tobacco and fortifications."

The Nebraska delegation in the House proves to be as solid for tariff revision as that from Minnesota. It consists of three members, one of whom is a Democrat, and, like the Democrats in the Minnesota delegation, heartily supports the President. Congressman Laird, one of the two Republicans, thus states his position to a reporter of the Chicago *Tribune:* "I think Mr. Cleveland's message appropriate, and admire the Chicago *Tribune* for its courageous course in dealing with the views enunciated by Mr. Cleveland, for the position is in accord with my own, as I favor putting coal, salt, lumber, and certain grades of woollen fabrics on the free list." Mr. Dorsey, the other Republican member of the delegation, agrees with his colleague in his view of the tariff issue, so that the Omaha *Bee* is shown to represent correctly the sentiment of Nebraska Republicans in its support of Cleveland and its re-

pudiation of the "Blaine and a surplus" policy.

Ex-Senator Harrison of Indiana has shown his unfitness to be considered as a candidate for President by the speech which he delivered at the conference of Indiana Republicans on Tuesday week. It was devoted to the waving of the bloody shirt, the advocacy of extravagant appropriations, and the defence of opposition to any revision of the tariff by the Democrats. Mr. Harrison has "a strong preference that this work of the reduction of our revenue, internal and external, shall be conducted by Republicans," and says that there will be "a chance next year to wrest from the Democracy the control of the House of Representatives, where all revenue measures must originate." This means that no reduction of the surplus must be made by the Fiftieth Congress, but that the work must be postponed until the Republicans elect a majority of the Fifty-first Congress, in November, 1888, and that Congress meets in December, 1889. The talk about Mr. Harrison as a strong Republican candidate for President cannot survive such a deliverance as this.

In the *Tribune* of Monday is a quotation from the *Contemporary Review* showing a state of widespread distress among the working classes in England, to which is appended the warning editorial comment: "This is the English labor market with which President Cleveland asks American manufacturers and workingmen to compete." Turning to the next page of the same paper, we find a communication showing a state of distress among American laborers *in this city* as nearly like that described by the *Contemporary Review in Great Britain* as one pea is like another. We copy the two side by side:

There is no gainsaying the existence, rich and potent as the empire we claim citizenship in is, of widespread privation among the working classes of Great Britain. This "distress" has also now become an aggravated constant quantity in our midst. To-day men, women, and children by hundreds of thousands, miserably half clad, have to face the chill English winter now upon us, hibernating as best they can in dark, frowsy abodes, from which they but emerge to plead for bread. —*Bennet Burleigh, in the Contemporary Review.*

There are, in my judgment, fully 5,000 able-bodied and worthy persons who get up and lie down hungry and sad in this great city filled with abundance, and other thousands who will be thrown out of employment immediately after New Year, to be added to the army of the needy. Among them, probably one-quarter are foreigners of a worthy class. They are the "strangers within our gates," and should not be allowed to starve amid the general abundance.—*John N. Keyser, in New York Tribune.*

Mr. Blaine's "Paris message" has fallen so flat that it is high time for him to explain that he was misreported, and in reality never uttered such a farrago of nonsense. The Paris correspondent of the *Tribune* represented Mr. Blaine as consenting to the interview on condition that the correspondent "would agree to send him an *intelligent* shorthand reporter." It is perfectly clear that Mr. Blaine was made the victim of misplaced confidence, and that the shorthand reporter whom the correspondent engaged was a fool. This idiotic reporter represented Mr. Blaine as saying that he would maintain the tax on whiskey permanently, "and when the national Government should have no use for the money, I would divide the tax among the members of the Federal Union, with the specific object of lightening the tax on real estate." Every person who has ever read the Constitution knows that, as Henry Clay said of such a proposition in his day, "there is not the slightest authority for it in the Constitution," and it is, of course, quite impossible that a great statesman like Mr. Blaine should ever have said such a thing. Mr. Blaine was represented as making a great number of statements regarding the working of sundry tariffs which are utterly at variance with facts known to every student of our history, and which it is inconceivable that a man who is himself an historian should have made. Finally, Mr. Blaine was represented as favoring the maintenance of the existing high tariff and opposing the President's advocacy of a thoroughgoing revision; and as leading Republican newspapers and politicians confess that the party would be beaten in advance upon such a platform, it is obvious that a man who prides himself upon his understanding of public sentiment could not have advocated this policy. The *Tribune* ceased some days ago to defend so indefensible a deliverance, and an explanation that Mr. Blaine was grossly misquoted by the reporter may soon be expected.

The most significant thing in the current talk about the Republican nomination is the unanimity of sentiment among the Democrats. There is a hearty agreement among them that the Republicans are bound to re nominate Mr. Blaine, and every attempt is made to spread the impression that he is the inevitable candidate. They see what a tremendous advantage they would enjoy if the Republicans would nominate the man whose candidacy leading Republican newspapers all over the country have already declared would involve the defeat of the party, and they long for a campaign which they could begin by reprinting the warnings of such journals as the Chicago *Tribune*, the St. Paul *Pioneer Press*, the Omaha *Bee*, the St. Louis *Globe-Democrat*, the Milwaukee *Sentinel*, the Philadelphia *American*, the Providence *Journal*, and a host of minor papers, that the Republicans could not expect to win. The understanding has been, according to his especial cronies, that Mr. Blaine would not run again unless there was a unanimous Republican demand that he should do so. This is impossible, but perhaps he will conclude that a unanimous Democratic demand for his candidacy is equally good.

The pretence that Mr. Lamar ought to be rejected for the Supreme Court because he was a "rebel" is a very impudent one, considering that Republican Presidents for a decade before Mr. Cleveland's accession had been appointing to United States district judgeships men who fought to destroy the Government. Grant began the practice, Hayes continued it, and Arthur followed the example of his predecessors. Judges Hammond and Key of Tennessee, Judge Paul of Virginia, Judge Speer of Georgia, Judge Settle of Florida, and Judge Boarman of Louisiana, all served in the Confederate Army, and were placed upon the Federal bench by Republican Presidents to interpret the Constitution which they had sought to destroy. And yet there are Republican politicians so stupid as to suppose that they can make party capital by complaining because a Democratic President has nominated an associate of these men in the rebellion. The Republican majority in the Senate is but two. Nobody doubts that all the Democrats will vote to confirm the nomination. Mr. Riddleberger, Republican Senator from Virginia, was a "rebel" who does not allow people to call him a "traitor," and he will not vote to reject a fellow-rebel. This ties the Senate, and a single other Republican vote for confirmation gives Mr. Lamar two majority. It is well known that more than one Northern Republican Senator proposes to vote that way. The sole effect of the warfare on Mr. Lamar is to intensify the solidity of the South which "Bill" Chandler's Election Bill has produced, and to weaken still further the hold of the Republican party upon patriotic voters at the North.

The total immigration for this year will not be so large as was predicted early last summer. It was thought at that time that it might reach 800,000, and there were predictions of a "round million." The total for eleven months, ending with November 30, is given by the National Bureau of Statistics as 486,660, against 365,453 for the same period of 1886. This indicates a grand total for the year of a little more than half a million. There has been during the year a large increase in those coming from Great Britain, the total for eleven months being over 171,000, against about 120,000 for the same period last year. England and Wales have sent 79,000 of this number, Ireland 71,000, and Scotland over 20,000. The total for Great Britain is larger than that of any other country. Germany comes next with over 106,000, Norway, Sweden, and Denmark next with over 76,000, and Italy next with over 42,000. From all these countries there has been a marked increase over last year. The arrivals from Russia are almost precisely the same this year as last, being a few more than 24,000 each year.

The State Board of Health has made formal report to Gov. Hill that "it would be difficult to imagine a worse state of affairs than now exists at the Quarantine Station" in New York harbor, and that "it is hard to realize in this age of civilization that the harbor of the city of New York should be so inadequately provided with facilities for the prevention and extinction of an epidemic." This strong condemnation is made the opinion of the Board after an examination of the facts laid before it by experts, who have thoroughly investigated the manner in which the Quarantine officials treated the

cholera cases that came under their charge in October last. The report which the experts made is full of facts which furnish ample ground for this condemnation. Nobody can read it without being convinced that we are in peril of having a contagion spread not only through this city, but throughout the country, whenever a vessel with an epidemic among its passengers enters our harbor. There ought to be no surprise at this fresh evidence that the Quarantine officials are grossly negligent. That fact has been notorious for years. They see no reason why they should mend their conduct. They are held in office not because they are faithful public servants, but because, with the honorable exception of Mr. Judd, they are members of a ring of which Tom Platt is the boss, and because Platt, being also boss of the Republican party of the State, is able to prevent the confirmation by the State Senate of all nominations for their successors.

That so serious an undertaking as the strike on the Reading Railroad should have collapsed so suddenly, without any concessions on the part of the company, is a remarkable illustration of the childishness of the men who get up this sort of thing. It is now quite evident that they decided to throw many thousands of men out of employment in midwinter, without counting the cost, or making sure of the amount of support they were likely to receive. The strike as initiated was really, like most of such strikes, an attempt on the part of the train hands to take possession of the railroad. They refused to deliver freight to a particular firm because it employed non-union men, and on another occasion refused to deliver coal because it was "scab coal," that is, coal mined, or "handled," by non-union men. Of course men who can decide for whom the railroad shall carry goods, and for whom it shall not, are the real owners of the property. That so silly an attempt should have ever been made is a lamentable proof of the ignorance and puerility in which "Labor" lives; but the way in which the press has treated it, shows that wisdom gains ground. The newspapers have universally condemned and ridiculed it. Two years ago they would have filled columns with abuse of the corporation and laudation of the strikers.

The struggles of the Anti-Poverty clergymen to abolish their own poverty by means of other people's money continue to be interesting. It is announced that the Rev. Dr. McGlynn has been presented with $1,200 by his "old parishioners," and he appears to have the upper hand of his poverty for some months to come. The admirers of the Reverend Pentecost in Newark have hired a hall for him there, and he will begin talking against poverty and taking up collections in January. The Reverend Grumbine of Syracuse is still pursued by certain members of his congregation, and there are threats of his church closing upon him. He says if that is done he will break down the doors, which shows that he is a muscular abolitionist. However little headway the Anti-Poverty Society may be making against the great mass of poverty in the world, their success in keeping from want clergymen whose congregations have become tired of supporting them, must be very encouraging.

The defenders of the Court of Appeals in Sharp's case are evidently either very uneasy in their minds or very weak in their judgment, for they will not let the matter drop. They began by ascribing the unanimity of the court to a natural and human desire—judges, after all, being but men—to fortify Chief-Judge Ruger against the newspaper attacks on him for granting the stay. In fact, they used the unanimity as an argument against recent newspaper criticism of judicial decisions. "You see," they said to the journalists, "how much good you have done your cause by attacking Judge Ruger. You forget that judges are men moved by like passions with yourselves, and that they were sure to be irritated by unjust assaults on one of their colleagues. They have accordingly made the decision giving Sharp a new trial unanimous, just to show you the futility of these attempts of newspapers to take criminal cases out of the hands of the courts, and to vindicate Chief-Judge Ruger in feeling 'reasonable doubts' about the legality of Sharp's conviction." The concocters of this defence overlooked the fact that they were simply answering one charge of corruption by admitting another. To frame a judgment in order to spite the newspapers is, of course, just as base as to frame one to oblige Sharp, though it may not excite so much popular reprobation. In the exercise of judicial functions all motives but the highest one are bad as bad can be. Moralists have never taken the trouble to divide judicial turpitude into degrees. They do not care whether a judge renders a decision for love or for money, through *esprit de corps* or "pure cussedness." As long as it is not prompted by a simple desire to do justice without fear or favor, they set the judge down as among the worst enemies of society, the one who does most to shake that confidence of man in his fellows which keeps civilized communities together.

It so happens that this case was tried by a judge who is generally admitted to stand as high as most of his brethren in the matter of learning, and his rulings were confirmed by the General Term of the Supreme Court of this district, composed of four judges who, as far as the public can see, are as able lawyers and upright men as any judge of the Court of Appeals, and whose failure to sit in the Court of Appeals instead of the Supreme Court is, under our system of selecting judges, pure accident. There is no reason known to laymen why the decisions of the Court of Appeals should be more respected than those of the Supreme Court, except that, under the Constitution of the State, they are final decisions. There is nothing about a judge of the Court of Appeals which makes him more sacred or a worthier object of reverence than a judge of the Supreme Court. There might be if the judges of the Court of Appeals were selected, as they are in England, from the acknowledged leaders of the bar; but as a matter of fact they are selected in precisely the same way and by the same bodies as the judges of the Supreme Court. So what is a poor layman to think or do when he finds the Court of Appeals declaring, according to a United States Judge writing to the *Sun*, a conviction unanimously pronounced valid by such judges as Barrett, Van Brunt, Daniels, Brady, and Bartlett, to be "bristling with errors, and significantly conspicuous for the disregard of elementary principles of law and evidence"? Surely the judiciary in this State may well cry: "Save us from our friends!"

The Commercial Union agitation in Canada seems to be making some progress, if we may judge from the very small majority by which the first candidate who has ever run for Parliament on a Commercial Union platform has been defeated at an election in East Northumberland County. Dr. Mallory, the candidate in question, only lost the election by thirteen votes in a total of 5,000. This is the more significant because, as Mr. Chamberlain keeps pointing out to the Canadians, political union must follow Commercial Union pretty closely. If Canada agrees to have the same tariff as the United States, the making of it must of necessity be left to the American Congress, or, in other words, the power to tax the Canadians must be ceded to the United States, and the power to tax soon carries all other powers with it. It is just as well for everybody who is interested in this movement, on either side of the line, to bear this in mind. The United States cannot allow a small province like Canada to say what their import duties shall be; so that Canada would have to allow the United States in fact, if not in form, to say what her import duties should be. In this way she would very soon get used to the idea of sending Senators and Representatives to Washington. That this will come some day, no intelligent man doubts, but it ought not to come unawares, or to take anybody by surprise.

Some natural embarrassment has been caused in Germany by the accidental publication of a private circular showing the amounts of money paid by the Protectionist Union to one of the leading newspapers of Berlin. This paper is rated very highly on the Continent as an exponent of public opinion, and is much quoted by the Berlin correspondents of the London press. It is not stated what this money was paid for. It may have been paid for Reading Notices. We have seen a good deal of high-tariff matter in American newspapers which looked as though it might be paid for by the line at a pretty stiff rate. These papers generally have a very keen scent for British gold, and keep a vigilant watch on the Cobden Club. The Berlin misadventure should be a warning to them.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 21, to TUESDAY, December 27, 1887, inclusive.]

DOMESTIC.

THE Post-office Department has modified the recent ruling, by which no writing or printing can be placed upon the outside of second, third, and fourth-class mail matter without subjecting it to letter rates of postage, in so far as to allow the word "merchandise" to be printed or written on the wrapper of fourth-class matter.

Reports to the Navy Department from the New York and Norfolk Navy-yards, where preparations are making to build the great 6,000-ton armored war ships, are highly satisfactory. At New York the keel blocks for the armored cruiser have been placed, and the ship is being laid down. The new buildings are nearly completed, and will be ready to receive the machine tools when they are procured.

A detachment of troops attacked the Yaqui Indians in New Mexico on Sunday, killing one Indian and wounding one, and capturing two women. Another body of troops killed one and wounded several Yaquis. The pretence for the attacks was that the Yaquis were about to begin raids.

A protest against the appointment of Samuel J. Randall to a place on the Appropriations Committee is to be drawn up by prominent Chicago Democrats during the holiday recess of Congress and sent to Speaker Carlisle. It was started at a meeting of the Tariff-Reform League by J. F. Claflin, who announced himself a Mugwump.

Statements are published in a Western paper from seventy-eight members of the House, representing twenty-six States, including fifty-eight Republicans and eighteen Democrats, which indicate a strong probability of the passage of an enabling act admitting the Territory of Dakota as one State after the next Presidential campaign, if such action be acquiesced in by the people of the Territory.

Wharton Barker of Philadelphia, who has a residence in Montgomery County, Pa., has addressed an open letter to the Republicans of the county, announcing himself a candidate for delegate to the National Republican Convention. In his letter Mr. Barker says: "Many Republicans say that Mr. Blaine must again be the candidate, and it is quite plain that the men who forced his nomination in 1884 are again active and again wish to take the chances of his election. I think this is too great a peril to be needlessly incurred. Mr. Blaine was beaten in 1884; I fear he would be beaten again. I ask you to consider whether you desire to run this risk. Every Republican is able to judge for himself whether Mr. Blaine was at the height of his strength three years ago." Mr. Barker states that he would support Sherman, Harrison, or Hawley.

Some 5,000 employees of the Reading Railroad were out on strike, crippling the freight service of the road Saturday, Sunday, and Monday, and causing a good deal of anxiety. The trouble arose because several car-loads of flour had been consigned to the Philadelphia Grain Elevator Company, and some of the men in the Port Richmond yard refused to move them. The General Manager ordered that the cars be moved, and if the men refused, to discharge them immediately. The men refused, were discharged, and 1,200 struck. The flour was moved, but a general strike was begun, supported by the whole strength of the Knights of Labor. The strike ended on Tuesday morning, both sides consenting to arbitrate their differences.

A very severe snow and wind storm raged west of the Mississippi last week, and several deaths are reported from Kansas and Nebraska. In some cases persons are said to have frozen to death from lack of coal, because the railroad companies had failed to supply the settlers in the western part of Kansas. There had been much trouble from lack of coal before the storm, but after it the railroad companies began hauling coal cars on their passenger trains, and the distress is said to have been relieved.

Thomas N. Newbold, President of the New York State Board of Health, has made a report to Gov. Hill on the condition of the quarantine station in New York Bay, as disclosed during the recent alarm about cholera. It criticises the condition of the station severely, says the disease was spread among the immigrants after their landing by compelling them to use their hands in dishing out and eating their food, and concludes as follows: "In conclusion, sir, from all the evidence I have been able to collect, it is the unanimous opinion of those posted on such matters that it would be difficult to imagine a worse state of affairs than now exists at the quarantine station. It is hard to realize in this age of civilization that the harbor of the city of New York should be so inadequately provided with facilities for the prevention and extinction of an epidemic. The State Board of Health does not consider it within its province to pronounce upon the actions of the quarantine authorities. I have merely endeavored to give a few facts concerning the condition of affairs as they were found by the different persons who visited the station, and allow you to form your own judgment upon it. That the health of the State and the country was put in great jeopardy by the culpable unreadiness of the station, admits of no question."

The landing of the Pilgrims was celebrated by the usual annual dinners on December 21 in Boston, 22d in Brooklyn, and on the 23d by the New England Society of this city. Chauncey M. Depew and Mark Twain were the principal Boston speakers. Gen. Sherman, Gen. Horace Porter, President Dwight of Yale College, Senator Hawley of Connecticut, the Rev. Dr. T. L. Chamberlain, and Mayor-elect Chapin spoke at Brooklyn, and the Rev. Joseph H. Twitchell of Hartford, W. Bourke Cockran, Mayor Hewitt, E. O. Wolcott of Colorado, Gen. J. M. Schofield, Gen. Horace Porter, and Chauncey M. Depew in this city.

The subscription to the "national purse" to be presented to Edward Burgess, designer of the *Puritan*, *Mayflower*, and *Volunteer*, has reached $10,172.25, and a check for the sum was sent to Boston December 23.

Weber's opera "Euryanthe" was given its first complete performance in America at the Metropolitan Opera-house December 23.

The West-Snowdon syndicate will take control of the Chicago *Times* January 4, continuing it as an independent paper, but reducing the price from five cents to three.

An accidental discharge of 14,000 gallons of naphtha into one of Rochester's main sewers December 22 produced a most uncommon disaster. The heavy stone covering of a manhole of the Platt Street sewer was first blown off by a terrific explosion, and then almost immediately another explosion occurred beneath the Clinton Flouring Mill on Mill Street. The upheavals were followed by sheets of flame that burst out to a height of sixty feet. The Clinton Mill took fire first, and the flames spread quickly to the Washington Mill and the Jefferson Mill. These three mills and contents were destroyed, involving a loss of over $200,000. The first explosion was followed quickly by others along Mill and Platt Streets, and at several points on West Avenue, making over forty in all, and extending along for miles of sewers. The cause of the peculiar disaster was an attempt to pump the naphtha from the Vacuum Oil Company's tanks through a two-mile conduit to the Municipal Gas Company's works near the centre of the city. Four persons were killed, three more are missing, and about twenty are badly injured.

The missing Nova-Scotian timber raft has been reported 136 miles southeast of Nantucket Shoals, broken into small fragments. The logs when seen were not in the track of ocean steamers.

The funeral of John Howson, a comedian of some note, who died suddenly in Troy, was attended in this city December 21, and the body has been cremated. Howson is best remembered for "making up" the principal part in Gilbert and Sullivan's "Sorcerer" in close imitation of Dr. Talmage, the Brooklyn clergyman, and playing the part in that guise during a long run in this city in 1882.

Maj. James Haggerty, an ex-member of the Assembly, died in this city December 21, aged fifty-three years. He served during the war, was appointed Consul to Glasgow, where he was born, by President Grant, but, his exequatur being refused by the British Government on account of his connection with the Fenian movement, he was made Deputy Naval Officer of the port of New York. He became a Democrat in 1872.

Mr. Wilmot L. Warren, who had been for nearly twenty years on the staff of the Springfield (Mass.) *Republican*, during most of which time he was a leading editorial writer, died December 23 in his forty-first year. Mr. Warren was a graduate of Tufts College in the class of 1868, and had been for some years a trustee of that institution.

Dr. A. B. Palmer, LL.D., Dean of the Department of Medicine and Surgery and Professor of Pathology and the Practice of Medicine in the University of Michigan, died December 23, aged seventy-two.

Daniel Manning, ex-Secretary of the Treasury, died at his son's house in Albany, December 24, aged fifty-six. Mr. Manning began his career as an office-boy in the office of the Albany *Atlas*, which afterwards became the *Argus*, and worked his way up through various stages, including an experience of some years as legislative reporter, to the proprietorship of the paper. As a politician, he was one of Mr. Tilden's trusted lieutenants, and made a national reputation by securing the nomination of President Cleveland in the National Convention. He became President Cleveland's Secretary of the Treasury, and retained the position till February 14, 1887. His serious illness began with a stroke of apoplexy March 23, 1886. The failure of his health is attributed to the unsanitary condition of the Treasury Building, particularly of his private office.

FOREIGN.

The war talk at Vienna continues with such vigor that it has largely broken up the holiday trade. All the commanders of the military districts along the entire western frontier of Russia have been summoned to Gatchina to hold a council with the Czar. All the officers and men of the various Prussian corps stretched along the German border have had their Christmas furloughs cut short. Members of the Austrian reserve who are in other countries have orders to hold themselves ready to return and join their colors by January 1.

A despatch from Constantinople to the London *Daily News* of December 25 says: "The Government is alarmed at its neighbors' war preparations, and the Sultan is inquiring as to the advisability of calling out 50,000 men for Erzerum and Bulgaria. It is stated that M. Nelidoff, the Russian Ambassador to Turkey, has informed the Porte that unless the indemnity arrears, amounting to £750,000, be paid, Russia will be obliged to take pledges in Asia Minor for the protection of her interests. The Government is hampered for money. A body of marines,

whose time had expired recently, tried to force their way into the imperial palace to demand of the Sultan their arrears of pay. They were all arrested and imprisoned, and afterwards they were paid a small sum and sent away from the capital to prevent their complaints reaching the ears of the Sultan."

The Rumanian Government announces that it is preparing a bill to establish a Danube steamship company. The vessels are to be purchased by the revenues derived from the Danubian harbor dues levied on the ships of all nations. As this revenue, under the agreement of the Powers, ought to be applied to the maintenance of navigation between the Iron Gates and Sulina, the bill will violate foreign rights. Austria will lead, it is said, in taking diplomatic action in the form of a protest against the project.

Owing to riotous outbreaks among the students of the universities at Kieff and Kasan those institutions have been closed. "The reports are vague and extremely contradictory," writes a London correspondent, "but there is no doubt about the rector of the University at St. Petersburg having been struck, or of the calling out of the Cossacks and other troops, and the subsequent long procession of sledges through the streets bearing scores of prisoners to jail. Russian papers have been forbidden to say a word about the thing, and it will be some time before the truth filters out. In the meantime a trial with closed doors is proceeding at St. Petersburg of eight Nihilists, five men and three women, charged with an attempt on the Czar's life during his recent journey to the Don Cossack country with the Tsesarevitch. The leader is a Jew named Boris Orshis, but the chief interest attaches to the young Vitali Tchernoff, who is an officer in the Cossacks and a son of one of the great Cossack nobles. Boxes of dynamite were found concealed in hay on his father's estate. He was arrested, and in a panic he gave evidence implicating three of his cousins, and leading to the discovery of a Nihilist printing-office where three young women were working. Vitali bitterly repented his treachery after it was too late, and he now takes his place with the others. It is expected that all the men will be hanged. Vitali's cousins were all in Government employ or in the army, and there are reports that their trial will lead to extraordinary developments of a conspiracy in both branches of the service. This may account for a good deal of the Czar's strange policy." The university riot at St. Petersburg was caused by students inviting citizens to make common cause with them. The disorder has spread to the Military Academy, the Medical College, and the School of Forestry, all of which are now closed.

Lord Randolph Churchill has reached St. Petersburg. Assurances are repeatedly given that his mission has no political significance, but he is making strenuous efforts to see the Czar. At Berlin he saw Count Herbert Bismarck, but not the Chancellor

Mr. Balfour, Chief Secretary for Ireland, has been subpœnaed to attend the Portumna Assizes in January, when the Court will hear the appeal of Mr. Wilfrid Blunt, who was sentenced to two months' imprisonment for taking part in a proclaimed home-rule meeting.

Mr. Sheehy, an Irish member of Parliament, sentenced to one month's imprisonment for inciting resistance to evictions, has been thrown to the floor by the warders of Clonmel Jail, who tied his hands and removed his clothes. Father Matthew Ryan of the town of Hospital, County Limerick, one of the projectors of the plan of campaign, has been sentenced to a month's imprisonment, without hard labor, for inciting the people to commit illegal acts. Father Ryan declines to divest himself of his clerical attire in prison, and the Catholic warders sustain him in his refusal. The Marquis of Clanricarde has issued 100 fresh writs of ejectment against tenants on his Woodford estate.

Thousands of people assembled at Mitchelstown, Ireland, on December 24, to greet Mr. Mandeville on his release from prison. Mr. Spaight, a magistrate, and his wife were fired at while driving at Killaloe, County Limerick. The horse was killed. Michael Davitt, speaking at Steepbridge Sunday, repeated his advice to farmers not to purchase land at the present time. By waiting, he said, they would be able to secure land on the basis of a nominal rent, 70 to 80 per cent. under the present figures.

A despatch from Rome December 26 says: "It is stated on good authority that the Pope has instructed Archbishop Walsh and the other visiting Irish prelates to adopt a conciliatory attitude towards the Government in Ireland."

Charles Stuart Parnell's health is much improved. He will probably address his constituents in Cork in January.

The London *Standard* said last week: "Mr. Goschen, the Chancellor of the Exchequer, has sounded the leading bankers and financiers with reference to the conversion of the national debt. He contemplates a big operation for the conversion of the 3 per cents into 2½ per cents at one jump."

It is stated that England and France have consented to admit a Turkish delegate to the Suez Canal Neutrality Commission.

A movement has been started by leading inhabitants of Berlin to present a congratulatory New Year address to the Crown Prince. Sheets were placed in central positions on Christmas Day for signatures by persons of all classes.

Dr. Mackenzie says he is greatly pleased with the improvement in the Crown Prince's condition. The small growth in the Prince's throat is almost gone. There remains a slight tumefaction on the left ventricular band. The blood drawn from the Prince's neck is to be analyzed to learn if it contains an undue proportion of sugar, and if so, a diet to remedy the trouble will be adopted.

According to the researches lately communicated to the Academy of Sciences by Dr. Teissier of Lyons, the author believes that diphtheria is, above all, an infectious malady, the germ of which, being transmitted through the medium of atmospheric dust, is absorbed through the respiratory organs. The dust emanating from manure heaps, collections of rags or of straw, are particularly favorable for such transmission, as they constitute excellent media for the culture of the pathogenic germ. The pigeon and the common fowl seem to be the most active agents for the dissemination of the germs from these different infectious foci. Among the other cases which contribute to favor the receptivity of the germ, cold occupies the first place (79 out of 132). Dr. Teissier, however, thinks that the humidity of the air constitutes, without any doubt, a condition extremely propitious for the multiplication and dissemination of the germs of diphtheria.

M. Desclauds, a judge of the Court of Accounts at Paris, has been elected President of the Patriotic League. It is announced that the League will in future abstain from concerning itself with the internal policy of France, and that it will have only one flag—the national emblem — and one motto—"France."

Another inquiry at Paris has shown that a blacking manufacturer bought the decoration of the Legion of Honor for 60,000 francs, and that M. Wilson and his accomplices shared the spoils. M. Wilson's arrest is expected in connection with the affair.

The Belgian Premier has announced to the Chamber of Deputies that forty-nine foreign governments have agreed to take part in a conference at Brussels in March, to bring about the establishment of an office for the translation and exchange of legislative documents of all countries.

The Spanish Government has decided to celebrate the fourth centenary of the discovery of America.

All the absent Cardinals have been summoned to return to Rome before the first of January to take part in the Pope's jubilee celebration. Two hundred foreign Bishops and many European legitimist aristocrats have given notice of their intention to visit Rome after Christmas to attend the celebration. The Czar of Russia will send a gift, but none of the family of King Humbert of Italy will be allowed to do so.

Advices from Zanzibar, under date of December 19, state that a messenger has arrived from central Africa who brings no direct news from Henry M. Stanley, but says it is reported in the country on the eastern side of Lake Nyanza that Mr. Stanley, after many privations, reached Wadelai on the Nile, about fifty miles north of Lake Albert Nyanza, early in September. The principal difficulty he encountered was between the Mabodi country and Wadelai.

Advices from Massowah say that the British mission to Abyssinia was unsuccessful in its efforts to induce King John to sue for peace, and that the Italians are jubilant over the failure.

The session of the Dominion Grange at Toronto, December 24, adopted a report urging that, in view of the suspension of several of the chartered banks in the Dominion, thereby forfeiting public confidence in Canadian monetary institutions on the present basis, the circulating currency of the Dominion be secured by the Government.

A huge wave swept Baracoa, Cuba, December 4. People saw it coming and fled to the hills. The wave struck the beach, broke, and flowed inland, carrying many native huts and several good houses before it. After sweeping in fully 400 feet, the water flowed back to the ocean. Nearly 300 huts and houses were destroyed, but fortunately no lives were lost. The beach was swept clear of every habitation that stood upon it. The wave was not a tidal wave, but the result of a three days' north wind. Aguadilla, a small port of Porto Rica, suffered also by the wave. Fifty-three houses were swept away.

Advices from Bavispe, in the Mexican Province of Sonora, show that the suffering resulting from the earthquakes there is very great. The Mexican Government recently sent a lot of provisions, but the people are destitute of clothing. What few houses were constructed a month ago have been destroyed, and the people are now living on Refuge Hill, in huts made of poles and grass. The weather is very cold. Earthquake shocks are frequent, though no new rifts have been opened.

A special correspondent, writing from Honolulu to San Francisco, says: "The people here are virtually on the eve of another revolution. The King, in exercising his veto power, intends to stand on his constitutional rights until a judicial decision is rendered. The Legislature will contest his action, and the natives are becoming excited. They find themselves ignored and treated with contempt, the King insulted, and his rights, as understood by them, ignored or denied. The native papers, it is said, are inciting the natives to rise in arms, if necessary, and assert their right to a voice in the management of their own affairs. It only needs a spark to set the country in a blaze." The Legislature has adopted resolutions denying the King's right to veto. The Supreme Court invited all members of the bar to confer with it on the subject, and the court listened with closed doors to the arguments of twenty-two attorneys, and then failed to agree.

THE LATE DANIEL MANNING.

THE public career of the late Daniel Manning was brief, but most instructive. Before he became Secretary of the Treasury he was scarcely known out of his own State, and even here he was not much known out of his own political party. He had never held public office. His position was that of a local party manager. He belonged to the Tilden school of politics, and he had profited much by what he learned from Mr. Tilden, but no one could have anticipated that the lessons he gained in that school would have made him, in the short space of two years, the most noted man in the country after the President himself.

It was Mr. Tilden's belief that straightforwardness, plain speech, and correct aims will always beat chicanery, duplicity, and demagogism at the polls in the long run. Mr. Manning took in this lesson to a degree that surprised everybody in the country. When he was designated as Secretary of the Treasury, he allowed it to be known, even before he went to Washington, that he was determined to maintain the public credit and the gold standard against all attacks, and that nothing should swerve him from this purpose. He needed all his resolution and all his political tact besides in the coming encounter.

It is hard to realize now that in the first winter of Mr. Cleveland's Administration, only two years ago, the sharpest fight, and the most bitter and protracted in Washington, was that relating to "paying out silver," so completely has that issue disappeared. Leading members of the Democratic party conceived that the Treasury was hoarding its silver in order that the banks and the bondholders might wallow in gold. They therefore attacked Mr. Manning with speeches, resolutions, and investigations, seeking to force him either to "pay out silver," or, if he would not do so, to drive him from office. Denunciation in Congress had little effect upon him, because he had reckoned with it before he accepted the position of Secretary. Resolutions of inquiry intended to embarrass him were answered with such blunt directness, and occasionally with such cutting sarcasm, that the inquisitive classes were speedily disabled and completely cowed. Mr. Manning himself bore no malice. He had the most exemplary patience, and was always ready to shake hands and wipe out the old score. His assailants were completely vanquished, but without any sting of defeat. When the fatal stroke of disease fell upon him at his desk in the Department, he had not an enemy in the world, either in his own party or in any other, while he had won the respect of thinkers, scholars, and business men by the thousand all over the country, most of whom had never heard of him until they learned that Mr. Cleveland had chosen him for Secretary of the Treasury.

If we ask what was the meaning of all the pother about silver, we shall hardly be able to find an answer. Those who were pushing so desperately two years ago to force Mr. Manning to pay out his surplus silver have seen it pay itself out in a natural way in obedience to the demands of business. It was this natural process that Mr. Manning contended for. He declared that he would not, unless compelled by positive mandatory law, force upon the public a kind of money they did not ask for. If they wanted silver, they should have it; if they wanted gold, they should have that; if they wanted paper, they should have that. It was in this way that he meant to uphold the public credit, and keep all kinds of money at par for all purposes of trade. He knew that when a bank begins to "shove" on its customers something that they would rather not take, it puts itself under suspicion at once. He was resolved that the Government credit should be passed over to his successor in office in as good shape as he received it. And so it was. Those who tried to drive him the other way are probably convinced now that if he had forced out silver as they desired, the effect would not have corresponded to their wishes—that is, would not have changed the monetary standard of the country. But it would have put a stain on the public credit, just the same.

It was Mr. Manning's principal service that he refused to allow this stain, or any stain, to be put there while he was charged with the administration of the Treasury. The advice and counsel that he gave from time to time in his regular and special reports was for the most part fraught with financial wisdom, but some part of it was in advance of his time. Not much in advance, however. The President has taken a leaf out of his last report, and the country will soon be up with the recommendation he made a year ago to "untax the clothing of the people." If Mr. Manning had had good health, his prospect of reaching the Presidency, if he desired it, would have been extremely flattering. But he was destitute of ambition. The office that he held came to him unexpectedly, and rather to his regret. He was one of the men who have so often vindicated the soundness of our institutions by starting up from obscure places and showing themselves equipped for the highest duties.

Mr. Manning was always ready to learn, and it is one of the noteworthy facts in his career that he had not been a year in office before he became a hater of the "spoils system" in politics. He often remarked that the greatest distress of his public life was the contention and clamor of office-seekers, and that if he could be rid of them, he could transact the business of his department in half the time and with twice the satisfaction that was possible under the existing system. Civil-service reform lost one of its most promising recruits by the stroke that deprived the country of his services. We mourn the death of such a man, but we are sure that his example will not be lost upon the younger generation of his countrymen, or upon any who admire steadiness of nerve, candor of mind, and patience of temper in the administration of great public trusts.

RESTRICTING IMMIGRATION.

THE conduct of the foreign-born Anarchists in declaring war against society, and of the Knights of Labor in trying to set up an organization which was to overshadow both the Federal and State authorities, and substitute a government by strikes and boycotts for that of the Constitution and the laws, has naturally excited a good deal of interest in the possibility of sifting the immigrants from Europe, so as to let in none but such as are likely to prove good citizens. We cannot say that any of the schemes produced with this end in view have a very practical air.

As we have heretofore pointed out, there is no possible way of detecting an Anarchist or labor agitator when he lands from the steamer. The worst cut-throats or bomb-throwers are very apt to wear the mildest and most studious expression of countenance, and are very often the best educated in a whole shipload. Moreover, inquiries into character at the place of embarkation, by a consul or other official, would be utterly futile. Even if it were physically possible to get any information of any kind about the character and antecedents of the half million of poor people who every year take ship at Liverpool, or Havre, or Hamburg for the United States, whom could we charge with the duty of making the inquiries? Certainly not our consuls as at present selected. A letter from an ex-consul to the *Evening Post* explains forcibly the difficulties of any such undertaking, even if our consuls were fitted for their task in the matter of linguistic skill and experience of foreign life, and even if the authorities at foreign ports were as much interested in keeping the emigrants as they are in getting rid of them. In short, the attempt to extract a trustworthy certificate of character from every newcomer who lands in the United States, would be ridiculous from the outset, and be speedily abandoned. The nearest approach that could be made to a sifting process would be the imposition of a capitation tax. If shipowners could not land passengers without paying this, they would not take on board anybody who could not furnish the money; and ability to furnish the money, if it were more than a nominal sum, would be some slight guarantee of thrift, and industry, and prudence, and of a desire to pursue with steadiness some honest calling.

How a prolongation of the term of residence before naturalization would solve the problem, it is hard to see. It sounds very like the old Southern plan of preventing the mingling of races by prohibiting marriage between blacks and whites. A European loafer, or Anarchist, or blackguard of any description would be just as mischievous in the character of a foreign resident as in that of a naturalized citizen. In fact, we are inclined to think he would be more so, because, if allowed to vote, he might blow off some of his deviltry at the polls. A prolongation of the period of probation, and the exaction of guarantees of good behavior and intelligence before naturalization, would undoubtedly be a good thing for politics; but we do not see how it would protect us against attacks on social order by foreign cranks or malcontents whom we once allowed to land and take up their abode here. In fact, the one way in

which legislation would seem likely to prove in any degree effective would be in preventing the huge importations of unskilled and, indeed, half-savage labor, in which some of the mining companies have indulged, as a means of enabling them to achieve temporary victories over strikers. We say temporary, because as soon as the half-savages learn the ways of the place, they become strikers in their turn, and worse ones than their predecessors. This practice, we are glad to say, the existing law against the importation of contract labor will probably stop, and its stoppage will be all the more welcome because it originated with, and has been carried on mainly by, those who support a high tariff as "protection for American labor."

A vast amount of comfort for those who are most troubled by the evils of unrestricted immigration and the difficulty of any process of selection, is to be found in the reflection that the troublesome or mischievous immigrants are an infinitesimally small part of the whole. Those who cause either loss, damage, or vexation bear to those who make the American rate of material and political progress possible, a very small proportion indeed. As has been so often pointed out at dinners of the New England Society, the immense capacity of the Yankee for "bossing" would be utterly useless to the country if the supply of foreigners to be bossed were not well kept up. Native talent has, for the greater part of this century, run to plotting, and planning, and superintending, and the results would not have been as tremendous as they have been, if Europe had not steadily recruited the ranks of manual labor.

And then who can feel very much troubled about the consequences of foreign ignorance and turbulence, when he sees the way in which the labor follies of two years ago have been dealt with, simply by the application of American "horse sense"? Two years ago the Knight of Labor, or the Walking Delegate, or the Boycotter, or the Striker had nearly everything his own way. The press, and the judges, and the grand juries, and the ministers, and the philanthropists were all afraid of him. He took possession of the streets, horse railroads, and wharves; frightened employers and shopkeepers out of their wits; threatened to suspend traffic on the great lines of travel, and even to put the police on strike, and compel people to employ him in perpetuity on terms fixed by himself. He throve for a few months fairly well under the influence of popular surprise and bewilderment. But as soon as the American eye had, to use the slang phrase, "sized him up," he began to wither visibly. The police took hold of him and hanged him or put him in jail, as his case required; the employers locked him out; the politicians fought shy of him; the press laughed at him or denounced him, and now nobody spends any thought on him. He has not left a trace of his tomfoolery on the surface either of American industry or politics.

CHRISTMAS IN THE CHURCHES.

Few can have failed to notice the marked increase, of late years, in the religious observance of Christmas. What we mean is the altogether more pronounced emphasis given the day, in its religious significance, by what for convenience may be called the dissenting churches. There has come a great change over those denominations which had inherited the idea that special attention given to Christmas in the churches was a thing wholly of "human invention" and "savoring of papistical will-worship," and which had, until recently, pretty consistently regulated their practice by that notion. Although they have, as a general thing, made little progress in the recognition of the Christian year—Easter and Christmas being about their only festival days—and have gone scarcely at all even into the Christmas cycle, a distinct place in their services has been made for the Christmas celebration, if not on the day itself, on the Sunday nearest to it. It would be almost impossible now to repeat an experience of our own, not so many years ago, when we listened to a somewhat acidulous divine who chose as a fitting theme for a Christmas discourse the doctrine of reprobation. At present all branches of the Church are alike in point of decorating the interior of the churches, and having special Christmas music and sermons.

This change has often been described as but a part of the general movement towards a more liturgical worship. It undoubtedly is so, but to say that is only to state the fact in another form, not to assign its cause. More than a single cause is to be looked for behind so widespread and vaguely marked a movement, and it is only as one cause of many that we suggest as an influence which we think has been powerful, at least in the case we have referred to, the social pressure which has worked, with the solidifying of the classes that now support the churches, to solidify and equalize their forms of public worship. Certainly in the great centres of population—and it is there that the tendency in question is clearest—the constituency of the churches is mostly to be found on one plane of society. In almost every respect the social usages of the people occupying this plane are the same; their houses, dress, amusements, are very similar; similarity of religious practices, in type, if not in detail, comes in as a natural sequence. In fact, it has been through admitting Christmas as a social Christian festival, that it has won a place for itself as a religious festival. Here the Puritans made their fatal mistake. They should have remembered the maxim, *obsta principiis*. They should have kept up their severe ignoring of Christmas in not having so much as a sprig of evergreen in their houses, and in giving no presents to their children. Once admitted into the home, Christmas was sure to insinuate itself into the Sunday-school, as it did next, and thence it was but a step into the church.

Yet, with all this larger prominence given to the day, in its religious aspects, there has been no new emphasis of the theological view of Christmas. If anything, we think that view is much less obtruded than formerly. Mr. Matthew Arnold, in the crusade against the theological associations of Christmas which he undertook, with rather more courage than tact, a couple of years ago, was fighting words and forms, we believe, as much as realities. Even if done under cover of the old phraseology, the church teaching now connected with Christmas is new in method and aim. It is less doctrinal and more practical. It is simpler and more natural. If it is less clear-cut and more sentimental, we must remember that the feelings to which it appeals and upon which it works are not easily defined. In fact, when we reflect that a large part of the religion of most people is made up of vague emotions, which may nevertheless be deeply stirred, and prove powerful in their influence upon conduct, it must seem a great gain that the religious accent of Christmas is placed so much more generally on those sentiments of gratitude and brotherhood which Christianity has so signally fostered, and which so much need to be cultivated. For this can well be spared the older Christmas teaching, which was less effective precisely because more definite and dogmatic than the new.

INTERNATIONAL "ROYALTY" COPYRIGHT.

The article on international copyright which Mr. R. Pearsall Smith contributes to the *Nineteenth Century* for November, fancifully entitled (presumably by Mr. Knowles, the English editor), "An Olive Branch from America," is worthy of notice, not so much because of the article itself, which contains nothing new, but for the opinions expressed by the authors to whom the proof-sheets were submitted by Mr. Knowles. It may be well at the start to point out, that as far back as 1869 Mr. R. A. Macfie, formerly a member of the British Parliament, published in a volume entitled 'Recent Discussions on the Abolition of Patents for Inventions' a royalty copyright scheme, the practice of which required each author to have a special stamp, to be attached to or impressed on each copy of a book sold; thus briefly suggesting what Mr. Smith has elaborated. Mr. Macfie was one of the witnesses examined by the English Copyright Commission in 1876, and his defence of the scheme proposed can be found in the volume entitled 'Minutes of the Evidence taken before the Royal Commission on Copyright (fol., London, 1878, pp. 137-142); while the original scheme itself is reprinted at page 355 of the same volume. As regards the idea of royalty payment to authors, Mr. Thomas Watts, of the British Museum, as far back as 1837, proposed, in an article in the *Mechanics' Magazine*, that an author should have copyright in his works for five years, after the expiration of which term any printer was to have the right to reprint upon paying a certain sum to the author for each copy he might issue. It is of interest to notice, especially in connection with the statement (p. 608) that Congress would probably accept a bill such as Mr. Smith suggests, that the plan proposed by Mr. Watts was actually presented to Congress in a bill introduced by Mr. Patrick A. Collins of Massachusetts to the House of Representatives in the first session of the Forty-eighth Congress, in 1883. This bill granted copyright to foreigners by substituting the word "person" for the words "citizen of the United States, or resident

therein," in the existing copyright law, but it required that every copyright article published abroad should be reprinted in America within one year, and if not so reprinted any person was to be allowed, after the expiration of the year, to claim the copyright and print the work, after first giving bonds to keep an accurate account of sales and paying a sum equivalent to 8 per cent. of the highest retail price for each book before any copies were sold. The bill was referred to the Committee on Patents, and was never reported upon.

Mr. Smith's proposal has been drafted into a bill which has been privately printed. Its provisions he briefly sets out in his article, and they are, when supplemented by references to the bill itself, as follows: Any foreign author of a literary, musical, or artistic work published abroad is to be granted a "royalty" copyright for an ultimate term of forty-two years after entry of title at Washington. Two copies of the best foreign edition of each book entered are to be delivered to the Library of Congress within thirty days after publication. If the author desires to obtain any revenue from a possible reprint of his work in America, he must prepare certain distinctive stamps, which shall state the retail price of the book, and contain his autograph initials in facsimile. Of these stamps he must keep a supply on hand, or furnish a supply to a designated depository. The Library of Congress and the Secretary of the Incorporated Society of British Authors are suggested as suitable persons. Any one desiring to reprint shall obtain a license to do so by a mere formal application to the author or stamp agent, accompanied by a sum equal to 10 per cent. of such retail price as the reprinter may establish for each copy he proposes to print. If such stamps as asked for are not furnished within thirty days, he has authority to print, and the failure by the author or agent to respond within that time, forfeits the author's copyright. Certain stamps must be furnished free of charge for press copies, etc., and the possible return to the author of unused stamps is to be left a matter of private agreement. The author's name and address must be printed in each book, otherwise an application to the Librarian of Congress, accompanied by the money, shall be considered sufficient, and unless a declaration of American copyright is printed in each copy of the foreign edition the right is forfeited. One stamp shall be attached to each book issued, and for matter reprinted in periodicals it is rather indefinitely stated that "a different proprietor's license can be obtained, and the copyright stamps, with the name of periodical and date, may be adapted for printing with the type matter in the body of the number." Any assignment of copyright must be recorded at the Library of Congress within sixty days of its execution. The imitation of copyright stamps, according to section 7 of the proposed bill, shall subject the offender to a penalty of $100; one-half to go to the person who sues, and one-half to the United States. In section 8, however, such imitation is declared to be punishable as forgery. In his article Mr. Smith says that each publisher shall be held responsible for an accurate and unmutilated reproduction of the original, but there is no provision in the bill concerning this, nor is it stated how the author is to obtain satisfaction for any possible outrage upon his work, by mutilation or otherwise; but if a publisher or bookseller is detected selling any book not having the proper stamps affixed, a *qui tam* suit may be brought against him for damages for a sum equal to ten times the retail price of every copy thus sold, one-half of the amount to go to the informer, and the other half to the United States, while the author is to receive all unstamped copies which the delinquent bookseller may have on hand, and, in addition, payment for "all damages arising from such sale." Although the proposed bill does not clearly provide for it, it is evidently intended that translations shall be subject to royalty as well as reprints of original works.

As an introduction to his proposed measure, Mr. Smith states three reasons why American readers may object to give to British authors what he terms a "monopoly" copyright. These are: (1) The desire for cheap books; (2) because, to use his own words, "the American people would naturally resent an increase of price in which only one-eighth would reach the author," and (3) that, by reason of the necessarily low retail price, larger editions would be sold, and thereby the foreign author would be better paid than would be the case if he could choose his own method of publishing. This, in brief, is the scheme and Mr. Smith's arguments for its adoption. Turning to the English comments upon it, we find nine contributions from persons who are looked upon as favoring it, followed by two letters from Mr. Arnold and Prof. Huxley, opposed to the plan. Their contents may be briefly indicated. First among the responses has been placed a letter by Mr. Gladstone. He thinks the present system of copyright injurious to the interests of authors, publishers, and readers; and the question of international copyright between England and the United States, he takes it for granted, "implies the establishment in each country of copyright by royalty, instead of copyright by monopoly, for the whole of its domestic literature, and not only for foreign importations from the territory of the other contracting Power." He admits that there are many difficulties of detail, and confesses that he is not prepared with modes of treatment for them, but mentions the provision for a uniform percentage, which he thinks objectionable, as tying down authors irrespective of their standing and credit in the literary world. The new system would offer, he believes, a greatly increased aggregate of advantage to publishers, authors, and readers, and concludes: "The case with which you have to deal may be shortly stated thus: On one side there is a well-founded sense of injustice; on the other side there is a not less strong conviction that an international system of copyright by monopoly would replace one injustice by another and probably a greater one." Lord Tennyson, who follows, thinks that as "something is better than nothing," he would support the measure proposed, but there is no indication in the letter which his son writes for him that the project has been weighed and considered. The Duke of Argyll states that until he had read Mr. Smith's article, he did not know how the case stood, but he now believes that the plan proposed of "a fixed lordship or percentage on sales is the only proposal which meets all the difficulties." Archdeacon Farrer modestly admits that his opinion may be of little value, as he is not a good judge about the technical details of business transactions, but the scheme seems to him feasible. The novelist, Mr. Haggard, who, besides reading the article, has discussed the scheme with Mr. Smith, is of the opinion that it should be cordially accepted by English authors, which opinion seems to be largely based upon the belief that the American public have expressed their favorable inclination to its adoption. But he does not think a royalty of 10 per cent. a liberal fee.

Mr. Lewis Morris considers the "principle of payment" advocated valuable, and that there can hardly be two opinions as to its adoption, but he thinks that the percentage ought to be left to private agreement between author and publisher, within a limit not exceeding 25 per cent. The principle of the scheme is also adhered to by Mr. Justin McCarthy, who, however, states that his want of knowledge of the publishing business renders his opinion as to the practicability of the measure not worth anything. Mr. Walter Besant criticises Mr. Smith's assertion that international copyright will destroy cheap books in America, which he thinks an absurd pretence; but he has every desire to see the scheme carried out, "if it can be compassed," though in any case, he holds, it can only be accepted as an instalment of what is just. The only publishers contributing any opinion on the scheme are Messrs. Kegan Paul, Trench & Co., who content themselves with the bare statement that they think it would be extremely beneficial to English authors, and that it would have little or no effect on the publishers.

Any expression of opinion by Sir Thomas Henry Farrer would claim consideration. As Secretary of the British Board of Trade, he has had opportunity during many years to study, not only the copyright laws of Great Britain and her colonies, but also the question of international copyright between England and the United States. Mr. Farrer's objections to the ordinary form of copyright are based upon a belief that it prevents literature from following in the channels of other trade, and seeking its profit in a wide market with low prices. He believes not only that cheap books are a necessity, but that their sale would prove in the aggregate more advantageous to the authors. Directly concerning Mr. Smith's scheme, however, he has very little to say, cautiously stating that "if it should prove practicable," it would do much to bring about a copyright treaty; but he avoids any discussion of its feasibility.

A careful reading of these contributions fails to discover in them much real support of the copyright plan proposed. There is manifest in most of them a feeling, amounting to an outspoken admission in at least two of them, that approval is based upon the belief that "half a loaf is better than no bread." In others there is a frank admission of incompetence to judge of the feasibility of the plan, while in none of them is this question answered by anything more than a mere assertion of practicability. The ethical question of the equity of robbing the author of the control of his property in this country while he is allowed to retain such control in all others, is not touched upon. In this respect only two of the contributors can be considered consistent, inasmuch as they advocate the adoption of the royalty system with free publication to all copyright. Sir Thomas Farrer has consistently advocated this system for many years, and it is evident that Mr. Gladstone has seriously adopted it.

The remaining two contributions are in opposition to Mr. Smith's scheme. Mr. Matthew Arnold sends a short but sharp letter stating that he is not prepared to accept the assertion that of the difference between the cost price and the price paid by the buyer the trade gets seven-eighths and the author only one-eighth, and he believes that he now receives from Macmillan for the American edition of his books more profit than the plan proposed would give him. He has, therefore, strong doubts that it is a "privilege" which is offered him; but even if it were, he would at present decline to discuss it. Quoting Senator Hawley as saying that America is governed "by and for the average man," he believes that so long as this average man is what he is, he will not give to the British author copyright. "As I have said somewhere or other," he continues, "he has not *delicacy* enough to feel the author's

claims; he feels only that he himself has 'a good thing' and had better keep it."

By far the longest reply is from Prof. Huxley, filling more than four pages. He starts out by saying that Mr. Smith's paper offers two chief matters for consideration: (1) The statement of the moral principles by which we propose to govern ourselves in dealing with the property of British authors; (2) the "plan for securing to the said British authors such a price for the use of their property as is compatible with the moral principles in question." With sharp sarcasm he paraphrases Mr. Smith's reasoning as follows: "Our souls require moral and intellectual elevation; we are accustomed to get these elevators cheaply, and we mean to go on getting them cheaply. We shall be happy to consider any arrangement for rewarding the makers of the elevators consistently with that declaration; but they had better recollect that we are masters of the situation, and that we shall appropriate our spiritual nourishment without payment, if we cannot get it at our own price." The "ingrained conservatism of the decaying civilizations of Europe" is still so far retained in England, according to Prof. Huxley, that a man would not be excused for carrying off a sixpenny loaf and leaving twopence as payment, upon pleading that his bodily frame absolutely required regular instalments of bread, and that he had been accustomed all his life to get a big loaf for twopence; and that, in his judgment, the baker got enough profit out of that sum per loaf; and he considers the plan proposed by Mr. Smith an anticipation, upon the part of transatlantic readers, of that "social millennium when the 'Have-nots,' whether they lack land, or house, or money, or capacity, or morals, will have parted among themselves all the belongings of the 'Haves,' save the two last mentioned."

Prof. Huxley's is bottled wrath. Last year Mr. Smith printed, privately, a pamphlet entitled 'International Copyright: Protected Copyright, with Free-Trade Competition.' It is evident that it is this work which the Professor has in his mind as he writes; which accounts, also, for certain slight discrepancies, owing to changes made in a few details of Mr. Smith's plan since first publication. In this anonymous pamphlet, moreover, the author uses much less reserve of language than in his article. The untrammelled opportunity to steal foreign books is referred to as "our present legal privileges," and it is very plainly stated that the question is not what is just, but, firstly, what America will consent to; and, secondly, what plan presents the minimum of difficulties. And he boldly reminds the British author that "a good thing that they can get is better than what they think is a better thing that they cannot get." It does not seem to have mollified Prof. Huxley that Mr. Smith admits that, if there is a difference, "the literary worker is more, and not less, worthy of his hire than others who perform more common labors," and that "men of literature need more of the refinements of existence purchasable by money than those of less elevated tastes. It is comparatively a small thing," continues Mr. Smith, "to those who have been spiritualized and refined [*i. e.*, the American reader, who has secured a "conscience void of offence" by virtue of royalty copyright] to minister to the author in things temporal. The writer has sown spiritual seed, but his family needs the liberal support and 'necessary superfluities' that will place him as an intellectual prince in unencumbered intercourse with political or money princes"!

But to return to Prof. Huxley's letter. After having thus sharply ridiculed the principle of the scheme proposed, he criticises the practical details of the plan, pointing out the impossibility of preventing or punishing the counterfeiting of the proposed authors' stamps, the utterly inadequate damages it would be possible for an author to recover against the publisher of a fraudulent edition after assuming the expenses of a law-suit, and the absurdity of expecting a publisher to buy in advance from the author ten thousand stamps for an edition of a book, when his rival in the next street may at his pleasure secure stamps for an edition to undersell him. The damage which may be done to the author of an illustrated scientific book, who may have spent as much or more time and labor in preparing the illustrations than in writing the text, by an irresponsible, cheap reprint, is forcibly pointed out. In conclusion, Mr. Huxley is of the opinion that the scheme is false in principle, and would be futile in practice, and if adopted would merely amount to the issuing of letters of marque to people who are now frankly pirates. He thinks that if the American reader admits that an English author has rights of property in his book, he is bound to admit that the author may at least appoint an agent in the reader's own country; and that, if this proposal is to be called "undisguised monopoly," he would call any proposal offering less to the author "more or less disguised piracy."

Little need be said after Prof. Huxley's conclusive letter. But it may be pointed out, in addition, that the intention is apparently not to have authors themselves bring suit, but to encourage persons to sue for the sake of securing the one-half of the fines imposed, for the author's share of the damages is to be the unsold copies of the fraudulent edition, and "all damages arising from fraudulent sale," which damages, under the circumstance of free publication, could only be the royalty due upon the copies actually sold—an amount of damages, it need hardly be said, for which no author could afford to bring suit. The proposed bill could not, as it stands, be enacted into a law. It is too indefinite in its statements, and no adequate measures are provided for the carrying out of its provisions.

THE HARDENING OF THE TORIES.

LONDON, December 7, 1887.

HOME-RULERS all over the country, in village Liberal associations as well as in higher political circles, are making up their minds to a patient struggle which may be of some duration. If any section of the party hoped that the mere sight of another coercion act in operation would produce a violent revulsion of feeling to the immediate danger of Lord Salisbury's Government, the hope has not been realized. Indeed, there was no ground for such an expectation. The British public are well inured by habit to support the spectacle on the sister island of a repressive rule of the same character, though not of equal stringency, and during the passage of the Bill through Parliament it was condemned at Liberal meetings in very emphatic terms, but obviously in a cool temper. The Tories, however, would not be wise to take too much comfort from this fact. The argument that it is impossible to give good government to Ireland, such as we are bound to give, contrary to the wishes of the people, or by means of any alternative policy of home rule which the Conservative Government have produced or may yet propose, is an argument which requires time for its development. It is not advanced by obstruction or any procedure repugnant to the tolerably well-regulated political conscience of a British elector. It is not at once brought to a point by the mere opinion that the imprisonment of Irish political offenders is harsh, or that the contemptuous language applied to the prisoners by Ministers is unworthy. A certain time must be allowed for observation of the growth of the Government policy, which Home-Rulers say is bad at the root, and therefore its branches and fruits must be bad also. Accordingly, while they point to such facts as the protest of more than fifty ministers of religion in Bristol as indications of the direction in which public opinion is moving, their main confidence is that the inherent vices of the present policy will every day make its failure more manifest.

There is no doubt that the prospect now held out to Ireland is a much more sinister one than the British public were led to expect at the commencement of the struggle, and this, say the Home-Rulers, has come about not so much from bad faith as from the necessary evolution of the Government policy. One false step has led to another. In the first place, repressive legislation, the necessity of which as an alternative to home rule was indignantly denied, has come, and come without delay, in the shape of an act which is directed to crush political combination. Secondly, Ireland was told that her real malady was agrarian, and that it would be cured by a comprehensive measure of land reform, getting rid of the dual ownership. But now that bill recedes into the distance. There is no agreement among the supporters of the Government as to the principle on which it should proceed. Sir Michael Hicks-Beach and Mr. Bright have declared themselves opposed to a general measure of compulsory purchase. That is not desired by the Irish themselves, who do not wish to expel good resident landlords or imprison them in their demesnes, but would like to retain them as landlords and induce them to take a leading part in the government of the country. But perhaps the most significant change of all is the resolution not to extend to Ireland the reform and extension of local government promised for next session to England and Scotland, and which had been promised to Ireland also. In accounting for, or at least announcing, this decision, Mr. Goschen compared the promise to Ireland to a promise given to a lunatic, and referred to the tendency in Ireland to make use of the institutions of local government for political objects. But that form of lunacy in Ireland is older than Mr. Goschen, and must have been known when the promise was made. A great part of the strength of the Unionist position at the last election, a great measure of the conviction that their arguments carried, was due to the contention that they were prepared to give perfectly equal laws and institutions to Ireland—that her Parliamentary representation was already adequate, was liberal, but that if anything further was wanted, it would be done, particularly in the way of a reform of local government and institutions. Now, that is not to be done. Local self-government is denied as absolutely as national self-government. Why? Because the Irish are not fit for it. Well, the Home-Ruler may fairly ask, then why did you not say so at the last election? But he asks further, How are they to be made fit for it? The only answer is, By the steady application of repressive legislation.

That is the position of the controversy. It is one which the constituencies will perfectly understand and draw their own conclusions. Eighteen months ago, few supporters of the Government would have acknowledged the probability of the situation of Ireland being in these three points what it is to-day, and

in each case there has doubtless been hesitation and difference of opinion within the Government, and in each case the policy of conciliation has been worsted, the policy of repression has prevailed. Thus it is notorious that the Crimes Bill was introduced after much hesitation. Then Lord Hartington expressed his disapproval of the principal action taken under it, the proclamation of the League. It may well be believed that voices were raised for the immediate prosecution of a large measure of land purchase, and for the application to Ireland of the Local Government Bill. Yet, as the Home-Rulers say, it is the necessary fate of the Government policy to shed any liberal element which it contained; that it is a policy which hath not a genuine liberal element, and therefore that there should be taken from it that which it seemeth to have. The path they have entered upon leads further and further away from remedial measures and from free government.

Mr. Gladstone, in his letter to Lord Edward Fitzmaurice, expresses the regret which was widely felt, especially at first, in the Liberal ranks, that they have been forsaken by the Liberal aristocracy and the leisured class who used to be accepted as the natural leaders of the party. This is said with reference to the sound principles which, during a hundred years or more, guided the Irish policy of the Whig leaders. But the Whig party was an aristocratic party, and, before the home-rule controversy arose, it was something more than moribund from the same causes among others which enable Liberals to face the defection of the aristocracy without any discouragement. The political influence of the aristocracy is very small compared to what it was sixty years ago. That is in large measure due to the relative diminution of their political power by the enfranchisement of the masses. But it is also due to the dilution of the aristocracy of birth by an aristocracy of wealth. When almost all the social advantages which birth used to confer can be purchased with hard money, the possession of a high social position does not, as it used more or less to do, imply the performance or memory of public services, the generous presumption of inherited worth, or any other quality which takes hold of the public imagination. As to the leisured classes, as distinguished from the aristocracy, it is true that a very large proportion of them have held aloof from the home-rule movement, whatever explanation may be given of the fact. The maintenance of the Act of Union was a fixed idea with them, in a way which it was not with the mass of the electors. It appealed to their conservative instincts, which somewhere influence every class, and the influence of the idea was naturally great, if, as is probable, the majority were very slenderly informed on the facts of Irish history. Another element was the opinion that, in the Parliament of 1880, the Irish National party praised with faint condemnation the perpetration of crime in Ireland.

But while the absence of the moneyed and professional classes means undoubtedly the withdrawal of a check on democratic progress, I do not think the main stream of liberal opinion among the mass of the electors has shown any tendency, as some feared, to abandon itself to the guidance of half-educated, fanatic, unscrupulous, or incompetent leaders. Leaders of the old stamp are not wanting, in spite of all defections, but what is more important is, that the extension of the franchise and the duty of deciding the present great controversy have found the electors ripe for the responsibility laid upon them. Newspapers are eagerly read, political questions are discussed with intelligence, fairness, and self-restraint, and, saving the exceptions which have always existed, and are always to be expected, there is no tendency to put public affairs into bad hands. Leaders may in time come from the masses as well as from the classes. There is no reason why we should not have our Lincolns and our Garfields.

Lord Hartington said lately that the home-rule question promised to be the dividing line between parties in the future. It does seem so, until the question is settled, and, following Lord Randolph Churchill's example, in order to reconcile professing Liberals to the situation, he pointed out that they were more likely to obtain Liberal reforms from the present Government than from a leader who acknowledged that he must first get the Irish question out of the way. It is a fair political argument, though, when applied by Mr. Gladstone to Disestablishment, it was denounced as bribery. But Lord Hartington was honest enough to let his hearers know some of the expurgations which might be expected in a Tory edition of Mr. Gladstone's Nottingham programme. He spoke coldly of "one man one vote," a very mild example of a resolve to carry out the Liberal principles of the franchise to their logical consequences; also of the limitation of the power of settlement of land to lives in being, an elementary principle of land reform. Lord Randolph Churchill had already discarded Disestablishment, which no doubt will now remain a plank in the Liberal platform, beginning with Scotland and Wales. Then at Oxford Lord Salisbury made more important reservations as to the value of the principle of representation and election in local government. Accordingly, the dissentients still supposed to be ardent Liberals may have rather meagre fare. If the representative principle is seriously violated in the Local Government Bill, that, coupled with the denial of the reforms to Ireland, will have an immediate and far-reaching effect.

But at the Oxford conference, the effect of the profession, "We are as liberal as you," was, in the absence of responsible leaders, marred by a resolution passed in favor of protection; and it is rudely surmised that the rank and file, the strength and heart of the Tory party, care more for an ounce of protection than for tons of Nottingham reforms, however much or little of them they may be willing to swallow with as much dilution as possible. Protection dies very hard, and it is natural that it should. Never, since the repeal of the Corn Laws, has so deadly a blow been given to it in this country as your President's message, which has been received by Free-Traders with extraordinary interest and hopefulness. Not that free trade is in real danger in this country, or that the President's message is misunderstood to involve an adoption of the theory of free trade, but protection, now generally under some *alias*, such as "fair trade" or reciprocity, always crops up here in bad commercial times. In spite of the tempting bait of high wages, the workingmen compare the cost of living with what they remember or have been told of forty years ago. They treat the issue as a simple ruse, and are rarely deluded. To manufacturers, life-long Liberals, in the present state of foreign tariffs, the question is often a sore stumbling-block and temptation. In 1885 many elections were fought entirely on that issue, and, apart from Ireland, the Liberals won. Then the commission on the depression of trade was issued, and, despite its constitution, the report of the great majority, the preponderance in numbers and weight as well as the evidence, gave no countenance to protection. Yet the ghost was not laid. Manufacturers, orthodox in the Liberal faith, but suffering in pocket from bounties and hostile tariff, spoke uneasily on the subject. This the genuine Tories knew. The theoretical arguments seemed to escape the grasp of a plain man who was suffering, and foreign countries would not acknowledge the evils which theorists said were produced. Now that they are acknowledged and exposed in the weighty language of the President of the United States, the effect will be to extinguish the attempt to revive the heresy in this country.

C. D.

PALLADIO AT VICENZA.

Alassio, November 17, 1887.

The so-called "Gothic Revival" worked, in its day, much good in more ways than one, but it had the "defects of its qualities," as the French say. Its leaders, with all the zeal of apostles, had also the true apostolic narrowness and intolerance. For instance, we find it hard at this moment to forgive the late George Edmund Street for having kept us many years away from Vicenza. In his book on north Italy he deals out a contemptuous injustice to Palladio, which, in days when we believed in him, in Mr. Ruskin, and their likes, made a great impression on us—all the greater as we had no knowledge whatever of Palladio, and, consequently, despising him was a natural proof of our adhesion to the Gothic cause.

You know there is no friend that sticks so closely as a prejudice. This one had survived our veneration for the coryphei of the revived Gothic chorus—it had not had so many occasions of being questioned. It had hindered us from seeing the few works of Palladio that we had come across. We had passed Vicenza over and over again, and, though the aspect of the place, as seen from the rail, had tempted us, we had until now held out against its charms.

"Tempora mutantur et nos mutamur in illis," and so it happened that we found ourselves in Vicenza lately, with quite another baggage of notions and sympathies from that we should have carried there twenty years ago. One among the many causes that had contributed to the change in us was the passage in Goethe's 'Italienische Reise' describing his visit to Vicenza. He said that no copy or engraving of the works of Palladio had ever given him any idea of the beauty of them, and his enthusiasm over them led him to make all haste to buy a copy of the great architect's writings. For Goethe recognized in him an intrinsically great man, whose greatness worked outwards from within. ("Er ist ein recht innerlich und von innen heraus grosser Mensch gewesen.") We know that in matters of art the admirations of this century are far from coinciding with those of the eighteenth, but somehow this appreciation of Goethe's made its impression.

Every one who has gone from Verona to Venice has had a chance to see the beauty of Vicenza from the outside. From Verona eastward the mountains towards the north approach the line of the rail; later the mountains of Berici rise close on the south, and the broad plain we have traversed from Milan seems to contract to a defile. The rich confusion of a land teeming with corn and wine, dotted with villages, with graceful *campanili*, with villas or mediæval castles, is nowhere more striking than here. It is in the midst of this landscape that Vicenza, bedded in foliage, lifts its towers. Its charm no doubt makes itself felt by many a traveller, but Italy has so many interesting cities that few find time to see them all, and Vicenza is sacrificed to Verona and Venice.

The first view inside the gate reveals a series of perspectives of the crumbly architecture dear

to the heart of Prout and the water-colorists of his day. If there be any artist at present capable of rendering that sort of thing, we would counsel him to try Vicenza. He will find there "motives" enough to fill his portfolio. Even the narrowness of Mr. Street was obliged to confess that the city is very picturesque, though he thinks it is "in spite of Palladio and Scamozzi." There are some beautiful Gothic houses of the Venetian type, but it is not they that give the character to the place. Palladio was the great man of Vicenza, and an exception to the rule that refuses to a prophet honor in his own country. The town everywhere bears the impress of his genius. It is full of palaces (the President De Brosses, indeed, recalls a tradition that Palladio, in revenge for some slight shown him, excited in his townsmen the mania of splendid building in order to ruin them), and these palaces were either designed by the one prolific brain or by others of his school. Everything that was not built by Palladio himself has been so modelled on his style that it is by no means always easy to distinguish the work of the disciples from that of the master. Both Baedeker and Gsell-Fels, in fact, ascribe to him one fragment, the so-called Ca del Diavolo, that was built by Scamozzi—Scamozzi, who in Venice, in the Procurazie Nuove, imitated Sansovino, and rendered like homage in Vicenza to Palladio, hating him the while with all the fervor of an imitator.

Vicenza is, then, the monument of one man, who has done more than any other to fix the types of architecture, domestic and civil, from his day to our own. All sorts of styles come into and go out of fashion, and the world still comes back, especially when it is a question of any important building, to the adaptation of Roman forms perfected by Palladio. It has its defects, there is no denying that; but in an age when there are no great geniuses occupied with architecture, it secures results more satisfactory than are to be reached by any other style. Mr. Symonds, in his 'Renaissance in Italy,' somewhere said that it would be impossible in England to model a building after the Certosa at Pavia, with its façade covered with delicate sculptures, but that a reasonable degree of success might crown the work of an architect who contented himself with the Palladian qualities of correct proportion, symmetry, simple and conventional ornament. We trust that Mr. Symonds takes some brains and good sense for granted in his architect, as otherwise the effects of his effort may be disastrous. There is, for example, at Vicenza a villa which has so excited the admiration of the world that it has been reproduced in England at least four or five times. Now, a main feature in Palladio's design is a great portico that is repeated on the four sides of the house, a feature reproduced faithfully in all the copies. But the Vicenza villa crowns a knoll, is freely approached from all sides, and commands in every direction a beautiful view. Palladio said it was in order to take advantage of this situation that he quadrupled the portico in his plan; he, moreover, managed the orientation so that his employer could enjoy the outlook without being exposed to any one of the prevailing winds. These are, however, considerations that his English and other imitators have utterly ignored, and so the design, transferred to unsuitable positions, and made to serve wants it was never intended to supply, becomes an absurdity.

It must be owned that the path of the modern, especially the northern, architect who would follow Palladio is beset with thorns, at least in domestic architecture, where the requirements of those who employ the builder are so different from what they were in the sixteenth century. To this day Italians are very careless of what we call comfort, and have but primitive notions of convenience. But they still admire a *bella ordinazione*, they are still fanatics of symmetry, they still are affected by what is noble, stately, adapted to dignified representation. So when Palladio had combined a certain number of big rooms and little rooms, staircases, saloons, corridors, ante-chambers, on one side of a line, he had only to repeat them in reverse order on the other side to satisfy all the wants of his employers in respect of arrangement. Their life seems to have fitted easily into any combination of rooms which they found beautiful. The internal disposition of a modern great house is much more complex, and the effort to mask it with a symmetrical Palladian façade is often fruitful in blunders. It was perhaps as much owing to the simplicity of the requirements of his employers as to his own genius that Palladio was not guilty of putting sham windows into his elevations, or of making what appears to be one story on the outside two within, as his imitators too often do.

He had faults enough of his own, as we see here at Vicenza even in the midst of our admiration. Some of these may be due to those who carried out the designs rather than to the architect himself, and the blame of many of them must be shared by the Roman builders who were his models. His occasional use of pillars or pilasters mounted upon pedestals, with regard to which Ruskin has an hysterical passage in the 'Stones of Venice,' is nothing new, as any one knows who has seen, *e. g.*, the arch of Constantine at Rome. His insertion of two stories behind such an order was a legitimate variation upon the originals. His use, and even his abuse, of the attic story was Roman before it was Palladian. The main quarrel with him is a quarrel with the problem he had set himself to solve in common with other great architects of the Renaissance, the application of the Roman orders of columns to domestic architecture; for, as Goethe says, the combination of columns and walls always remains a contradiction. But the question of this architecture is bound up with that of our entire civilization, which at that time drew from ancient Rome the influences that have ruled it ever since. Modern society set itself to the task of continuing ancient society. Latin literature perpetuated Latin ideas, and people who were brought up in the humanities very naturally decorated their houses with Corinthian columns.

Another fault charged against Palladio is that he became too great, and reduced his successors to a bondage of imitation. Well, in the following century, under Borromini and others like him, architecture took its period of frolicsome revolt, and endowed Europe with the marvels of *barocco* art. The result was, that after a time builders returned with redoubled veneration to the Palladian line and rule, so that, especially in parts of Italy and in England, there was no appeal from his precept and practice. No doubt had a genius come capable of designing a façade like that of the Certosa of Pavia, he would have burst these bonds as Samson did the green withes. But no such man appeared; the turn of the mediocrities had come. For them Palladio's rule has been beneficent; they are never at their worst when they are led by correctness, even though it be cold. Fortunately the master had solid qualities to justify his supremacy. He really knew, as none before him had, the art from which he drew his inspiration, and had made numerous drawings and restorations of the Thermæ—in his day still in good preservation. His building, too, had good constructional features—strength, and the appearance of strength, where it was needed; lightness and richness where it could safely be indulged in. It may be owned that these works sometimes betray the scholar rather than the man of genius; though, in general, there is a sobriety about the design that commands respect, and an elegance in the details that pleases. Perhaps it is this elegance which, as much as anything, impresses the observer; its charm is so great as to blind him to some faults and make him willing to forgive others. There is in these palaces the master quality that in their presence one feels it would have been impossible to make them as fine in any other way.

Palladio's sense of the value of simplicity and fine proportion in producing good architecture has stood others, as well as himself, in good stead. Where his influence was most felt, as in Vicenza or Milan, the cities saw the excesses of the barocco period pass, and were unhurt thereby. Few façades were erected there for which the builders' grandsons had to blush. As Burckhardt has justly said, the architecture of these places may be called cold and heartless, but can never be insulted by the epithet of petty (*kleinlich*). If American builders wish to free themselves from the reproach which has been brought against them of being unquiet in their works, striving for effect, they may learn at Vicenza, and from numerous villas in the neighborhood, how dignity and grace may be obtained from the fewest possible elements.

And yet Palladio could be lavish of ornament when he chose. The Palazzo del Prefettizio, though but a fragment of the intended building, shows what use he could make of sculpture. The beautiful little house popularly called Palladio's own, though without color, shows how he could reckon on the aid of painting. In one work, the Basilica, he has shown that he could combine richness with simplicity, strength, and nobility. This is perhaps his greatest achievement, and, so far as the artistic effect goes, may rank with anything that ancient Rome produced. Unfortunately it is merely a shell, to mask an earlier Gothic building; but it is always imposing, and is, in any case, the greatest ornament of Vicenza.

For the general traveller, the Olympic Theatre has perhaps more interest. In these days, when students have taken to reciting ancient plays, such a theatre, constructed essentially after the manner of Roman and Greek theatres, would greatly aid the effect of the performance, and would, not only for this reason, but as a permanent illustration of the scenic conditions for which ancient dramatists wrote, be a valuable addition to the resources of every university town.

The great churches of Palladio are at Venice. In them he was, more distinctly than in any other field, an innovator. They, however, as well as the villas scattered over the country between Venice and Vicenza, do not come within the scope of the present article. They are worthy of treatment by themselves.

Somebody recently said to us that America took a new architectural direction every year. We may hope, then, that the day is not far distant when the fashion will turn towards an ideal in which sober construction, simplicity, a refined distribution of parts, beauty of proportion, and elegance of ornament are the distinctive features. We neither ask nor hope that the Palladian style will be revived—all revivals are pernicious—but students of architecture will find it worth their while to learn how it secures the qualities just mentioned with the materials at its command. That may help them towards doing as much with theirs. For those who have already seen some of the originals we

may mention that the magnificent work of Ottavio Bertotti-Scamozzi, published in four volumes at Vicenza in 1776–83, is the best and most complete collection of the designs and constructions of Andrea Palladio. F.

Correspondence.

REFORMATION OF THE HOUSE.

To the Editor of The Nation:

Sir: Under the caption, "A Constitutional Reformation of the House," the *Nation* advocates the adoption of an amendment to the Constitution which it formulates, providing for a continuing House of Representatives, and points out the evils of the present system in a forcible manner. But the adoption of this amendment, as formulated in the *Nation*, would be both impracticable and unwise.

The time allowed would be insufficient for its ratification by the States unless special sessions were called in many of them for that purpose; and its incorporation in the Constitution would be warring against the theory of our form of government, which contemplates the election of the Representatives of the lower branch of Congress "fresh from the people." When the question of the term of the Representatives was discussed in the Constitutional Convention, there was a diversity of opinion in regard to its duration. Some members advocated one year, some two years, and others three years. But all agreed that the House should be a changing body, and not a continuing one like the Senate. The objections to the present practice, which is not based upon any law or constitutional provision, are numerous, but the mention of a few will be sufficient to demonstrate the necessity for a change.

The House elected in November does not begin its work for thirteen months after its election, although its members draw their salaries from the 4th of March next succeeding; for nine months there is no Speaker of the House; before members have served their full term their successors are chosen; the certain determination of the second session at twelve M. on the 4th of March often prevents the passage of important measures, either from lack of time, as in the case of the Deficiency Bill last session, or because the President has not had sufficient time to examine them, as happened with the River and Harbor Bill; members are rendered more or less inefficient during the short session because they have been repudiated by the people; Representatives are chosen upon issues which may be settled when they come to the capital to enter actively upon the performance of their duties; the people in many cases are not represented by the men whom they have selected to represent them, but defeated candidates hold over in opposition to the will of the people as expressed at the polls; the month of December in the first session is practically wasted by the House on account of the holiday adjournments; and extra sessions sometimes become a necessity.

These are some of the most glaring evils. Now what is the remedy? The Hoar amendment, of which you speak commendingly, if adopted, would simply lengthen the second session by two months, but would not cure the evils set forth above. It would be an improvement upon the present system, but it would fail to meet the necessities of the case.

In the editorial to which I refer, the *Nation* says—"while to postpone the assembling of Congress to the middle of winter, as was proposed by the Crain amendment, is to bring upon ourselves two short sessions instead of one." It seems to me, with all due respect to the writer of the above-stated proposition, that he did not understand the scope of the so-called Crain amendment; and in this connection I desire to call the attention of the readers of the *Nation* to what my amendment really is, and what it undertakes to do. That it may be properly understood, I herewith give it substantially as I intend to introduce it in the House after the holidays, the phraseology having been altered from what it was in the original presented by me last winter:

"The term of members of the House of Representatives is hereby fixed at two years, and the 31st day of December, at twelve M., is hereby substituted for the 4th day of March, as the time for its commencement and limitation; provided, that the Congress in existence at the time when the members of the first House of Representatives are elected after the ratification of this amendment, shall thereafter hold no regular annual session, and that its term shall expire at noon on the 31st day of the following December, and that the term of the succeeding Congress shall thereupon begin.

"The Congress shall assemble at least once in each year, and such meeting shall be on the second Tuesday in January, unless Congress shall by law appoint a different day.

"The Senators whose terms of office would not otherwise expire until the 4th day of March after the termination of Congress by virtue of this amendment, shall continue in office until their successors shall have been appointed or elected."

Some of the benefits which would follow the adoption of this amendment will readily present themselves. The members elected in November would have sixty days in which to receive their certificates of election, prepare for contests, settle their private business, and reach the capital. There would be no holiday adjournments; the Speaker would hold continuously for two years; the House would only be about eight days without a Speaker instead of nine months; the House would be practically a continuing House to the extent that it could remain in continuous session for two years, if necessary, only adjourning long enough to comply with the constitutional requirement of an annual session; there would be two long sessions instead of two short ones, as suggested by the *Nation;* members of the House would be "fresh from the people," and at work upon the settlement of the issues upon which they were elected within sixty days after their election; the House chosen at the Presidential election would assist in the counting of the Presidential vote; there would be no failure of bills for want of time; there would be no fixed time for adjournment, except such as might be agreed upon by both houses, until the 31st day of December of the second year; there would be no election between sessions, and consequently every member would be as efficient during the second session as he was during the first; members would not hesitate between a temporary abandonment of their post of duty and a chance of defeat at home; they would have an opportunity between the sessions to visit their respective constituencies and discuss pending measures with their people; the first session would not be a game of chess between the two parties with the fall elections as the wager; and there would be no necessity for extra sessions.

Your obedient servant,

W. H. Crain.

Washington, D. C., December 17, 1887.

[The *Nation* said that Mr. Crain's amendment would postpone the assembling of Congress "to the middle of winter." The second Tuesday of January may fall upon the eighth or the fifteenth, and either comes pretty close to the middle of winter. It is well known how loath members are to assemble before the day when they actually *must*, and how loath they are to continue in session after say the first of June. To that extent, therefore, past experience (except in times of war or great public exigency) warrants us in saying that Mr. Crain's amendment will bring upon the country two short sessions instead of one.

We must, also, without being disrespectful to Mr. Crain, say that the proposed amendment is thoroughly *unconstitutional* in phraseology, style, clearness, and detail. However wise it may be in substance, it sounds a great deal more like a hasty amendment for some of the incoherent legislation of the "Statutes at Large" than for that great but simple instrument, the Constitution of the United States. The "hereby fixed," the "commencement and limitation," and the multifarious provisions forced into one sentence relating to distinct things in the first paragraph, are inexcusable in a constitutional amendment. The second paragraph is taken from the Constitution, but with needless and therefore inexcusable changes of phraseology. The third is obscure in meaning—so obscure that we doubt whether any reader can tell, without giving it several readings, what is the practical effect which it is intended to produce.—Ed. Nation.]

THE REAL DIFFICULTY.

To the Editor of The Nation:

Sir: The President has justly pointed out the serious condition of the finances, but there is one thing more serious still, and that is the condition of Congress. It came together early in this month, with absolutely no plan of business, with no distinction between the thousands upon thousands of bills which are heaped upon it, and with nobody to look to for guidance. The public can only imagine—since it is carried on completely in the dark—the fearful struggle which is going on for places of power and influence on the committees. Mr. Carlisle is reported to have said that he had never seen so much difficulty in making up the committees, and it seems probable that they will not be appointed, certainly that they will not get to work, till into January—one-sixth of the session being consumed in the mere preparation for doing business. Then there is apparently to be another conflict over the House rules, that elaborate and artificial structure which has been evolved by desperate efforts to get a disorganized mob into some shape for doing business. The objective point is always the giving the more power to the majority to crush and gag the minority, modified only by the unpleasant consciousness that the majority may itself some day become a minority, and may not like the fetters it has forged for others. Of the work of the session only one thing can be predicted with certainty, namely, that the national interest, being unrepresented, will be wholly left out of sight, while the net result will be only a test of the relative strength of party, private, and local interests. I venture to quote a sentence which is not without interest:

"The republican chamber is not a convention, but it proceeds as if it was a convention; it has the Jacobin taste for omnipotence. It has created committees with the secret intention of getting hold of the Administration, of substituting itself for the Government, and sometimes even for the courts. It has had, and still has,

a budget commission, which, under pretence of regulating the expenses of the State, disorganizes the services, suppresses the laws, and would, if necessary, suppress treaties. It has thus succeeded, in fact, in falsifying all the conditions of a regular government as well as of a partisan one, and has prepared anarchy."

This was not written of Congress, but of the French Chambers, by M. Charles de Mazade, in his fortnightly "Chronique." It seems but too probable that this incompetency on the part of the French Chambers to govern by themselves, and their unwillingness to let anybody else govern, is leading straight on to the military despotism which has already ended two previous experiments. We may hug ourselves in the consciousness that our case is different, but we shall do well to remember that Congress, in its methods, is not a whit better, if it is not worse, than the French Chambers; that we have already had one civil war, which, if it turned upon the question of slavery, had for its immediate cause this very feebleness and incapacity of Government; and that there are clouds upon the political horizon giving ample warning that the present state of things cannot continue for ever.

In a recent editorial you stated that the change of inauguration day from March 4 to April 30, having passed the Senate, was lost in the House through the neglect of a committee to report. You went on to set forth the immense and dangerous power of the Speaker in making up the committees, a subject to which the attention of the country is happily being more and more directed. Next you proceeded to dwell upon the confusion and difficulty of organizing a new Congress, with its new Speaker, new committees, and all business to be commenced anew. In contrast with this you quoted the continuous organization of the Senate with the same presiding officer, and its committees still existent and indeed organized. Its secretaries and officers continue at work. Unfinished business and undisposed of Presidential nominations are taken up and disposed of as if March 4 was only an ordinary day in the calendar. No lobbying, no caucusing, no prolonged election for Speaker, no trading of votes for clerk or doorkeeper or sergeant-at-arms. In a word, the functions of the Senate are in as good working order after noon on the 4th of March as before. In view of this you advocated a constitutional amendment making the House renewable by sections, and its organization therefore continuous, like that of the Senate.

The remedy seems to me worse than the disease. As a political element the Senate is to-day incomparably more dangerous than the House. The real evil is not in the difficulty of organization, but in the standing-committee system, with its secrecy, its irresponsibility, its diffusion of power, and its exclusive representation of localities. That it works silently in the Senate only means that it is covered up from the public eye. I will leave it to anybody who knows Washington, if the secret power of the Senate is not much greater than that of the House. The two novels 'Democracy' and 'Through One Administration' both turn upon the immense underhand power of Senators, and this shows at least what the general feeling on the subject is. To make the House continuous, and its committees therefore elective, while failing to remedy the evil, and even, perhaps, making it worse, would to some extent cover up and conceal it. The very confusion of the present methods points to the real source of trouble, and gives some hope of effective remedy. Moreover, the House, unlike the Senate, emanates directly from the people, and it is of the utmost importance that it should respond to public opinion, which it would not if renewed only one-third every two years. That the elections take place thirteen months before the new Congress meets is an absurdity which would be remedied if these elections had anything to do with Government policy.

It looks as if in France the present confusion could be ended only by an irresponsible executive taking power wholly away from the Chambers. In this country, also, salvation can only come, if at all, from the Executive backed by the nation. But with us the process can be made entirely safe by the enforcement of responsibility. If the Cabinet had seats in Congress and took the guidance of legislation, if the Speaker was reduced to his proper function of a presiding officer, if business was taken out of the hands of the standing committees, and transacted in an orderly manner by the houses themselves, there would be no difficulty in organizing, because there would be no powerful rivals interested to oppose it. The House of Commons, though a larger body and perhaps quite as composite in character, and though renewed all at once, whatever its other defects, has no difficulty in organizing. G. B.

Boston, December 17, 1887.

[It often seems as if when the most sensible of men seize a "correspondent's pen," they are bewitched by it, and must needs write whatever comes into their heads without revising or verifying. A more suicidal appeal, for instance, than that of our correspondent in his last sentence can hardly be imagined as applied to the House of Representatives and the subject under consideration. (1.) The term of Parliament is not for two years, but six. (2.) The Speaker's office is non-partisan, continuous, and held under different administrations and opposite parties. The predecessor of the present Speaker, if we remember aright, held his office fourteen years, and during the ministries of both Gladstone and Beaconsfield. (3.) The committees which do the work of our standing committees are not appointed by the Speaker, but by a special committee popularly known as the *Locus Standi*. (4.) The clerks, sergeants-at-arms, and other officers hold their places during good behavior, and those places are never used as barter in the election of a Speaker, or fought for in the organizing of the House. (5.) Contested elections go to the courts, and there is no Committee on Elections for the Speaker to appoint, and no partisan decisions, often deferred till the last month of a Congress. (6.) Finally, the business of the House does not depend upon the "make-up" of committees nor the *ipse dixit* of the Speaker, but upon the discretion and determination of the "Government," that is, of the Prime Minister and his Cabinet. If novels and novelists can be appealed to as evidence of public opinion, we may cite a much more practical novel than those named, and by a much more practical author. Mr. De Forest's 'Honest John Vane' is as conclusive as a novel can be that the seed of all our national disgraces is sown in the House, and ripens in the hot-bed of the short session. We have not space to follow our correspondent at present, but in the further discussion of the constitutional question he will perceive that he has greatly misunderstood both our argument and our position.—Ed. Nation.]

COURT AND LEGISLATURE.

To the Editor of The Nation:

Sir: Of Mr. Campbell's 'Science of Law,' noticed in the *Nation* of December 15, I know nothing except what that notice says. I beg leave, however, to call to your attention a qualification which Mr. Justice Gray's paragraph, quoted by you from the Appendix to Quincy's Reports, ought to receive. That quotation is in these words: "It is believed there is no instance, except one case in South Carolina, in which an act of the Legislature has been set aside by the courts, except for conflict with some written constitutional provision." An exception quite as marked, and much nearer home, is the case of Gardner vs. Village of Newburgh, 2 Johnson's Chancery Reports, 162. In 1809 the Constitution of New York contained no inhibition of the taking of private property for public use without compensation; and the clause to that effect in the Federal Constitution, it had been settled, imposed no restriction upon a State. The Legislature of New York in that year had passed an act authorizing the trustees to supply Newburgh with water, and providing for compensating the owner of the spring to be taken, and the owners of lands through which the conduit should be laid. It provided for no compensation, however, to the owner of land through which the water issuing from the spring had been wont to flow. Chancellor Kent nevertheless declared the act "defective," and that it "ought not to be enforced"; and restrained the village authorities by injunction from proceeding under it. It is true he spoke of the defect as "unintentional," and said the act "was not intended to be enforced until such provision should be made"; but this assumption that the Legislature did not mean what it said, was only a way of putting what he proceeds to declare in express terms to be "a necessary qualification accompanying the exercise of legislative power," "adopted by all temperate and civilized Governments, from a deep and universal sense of justice." And he proceeds to cite, in support of this proposition, Grotius, Puffendorf, Bynkershoeck, and even Blackstone.

So you see that, although the Court of Chancery did not in terms "set aside" this act, it was not far from doing so when it enjoined the public authorities from carrying it into effect.

T. B.

Rochester, December 22, 1887.

[The case cited by our correspondent calls for no qualification of Mr. Justice Gray's remark; the statute was not "set aside," but its true construction was declared, and the defendants were enjoined from violating it. This construction was reached on the ground, first, that other parts of the statute indicated the intention to be what is now laid down, and, second, that the contrary view would impute to the Legislature what would not be a "due and constitutional" exercise of power. This is a road on which courts may travel far; and they do and should. The court, in this case, as is often done, put it as part of the *definition* of the power of eminent domain, that compensation must be made or provided for. It is always to be remembered that the fundamental question in this class of cases relates to the extent of *judicial* power. —Ed. Nation.]

ZOLA ONCE MORE.

To the Editor of The Nation:

Sir: My humble suggestion in the *Nation* of November 24 has drawn upon me such a severe

rebuke from Edith Thomas, that I may, perhaps, be allowed, if not to answer at length, at least to apologize.

It may be mental obtuseness, but I do not see very well how my "needless" remarks could be shaken by the otherwise interesting quotations from 'Le Roman expérimental.' These quotations, pointedly enough, show the would-be prophet of a new literary gospel lingering on beaten, even forsaken, tracks. M. Brunetière deals, in them, with a question of method and epoch; M. Lemaitre, in the sentence which I transcribed, reaches further, it seems, and deals with a question of mental structure, of psychology, if I may risk introducing another big word into this debate. In the passages alluded to, Brunetière views Zola from the outside, Lemaitre from the inside. "Romantique" is so far from being a synonym of "idealist" that it may occasionally imply the reverse. Was T. Gautier, for instance—Gautier, Romanticism itself "in the flesh"—an idealist? Where are the evident, if not always acknowledged, literary ancestors of to-day's *naturalistes* to be looked for, if not among the *realist* wing of the Romantic army?

In short, as far as my knowledge goes, M. J. Lemaitre is, and remains, the first who ever used the term "idealist" in connection with Zola, or even hinted at what the term really implies in its deeper sense.

But it *was not* a question of borrowing to which I drew your readers' attention. It was to the critical statement itself, whose credit, it seems, is growing on both sides of the Channel, and whose practical bearing may be great, not only in the literary point of view, but in the moral also, since, in crushing Zola's claims to an objective rendering of reality, it shows him in his true light and place, that of a remarkable artist, misled, though, by what I may be permitted to call a sort of æsthetical Daltonism—a disease wholly subjective—whose close connection with pessimism is a matter of obvious evidence, even of trite observation.

A. Du Four.

Washington, D. C.

Notes.

'A Portfolio of Players—with notes thereon,' by H. C. Bunner, E. H. Dithmar, Lawrence Hutton, Brander Matthews, and William Winter, will be issued in a limited edition of 100 only, by J. W. Bouton, towards the end of this month. The 'Portfolio' will contain about a score of large photogravures, American and French, reproducing members of Mr. Augustin Daly's company of comedians, singly and in groups, in character and in the dress of private life. Besides their share of the prose-pictures, Mr. Bunner and Mr. Winter have contributed also poems. This 'Portfolio of Players' will probably be the most sumptuous book ever devoted to the members of one theatrical company, excepting only M. Febvre's 'Album de la Comédie-Française.'

Mr. George O. Seilhamer, literary editor of the Philadelphia *Times*, has in press and will publish, solely by subscription, on the 2d of January, 1888, a complete history of the American theatre before the Revolution. In the preparation of this work, Mr. Seilhamer has examined the public and private libraries of the leading cities for material, and gone through the American newspaper files from 1749 to 1774. Besides a consecutive narrative, in large, bold type, the work will contain lists of the performances of the early companies, full casts, summaries of the parts of all the actors and actresses, and many quaint cards, advertisements, criticisms, prologues, epilogues, and poems.

T. Y. Crowell & Co. have in press for immediate publication an authorized translation, by Nathan Haskell Dole, of 'Maximina,' a new novel by Don Armando Palacio Valdés.

A 'Recueil de Portulans,' or collection of harbor charts of all ages, "reconstructing the history of universal cartography, and summing up the geographic discoveries made in all epochs by navigators and travellers," is about to be undertaken by J. Gaultier, Paris (New York: F. W. Christern). The heliographic facsimiles will be described in letterpress by M. Gabriel Marcel of the National Library. The number of charts to be embraced is indeterminable at present. Each instalment will contain five or six, and will cost 20 francs.

As has happened before, some Christmas publications remain on our table after the day is past. But we must say a good word for the series of Aino Fairy Tales begun with 'The Hunter in Fairyland' (Boston: Ticknor & Co.), told for the first time in English by Basil H. Chamberlain, and charmingly illustrated by Japanese artists; and for 'Little Peter,' by Lucas Malet (Appletons), a sad little "Christmas morality for children of any age," with good illustrations; and for Mrs. Molesworth's 'Little Miss Peggy' (Macmillan), a nursery story as it truly purports to be, decorated by Walter Crane.

O. Ditson & Co., Boston, send us a 'Birthday Book of Musicians and Composers,' edited by Gertrude H. Churchill, with suggestive and instructive extracts from the works of composers and critics, the list of names including almost all the Boston critics. The insertion of such a name as Frederic Archer's is surely carrying a joke a little too far. Many prominent names are absent, and Rubinstein is of course spelt with an e in the second syllable; but otherwise the book is neat in execution and appearance.

A. D. F. Randolph & Co. give an American imprint to the agreeable little book, 'Fresh Woods and Pastures New,' which we noticed a few days ago. It is prettily made.

A century and a quarter now marks the age of the indispensable *Almanach de Gotha*, which is just out for 1888 (Gotha: J. Perthes; New York: Westermann & Co.). The world, as measured by this record of the political movement of nations, has not changed much in the twelvemonth, and the most significant improvement of the statistical portion of the *Almanach* consists in the use made of the latest French and German censuses. Count de Lesseps's portrait is one of the four regulation series.

Handbooks to Volapük now tread on one another's heels. One week has brought to our table 'Volapük: A Guide for Learning the Universal Language' (New York: Samuel Huebsch); 'Die Weltsprache Volapük, in drei Lectionen,' by Ivan Ivanovitch (Chicago: L. Schick; New York: Westermann); and Prof. Kerckhoff's 'Abridged Grammar of Volapük,' adapted to the use of English-speaking people by Karl Dornbusch, issued by the publishers last named.

Plymouth Church has compiled and published 'Henry Ward Beecher, a Memorial.' It preserves a record of the great preacher's last hours, death, and funeral and commemorative services, both at his own church and elsewhere. Jewish sympathy is allotted a separate chapter, and is, indeed, remarkable. Dr. Parker's eulogy concludes the volume of 167 pages. A good portrait, and a view of the church with the remains lying in state, both photogravures, accompany the text.

The new Harvard Catalogue has made its appearance (Cambridge: C. W. Sever; New York: F. W. Christern). A convenient map of Cambridge in the vicinity of the College, with indications of buildings and residences, is a feature which ought to be perpetuated.

Several bound volumes of periodicals serve to remind us of the flight of time. The fourth of the *New Princeton Review* (A. C. Armstrong & Son) shows a table of contents varied and with no special bias towards any class of topics. For permanent value, we are disposed to rank first Prof. Alexander Johnston's "First Century of the Constitution." There is the usual helpful analytical index. The eighteenth of the *Magazine of American History* (New York: 743 Broadway) shows a falling off in the number of the war papers; the Revolutionary era and the middle period receive nearly equal attention, though in neither department is there any article of striking merit. Mr. Winsor's "Manuscript Sources of American History" is of first importance. Brief, but of the kind which ought to be more frequent in this magazine, is Prof. Hubbard's paper on "The Treadmill in America," elicited by a careless bit of rhetorical coloring on the part of Prof. McMaster. There is the usual assortment of illustrations, many excellent, and not a few rare, among which we are glad to perceive the photogravure employed. The table of contents and list of illustrations are both prepared in a very slovenly and labor-saving manner—labor-saving to the compiler. The typographic tastefulness of the *English Illustrated Magazine* always tells in the bound volume, as in this for 1886–87 before us. English towns—Bristol and Bath, Cambridge, Coventry, Heart of London; the North of Ireland, George Sand's Country, Picardy, Southern Gaul; Holland, are written about and pictured liberally. Poems, too, are pictorially interpreted, and among the new ones are verses of Swinburne and George Meredith. Mr. F. Marion Crawford contributes the leading novel, "Marzio's Crucifix." Two of the best-known names on the list, Mrs. Craik and Richard Jeffries, are now lost to the world of letters and of human companionship.

In the January number of *Longman's Magazine* will be begun Mr. William Archer's series of papers on 'The Anatomy of Acting,' based on the answers to a histrionic catechism sent to the leading actors and actresses of Great Britain and the United States. Mr. Archer has attempted a serious contribution to our knowledge of the scientific basis of acting, and he is the first investigator to attempt a wide induction from a host of examples. The exciting cause of the paper seems to have been the recent discussion between M. Coquelin and Mr. Irving. Among the actors who have supplied Mr. Archer with facts from their own experience are Miss Mary Anderson, Mrs. Bancroft, Mrs. Kendal, Mr. Beerbohm Tree, Miss Genevieve Ward, and Mr. Wilson Barrett.

With the January number the *American Journal of the Medical Sciences*, published at Philadelphia by Lea Brothers & Co., turns monthly from quarterly, and enters on its ninety-fifth volume.

The December issue of the monthly *Transactions of the American Institute of Electrical Engineers* begins a useful innovation in the shape of a classified index of current electrical literature, detachable for separate binding at the close of the volume.

A profile of Aaron Burr, after an original drawing from the life, by St. Memin, is published for the first time in the *Curio* for December.

The *Studio* for September contains heliotypes of a remarkable alabaster sarcophagus belonging to the Fine Arts Museum of Boston,

and of a travertine sarcophagus on loan at the same institution. Both are Etruscan products, found at Vulci. A photographic copy of the statue of Jefferson by David d'Angers, now in the Capitol at Washington, is another ornament of this issue.

The publication of a complete edition of the writings of the late Mikhail N. Katkoff, the famous Moscow editor, has already been begun, but is being conducted in so strange a manner that it will probably be productive of great dissatisfaction. As no preface is furnished, the reasons for the unusual mode of procedure can hardly be so much as guessed. Two volumes, consisting of nearly 1,500 pages, have already been issued, and they do not exhaust even the material on the Polish question produced in the year 1863. Katkoff's literary activity began seven years earlier, and no explanation is offered as to why that period is ignored. It continued for twenty-three years afterwards, and at this rate the number of volumes (at $1.50 apiece) can hardly be estimated. Another peculiarity of this publication consists in the fact that the contents do not correspond to the title, 'Collection of Articles on the Polish Question Inserted in the Moscow *News*, the *Russian Messenger*, and *Contemporary Chronicles*.' Half of them consist of materials of quite another sort: official acts, correspondence from Vilna and Warsaw, articles of collaborators, and so forth. What was needed was a selection of Katkoff's own writings, properly grouped in chronological order.

—The Faculty of Letters at Lyons began, during the present year, a series of publications, of a scientific character, in the field of letters and history, to take the place of the slighter *fascicules* which it has heretofore issued. Vol. 1 of the "Bibliothèque de la Faculté des Lettres à Lyon" (a pamphlet of 261 pages), is by Dr. Émile Bourgeois, Chargé de Cours of the Faculty, and is entitled 'Neuchâtel et la politique prussienne en Franche-Comté (1702-1713). It is an important contribution to the history of the War of the Spanish Succession. The succession to Neuchâtel became vacant in 1707, and a judicial process of that year decided between the claimants in favor of Frederick I., King of Prussia, in whose house it continued until 1857, having become, meanwhile, a member of the Swiss Confederacy in 1814. The principal object of the paper is not, however, the fortunes of Neuchâtel, but the connection of these events with the larger affairs of the time. The author points out with great care the military importance of the city of Neuchâtel, commanding as it does the principal passes of the Jura; this is illustrated by a map of the region. The possession of this stronghold gave a valuable basis of operations against Franche-Comté, which had within a few years been acquired by France, and was not wholly contented with its new relations. It was the intention of Frederick of Prussia to take advantage of this, and bring the province back into the possession of Germany. In this he was foiled by the watchful activity of Louis XIV., but M. Bourgeois is inclined to think that the sagacious and enterprising policy of Frederick I. in this affair should go far to relieve him from the contempt with which historians have regarded him. The series of events here described have been wholly forgotten by historians, who note the acquisition of Neuchâtel as a trifling gain for Prussia, wholly unmindful of the fact that it was intended to be only the first step to more important movements. The second volume of the "Bibliothèque" is to be the Memoirs of Maine de Biran; the third, a prose translation of the 'Chanson de Roland.'

—The new edition of Berghaus's Physical Atlas, now in course of publication by the well-known geographical house of Perthes in Gotha, consists of four parts, sold separately when so desired—a geographical portion proper in forty-six sheets, by Dr. H. Berghaus: eight sheets for the distribution of plants, by Dr. O. Drude of Dresden; nine for the distributior of animals, by Dr. W. Marshall of Leipzig; and twelve for geographical and physical meteorology by Dr. J. Hann of Vienna. These last have a particular interest for many Americans, for there is much truth in the idea that foreigners have of our strong liking for weather-study. The subject is kept prominently before us by the marching and countermarching of our cold and warm waves, by the violence of our seaboard cyclones, the frequency of tornadoes in the Mississippi Valley, and the severity of the famous blizzards of the Northwest; and good advantage seems to have been taken of our opportunity, for the United States has almost as prominent a place as Europe in Dr. Hann's Atlas. The map work of the atlas is truly exquisite in its mechanical execution. The outlines are simple, clean, and sharp; the colors are delicate and in nearly all cases pleasing, and are printed with remarkable precision; and it is a good thing, as teachers using this atlas will agree, for a student to see his subject thus worthily represented. The employment of the centigrade scale for measures of temperature, pressure, and rainfall must not be considered an objection to our use of the atlas, for most of its facts are presented graphically by colors, and are concerned with relative rather than with absolute values. If absolute values are wanted, the conversion to the more familiar scales of our own can easily be made. For use in a more scientific than educational way, the decimal scales will be welcome. So also will be the full assortment of the statistical maps, and the addition of several new charts, not to be found in other atlases, in illustration of dynamical or physical as contrasted with statistical meteorology.

—Besides those charts which constitute the ordinary series in text-books, such as isotherms and isobars for the year and for the extreme months, there are the thermal isanomals for the same three periods, modernized from the beginning made by Dove, years ago: Supan's lines of equal annual thermal variations; Buchan's lines of equal diurnal baric variations; Hildebrandsson's march of spring northward over Europe; a rain-chart of the world on an attractive projection, essentially a reproduction of Loomis's data, on which Hann says he can make no improvement at present; special rain-charts of Europe, the United States, and India, and a new chart of rain distribution through the year by Köppen, this one being the only sheet on which the colors are displeasing. The charts of the more physical subjects illustrate the temperature and pressure of exceptionally warm and cold winter months in Europe, prevailing storm tracks as worked out by Köppen, and examples of cyclonic storms, and of foehn, sirocco, and bora winds in Europe, that will be found of great value to those who would keep pace with the recent advances in meteorology, and understand the weather as it really occurs.

—In 'Das Erwachen und die Entwickelung der historischen Kritik im Mittelalter, vom VI.-XII. Jahrhundert' (Breslau: Koebner, 1887, pp. 121), Dr. Berthold Lasch makes the first systematic attempt to determine to what extent a critical historical spirit prevailed among the annalists of the Middle Ages. The first chapter discusses their manipulation of legendary or fabulous materials, and points out that many myths, though universally believed, were rejected by some chroniclers. In several succeeding chapters the author shows the existence of a certain amount of criticism in the manner in which some writers corrected dates handed down to them by their predecessors, or questioned the latter's general credibility, and sceptically sifted the particular statements of fact made in the sources. Dr. Lasch then calls attention to their critical attitude in the use of contemporary channels of information; and, finally, enumerates early examples of the manifestation of a critical spirit regarding the authenticity of manuscripts—in other words, palæographical and diplomatic criticism. The author justly maintains that there was no systematic historical criticism in the present sense of the term; there was only a beginning, an awakening of the spirit of doubt. It manifested itself most frequently in a tendency simply to pass over dubious points in silence, without attempting, as we now do, to ascertain the truth with the help of supplementary evidence. This was in part due to the paucity of materials then accessible to historians. The predominance of the ecclesiastical element also hemmed the progress of criticism; miracles were generally accepted by chroniclers who rejected other fabulous matter. In the eleventh century, owing mainly to the progress of learning, a great advance in the growth of the critical spirit is perceptible; it attained its culmination during the second half of the twelfth century, Otto of Freising being its greatest exponent. Then there was a decadence until the advent of the humanists, towards the close of the fifteenth century. Dr. Lasch's book will be read with pleasure and profit by all who are interested in the general development of historiography and civilization.

—The difficulty of keeping up with the periodical literature of the day is greatly increased by the unwise multiplication, especially in Germany, of journals of the same general scope. While it is true that certain departments of study have within a few years undergone a notable development, as folk-lore, for example, and may need special organs, still a slight change in existing publications would afford all the necessary space and save the student no little trouble and expense. An example of this may be found in the *Zeitschrift für vergleichende Litteraturgeschichte*, edited by Dr. Max Koch (Berlin, 1886-1887), the first volume of which, in six numbers, is before us. The fashionable study of the day is the application to literature of the comparative methods of the scientist, a proceeding not without value and interest when there is some real connection, but which is apt to degenerate into the mere collection of resemblances. There is no great gain to literature or literary history in tracking a fable of Lafontaine through the four quarters of the globe, unless some relation of derivation or imitation be established, or the object be to show how different peoples have treated a common theme, which takes the matter out of the realm of pure literary investigation. The new journal has avoided in the main this danger, and contains some valuable contributions to literary history. The editor introduces the volume with an article in which he traces in Germany the idea of comparative literary history from Morhof (1682) to the present day, and shows how immensely German literature has been enriched by this happy tendency to absorb the literature of other people, and evolve what Goethe was fond of calling a *Weltlitteratur*. The remaining contents are as varied as possible, consisting of essays, communication

of new material, shorter miscellaneous articles, and reviews.

—Among the first may be mentioned a long essay, running through three numbers, by Alfred Brese, on the æsthetic feeling for Nature in ancient and modern poetry; one on Uhland's relations to foreign literatures, with a summary of the latest Uhland literature, by H. Fischer; another on Goethe's attempt at the beginning of the century to naturalize Plautus and Terence on the Weimar stage, by O. Francke. Landau examines the legend of the Virgin claiming the youth who placed his ring for safe keeping upon a finger of her statue (Mérimée's "Vénus d'Ille"); and Engel discusses the Don Juan legend, and Elsner the Middle-English *fabliau* of "Dame Siraz" (the story technically known as "The Weeping She-Dog" in the Sindibad romance). Under the head of new material, H. Oesterley contributes a German version of the Tamul folk-book, 'Adventures of the Guru Paramártan' (published in 1822 at London with English translation by B. Babington). Robert Felkin gives an interesting selection of Fables and Myths from Central Africa; and H. von Wlislocki, Gypsy (Transylvanian) and Rumanian versions of the episode of the "ordeal" in 'Tristan and Isolde,' and Armenian and Gypsy versions of the legend of Barlaam and Josaphat. Among the miscellany may be noted an article by Henkel, on Shakspere's blank-verse in Lessing's, Goethe's, and Schiller's dramas, and contributions to the literature of the folk-song by Boeckel and Weilen. The reviews are numerous and valuable. Although enough has been said to show the importance of the first volume of the new periodical, we are not sorry to announce that it will not be continued as an independent publication, but will henceforth be merged in Geiger's admirable *Vierteljahrsschrift für Kultur und Litteratur der Renaissance*. The new periodical will bear the comprehensive title *Zeitschrift für vergleichende Litteraturgeschichte und Renaissance-Litteratur*, and be under the direction of Koch and Geiger, appearing in six numbers a year at the subscription price of 14 marks (Berlin: A. Haack).

THE KENTUCKY RESOLUTIONS OF '98.

The Kentucky Resolutions of 1798: An Historical Study. By Ethelbert Dudley Warfield, A.M., LL.B., Barrister-at-Law. G. P. Putnam's Sons. 1887.

In this interesting study Mr. Warfield discusses with great good temper and thoroughness the documentary history of the famous "Resolutions of 1798," as passed by the Kentucky Legislature of that year in condemnation of the Alien and Sedition Laws. At the outset of his inquiry he endeavors to explain the remoter genesis of these Resolutions by relating them to a peculiar state of public opinion which had grown up in Kentucky during the closing years of the last century, and which, as he thinks, prepared the Kentucky popular mind of that day for extreme utterances in national politics; and then, after a brief biographical sketch of John Breckinridge, the mover of the Resolutions, he proceeds to vindicate for his distinguished ancestor the paramount honor held to be justly due to him for the probable conception of the Resolutions, as well as for the responsible patronage and advocacy of them when put on their passage through the Kentucky General Assembly. Mr. Warfield believes that Mr. Breckinridge conceived the general theory and design of this manifesto independently of Mr. Jefferson; that in pursuit of this design he sought a conference with Mr. Jefferson at Monticello; and that although he finally made use of a draught which was "probably" drawn by Jefferson, he subjected that draught to a "searching revision" before it was submitted to the Kentucky Legislature. Mr. Warfield therefore concludes that Mr. Breckinridge used the Jefferson draught as "a private document, suggestive rather than final, and made alterations in it of so radical a nature as to show that he did not regard himself as a mere conduit by which Mr. Jefferson was to have access to the Kentucky Legislature."

We have to thank Mr. Warfield for his interesting résumé of the life and services of John Breckinridge, and we find ourselves in general accord with the writer when he comes to treat, in a whole chapter, on the "Doctrines and Effects of the Resolutions" as they reappeared in the subsequent politics of the country. We cannot, however, entirely concur with Mr. Warfield in his view concerning the personal origin and paternity of the Kentucky Resolutions when, as we think, he minimizes the share which Jefferson had in their formulation and magnifies that of Mr. Breckinridge. We are sure that there is no want of candor in Mr. Warfield's statement of either his premises or conclusions, but still the balance of evidence on the score of the political inspiration and literary authorship of these Resolutions does not seem to us to be struck with entire accuracy, if we are to pronounce our judgment on the strength of the documents before us. On the face of the documents, as we read them, Mr. Jefferson was the penman of the Kentucky "Resolutions of '98" to all the intents and purposes meant to be subserved by them. Jefferson himself so claimed in 1821, when writing to a son of John Breckinridge. If this claim could have been contested, it should have been contested then. It is no reflection on the candor and honor of John Breckinridge that, in fidelity to the wishes of his political chief, he stood as the sole putative author of these Resolutions, as he was their sole responsible author in the public eye. The dishonor would have been in betraying the secret of their authorship.

And it does not seem to us as clear as it does to Mr. Warfield that before he submitted the "Jefferson draught" to the Legislature, he subjected it to "a searching revision." If he did, he certainly found in it very little to modify or reject. He adopted the Jefferson text almost *verbatim* in the continuous series of the first seven Resolutions, comprising the real gist of the manifesto. If he omitted two paragraphs from the 8th Resolution of the draught (the paragraphs inviting to a "nullification" of the obnoxious laws), he did not omit to reincorporate their tenor and to some extent their *ipsissima verba* in the body of his own speech before the Legislature. If he changed the "directory clauses" of the 8th and 9th Resolutions so as to provide that the manifesto, instead of being referred to a Committee of Conference and Correspondence, should be communicated to Congress and to the Legislatures of the several States, with the request that they should concur with Kentucky in declaring the acts void and in demanding their repeal, it seems probable that this change was made in pursuance of a *mot d'ordre* emanating from Virginia.

On the 17th of November, 1798, we find Mr. Jefferson transmitting to Madison what he calls "a copy of the draught of the Kentucky Resolutions" (Writings of Thomas Jefferson, vol. 4, p. 258). Twelve days afterwards, to wit, on the 29th of November, we find him writing to Col. Wilson Cary Nicholas that "the more he had reflected on the phrase in the paper" shown him (evidently a draught of the Virginia "Resolutions of '98," as provisionally sketched by Mr. Madison), "the more strongly he thought it should be altered." And the alteration suggested was that instead of the States being invited to coöperate with Virginia in the "annulment of the acts," they should rather be invited to concur with her in declaring the acts "*ab initio* null and of no force or effect." (Miss Sarah N. Randolph's "New Light," etc., the *Nation*, May 5, 1887.) It is thus made evident that between the first and the final *rédaction* of these twin declarations, the framers of the Kentucky and Virginia Resolutions had adopted a change of tactics in manœuvring for a position. As originally drawn, they had both contemplated a coöperative annulment of the objectionable statutes. Is it likely that Jefferson took measures for bating the breath of the Virginia series without having beforetimes sent a similar hint to Mr. Breckinridge? It can hardly be presumed that this abatement by Mr. Jefferson was due to the initiative of Mr. Breckinridge in Kentucky, for he ascribes it to his own "reflection," and there is nothing in the political character of Mr. Breckinridge to show that he had a proclivity to moderate measures in that crisis. And besides he took good care, even after verbally lowering the tone of the Resolutions, to show that *he* was of the same opinion still as when they came to him with "nullification" blazoned on their fronts. In the softened diction of the Resolutions he contented himself with asking for the repeal of the laws. In his speech he scoffed at asking for the repeal of laws which ought to be declared null and treated accordingly.

We agree with Mr. Warfield that the excision of the clauses in the 8th Resolution of the Jefferson draught, specifically calling for a "nullification" of the laws, did not eliminate the implications pointing towards what was meant by "nullification" in that day. And Mr. Breckinridge determined that if some of these implications were stricken from the 8th Resolution, as submitted to the Legislature, they should none the less reappear explicitly stated in the oral argument he made in support of the Resolutions. For instance, we find him holding the following language, as cited by Mr. Warfield from the report of Mr. Breckinridge's speech in the Frankfort (Ky.) *Palladium* of November, 1798:

> "To be explicit, sir, I consider the co-States to be alone parties to the Federal compact, and solely authorized to judge in the last resort of the power exercised under the compact—Congress being not a party, but merely the creature of the compact, and subject as to its assumptions of power to the final judgments of those by whom and for whose use itself and its powers were created."

The whole body of this passage is taken verbatim from the first omitted part of the 8th Resolution as originally drawn by Jefferson. It would seem, therefore, that Mr. Breckinridge had no objection to serve as a "conduit" for conveying the words of Jefferson to the Legislature. And this is not the only passage which takes shape and complexion from the omitted parts of the Jeffersonian original. "Nullification" finds distinct expression in the speech after being, in word, expunged from the Resolutions as put on their passage. It thus becomes plain that the word was not omitted for any prudential reasons of Mr. Breckinridge's conceiving.

Let it not be supposed that in thus specifying the words and ideas imported by Mr. Breckinridge into his speech from omitted parts of the Jefferson draught, we mean to impute to him

the slightest disparagement. He was acting as Jefferson's lieutenant, and simply made a loyal use of the language which seemed best fitted to express his own ideas, and what he knew to have been the ideas of his chief before they had been pitched at a lower key. Mr. Warfield seems to fear that some want of ingenuousness may be ascribed to Mr. Breckinridge because he allowed himself during his life—he died in 1806—to stand as the "only begetter" of these Resolutions. He was morally bound to pose himself in this attitude so long as the proprieties of the situation seemed to require it in the eyes of Mr. Jefferson. All that we know about Mr. Breckinridge serves to show that he was as punctilious in point of private honor as he was able and faithful in the discharge of his public duties.

In a second edition of this instructive monograph a few misprints should be corrected. Allan McGruder should be Allan B. Magruder; Wilson Carey Nicholas should be Wilson Cary Nicholas; Philip Narbonne Nicholas should be Philip Norborne Nicholas. And the statement made on page 140 that the letter of Jefferson to J. Cabell Breckinridge under date of December 11, 1821, bears on the letter-book of Jefferson the caption of "Th. Jefferson to J. Cabell Breckinridge," should be expunged. That caption, for simple reasons of literary form, was prefixed to the letter by Miss Randolph, when she embodied it in her communication as published in the *Nation* of May last.

EMMONS'S GEOLOGY OF LEADVILLE.

Geology and Mining Industry of Leadville, Col., with Atlas. By Samuel Franklin Emmons. Washington: Government Printing Office. Pp. xxix, 751. Large 4to, atlas sheets 34.

THE appearance of Mr. Emmons's final report on the geology of the Leadville district is a matter of much interest both to practical men and to the students of theoretical geology. It is also not without importance to all those who are interested in the problems of the relation of the Federal Government to the economic development of the country.

When the Government Geological Survey was organized, it was determined, in addition to the general study of the national area, that certain reports, at once of a scientific and economic nature, should be prepared in order to set forth the resources of particular fields which clearly had important relations to our industries. The Comstock Lode, the gold-bearing region of California, the quicksilver district, the Leadville district in Colorado, and various other fields clearly demanded a very special treatment. Of all these areas, that about Leadville presented the most difficult problems which the geologist has to encounter. The ores which have afforded the abundant supply of silver from that region mostly exist under conditions which have not been met with in any field that has been made the seat of an extended and careful inquiry. So peculiar is the nature of the ore from that region that the gold-washers, mostly astute, practical men, labored for near a score of years and won many millions of the precious metal from its river deposits before they suspected that the perplexing iron ore which clogged their sluices and rockers contained a precious metal. When, in 1874, Mr. A. B. Wood, the first scientifically trained miner to work in those parts, came to Oro, he quickly saw the importance of investigating this "heavy rock" of the miners, and ascertained that it contained a notable quantity of lead and silver. His prospectors soon found the place whence this floating ore came, and in 1876 the silver-mining industry was fairly begun by the discovery of the deposits on Carbonate Hill.

The whole of the region about Leadville in which the characteristic deposits of silver ore of that district have been found is covered by a thick coating of detritus, the result of frost action upon friable rocks. The miners found their way to the resources of the neighborhood by a curious mixture of accident and enterprise. Thus, the mines on Fryer Hill, by far the most profitable of this district, were hit upon through the actions of a party of drunken miners:

"Tradition has it that two prospectors were 'grub-staked,' or fitted out with a supply of provisions, by Tabor, half of all they discovered to belong to him. Among the provisions was a jug of whiskey, which proved so strong a temptation to the prospectors that they stopped to discuss its contents before they had gone a mile from town. When the whiskey had disappeared, though its influence might probably have been still felt, they concluded that the spot on which they had thus prematurely camped was as good a one to sink a prospecting hole on as any other. At a depth of twenty-five or thirty feet their shaft struck the famous ore body of the Little Pittsburg Mine, the only point on the whole area of the hill where the rock in place comes so near the surface. Discoveries rapidly multiplied in this region; immense amounts of ore were taken out, and the claims changed hands at prices which advanced with marvellous rapidity into the millions. A half interest in one claim which was sold one morning for $50,000, after being transferred through several hands, is said to have been repurchased by one of the original holders for $225,000 on the following morning."

Another incident in the chapter of accidents which shows how the commingling of chance and enterprise may force fortune on a man, is related of Mr. Tabor:

"When the fame of the rich discovery of Fryer Hill had already become known at Denver, the wholesale house from which he was in the habit of buying his provisions commissioned him to buy for them a promising claim. On his return to Leadville, in accordance with this agreement, he purchased on their account, for the sum of $40,000, the claim of a somewhat notorious prospector known as 'Chicken Bill,' on what is now Chrysolite ground. Chicken Bill, in his haste to realize, had not waited till his shaft reached rock in place, but had distributed at its bottom ore taken from a neighboring mine, or, in the language of the miners, he had 'salted' his claim. After the bargain with Tabor had been concluded he could not resist the temptation of relating to a few of his friends the part he had played in the transaction. The report of what he had done thus reached the ears of Mr. Tabor's Denver correspondents before he himself arrived to deliver the property, when they, not unnaturally, declined to receive it, and Mr. Tabor was obliged to keep it himself. He, with his associates, under the title of Tabor, Borden & Co., afterwards bought some adjoining claims and developed their ground, from which they are said to have taken out in the neighborhood of $1,500,000, and afterwards to have sold their property to the Chrysolite Company for a like sum."

When Mr. Emmons came to begin his work on the Leadville district, this haphazard method of exploration had already led to the sinking of some scores of shafts, which gave access to deposits otherwise almost entirely hidden from view. It was his task to gather the information from these workings, and to combine the disjoined evidence where it appeared concerning a class of deposits little known to the geologist or practical man, in such a way as would afford a clear and accurate statement of the underground structure of the region of these ores. He has performed his task in an admirable manner; indeed, both in the scientific work and in the practical application of this work to the economical problems which have to be met in the mining of the district, and in the form of statement in which they are presented to the reader, he leaves nothing to be desired.

Mr. Emmons's report is divided into two parts, one concerning the geology of the district, the other the mining industry, each with its appropriate appendices. After giving in his first chapter an excellent general statement concerning the topographical conditions and general history of the district as a mountain centre, he next proceeds to set before the reader in outline the physical geography and structural character of the Mosquito Range in which his field lies. Although condensed, this account of the Leadville district is a model of clearness, and is quite sufficient to afford the basis of all his subsequent exposition. In his discussion of the original extension of the Cambrian deposits, he takes issue with most of the geologists who have written on that field, and demonstrates that the most ancient stratified rocks in that mountain range never arched over the summits of the mountains, but that these elevations were exposed to marine action from a very early day and contributed their waste to the palæozoic deposits. In the concluding portion of this chapter, he clearly determines that the metallic deposits of the Leadville district were formed at an early stage in the history of the country, before the last considerable uplift of the Mosquito Range occurred. The third chapter of the report is assigned to the discussion of the successive strata which compose this region. It was necessary to give a considerable attention to this part of the problem, for the reason that it was of the utmost importance to determine in a precise manner the age of the metalliferous deposits of the district.

Having thus laid a firm foundation in the general facts concerning the country, our author next proceeds to set before the reader, in admirable concatenation, the general geology of the Mosquito Range. Having divided the territory into two natural fields, each is taken in succession, the superficial appearances and under structure which they indicate being set clearly in view. The text is greatly aided by a number of excellent folded plates, which afford, by means of outline engravings, a very faithful picture of the more important of the wonderful rock sections exhibited in this range.

Having provided a sufficient basis in the way of general description of the structure exhibited in this mountain section, Mr. Emmons next proceeds, in chapter fifth, to consider in great detail the structural changes produced in the Leadville section by the extensive disturbances attendant on the mountain building which has taken place since the deposition of the sedimentary strata. This inquiry leads him necessarily to the discussion of the numerous fractures, or faults, and the attendant foldings to which the rocks of the Leadville mountain district have been subjected. All those who are familiar with the difficulties incident on inquiries of this nature, particularly those who have a personal acquaintance with the very great obstacles attending such study in this particular region, will admire the way in which this task has been executed. In most cases the field geologist is not held down in his speculation as to the underground structure by the consideration that each of his statements will speedily be subjected to criticism from practical men, who may be led to great profit or loss by slight differences in the reckonings which he may make. Mr. Emmons has had to walk amid these dangers. It is the highest praise of his work that the miners of this district have learned to lean upon it, and that, even before the publication of this final report, his preliminary statements proved to be of very great use in exploration.

The last of the chapters which concern the general geology of the district, is devoted to the theory of the large geological problems which have been set forth in the previous descriptive sections of the work. This division of the report, including over 130 pages, is the best general consideration which has as yet been given to any portion of our Cordilleran district. The larger portion of it is naturally concerned with the eruptive rocks. This chapter is certain to arouse in time more or less debate; but the presentation is masterly in its form, and the facts appear to be well ascertained. The postscript of this section of the report, containing about fifty pages, is from the pen of Mr. Whitman Cross, and deals with the petrography of the district, or, in other words, the minute structure of the rocks found within the area. It will have little interest for the general reader, but is of importance for the investigation as a whole.

The second part of the report, that concerning the mining industry, begins with the classification of ore deposits in general, and then proceeds to the consideration of the Leadville ores, their manner of occurrence, composition, distribution, and the secondary alterations which have affected them. The reader will here find a clear general statement as to the theories now held about the classification of such deposits, followed by a careful discussion of the facts as exhibited in the several groups of mines occurring in this field. Although this portion of the report is not likely to interest the general reader, it will receive the utmost attention from practical miners. After presenting the facts in detail, the author proceeds to consider the genesis of the Leadville deposits, devoting 130 pages of the report to this important problem. Assembling the important array of evidence, he comes to the conclusion that the ores were derived from vast intrusions of lava, which first penetrated vertically, and then, extending horizontally in the form of laccolites, were interposed between the levers of the sedimentary formations. Originally contained in the lavas, these disseminated minerals were by the action of water brought into the zones intervening between the overlying volcanic rock and the subjacent limestones. He shows that these ores were probably originally deposited as sulphides of the several metals, subsequent reactions having led to the general change in their chemical character. The argument on this point is too complicated to present to the general reader in this notice, but even the layman can follow the statements which, though guarded, will lead him to the conclusion adopted by the author. This section of the report is followed by two appendices of a highly technical character, one on the chemistry of the Leadville ores, and the other descriptive of the metallurgical processes adopted in that field.

The maps of the report and the accompanying geological sections are admirably suited for the use of the scientific student and of the practical miner. They are closely knit with the text of the report, and proceed, as does the text, to acquaint the reader first with the general structure and physiography of the district, and then with the more detailed matters concerning each of its several natural divisions.

The general reader will be interested to find in this great work a type of the monographic descriptions of important mineral fields which the Geological Survey now has in preparation. There is no question that the Leadville district is destined for a long time to be the source of important mineral contributions both of silver and lead and iron. Mr. Emmons's account of the under structure of the country will spare the practical man the expenditure of vast sums, such as have been wasted in the vagarious explorations of earlier days, and not improbably will save the annual cost of all the geological work now in the hands of the Survey.

FREY'S SOBRIQUETS.

Sobriquets and Nicknames. By Albert R. Frey. Boston: Ticknor & Co. [1887].

In the field which Mr. Frey has chosen there was room for a good book without encroaching on adjoining territory already occupied. His volume is well manufactured, and it is provided with an attractive title. If, in addition to these external merits, the author had made its contents comprehensive, accurate, and available, it would have been useful in a high degree. We expected to find in it such phrases as, by frequent application to a man, have become in a certain sense his property, his byname which no one would think of taking from him. On the other hand, we expected not to find such mere epithets as, once applied to a man, have no permanent connection with him. Least of all did we look for four sorts of entries that are not sobriquets at all. Such are, real names, like (p. 2) "Ada! Sole Daughter of my House and Heart. An allusion, by Byron, in 'Childe Harold' (Canto iii., line 2), to his only child, Lady Augusta Ada Byron." Such a name requires no entry here, much less an extended explanation. Nevertheless, the words quoted are followed by more than a column of discussion on Lady Byron's character and education. Similarly we are told (page 234) that "Mary, who occurs extensively [!] in the poems of Lord Byron, is Mary Chaworth," and (page 137) that "Good Lord Clifford" in Wordsworth's 'Song of the Feast of Brougham Castle' is, in point of fact, Lord Clifford. All of this is very interesting, but what has it to do with sobriquets and nicknames? A second sort of improper entry springs from mistaking an official title for a sobriquet. Thus we read (page 197) that Cromwell was "popularly called" Lord Protector of the Commonwealth. He certainly was; Victoria is likewise popularly called Queen of Great Britain. Also, on page 223, begins a German quotation to prove that "Marquis de Brandenbourg" was "a nickname bestowed on Frederick the Great." It is not nicknaming a ruler to translate his title into French, even into bad French. The compiler fails to recognize the point of his German's complaint—viz., that Frederick was discourteously called by the lesser of his titles, Margrave of Brandenburg, instead of his greater, King of Prussia. In the third place, entries are frequently made under passing epithets. For example, we read (p. 13), "Ape, An. So John Dennis, in his review of Alexander Pope's Homer, in the *Daily Journal* (1728), designates the translator." This would be bad enough even if Dennis had actually called Pope an ape. In reality he said: "Let us take the initial and final letters of his name—viz., A. P——e—and they give you the idea of an ape." An epithet once applied and then forgotten is not a sobriquet, yet many entries are made on the sole strength of a single phrase in a book or newspaper, as (p. 363) "Xenophon of his own History" (Geoffroi de Villehardouin), from Van Laun's 'French Literature' (i., 220), "Prince of the Piano-forte. A title given to the pianist Louis M. Gottschalk in *Vanity Fair*" (p. 289). Robert Buchanan's lines,

> "Oh Magellan! Mighty Eagle, circling sunward, lost in light,
> Waving wings of power, and striking meaner things that cross thy flight,"

are sufficient provocation for an entry (p. 238) under Mighty Eagle. A good-sized volume could be made of such citations from the works of Carlyle alone. But the compiler is not content even with such entries. He has gone further, and himself invented sobriquets for his book. Henri van Laun speaks of Théophile de Viau, "a poet of great ease and brilliancy, the Coryphaeus of a band of young and well-born courtiers." This quotation, in which Coryphaeus is properly used to mean a leader, gives rise to an entry (p. 72) "Coryphaeus of his Day," in which Coryphaeus means nothing at all. A fourth absurdity consists in singling out some (commonly an inappropriate) person for a sobriquet which has been applied to scores. Thus (p. 146) George IV., and he alone, is declared to be "The Greatest Prince in Christendom." Sheridan himself, who is quoted as authority for the epithet, says only:

> "We'll make him, in some time to come,
> The greatest Prince in Christendom."

It has been reserved for Mr. Frey at this late day to fulfil the prophecy. But of all the "nicknames" in the book, perhaps the most amusing is (p. 327) "Sot, A. So George Wither, in his *Great Assizes Holden in London* (1645), calls Philip Massinger."

In proportion and arrangement, also, the book leaves much to be desired. One entry, "The Man in the Iron Mask," extends through twenty-five closely printed pages. Twenty-five entries fill fifty-two pages, while over 200 times that number of entries occupy only seven times as much space. The preface states that "the author begs to acknowledge his indebtedness to Mr. Edward Denham. . . . This gentleman is to be credited with the majority of the lengthier entries." Many of these exhibit not a little curious learning—especially curious by reason of its irrelevancy. For instance, this on page 13: "Ape of Genius, The. A nickname given by Victor Hugo to Voltaire, in one of his earlier works, Rays and Shadows (*Rayons et Ombres*). In the poem, *A Glimpse into the Attic*, he says:

> 'That ape of genius, sent as the devil's missionary to men.'

De Maistre says very much the same thing:

> 'Un homme unique, à qui l'enfer avait remis ses pouvoirs.'"

We are at a loss to see what the latter quotation has to do with the ape of genius. In fact, many of these entries are models of what a work of reference should not contain. There should be no literary criticism, no further biographical information than is requisite for purposes of identification, no bibliography, all which appear frequently in the book. A good example of the sort of thing which should be left out occurs on page 365, where, under "Young Sicilian," we are told, in addition to other interesting gossip, that Luigi Monti "became a regular guest of Longfellow every Saturday at dinner."

From these specimens it will be evident that the compiler has no adequate idea of what constitutes a sobriquet, or of the proper character of a book of reference. Still, even these serious faults might have been, in some measure, condoned if what he had done had been done accurately. But the book is even worse in respect of blunders than in respect of misconceptions. To cite a few: Pierre d'Ailly, who was once so well known that, though he lived 500 years ago, even Mr. Frey has found three sobriquets for him, masquerades in four places as Pierre d'Ailby. Jebu O'Cataract becomes John O'Cataract (the name is a pseudonym anyhow, not a sobriquet). Hébert, the only Père Duchesne the volume knows, figures as chief of the Cordeliers Club, in Danton's proper place. Byron's famous characterization of Gibbon, "Master of Irony," etc., is applied to Voltaire. This last is a

sample of the slovenly way in which the book has been compiled. If the author had read the passage ('Childe Harold,' iii., 107) to which he refers, he could not have made the mistake. Occasionally, however, his blunders are the result of something more than indolence. With a fine contempt for "our modern historians whose researches have been so much vaunted," the sobriquet of Charles Martel is explained (p. 234) as "an abbreviation for Martinus, Martin," and all this on the authority of Collin de Plancy's 'Bibliothèque des Légendes,' which is no authority at all, as Mr. Frey, being a librarian, ought to know. Waiving the improbability that any man in the eighth century had two names, neither of them a sobriquet, the derivation of Martel from Martinus is impossible. *Martel*, in old French, is the accusative of *marteau*, as Littré, who is an authority, would tell Mr. Frey. And *marteau* is derived from *martulus*, low Latin diminutive of *marcus*, just as *château* comes from *castellum*.

To make matters worse, the contents are so arranged as greatly to diminish a reader's chance of finding anything that it contains. The entries are all alphabetized under their first instead of under their most important word, and there are no cross references. In ordinary cataloguing, the form of the entry is absolutely determined by reference to a fixed title-page, and the first is the proper catchword. But with sobriquets the case is different. Each has, by its nature, some one essential word. The other words are fortuitous, likely to be changed or forgotten. Sobriquets, therefore, should be alphabetized under their most important words. The method here adopted gives us "Another Reynolds" on page 12, an "English Raphael" on page 107, a "Modern Hogarth" on page 242, and a "Second Hogarth" on page 316. None of them appear under the nouns. If, therefore, the inquirer has forgotten or misplaced any of the adjectives, he will fail to find the information he seeks, though it is really in the book.

In short, the book is a careless piece of work, ill conceived and ill executed. It adds but little to resources already available. Half the entries it contains, and a large number of others, may be found in Brewer's 'Reader's Handbook' or Wheeler's 'Noted Names of Fiction,' and half the remainder are not sobriquets at all, but mere fugitive epithets. On the other hand, it omits such notorious sobriquets as Caligula, Baron Clackmannan, and Grand Old Man. We are informed that President Taylor was Rough and Ready, but not that he was Old Whitey; that the stock phrase Living Library was applied to Tousain, but not that Macaulay was the Book in Breeches. Jennings's 'Anecdotal History of Parliament' and the list of 'Political Americanisms' recently published in the *Magazine of American History* and noticed in the *Nation*, have been neglected. Withal there is about the book a deplorable affectation of learning.

Madame de Staël. By Bella Duffy. (Famous Women Series.) Boston: Roberts Brothers. 1887.

It seems as if it would be a difficult task to write two hundred and odd pages about Mme. de Staël that should be irredeemably dull; but the authoress of this volume has succeeded as well as if she had tried. It will be a brave reader who does not take to "skipping" over its pages—only to find that skipping does him no good. The truth is, that the very structure of the book is to blame; since whoever is well enough informed to read it understandingly, must necessarily be too thoroughly acquainted with the subject to be interested by Miss Duffy's commonplace presentation of it. She has made the essential mistake of writing neither for a large nor a small circle of readers, of not addressing herself distinctly to a special audience, as the best-trained intelligences do almost unconsciously; and a singular unevenness of tone is the result. It is one of the first instincts of the well-born in the world of letters that it is only imaginative thought that should not adapt itself to the occasion.

The "occasion," we take it, of the volume before us is to inform, almost perhaps to instruct, the reader with regard to Mme. de Staël. But a person who needs instruction about Mme. de Staël is not likely to be familiar with Mme. Geoffrin; yet the first page presents Mme. Geoffrin to us, on her return from "her celebrated journey to Poland," as if, in the boys' phrase, we should "catch on" immediately. On the other hand, if we all know Mme. Geoffrin, we do not need on a later page to have the Abbé Galiani's name encumbered with adjectives and epithets; and certainly either more or less should be said about the Maréchale de Luxembourg than that "she was felicitously and untranslatably described by Mme. du Deffand as 'Chatte Rose.'" Just so, the political pages, most of which might to advantage be omitted, are either too empty or too full.

At another point of view the authoress is open to still severer criticism. From the first page to the last it is evident that she has worked out for herself no clear conception of the character with which she is dealing, and is unable to give any lucid interpretation of the perplexing nature and complicated mind of Mme. de Staël—of her who, though herself a daughter of the Revolution in her intellect, was in her heart readily royalist; whose hostility to Napoleon, though that of a woman, met him on a more equal footing than that of any man; and who, though one of the most typical of Frenchwomen, was one of the first observers of the greatness of Germany. This vivid personality finds in the volume before us but a dim and distorted reflection, and the eloquent voice that rang through Europe we hear but as a confused echo.

For any philosophic delineation of the causes and conditions and consequences of Mme. de Staël's social and literary influence one looks in vain, even in the "review of her works." The all-important question, What was the result for the world of this life of brilliant activity? is smothered in silence. In the very last sentence, to be sure, we are told, "Her influence on literature was not destined to be lasting, because, in spite of foreseeing much, she had not the true prophetic sense of proportion, and confused the things of the present with those of the future — the accidental with the enduring." Such dogmatic vagueness is not instructive—not even suggestive.

Down the Islands. A Voyage to the Caribbees. By William Agnew Paton. With illustrations from drawings by M. J. Burns. Charles Scribner's Sons. 1887. 8vo, pp. 301.

To any one who has once been in the tropics there comes, at the approach of winter in this latitude, an almost irresistible yearning to escape our fogs and snows and sleets by a dash into the regions of endless summer, where the airs are soft, the azure seas sparkle, and the palm trees wave a welcome to the northern pilgrim. To all such who are tied down by fate to our rugged climate, we would advise an abstinence from Mr. Paton's book, for the ungratified longing will be rendered yet harder to endure by his breezy descriptions of the little paradise known to mortals as the Windward Isles, which stretches in a chain of never-ending delight from St. Thomas to the Spanish Main, and where only man is vile. Now that steamers ply thither in regular trips, the wanderer is carried, as though by enchantment, in a few days from the asperities of a northern winter to lands where mere existence is a luxury, and where each day in his course reveals to him some new form of beauty exceeding what the day before seemed incomparable. That we should have so close at hand, and so accessible, such a winter resort, without precipitating ourselves upon it by the thousand, is one of the inexplicable mysteries of human obtuseness. That winter travel should build up a line of gigantic hotels from Old Point Comfort to Tampa Bay, where valetudinarians herd themselves in crowds and alternately shiver and swelter, instead of seeking the beneficent shelter from heat and cold offered by the matchless trade-winds, only shows that mankind is unpleasantly akin to the flock of sheep which followed Panurge's bell-wether.

To all such we would recommend Mr. Paton's book as a source whence to draw wisdom to guide their erring footsteps. They will learn how easy the way is, and how entrancing is the Eden to which it leads. They will also find much solid information gathered from many sources not easily accessible to the general reader; and if they take it with them, it will serve as an admirable guide-book for the various ports touched at by the steamer during its few weeks' trip. It is true that this left unvisited some of the most charming spots, for he who has not lain on the land-locked waters of Prince Rupert's Bay, or sailed under the lofty cliffs which form the windward coast of Dominica, does not know the fulness of mingled loveliness and grandeur to which tropical scenery can attain; but where there is such a wealth of beauty on every hand, all cannot be seen within the compass of so brief a voyage.

A captious critic might object to the somewhat forced jauntiness which American travellers seem to think indispensable to a record of their adventures, or might impugn Mr. Paton's astronomy when, on his southward way, he leans over the taffrail to catch his first glimpse of the Southern Cross (p. 12), and says (p. 223) that on his homeward course the north star does not show over the ocean till he reaches the latitude of 12° N.; but we will refrain, and only express our hope that his pleasant and handsome volume will lead many to follow his example. Perhaps such an influx of Americans might aid to solve the problem of the future of the islands, which we agree with Mr. Paton in regarding as extremely dark.

Men and Letters. Essays in Characterization and Criticism. By Horace E. Scudder. Boston: Houghton, Mifflin & Co. 1887.

Some of the papers which are gathered in this attractively printed volume have met with passing notice from us on their original appearance in the magazines, and are now pleasantly recalled by this permanent publication. They are rather literary talk about men and books than strict criticism, and they gain in interest by the personal quality which one feels in them now that they are collected and can be read consecutively. Much the best of them, in our judgment, is the sketch of Dr. Mulford, whose individuality must have been striking in the circle of his friends, and is well, though briefly, rendered here by means of personal reminiscences. There is a fine perception of the humorous aspects which belong to the type of character that identifies him as akin to the divines of the old time,

and Mr. Scudder has the skill to exhibit them without derogating from his subject's worth. The trick which Mulford had of idly pushing his ear-trumpet out of reach while he discoursed uninterruptedly to the helpless interlocutor, is lightly mentioned, but it sets the man before us to the life; and his impatience at the publisher's delay in the issue of his philosophical book (which had waited long months for his own final proofs), because he fancied it was "needed for the fall elections," is characteristic of his class as well as of himself. One scene—and it seems to have been a frequent one—is well described, and the touch at the end is worth noticing: "At the end of an evening, when one was laying aside books and papers, a ring at the bell would announce a caller. Enter Mulford, very doubtful about putting aside his hat and coat; he had come in merely for a moment; he could not stay. Then one put more wood on the fire, and settled one's self to that three or four hours' talk which was sure to follow, with good-bys at last under the stars at midnight that seemed nearer than before." Such intercourse with a man of thought was well worth this slight memorial, though one sympathizes very much with that critic who is here quoted as saying, "What a narrow man Mulford is; but then he is narrow on great lines."

In the remainder of the volume there is nothing that especially evokes remark. Landor, Longfellow, Emerson, Mrs. Gilchrist, Dr. Muhlenberg, Maurice, and general views of how to write history, how to turn American history into drama, and how to estimate Shakspere's present and future import to the world, constitute the subject-matter; and these topics are treated in a broad way, not too exacting of either author or reader. The papers, taken together, belong with that body of journeyman-work, half-way between letters and journalism, of which so much is being done, and being better done than ever before. The fate of most of it is the oblivion that follows ephemeral things; but here and there is an attempt at salvage, and certainly these essays of Mr. Scudder's are better worth rescue than the greater portion of recent works of criticism similarly collected.

From Pharaoh to Fellah. By C. F. Moberly Bell. With illustrations by G. Montbard. Philadelphia: J. B. Lippincott Co. Pp. 193, 4to.

Mr. MOBERLY BELL'S new volume is an account of what might be termed a "personally conducted" tour in Egypt, with information on various points in its history, present and past, and archæology, as well as on some of the burning questions of Egyptian politics. If the reader can overcome the annoyance, amounting at times to positive exasperation, at the author's persistent attempts at humor, he can scarcely fail to be interested in what Mr. Bell has to say of a country about which he is especially well informed. After descriptions of Alexandria and Cairo, there is a good account of a trip up the Nile as far as the First Cataract, taken with an "English Pasha," in whom it is not difficult to detect Sir Evelyn Baring. The fact that the latter was examining into the condition of the Fellah with relation to his taxation, enables the author to state very clearly and decidedly his views on this subject, which are that the Fellaheen under the English control are not overtaxed, and, notwithstanding the low prices, are in a more prosperous condition than they have been for many years. He has no hopes for their future, however, should England leave Egypt, holding that they are to-day exactly what they were in the days of the earliest Pharaoh—slaves, incapable of becoming a nation or of governing even their own villages. The book is very attractively got up; the numerous pictures of M. Montbard, illustrative both of the scenery and the native life, being unusually good both in design and execution.

BOOKS OF THE WEEK.

A Girl's Life Eighty Years Ago. Selections from the letters of Eliza Southgate Bowne. Introduction by Clarence Cook. Charles Scribner's Sons. $3.
Aldis, W. S. A Text-Book of Algebra. Macmillan & Co. $1.90.
Almanach de Gotha. 1888. B. Westermann & Co.
Annesley, C. The Standard Opera-Glass; the Detailed Plots of Eighty Celebrated Operas. B. Westermann & Co.
Baxter, Lucy. The Life of William Barnes, Poet and Philologist. Macmillan & Co. $2.25.
Bell, C. F. M. From Pharaoh to Fellah. Illustrated. Philadelphia: J. B. Lippincott Co. $5.
Besant, W. Katharine Regina: A Novel. Harper's Franklin Square Library.
Bidder, M. Westminster Cloisters: The Story of a Life's Ambition. E. & J. B. Young & Co.
Bosworth—Toller. An Anglo-Saxon Dictionary. Part III. Hwi—Sar. Macmillan & Co. $3.75.
Brotherton, Alice Williams. What the Wind Told to the Tree-Tops. Illustrated. G. P. Putnam's Sons. $1.25.
Bullen, A. H. More Lyrics from the Song-Books of the Elizabethan Age. London: John C. Nimmo.
Children's Musical Gift-Book. Boston: Oliver Ditson & Co.
Churchill, Gertrude H. A Birthday Book of Musicians and Composers. Boston: Oliver Ditson & Co.
Clark, A. Register of the University of Oxford. Vol. ii. 1571–1622. Part I. Introductions. Part II. Matriculations and Subscriptions. Clarendon Press.
Clarke, J. I. C. Robert Emmet: A Tragedy of Irish History. G. P. Putnam's Sons. $1.
Classical Pianist; Compositions from Liszt, Rubinstein, and Others. Boston: Oliver Ditson & Co.
Dolaro, Selina. Mes Amours: Poems, Passionate and Playful. Belford, Clarke & Co.
Early Letters of Robert Schumann. Originally Published by his Wife. Translated by May Herbert. London: George Bell & Sons.

"Every child in America should have them."—*New England Journal of Education.*

"The 'Young Folks' Cyclopædia' should be in every juvenile library."—*From a Report of the Connecticut Board of Education.*

YOUNG FOLKS' CYCLOPÆDIA of { *Common Things...$2.50.* / *Persons and Places.$2.50*

HENRY HOLT & CO., Publishers, New York.

"THE Brown Dwarf of Rügen," Mr. Whittier's latest ballad, charmingly illustrated by Mr. E. H. Blashfield, is found in the January ST. NICHOLAS. Col. R. M. Johnston has a capital story, with pictures by Kemble, in this number; Mrs. Pennell's "London Christmas Pantomimes" is here too; and Mrs. Burnett's serial, "Sara Crewe," with illustrations by Birch. "Sara Crewe" is as good as "Little Lord Fauntleroy," only in another field. All booksellers and newsdealers sell ST. NICHOLAS and take subscriptions. Price, 25 cents a number, $3.00 a year.

THE CENTURY CO., New York.

THE ENGINEERING AND BUILDING RECORD

ESTABLISHED 1877.

Conducted by HENRY C. MEYER.

Devoted to engineering and architecture. Of special interest to engineers, architects, builders, contractors, mechanics, and municipal officers.

THE TREATMENT OF MUNICIPAL PROBLEMS A PROMINENT FEATURE.

"It has been of incalculable value to the general public, whose interests it has always served."—*Cincinnati Commercial.*

"It may be regarded as the representative paper devoted to architecture and engineering."—*Boston Herald.*

"It stands as a fine example of clean and able journalism."—*Railroad Gazette.*

"A paper whose excellence and independence merit continued prosperity."—*Railroad and Engineering Journal.*

Published Saturdays at 82–84 Fulton Street, New York. $4.00 per year; 10 cents per copy.

N. B.—An attractive feature is its series of critically selected Architectural Illustrations, artistically rendered and handsomely reproduced.
